Make no mistake about it, this was not merely the decision of Congress, or of the President—it was the decision of the American people, and that decision has merely been expressed through the Congress and the President. Well, these decisions are momentous and world-shaking decisions. We, all of us, have decided to resist the German military might and the German passion for world conquest; and in order to do that effectively, we, the people—you who are listening to me, and I, who am talking to you—all of us have decided that in order to make this decision definite and effective we had to do two things, as I have just stated—that is, make our national defense the strongest on earth and give sufficient aid to Great Britain to prevent that Empire from being defeated and dismembered. This Government is now engaged in doing these two things—helping Great Britain and rearming to defeat Germany's purpose of world conquest. And these decisions cost money. They will cost more money. In order to make these decisions effective, the people of America must pay, pay, not alone in terms of money, in dollars and cents, but in terms of sacrifice and self-discipline.

If we are to come through this crisis unshaken, we must quit playing politics. It is impossible to do what we have set out to do unless everyone of us—the President, the Members of Congress, and the people of America, place the well-being of the country above self-interest. We cannot favor one group over another. We cannot play politics with one group because they have the votes, and we cannot promise to protect one set of our people to the disadvantage of another. Capital and labor, industry and agriculture, rich man and poor man, city dweller and countryman alike, we all must pull together and gird ourselves for the struggle that lies ahead if we are to preserve this America of ours. So I repeat to you, the tax bill just passed will be distasteful, but it is just a foretaste of the sacrifice that lies ahead for all of us. For myself, I believe—and I am confident that you believe—that the America that we have known and loved is worth whatever sacrifice it takes to preserve it. We received this splendid heritage from our fathers. This glorious dream that is America was not come by easily. Men have fought and died that we might experience that priceless privilege of human freedom that is synonomous with the name American. This heritage was not the fruit of peace and indolence and selfishness. It was purchased with the blood of heroes and the tragic sorrows of Americans who died that liberty might be preserved, and preserved by self-sacrifice and suffering. We received it intact from our fathers. It is not too much to ask of our generation that we preserve it and pass it on,

unsullied, to those who come after us—to our children and to our children's children.

Yes; the tax bill is just a foretaste of the price we will have to pay for the privilege of being Americans. I doubt not that all of us are willing to pay that price.

JOINT RETURNS

One part of the tax bill I opposed vigorously, and that was the part compelling husband and wives to make joint returns. Some people tell you that this affected only the rich. But do not make any mistake about it. Once that rule is fixed, it is going to stay in the law and every one of you will be affected by this provision of the bill. Thousands upon thousands of people of small means will be included in the tax bills to come. The reason that I objected to that provision of the tax bill was that it was a denial of the rights of womanhood. Under the old common law, the man and the woman were considered as one—and the man was the one. The woman had no rights—her separate property that she had before she married became her husband's, and everything the husband had was still his. For centuries, woman has struggled to achieve the right to be considered as an individual in her own right. In the United States, in election after election, the women of our Nation have made steady gains to be considered on equality with the men in the eyes of the law. Here is Louisiana, ever since our State was a State—yes, and well before when we were still a colony—the property rights of a married woman were recognized, and under our law here in Louisiana, the married woman is recognized as the owner of her own separate property and of one-half of the property acquired after marriage.

RIGHTS OF WOMEN

This recognition of the rights of a married woman has contributed to the dignity and sancity of the marriage tie and is in keeping with the fundamentals of American tradition. My position is that we will make the tax burden as large as may be necessary upon the individual, but we will not surrender 1 inch of the principle that a woman is just as much of an individual as is a man—that the rights of a woman are just as sacred in the eyes of the law as the rights of a man—that a married woman is an individual and should be considered as an individual taxpayer in her own right. I am glad that we were able to strike this medieval provision from our tax law. This proposal smacked of the Dark Ages when it was seriously disputed in certain schools of theology as to whether women had souls or not. I helped to defeat this provision in the bill and I hope that it has been returned to the dust of archaic superstition from which it sprang.

TAXATION AND SAVINGS

While I am speaking of the tax bill, and especially of future tax bills, I have this suggestion to offer. It seems to be inevitable that the tax base must be broadened and that people now exempt must be brought into the tax structure. I do not doubt the willingness of these small wage earners to chip in to match their share of the national debt, but I do doubt their ability to do so. Especially is this true when we consider that many of these people are now beginning to receive a living income for the first time in months, or even years, and that old debts—to pay the mortgage, to pay for doctors' bills, and grocery bills—must be met. Under these circumstances, it is almost impossible for the people in the lower-income classes to pay taxes and save.

It seems to me that an examination of this question should be made by the Treasury Department and the Ways and Means Committee of the House, and that if the tax base is broadened so as to bring lower-income groups into the tax structure, that the payments by these people should go into a special type of savings fund that would help to finance our national-defense program today and that would be paid back to the taxpayer in the future. For the day may well come when the small wage earner's wages will drop. When the defense program has come to an end and the national income begins to fall away, such special Treasury bonds, properly prepared and wisely liquidated, would serve as savings to help tide these wage earners over possible bad times ahead—would serve as a cushion against individual distress, and at the same time, help to spread purchasing power when it might be falling off.

SELECTIVE SERVICE EXTENSION

I want also to talk to you about the extension of the terms for selective service. One thing seems to me to be certain and that is we are in a very dangerous situation. There may be grounds for asking whether or not our situation is more dangerous today than it was a year ago. President Roosevelt says that it is more serious, and he has sources of information that the rest of us have not got. But I do not think that anyone in their proper senses thinks there is no danger at all. Unless this situation is dangerous, how can we possibly justify the extraordinary measures we are taking for national defense? Let's compare our armed forces with those of other nations:

	Men
Germany	8,000,000
Russia	5,000,000
Japan	2,000,000
Italy	2,000,000
China	3,000,000

On this same date the United States had 1,506,000, composed of 508,700 in the Regular Army, 55,000 Reserve officers, 287,800 National Guard men, and 654,500 selective-service trainees.

Of course, our Navy is our first line of defense, and we have the finest Navy in the world. As long as the British Navy remains in friendly hands, we will never have to use any of our Army, but Great Britain is at war—at war with the Nazi war machine that has conquered more territory, defeated more armies in a quicker space of time than any conquering empire in history. Norway was conquered in 24 days. Belgium and Holland were overrun in 24 days. The great Empire of France was defeated—the supposedly unconquerable Maginot line pierced and the Empire of France vanquished in the space of 6 weeks. The German war machine overran the Balkans, completed their conquest of Europe outside of Russia in a campaign that lasted only 4 weeks. Now the German Armies are locked in a death grapple with the Russian Armies of Stalin. Will the Russians stop the Germans? We hope so, but it is too soon to tell, and one thing is certain, we Americans have no right to take anything for granted. France and Great Britain took too much for granted, and France paid the penalty with complete defeat and Great Britain is now locked in a death grapple with the outcome still in doubt.

And one thing I say—and you must remember—we do not have a two-ocean Navy and will not have one for some 3 years. Under these conditions, with every nation in the world at war except us, the Chief of Staff of the United States Army, General Marshall, sent a report to the Secretary of War and asked that the selectees be retained in the service. The law under which the selectees were inducted into the service reads as follows—and I want you to listen to this language closely. I quote the law:

"Each man inducted under the provisions of subsection (a) shall serve for a training and service period of 12 consecutive months, unless sooner discharged, except that whenever the Congress has declared that the national interest is imperiled such 12-month period may be extended by the President to such time as may be necessary in the interests of national defense."

Now, General Marshall, Chief of Staff of the Army, recommends that these selectees be kept in the service. The very words of his report are these—and I quote his exact language: "In the light of the situation, it is believed that our interests are imperiled and that a grave national emergency exists." I do not know of any combination of words that could be any stronger expression of a national emergency than the language used by the Chief of Staff.

The President of the United States on July 21, 1941, sent a message to Congress stating that it was his official opinion that the selectees should be kept in the service. In his message to Congress the President stated—and I quote his exact language:

"The international situation is not less grave, but is far more grave than it was a year ago. It is so grave that the Army should be maintained in effective strength and without diminution of its effective numbers in a complete state of readiness. It is obvious that if two-thirds of our present Army return to civilian life it will be almost a year before the effective Army strength again reaches 1,000,000 men. We Americans cannot afford to speculate with the security of America."

THE ISSUE

The question before the House when the selectees' service extension was up was a simple one. The language of the act under which the trainees were serving states that if the national interest is imperiled the 12-month training period may be extended by the President to such time as may be necessary in the interests of national defense. The Chief of Staff of the Army, on behalf of our Military Establishment, in an official message to the Secretary of War and in his testimony before the Military Affairs Committee gave it as his considered opinion that our national interests are imperiled. The President of the United States, in measured words, endorses this statement by the Chief of Staff, and requested Congress to give him authority to prevent our Army from demobilizing. A world in arms—millions of men under arms marching and countermarching. Nations who were allies yesterday now locked in a death grapple. The nations of the world have gone mad. The red demons of carnage and destruction are abroad. The four horsemen of the apocalypse are riding headlong over all of the world. The Chief of Staff of the Army and the President of the United States asked Congress to vote on the simple question, Are our national interests imperiled?

Of course, I voted to keep our Army mobilized and in arms, and I am confident that most of you feel as I do. I voted in accordance with the testimony of the Chief of Staff of the Army and the President of the United States and in accordance with my own judgment and common sense that our Nation is in peril.

NATIONAL PERIL

Oh, as much as any man, I wish that I could tell you that there is no danger. These boys who are in the Army—these selectees, they are my friends and the sons of my friends, and I would not cause them 1 day of unnecessary hardship, but in my official position as a Member of the Congress I occupy a position like that of a sentinel on a watchtower. From the thirty-third chapter of Ezekiel, I find my duties in the present emergency pretty well described. And right here let me say that if all of us will read the Bible more and stick closer to its teachings than we have in the past, this will prove the greatest safeguard to the American way of living that can be found. Let me read you what the old Hebrew prophet said and I feel sure he may have been speaking about some public official of his day. Ezekiel may have had in mind one of these smooth-tongued demagogues who promise impossibilities, who cry "Peace, peace," when there is no peace. Said the Prophet Ezekiel:

"Son of man, speak to the children of thy people, and say unto them when I bring the sword upon a land, if the people of the land take a man of their coasts, and set him for their watchman:

"If when he seeth the sword come upon the land, he blow the trumpet, and warn the people;

"Then, whosoever heareth the sound of the trumpet, and taketh not warning; if the sword come and take him away, his blood shall be upon his own head.

"But if the watchman see the sword come, and blow not the trumpet, and the people be not warned; if the sword come and take any person from among them, he is taken away in his iniquity; but his blood will I require at the watchman's hand."

Well, I think these are dangerous times. I told you when you elected me to Congress that I would tell you the truth about conditions as God gave me the light to see the truth, and that is what I have done and this is what I propose to do.

DEFENSE OF PRESIDENT

And now just one word about President Roosevelt. There are people going up and down this land telling you that he is a warmonger, and that he is trying to get this country into war. There never was a greater slander. The fact is that the world has been ablaze with war for nearly 2 years, and at any time during this period the President of the United States could have gotten us into this war. I do not know that he or any man can keep us out of it. I think the question as to whether we keep out of war depends a good deal on what other people do. I think a good deal depends on what Hitler does. I think a good deal depends upon what the Japanese do. The idea of public men in this country trying to create the impression that President Roosevelt is responsible for the dangerous situation in which we find ourselves today is outrageous. President Roosevelt did not invade Austria. President Roosevelt did not invade Czechoslovakia. President Roosevelt did not invade Poland. President Roosevelt did not invade Holland, Norway, and Belgium. President Roosevelt did not make an alliance with the Japanese obligating them to attack this country whenever the opportune time presented itself. It was Hitler and the piratical crew that has seized power in Germany who have done all this, and they have organized the greatest resurgence of paganism the world has seen since the fall of the Roman Empire. Hitler and his godless crew have organized the greatest anti-Christian movement in 2,000 years—Hitler, who, in his mad ambition, has set the world ablaze, and jealous political would-be competitors of the President in this country seek to fasten the blame on our President.

The fact speaks for itself. The United States is not at war, and it is the only great nation in the world that is not at war. The overwhelming majority of the Members of Congress place the interests of this country and the welfare of our people above anything else in the world. No one whom I have talked to in Washington desires to see this country plunged into war. There are a great many people in Washington who feel that war may come to us in spite of anything we can do, and that we should follow the advice of George Washington and in time of peace prepare for war. But the fact remains that during 2 years of the worst carnage and destruction the world has ever seen, President Roosevelt and the Congress of the United States have kept this country at peace and yet have preserved the vital interests of our Nation.

With a skill and boldness that will undoubtedly amaze the historians of the future and excite the admiration of statesmen in generations yet unborn, our President, with the cooperation of the Congress, in 2 years, time has brought us from the verge of disaster and unpreparedness to a place where we have every reason to view the future with confidence. He has led us from the barren desert of unpreparedness to a condition where, given a few months longer, we shall be prepared to say, with the old Briton: "Come the three corners of the world in arms and we shall shock them," and it seems to me during these trying times, when so much is at stake, that the President of the United States is entitled to receive not carping criticism but cooperation from loyal and patriotic citizens of our country.

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. HARRY L. HAINES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

ARTICLE FROM THE TOWNSEND NATIONAL WEEKLY

Mr. HAINES. Mr. Speaker, the signatures of more than 150 Members of the House upon a petition to bring the Townsend plan to the floor for discussion by discharging H. R. 1036 from committee indicates widespread interest in a national pay-as-you-go program for maintaining aged Americans in decency and dignity. The desire for such a program was not born with our generation but is handed down to us by some of those most active in the 1776 fight for American independence. In this connection, under leave to extend my remarks in the RECORD, I include therein an article written in Townsend National Weekly by George Murray, newspaperman and playwright, now engaged in writing a biographical drama on Thomas Paine, early American patriot:

[From the Townsend National Weekly of June 21, 1941]

AMERICAN HERO FOR PLAN—EARLY PATRIOT ADVOCATED NATIONAL PENSION AT 50

(By George Murray)

WASHINGTON.—Basic principles of the Townsend plan had been advocated by an early patriot and American thinker more than a century and a half before Dr. Francis E. Townsend's program caught the Nation's eye in 1932. It was discovered here in perusal of rare pamphlets at the Congressional Library.

Thomas Paine, literary father and spark plug of the American war for independence, who served as Secretary for Foreign Affairs to the Congress of the United States during that war, proposed the Townsend plan in a pamphlet entitled "Agrarian Justice as Opposed to Agrarian Law and to Agrarian Monopoly." In this pamphlet he proposed:

"A plan for ameliorating the condition of man by creating in every nation a national fund to pay to every person, when arrived at the age of 21 years, the sum of £15 (about $75) to enable him or her to begin the world; and also £10 per annum during life to every person now living of the age of 50 years, and to all others when they shall arrive at that age, to enable them to live in old age without wretchedness and go decently out of the world."

TAX FOR FUNDS

Paine proposed to raise funds for such a pension through an inheritance tax of 10 percent. It was his contention that in the course of 30 years—1 generation—the bulk of the real and personal property of the entire Nation would have become subject to the tax. In discussing eligibility for such a pension, he wrote:

"It is a right, and not a charity, that I am pleading for. It is proposed that the payments, as already stated, be made to every person, rich or poor. Such persons as do not choose to receive it, can throw it into the common fund."

Paine estimated that at the time his pamphlet was written, in 1795, only one-eighteenth of America's population was past the age of 50. Experts today estimate that 10 percent of the Nation's population is past 60 and eligible for pensions under the Townsend bill. Paine set forth the reasons for his proposal:

"The contrast of affluence and wretchedness continually meeting the eye is like dead and living bodies chained together. Though I care as little about riches as any man, I am a friend to riches because they are capable of good. I care not how affluent some may be, provided that none is miserable in consequence of it."

MULTIPLY RESOURCES

Prosperity through spending had been envisioned by this great thinker even in a day when most of his contemporaries were thinking in terms of scarcity, Paine reveals in declaring his program "would multiply also the national resources; for property, like vegetation, increases by offsets."

In justification of his proposed tax, Paine wrote that all land, in the beginning, had been common property but that, in enhancing its value through cultivation, certain industrious men had acquired what society recognized as a claim upon it. But that such landowners were indebted to society. Paine insisted in a passage:

"Property is the effect of society; and it is as impossible for an individual to acquire personal property without the aid of society as it is for him to make land originally. Separate an individual from society and give him an island or a continent to possess and he cannot acquire personal property. He cannot become rich.

"All accumulation of personal property, beyond what a man's own hands produce, is derived to him by living in society."

This unusual treatise, written so long ago, was uncovered during research for a drama on Tom Paine, the American patriot who authored Common Sense, The Rights of Man, and The American Crisis, pamphlets which Gen. George Washington credited, in great part, with aiding in the birth of America.

A New Wyoming Arrival

EXTENSION OF REMARKS

OF

HON. JOHN J. McINTYRE

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. McINTYRE. Mr. Speaker, Mrs. McIntyre and I have a new son, John Francis, who was born Saturday at 2:47 a. m., September 13, 1941, at Doctors Hospital in Washington, D. C.

From an initial size of 20½ inches in length and 7 pounds 14 ounces in weight, we expect him to become, in time, a man of credit to the great State of Wyoming and to our Nation.

Speech of Abraham Lincoln on War With Mexico

EXTENSION OF REMARKS
OF
HON. KNUTE HILL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

ADDRESS BY ABRAHAM LINCOLN IN THE HOUSE OF REPRESENTATIVES JANUARY 12, 1848

Mr. HILL of Washington. Mr. Speaker, under unanimous consent to extend my own remarks in the CONGRESSIONAL RECORD and include therein a speech made by Abraham Lincoln on the floor of this House on January 12, 1848, I will make a few brief observations. Mr. Lincoln was at that time a mere inconspicuous Congressman, but he was as patriotic then and as clearly logical as he was later as President of the United States. He did not hesitate to criticize the President of the United States when he considered him in the wrong even when a war was on. On this point let me quote him:

> There is an important sense in which the Government is distinct from the administration. One is perpetual, the other temporary and changeable. A man may be loyal to his Government and yet oppose the peculiar principles and methods of the administration.—Abraham Lincoln.

This is one reason for my inserting the Lincoln speech. He saw fit to criticize his President during war. We are denounced for criticizing our President before any war has been declared. Another reason for calling the attention to Members of Congress and the public to Lincoln's speech at this time is the similarity of the situations. President Polk was provoking incidents on foreign soil. President Roosevelt is provoking incidents in foreign waters—Iceland and the Red Sea—in direct violation of the present neutrality law, which clearly and definitely provides that foreign nations must pay cash for their purchase and come to our ports for their material—"cash and carry," as it was popularly termed during the debate—in order to secure the support of many of us who hesitated to support the change in our neutrality law.

Let those, including the President, who so often quote Lincoln read this speech of his in full and profit thereby.

[From the Congressional Globe]

THE WAR WITH MEXICO

Speech of Mr. A. Lincoln, of Illinois, in the House of Representatives, January 12, 1848, on the resolutions referring the President's message to the various standing committees

Mr. Lincoln addressed the committee as follows:

Mr. Chairman, some, if not all, the gentlemen on the other side of the House, who have addressed the committee within the last 2 days, have spoken rather complainingly, if I have rightly understood them, of the vote given a week or 10 days ago, declaring that the war with Mexico was unnecessary and unconstitutionally commenced by the President. I admit that such a vote should not be given in mere party wantonness, and that the one given is justly censurable, if it have no other o. better foundation. I am one of those who joined in that vote, and I did so under my best impression of the truth of the case. How I got this impression, and how it may possibly be removed, I will now try to show. When the war began, it was my opinion that all those who, because of knowing too li tle, or because of knowing too much, could not conscientiously approve the conduct of the President (in the beginning of it), should, nevertheless, as good citizens and patriots, remain silent on that point, at least till the war should be ended. Some leading Democrats, including ex-President Van Buren, have taken this same view, as I understand them; and I adhered to it and acted upon it, until since I took my seat here, and I think I should still adhere to it, were it not that the President and his friends will not allow it to be so. Besides, the continual effort of the President to argue every silent vote given for supplies into an endorsement of the justice and wisdom of his conduct; besides that singularly candid paragraph in his late message, in which he tells us that Congress, with great una imity (only two in the the Senate and 14 'n the House dissenting) and declared that "by the act of the Republic of Mexico a state of war exists between that Government and the United States"; when the same journals that informed him of this, also informed him that, when that declaration stood disconnected from the question of supplies, 67 in the House, and not 14, merely, voted against it, besides this open attempt to prove by telling the truth, what he could not prove by telling the whole truth, demanding of all who will not submit to be misrepresented, in justice to themselves, to speak out; besides all this, one of my colleagues [Mr. Richardson] at a very early day in the session, brought in a set of resolutions, expressly endorsing the original justice of the war on the part of the President. Upon these resolutions, when they shall be put on their passage, I shall be compelled to vote; so that I cannot be silent if I would. Seeing this, I went about preparing myself to give the vote understandingly, when it should come. I carefully examined the President's messages, to ascertain what he himself had said and proved upon the point. The result of this examination was to make the impression, that, taking for true all the President states as facts, he falls far short of proving his justification, and that the President would have gone further with his proof, if it had not been for the small matter that the truth would not permit him. Under the impression thus made, I gave the vote before mentioned. I propose now to give, concisely, the process of the examination I made, and how I reached the conclusion I did.

The President, in his first message of May 1846 declares that the soil was ours on which hostilities were commenced by Mexico; and he repeats that declaration, almost in the same language, in each successive annual message—thus showing that he esteems that point a highly essential one. In the importance of that point, I entirely agree with the President. To my judgment, it is the very point upon which he should be justified or condemned. In his message of December 1846 it seems to have occurred to him, as is certainly true, that title, ownership to soil, or anything else, is not a simple fact, but is a conclusion following one or more simple facts; and that it was incumbent upon him to present the facts from which he concluded the soil was ours on which the first blood of the war was shed.

Accordingly, a little below the middle of page 12, in the message last referred to, he enters upon that task; forming an issue and introducing testimony, extending the whole to a little below the middle of page 14. Now, I propose to try to show that the whole of this—issue and evidence—is, from beginning to end, the sheerest deception. The issue, as he presents it, is in these words: "But there are those who, conceding all this to be true, assume the ground that the true western boundary of Texas is the Nueces, instead of the Rio Grande; and that, therefore, in marching our Army to the east bank of the latter river, we passed the Texan line, and invaded the territory of Mexico." Now, this issue is made up of two affirmatives and no negative. The main deception of it is, that it assumes as true that one river or the other is necessarily the boundary, and cheats the superficial thinker entirely out of the idea that possibly the boundary is somewhere between the two, and not actually at either. A further deception is, that it will let in evidence which a true issue would exclude. A true issue made by the President would be about as follows: "I say the soil was ours on which the first blood was shed; there are those who say it was not."

I now proceed to examine the President's evidence, as applicable to such an issue. When that evidence is analyzed, it is all included in the following propositions:

1. That the Rio Grande was the western boundary of Louisiana, as we purchased it of France in 1803.

2. That the Republic of Texas always claimed the Rio Grande as her western boundary.

3. That, by various acts, she had claimed it on paper.

4. That Santa Anna, in his treaty with Texas, recognized the Rio Grande as her boundary.

5. That Texas before, and the United States after annexation, had exercised jurisdiction beyond the Nueces, between the two rivers.

6. That our Congress understood the boundary of Texas to extend beyond the Nueces.

Now, for each of these in its turn:

His first item is, that the Rio Grande was the western boundary of Louisiana, as we purchased it of France in 1803; and, seeming to expect this to be disputed, he argues over the amount of nearly a page to prove it true; at the end of which, he lets us know that, by the treaty of 1819, we sold to Spain the whole country, from the Rio Grande eastward to the Sabine. Now, admitting, for the present, that the Rio Grande was the boundary of Louisiana, what, under heaven, had that to do with the present boundary between us and Mexico? How, Mr. Chairman, the line that once divided your land from mine can still be the boundary between us after I have sold my land to you, is, to me, beyond all comprehension. And how any man, with an honest purpose only of proving the truth, could ever have thought of introducing such a fact to prove such an issue, is equally incomprehensible. The outrage upon common right, of seizing as our own what we have once sold, merely because it was ours before we sold it, is only equalled by the outrage on common sense of any attempt to justify it.

The President's next piece of evidence is, that "the Republic of Texas always claimed this river (Rio Grande) as her western boundary." That is not true, in fact. Texas has claimed it, but she has not always claimed it. There is, at least, one distinguished exception. Her State constitution—the Republic's most solemn and well-considered act; that which may, without impropriety, be called her last will and testament, revoking all others—makes no such claim. But suppose she had always claimed it. Has not Mexico always claimed the contrary? So that there is but claim against claim, leaving nothing proved

until we get back of the claims, and find which has the better foundation.

Though not in the order in which the President presents his evidence, I now consider that class of his statements, which are, in substance, nothing more than that Texas has, by various acts of her convention and congress, claimed the Rio Grande as her boundary—on paper. I mean here what he says about the fixing of the Rio Grande as her boundary, in her old constitution (not her State constitution), about forming congressional districts, counties, etc. Now, all of this is but naked claim, and what I have already said about claims is strictly applicable to this. If I should claim your land by word of mouth, that certainly would not make it mine; and if I were to claim it by a deed which I had made myself, and with which you had had nothing to do, the claim would be quite the same in substance, or rather in utter nothingness.

I next consider the President's statement that Santa Anna, in his treaty with Texas, recognized the Rio Grande as the western boundary of Texas. Besides the position so often taken that Santa Anna, while a prisoner of war—a captive—could not bind Mexico by a treaty, which I deem conclusive; besides this, I wish to say something in relation to this treaty, so called by the President, with Santa Anna. If any man would like to be amused by a sight at that little thing, which the President calls by that big name, he can have it by turning to Niles' Register, volume 50, page 336. And if anyone should suppose that Niles' Register is a curious repository of so mighty a document as a solemn treaty between nations, I can only say that I learned, to a tolerable degree of certainty, by inquiry at the State Department, that the President himself never saw it anywhere else. By the way, I believe I should not err if I were to declare that during the first 10 years of the existence of that document it was never by anybody called a treaty; that it was never so called till the President, in his extremity, attempted, by so calling it, to wring something from it in justification of himself in connection with the Mexican War. It has none of the distinguishing features of a treaty. It does not call itself a treaty. Santa Anna does not therein assume to bind Mexico; he assumes only to act as the President, commander in chief of the Mexican Army and Navy; stipulates that the then present hostilities should cease; and that he would not himself take up arms, nor influence the Mexican people to take up arms, against Texas, during the existence of the war of Independence. He did not recognize the independence of Texas; he did not assume to put an end to the war, but clearly indicated his expectation of its continuance; he did not say one word about boundary, and most probably never thought of it. It is stipulated therein that the Mexican forces should evacuate the Territory of Texas, passing to the other side of the Rio Grande; and in another article it is stipulated that to prevent collisions between the armies the Texan army should not approach nearer than within 5 leagues—of what is not said—but clearly, from the object stated, it is of the Rio Grande. Now, if this is a treaty recognizing the Rio Grande as the boundary of Texas, it contains the singular feature of stipulating that Texas shall not go within 5 leagues of her own boundary.

Next comes the evidence of Texas before annexation, and the United States afterward, exercising jurisdiction beyond the Nueces and between the two rivers. This actual exercise of jurisdiction is the very class or quality of evidence we want. It is excellent so far as it goes; but does it go far enough? He tells us it went beyond the Nueces, but he does not tell us it went to the Rio Grande. He tells us jurisdiction was exercised between the two rivers, but he does not tell us it was exercised over all the territory between them. Some simple-minded people think it possible to cross one river and go beyond it without going all the way to the next; that jurisdiction may be exercised between two rivers without covering all the country between them. I know a man, not very unlike myself, who exercises jurisdiction over a piece of land between the Wabash and the Mississippi; and yet so far is this from being all there is between those rivers that it is just 152 feet long by 50 wide and no part of it much within a hundred miles of either. He has a neighbor between him and the Mississippi—that is, just across the street, in that direction—whom, I am sure, he could neither persuade nor force to give up his habitation, but which, nevertheless, he could certainly annex, if it were to be done, by merely standing on his own side of the street and claiming it or even sitting down and writing a deed for it.

But next the President tells us the Congress of the United States understood the State of Texas they admitted into the Union to extend beyond the Nueces. Well, I suppose they did—I certainly so understand it—but how far beyond? That Congress did not understand it to extend clear to the Rio Grande is quite certain by the fact of their joint resolutions for admission expressly leaving all questions of boundary to future adjustment. And, it may be added, that Texas herself is proved to have had the same understanding of it that our Congress had by the fact of the exact conformity of her new constitution to those resolutions.

I am now through the whole of the President's evidence; and it is a singular fact, that if anyone should declare the President sent the Army into the midst of a settlement of Mexican people, who had never submitted, by consent or by force, to the authority of Texas or of the United States, and that there, and thereby, the first blood of the war was shed, there is not one word in all the President has said which would either admit or deny the declaration. In this strange omission chiefly consists the deception of the President's evidence—an omission which, it does seem to me, could scarcely have occurred, but by design. My way of living leads me to be about the courts of justice; and there I have sometimes seen a good lawyer struggling for his client's neck, in a desperate case, employing every artifice to work round, befog, and cover up with many words some position pressed upon him by the prosecution, which he dared not admit, and yet could not deny. Party bias may help to make it appear so; but, with all the allowance I can make for such bias, it still does appear to me that just such, and from just such necessity, is the President's struggles in this case.

Sometime after my colleague, Mr. Richardson, introduced the resolutions I have mentioned, I introduced a preamble, resolution, and interrogatories,[1] intended to draw the President out, if possible, on this hitherto untrodden ground. To show their relevancy, I propose to state my understanding of the true rule for ascertaining the boundary between Texas and Mexico. It is that wherever Texas was exercising jurisdiction was hers; and wherever Mexico was exercising jurisdiction was hers; and that whatever separated the actual exercise of jurisdiction of the one from that of the other, was the true boundary between them. If, as is probably true, Texas was exercising jurisdiction along the western bank of the Nueces, and Mexico was exercising it along the eastern bank of the Rio Grande, then neither river was the boundary, but the uninhabited country between the two was. The extent of our territory in that region depended not on any treaty-fixed boundary (for no treaty had attempted it) but on revolution. Any people anywhere, being inclined and having the power, have the right to rise up and shake off the existing government, and form a new one that suits them better. This is a most valuable, a most sacred right—a right which, we hope and believe, is to liberate the world. Nor is this right confined to cases in which the whole people of an existing government may choose to exercise it. Any portion of such people that can, may revolutionize and make their own of so much of the territory as they inhabit. More than this, a majority of any portion of such people may revolutionize, putting down a minority, intermingled with, or near about them, who may oppose their movements. Such minority was precisely the case of the Tories of our own Revolution. It is a quality of revolutions not to go by old lines or old laws, but to break up both and make new ones. As to the country now in question, we bought it of France in 1803 and sold it to Spain in 1819, according to the President's statement. After this all Mexico, including Texas, revolutionized against Spain; and still later Texas revolutionized against Mexico. In my view, just so far as she carried her revolution, by obtaining the actual, willing, or unwilling submission of the people, so far the country was hers, and no further.

Now, sir, for the purpose of obtaining the very best evidence as to whether Texas had actually carried her revolution to the place where the hostilities of the present war commenced, let the President answer the interrogatories I proposed, as before mentioned, or some other similar ones. Let him answer fully, fairly, and candidly. Let him answer with facts, and not with arguments. Let him remember he sits where Washington sat; and, so remembering, let him answer as Washington would answer. As a nation should not, and the Almighty will not, be evaded, so let him attempt no evasion, no equivocation. And if, so answering, he can show that the soil was ours where the first blood of the war was shed—that it was not within an inhabited country, or, if within such, that the inhabitants had submitted themselves to the civil authority of Texas, or of the United States, and that the same is true of the site of Fort Brown—then I am with him for his justification. In that case I shall be most happy to reverse the vote I gave the other day. I have a selfish motive for desiring that the President may do this; I expect to give some votes, in connection with the war, which, without his so doing, will be of doubtful propriety, in my own judgment, but which will be free from the doubt, if he does so. But if he cannot or will not do this—if, on any pretense, or no pretense, he shall refuse or omit it—then I shall be fully convinced, of what I more than suspect already, that he is deeply conscious of being in the wrong; that he feels the blood of this war, like the blood of Abel, is crying to heaven against him; that he ordered General Taylor into the midst of a peaceful Mexican settlement, purposely to bring on a war; that originally having some strong motive—what I will not stop now to give my opinion concerning—to involve the two countries in a war, and trusting to escape scrutiny by fixing the public gaze upon the exceeding brightness of military glory—that attractive rainbow that rises in showers of blood—that serpent's eye that charms to destroy—he plunged into it, and has swept on and on, till, disappointed in his calculation of the ease with which Mexico might be subdued, he now finds himself he knows not where. How like the half insane mumbling of a fever dream is the whole war part of the late message. At one time telling us that Mexico has nothing whatever that we can get but territory; at another, showing us how we can support the war by levying contributions on Mexico. At one time urging the national honor, the security of the future, the prevention of foreign interference, and even the good of Mexico herself, as among the objects of the war; at another, telling us that, "to reject indemnity by refusing to accept a cession of territory would be to abandon all our just demands, and to wage the war, bearing all its expenses, without a purpose or definite

[1] See Congressional Globe, 1st sess., 30th Cong., p. 64.

object." So, then, the national honor, security of the future, and everything but territorial indemnity, may be considered the no-purposes and indefinite objects of the war. But, having it now settled that territorial indemnity is the only object, we are urged to seize, by legislation here, all that he was content to take a few months ago, and the whole province of Lower California to boot, and to still carry on the war—to take all we are fighting for, and still fight on. Again, the President is resolved, under all circumstances, to have full territorial indemnity for the expenses of the war; but he forgets to tell us how we are to get the excess after those expenses shall have surpassed the value of the whole of the Mexican territory. So, again, he insists that the separate national existence of Mexico shall be maintained; but he does not tell us how this can be done after we shall have taken all her territory. Lest the questions I here suggest be considered speculative merely, let me be indulged a moment in trying to show they are not.

The war has gone on some 20 months; for the expenses of which, together with an inconsiderable old score, the President now claims about one-half of the Mexican territory, and that by far the better half, so far as concerns our ability to make anything out of it. It is comparatively uninhabited; so that we could establish land offices in it, and raise some money in that way. But the other half is already inhabited, as I understand it, tolerably densely for the nature of the country; and all its lands, or all that are valuable, already appropriated as private property. How, then, are we to make anything out of these lands with this encumbrance on them, or how remove the encumbrance? I suppose no one will say we should kill the people, or drive them out, or make slaves of them, or even confiscate their property? How, then, can we make much out of this part of the territory? If the prosecution of the war has, in expenses, already equaled the better half of the country, how long its future prosecution will be in equaling the less valuable half is not a speculative, but a practical question, pressing closely upon us; and yet it is a question which the President seems never to have thought of.

As to the mode of terminating the war and securing peace, the President is equally wandering and indefinite. First, it is to be done by a more vigorous prosecution of the war in the vital parts of the enemy's country; and, after apparently talking himself tired on this point, the President drops down into a half despairing tone, and tells us, that "with a people distracted and divided by contending factions, and a Government subject to constant changes by successive revolutions, the continued success of our arms may fail to obtain a satisfactory peace." Then he suggests the propriety of wheedling the Mexican people to desert the counsels of their own leaders, and, trusting in our protection, to set up a government from which we can secure a satisfactory peace, telling us that "this may become the only mode of obtaining such a peace." But soon he falls into doubt of this too, and then drops back onto the already half-abandoned ground of "more vigorous prosecution." All this shows that the President is in no wise satisfied with his own positions. First, he takes up one, and, in attempting to argue us into it, he argues himself out of it; then seizes another, and goes through the same process; and then, confused at being able to think of nothing new, he snatches up the old one again, which he has sometime before cast off. His mind, tasked beyond its power, is running hither and thither, like some tortured creature on a burning surface, finding no position on which it can settle down and be at ease.

Again, it is a singular omission in this message, that it nowhere intimates when the President expects the war to terminate. At its beginning, General Scott was, by this same President, driven into disfavor, if not disgrace, for intimating that peace could not be conquered in less than 3 or 4 months. But now, at the end of about 20 months, during which time our arms have given us the most splendid successes—every department, and every part, land and water, officers and privates, regulars and volunteers, doing all that men could do, and hundreds of things which it had ever before been thought men could not do; after all this, this same President gives us a long message without showing us that, as to the end, he has himself even an imaginary conception. As I have before said, he knows not where he is. He is a bewildered, confounded, and miserably perplexed man. God grant he may be able to show there is not something about his conscience more painful than all his mental perplexity.

APPENDIX

Articles of an agreement entered into between His Excellency David G. Burnet, President of the Republic of Texas, of the one part, and His Excellency General Santa Ana President General in Chief of the Mexican Army, of the other part

ARTICLE 1. General Antonio Lopez de Santa Ana agrees that he will not take up arms, nor will he exercise his influence to cause them to be taken up, against the people of Texas, during the present war of independence.

ART. 2. All hostilities between the Mexican and Texan troops will cease immediately, both by land and water.

ART. 3. The Mexican troops will evacuate the territory of Texas, passing to the other side of the Rio Grande del Norte.

ART. 4. The Mexican Army, in its retreat, shall not take the property of any person without his consent and just indemnification, using only such articles as may be necessary for its subsistence, in cases when the owner may not be present, and remitting to the commander of the army of Texas, or to the commissioners to be appointed for the adjustment of such matters, an account of the value of the property consumed, the place where taken, and the name of the owner, if it can be ascertained.

ART. 5. That all private property, including cattle, horses, Negro slaves, or indentured persons, of whatever denomination, that may have been captured by any portion of the Mexican Army, or may have taken refuge in the said Army, since the commencement of the late invasion, shall be restored to the commander of the Texan Army, or to such other persons as may be appointed by the Government of Texas to receive them.

ART. 6. The troops of both armies will refrain from coming into contact with each other; and to this end, the commander of the Army of Texas will be careful not to approach within a shorter distance than five leagues.

ART. 7. The Mexican Army shall not make any other delay, on its march, than that which is necessary to take up their hospitals, baggage, etc., and to cross the rivers; any delay not necessary to these purposes to be considered an infraction of this agreement.

ART. 8. By an express to be immediately dispatched, this agreement shall be sent to Gen. Vincente Filisola, and to Gen. T. J. Rusk, commander of the Texan Army, in order that they may be apprized of its stipulations; and to this end, they will exchange engagements to comply with the same.

ART. 9. That all Texan prisoners now in the possession of the Mexican Army, or its authorities, be forthwith released, and furnished with free passports to return to their homes; in consideration of which, a corresponding number of Mexican prisoners, rank and file, now in possession of the Government of Texas, shall be immediately released—the remainder of the Mexican prisoners that continue in the possession of the Government of Texas to be treated with due humanity; any extraordinary comforts that may be furnished them to be at the charge of the Government of Mexico.

ART. 10. General Antonio Lopez de Santa Anna will be sent to Vera Cruz as soon as it shall be deemed proper.

The contracting parties sign this instrument for the above-mentioned purposes, in duplicate, at the port of Velasco, this 14th day of May 1836.

DAVID G. BURNET,
President.

JAS. COLLINGSWORTH,
Secretary of State.

ANTONIO LOPEZ DE SANTA ANNA,

B. HARDIMAN,
Secretary of the Treasury.

P. W. GRAYSON,
Attorney General.

Operators View of Railroad Workers Wage Demands

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

STATEMENT BY F. G. GURLEY, VICE PRESIDENT, A. T. & S. F. RAILWAY AND SPOKESMAN FOR THE CARRIERS' JOINT CONFERENCE COMMITTEE

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the statement by Mr. F. G. Gurley, vice president, A. T. & S. F. Railway, and spokesman for the Carriers' Joint Conference Committee. On September 11, I placed in the RECORD the reply of Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, to this statement by Mr. Gurley. Mr. Whitney has requested that in fairness to Mr. Gurley, and also in order to clarify Mr. Whitney's statement, that I also place in the RECORD the statement by Mr. Gurley to which Mr. Whitney's statement was a reply, so that both sides will be presented. I am very glad to do this.

Mr. Gurley's statement is as follows:

STATEMENT OF F. G. GURLEY TO OPERATING ORGANIZATIONS, AUGUST 5, 1941

Mr. Gurley stated, as he advised the other day, he has a few things he wants to say concerning the financial aspects of this situation. He remarked he could not qualify as a financier, that he came up "the hard way" through the operating department. He said his experience with bankers has always been on the side of the desk where arrangements are made to borrow money, but he would like the employees to keep in mind that it does not make a great deal of difference whether you are planning the budget of the family or planning the budget of a good-sized company, the same over-all principles must apply. The "over-all principles" are the way we go about things, and which in the final analysis decides our course of action in given circum-

stances. He said a man sits down with his wife and goes over his budget and decides whether they can buy this or that, and it is perfectly proper. He stated that has been his experience with railroad expenses. He remarked he "grew up" on the Burlington railroad, and some 2 years ago, following the death of Mr. Bledsoe and the elevation of Mr. Engel, the board of directors of the Santa Fe elected him to the position of vice president of the executive department of that railroad. He said his experiences therefore had been with the Burlington and Santa Fe railroads, which certainly cannot be classed as "downtrodden" or "poor" railroads, nor are either "rich" railroads. He stated it has been very interesting to come from the family discussion at breakfast time as to what the family could afford, down to the office and there participate in the discussions as to the wisdom of purchasing new material—whether the railroad could afford to buy 131-pound rail or 150-pound rail or continue to use 112-pound rail. Could the railroad afford to buy new cars to be used on the San Diego run due to the increase in population there by reason of defense work. He stated the question of what one can afford runs through the whole structure of business. He stated his railroad had borrowed money for some cars, and are rather proud of the fact they secured the lowest rate ever received by any railroad on equipment certificates.

Mr. Gurley called attention to the radio discussion Sunday evening by Mr. Robertson and himself of the respective sides of the question here being considered, and said he [Mr. Gurley] spoke about stockholders. He recalled it was said the other day the thing we are here considering has to do with human beings; in fact, all the theories and problems of the world have to do with that—it is these human beings that make the world what it is, either good or bad, and, of course, much more good than bad

But, he said getting back to the question of stockholders, on quite a number of railroads there are more stockholders than there are employees, but, of course, that is not true of the United States as a whole. He said it just so happens the Santa Fe has from 8,000 to 10,000 more stockholders than employees, and they are just human beings. In fact, he remarked, quite a number of Santa Fe employees are stockholders, and therefore he is working for them.

Mr. Gurley recalled there has been some discussion that one of the difficulties of the railroad situation is the lack of merchandising on the part of the people who have to do that particular part of the railroad work. He said there is no doubt there are many things that should, and can, be done to improve the merchandising technique, but, of course, one outstanding thing is the difficulties the railroads have in merchandising their product. Some of the employee relations have bothered in that regard. He stated that while the railroads are striving, that no doubt they were making some mistakes, that it is a trial-and-error procedure, and there are a lot of things they would like to do which they can't do. He expressed the thought it is a fair statement there is no business in America that is so circumscribed by other forces than true business principles as are the railroads, so, he said, he asks the organizations' support in the railroads' merchandising efforts and indulgence when they think things might be done in a better and more efficient way.

Mr. Gurley said he thinks it a splendid thing that as the railroads consider matters of such importance as this they have an opportunity to discuss them with representatives of the employees. He stated one of the undesirable parts of the railroads' managerial technique is the fact, because of the very nature of things, the managers of the property cannot get more closely in touch with their employees. He pointed out that it is inherent in a business that stretches from one end of the country to the other. He remarked there are industries here in Chicago which have under one big roof as many employees as there are in many western railroads. The president of that concern could walk from his office to see any employee within 5 or 10 minutes. He compared that situation with that of the president of a railroad running from here to the coast and it can readily be understood why that difficult situation does exist for the railroads. He thought it really remarkable, all things considered, that we have the splendid relations that do exist between men and management.

Mr. Gurley stated recently he had participated in a conference with citrus growers in California who claimed something drastic must be done about lowered freight rates to relieve the difficult situation of their people; he participated in the discussion about the manner of changing the freight-rate structure on lumber; and he listened to the same story of the flour manufacturers, and many others. Even the Government itself in connection with some of its shipments is now trying to get the railroads to reduce rates.

He pointed out, so far as this moot question of employees' wages is concerned, it is like all other similar relationships. He explained that the railroads not only had to discuss the question of value of services rendered by their employees, but that they had to discuss with the shippers what it was proper for them to charge the shippers for the services rendered for the railroad He explained that the collections the railroads make from the public are very vital to this question of merchandising. He expressed doubt that he is qualified to define merchandising accurately, but he would describe it as the method of treating the customers, the manner of approaching them, the manner of being fair with them, a matter of service, and then the all-important question of charges for the services. As to the latter, the charges now are 25 percent lower than they were in 1921, and the charges we now make per passenger mile are 43 percent lower than in 1921. He stated the year 1921 is used because that was the peak.

Mr. Gurley remarked he had an interesting experience a few years ago in connection with one phase of merchandising. Starting in 1920, the passenger reveneues fell down year after year until 1932. In that year he was assigned the task of seeing what might be done about it; he explained that was the start of what has become known as the streamline train. He thought it well for the employees to consider the millions of dollars that have gone into new equipment, improved track structure, straightening of curves, and all those things that make a venture of this kind a success. He said, frankly he does not know that it has been a success from the financial standpoint, but that it has brought a lot more people back to the rails, and the carriers are running more passenger train miles. Thus the employees were benefited. He pointed out one of the things the railroads had to do was make a very definite reduction in fares. In other words, the railroads had to "put that little sugar on the apple."

Mr. Gurley said at the present moment we are going through an experience that might be described as a 1941 counterpart of the Mississippi Bubble. He thought a number of us knew that. He said that basically it springs from the manifestation of how little we know about human relations; it springs from the terrible mess of international affairs; it springs from the interpretation our administration makes of the international affair. But the question is what we should do about it. He thought it no reflection upon anyone to say that no one in Washington really knows what it is all about; that all they can do is apply their ability and make the best decision they know how. He said this effort had an effect on the economic situation by stimulating railroad freight traffic and also has some effect on the volume of passenger traffic, but no one in this room, or in the United States, knows how long it will last. If there should be a sudden collapse on the Continent of Europe, what the reactions will be here no one knows. No one knows whether there will be a collapse in Europe. He referred to the so-called V campaign of the British, an attempt to shatter the nerves of the Germans, and stated it cannot be determined how effective it will be. He pointed out Germany collapsed in the last war, not in the lines, but behind the lines; that what is taking place among those oppressed people, how soon it will develop, what its effect will be on the possibility of another collapse, and what the effect of that will be on our economic structure is not known. He stated we should all approach the problem rather carefully, that we should "strive to guide our ship so that we will do the best we can whichever way it goes." He expressed the thought all of us feel when this terrible war situation quiets down there will be a very sudden and very appropriate change with reference to our over-all situation. He stated he does not believe Congress will continue spending through taxation the millions and billions of dollars they are now spending if there should be a collapse in the international situation.

Mr. Gurley stated he was at Los Angeles sometime last February having luncheon with the officers of the Chamber of Commerce, and just before luncheon the Chamber of Commerce members had had a meeting with the airplane people. They advised the airplane companies already were beginning to make plans for what they will do to protect the airplane industry when the curtain goes down on the war; that they were not completely sure when that will come, but they were getting ready for it. He stated that as an officer of a railroad which enjoys a trainload of mail out of Chicago every night to California, he was not at all enthused about their figures as to how much mail can be put in a plane of the bomber type, but, he added, it is one of the things the railroads face. He said he thought all present realize the tremendous amount of money that has been paid in the past to these railroads, the tremendous number of jobs brought to the employees by reason of coal traffic, and he doubted whether it is realized the full effect of the new power plants which resulted in more energy going over the wires and less energy in the form of coal we transport. He pointed out he is not saying he is entirely correct, but he believes he is correct in saying probably no one thing will take as much actual traffic away from the railroads as that transportation of energy through wires instead of coal cars.

Mr. Gurley stated the requests the organizations have made are quite staggering in their proportion. He said he is going to address himself to the results of the wage requests that have been made upon the carriers; that he is not going to discuss at the moment the vacation requests, the Diesel requests, or the reclassification requests, or anything else except the wage movement of June 10. But before doing so, he wanted to say he was impressed with Mr. Johnston's statement the other day about train limit. He (Mr. Gurley) made the request that the employee representatives think that over very carefully, and very calmly, in the future. He asked them to study out very carefully its effect upon what might be termed "production"; to remember we do have to support ourselves in this country upon a production basis. He remarked we might discuss that more completely at some future date, but not at this time. He stated he did not really intend to discuss it today, but moved on the

impulse of the moment. He said he does want to discuss the effect of this wage movement. He stated it is realized business is better now than it was in 1940, and he realizes that the request was not asked for in 1940, but nevertheless the year 1940 is the last calendar year for which statistics are available compiled on a calendar-year basis.

Now, he said, it so happens there are 30 railroads in the United States that represent about 80 percent of the total pay rolls of the railroad industry, and yet, in 1940, had this wage request been effective these 30 railroads would have failed to make their net railway operating income to the extent of approximately $30,000,000. In other words, they would have failed by $30,000,000 to pay operating expenses. He pointed out, the first 5 months of this year are the only complete figures we have at the moment, but if these wage requests had been effective during the first 5 months of this year, such railroads as the New York Central, the Pennsylvania, the Union Pacific, Santa Fe, and Burlington Railroads, which, it is fair to say, are pretty good railroads, would not have made their operating expenses. According to calculations, the New York Central would have failed by over $7,000,000, the Pennsylvania by $3,000,000, and the Santa Fe by $3,000,000. He said when the question is considered where they would have wound up after paying their fixed charges, or how much is represented by the accounting expression "net income," it would have been much worse; the New York Central would get a red figure of about $40,000,000, the Pennsylvania a red figure of about $24,000,000, the Santa Fe a red figure of about $9,000,000, the Burlington a red figure of about $5,000,000, the Union Pacific a red figure of about $9,000,000.

Mr. Gurley concluded with the statement the carriers are not unaware of what might be termed the atmosphere reflected at the last meeting, or the difficulties we have had here; they are not unaware of the necessity of taking a realistic view of this thing Mr. Cashen talked about the other day; they are not unaware of the statement made that the employees do not want to be asked a lot of questions which they apparently think are designed for delay purposes, but which were not so intended. He stated there were other things they would like to ask about but perhaps that would not have changed what he now had to say. He stated he has something to say here which he is certain will be a disappointment to the employees from a personal standpoint this morning because he has no doubt that, being human, they do have certain desires for money. He stated he had discussed this situation very carefully with his associates, and they have analyzed it thoroughly and to the best of their abilities. He quoted Abraham Lincoln, when he said, "With charity to all, with malice to none, with courage to do the right as God gives us to see the right," and he stated, in that spirit the carriers' committees "most respectfully declines the tremendous wage demands you have made upon us."

It's All Over But the Shooting

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. CHIPERFIELD. Mr. Speaker, President Roosevelt in his radio address last Thursday night initiated an undeclared naval war without the consent of Congress. While every red-blooded American believes in maintaining the freedom of the seas under well-recognized principals of international and existing law, most of us believe this doctrine should not be extended beyond those limits.

While under the preamble of the Neutrality Act passed November 4, 1939, the United States waives none of its own rights or privileges under international law, nevertheless the Congress did make restrictions by providing:

First. No American ships are permitted to enter danger zones as prescribed by the President.

Second. No American citizen is permitted to be a passenger on a belligerent ship.

Third. Title to all goods must be transferred to a belligerent nation before it leaves our shores.

How far these restrictions on the freedom of the seas have been abrogated by the passage of the lease-lend bill is questionable. Certainly it is true that the President has reduced the war zones by removing these restrictions in the Red Sea which action indirectly was responsible for the sinking of the American ship *Steel Seafarer*, carrying contraband of war to a belligerent nation. By the press we are informed that the State Department is now ready to permit American citizens to return to this country on belligerent ships. It is almost certain that no longer is it necessary to transfer title to material going to belligerents before it leaves our shores.

Under international law there are certain restrictions upon the freedom of the seas so far as trading with belligerent nations is concerned. It has always been a well-established and recognized principle of international law that a ship carrying contraband of war to a belligerent nation is subject to search and seizure; and since the World War and the development of the submarine it is recognized by all nations that vessels carrying contraband are subject to being sunk if, as far as possible, provisions are made for the safety of their crews.

Under international law the right of a belligerent nation to maintain an effective blockade has always been recognized during wartime. Both Germany and England are today insisting upon this right. The President has taken upon himself the sole responsibility to determine whether there is an effective blockade in the area surrounding Iceland. His policy of shooting on sight any German or Italian raider or submarine in what he describes as defensive waters violates not only international law but the laws of our land.

First. With the sole discretion resting in the hands of the President to determine the limits of defensive waters the President could carry his shooting war into danger zones which he had formerly declared to be forbidden to American shipping, under the Neutrality Act.

Second. The doctrine of freedom of the seas has never been extended by any nation beyond the protection of its own vessels. The President has declared he intends to extend this doctrine to all shipping of all countries within the areas he determines as defensive.

It cannot be considered as anything but an act of war when we attempt to protect belligerent ships carrying contraband between North America and England. This is convoying although the Lend-Lease Act contains the specific provision that: "Nothing in this act shall be construed to authorize or to permit the authorization of convoying vessels by naval vessels of the United States." Secretary Knox has publicly stated that convoying is an act of war; and even the President has said that convoying means shooting and shooting means war.

Third. It is well known that the Congress passed a law that permitted the seizure of foreign ships in our ports. These are placed under American ownership and then under a subterfuge registered under a foreign flag such as the Republic of Panama, and then permitted to violate our Neutrality Act by going into danger zones. The President's policy clearly violates the intent of the Neutrality Act by permitting American-owned ships, under foreign registry, to trade with belligerent nations no matter what the destination of these ships, and extends the doctrine of freedom of the seas to protect vessels flying foreign flags.

Taking into his own hands the decision as to what seas are necessary to constitute our defense, the President may well reach a decision that is a strategic absurdity.

It is all over but the shooting.

Maj. Gen. Julien L. Schley

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. COCHRAN. Mr. Speaker, after wearing a United States Army uniform for 42 years, Julien L. Schley will soon retire from the service, having completed his term as Chief of Army Engineers. He entered the service as a cadet at West Point in 1899 and concludes his service as a major general in charge of the Corps of Engineers. During the period that he has been in the Army he has occupied almost every outstanding position where an officer of the Engineer Corps can be recognized. Following his graduation from West Point he saw service in the Philippines and Cuba and also spent 4 years as an instructor in engineering at the Military Academy. During the period of his career he has been Assistant Engineer Commissioner of the District of Columbia; commandant of the Engineer School at Belvoir, Va; and was Governor of the Panama Canal Zone. The World War found him in command of the Three Hundred and Seventh Engineers overseas, and he was promoted to Chief Engineer of the Fifth Army Corps. His overseas service was recognized when

he was awarded the Distinguished Service Medal for his activities in the Meuse-Argonne and St. Mihiel offensives.

Major General Schley has been in charge of the Army engineers since the present emergency arose. Heretofore the Army engineers have confined their work mostly to flood control, river and harbor, and navigation projects. So great was the task assigned to the Quartermaster Corps in charge of military construction that the President issued an order assigning part of these duties to the Army engineers. As a result of that order the engineers of the Army have been handling nearly a billion dollars in construction projects, many of which are now active. This duty imposes upon the Chief of Engineers the obligation of carrying out Air Corps building projects, as well as other Army expansion projects, and housing, and the construction of our outlying island bases. It seems to me Mr. Speaker, that we should pause for a moment to pay tribute to this outstanding Army officer who is about to leave the service.

The engineers of the Army is one organization of which it is commonly said, "brings to the Government 100 cents of value for every dollar that is expended." It has carried out the duties assigned to it without criticism and has always been considered one of the most important branches of our national defense.

I am sure I express the sentiments of many Members of this body, who during their official career have had occasion to do business with Major General Schley, when I say that he will be missed, and I know all of them join me in extending to him our best wishes for a long and happy life and a well-deserved rest.

To Keep Boom From Becoming Boomerang

EXTENSION OF REMARKS

OF

HON. JOHN H. TOLAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EDITORIAL FROM THE OAKLAND (CALIF.) POST-ENQUIRER

Mr. TOLAN. Mr. Speaker, under leave to extend my remarks, I take unusual pleasure in placing in the RECORD an editorial from the Oakland (Calif.) Post-Enquirer under date of September 8, 1941. As chairman of the Select Committee of the House on National Defense Migration, I deem this editorial one of the most timely and intelligent expressions I have read.

Our committee consists of Congressmen SPARKMAN, of Alabama; OSMERS, of New Jersey; CURTIS, of Nebraska; ARNOLD, of Illinois, and myself. We will hold hearings in Detroit, Mich., on September 23, 24, and 25, where we will explore the effect of the new national-defense economy upon the heart of the Nation's industrial development. Among the witnesses to be heard are the Governor of the State of Michigan and State and Federal officials. The particular subject for examination will be the extent of present and future unemployment because of the shift from nondefense to defense industries and particularly because of the limitation in automobile production.

We expect that many of the witnesses will discuss plans looking toward cushions for the post-war unemployment shock.

Following the Detroit hearings we intend to visit other parts of the country, as we have done already in southern California, New England, New Jersey, and in Maryland, where migration from States to defense-production centers has proved great, following the mandate of the House to investigate this great interstate movement of human beings looking for jobs.

Unless we can find some plan to cushion the economic shock after the war is over, the peril to our Nation, in my opinion, is as great as any possible attack by any foreign power.

The editorial follows:

[From the Oakland (Calif.) Post-Enquirer of September 8, 1941]

TO KEEP BOOM FROM BECOMING A BOOMERANG

Congressman JOHN H. TOLAN, of Oakland, has been making an intelligent study of the defense industry boom and the likelihood of the boom turning into an economic boomerang after the emergency is past.

This kind of a survey deserves attention and support.

The Nation is aware of the good work done by the Tolan committee in Congress in investigating interstate migration.

Even more valuable should be a coordinated study of the defense-industry situation and a scientific appraisal of methods to prevent a dangerous dislocation after the boom.

California has reason to be specially interested in such a survey.

For this State leads in defense-industry contracts. Its margin over the runner-up for the leadership in defense industry is more than $200,000,000 worth of contracts.

This means that California is becoming an industrialized State; that industry is competing with agriculture at last for economic supremacy in California.

In many other States, on a somewhat smaller scale, the same thing is happening.

Also there is a common assumption that when peace comes, when the necessity for building gigantic armaments is over, there will be an economic crash that will make the late depression seem like a runaway bull market in the palmiest days of 1929.

Congressman TOLAN believes that all possible measures should be taken to prevent such an assumption from becoming a reality.

Undoubtedly there are such measures to be taken.

In some overindustrialized areas of the East, for instance, decentralization is being considered, and business management itself is one of the sponsors of this movement.

The shock of economic readjustment can be absorbed much more easily by workers who have a few acres in the country than by workers who are huddled in hundreds of thousands in vast industrial centers.

But California is underindustrialized.

Until now agriculture has been the really big industry here. There have been no industrial plants to compare with many of the great plants in the East.

We will need such plants to take care of the scores of thousands of workers that we have trained for our defense industries; and after the war there should be a market for the products of such plants.

An awakening China, at peace and with the tremendous job of building a new life for one-quarter of the world's population, will itself provide a market unimaginably vast—and California industries should have a preferred opportunity for taking advantage of it.

One big industry needed here is a first-class steel mill, complete with blast furnaces, built on a scale that would enable it to supply the western demand for steel and to compete with steel mills anywhere.

This need was brought out recently before the Truman Senate Committee on Defense Contracts.

It was shown that western industry is handicapped by the necessity of procuring steel in the East—and that this handicap is unnecessary, since there are vast quantities of coal and iron ore here in the West.

The defense-industry boom is creating automatically new problems in housing, schools, hospital facilities, sewage, police and fire protection.

It has intensified the interstate migration that began years ago with the uprooting of tens of thousands of American farm families by drought and farm mechanization—only now the migrants are looking for defense factory jobs, not jobs on farms.

Undoubtedly it would be better if each region could train and supply its own defense workers and, where this is not possible, to plan now for the development of industrial resources that will provide employment when the pressure for guns, tanks, shells, and powder relaxes.

It is a vast job, calling for all the planning resources of the Nation. In calling attention to this problem, and outlining some of the factors involved in it, Congressman TOLAN is making a contribution of first-rate importance.

District of Columbia Gasoline Tax

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. SPRINGER. Mr. Speaker, I want to take this time, and this means of informing every Member of the House of Representatives, how their constituents and how my constituents are being forced to contribute to the maintenance of the District of Columbia, while a privileged class of taxpayers in the District of Columbia are paying a lower tax than do our constituents.

We Members of the House are rendering our constituents a flagrant disservice by permitting this outrage to continue. This condition has prevailed too long in relation to the District of Columbia, and now it must be corrected, or we Members of this Congress, Republicans and Democrats alike, must stand the censure which our indignant constituents will heap upon us.

The whole tax situation in the District of Columbia is a disgrace, yet we Members of the Congress do nothing about it but talk and make speeches.

Now we have the chance to vote on this question, and I propose to make my position clear and plain.

The general tax situation is not so glaring, because it is hidden in a maze of figures of tax experts and accountants, but the District of Columbia gasoline tax comparison is easily made and condemns us on its face. Our constituents throughout the United States pay an average gasoline tax of 4.4 cents per gallon, exclusive of the Federal tax. The District of Columbia pays 2 cents.

Through the efficient performance of a high-powered, always on the job, type of lobby, composed of selfish interests, the autoists of the District of Columbia and all those who come into Washington to buy gasoline pay only 2 cents per gallon gasoline tax, exclusive of the Federal tax.

Yet we Members of the House voted the District of Columbia $6,000,000 this year to help run the affairs of Washington, while selfish owners and operators of large fleets of busses, trucks, and private cars in the District of Columbia were and are now enjoying the lowest gasoline tax in the Union with one exception.

The House of Representatives did defeat with an overwhelming majority the infamous Overton formula which would have taken about $9,000,000 per year from the Federal Treasury for the District of Columbia, which our constituents would have provided, while citizens of the District of Columbia were evading their share of their own tax burden, and were avoiding the use of an adequate gasoline tax as a source of revenue for needed road, street, and highway control and other traffic purposes.

This condition prevails because Members of Congress do not know how clever this selfish lobby is.

Now they are out in the open. The president of the Capital Transit Co., which has a monopoly on the streetcar and bus service in the District of Columbia, openly admitted that levying an adequate gasoline tax in the District of Columbia, would cost his company $120,000 per year in additional tax. He prefers that our constituents pay this $120,000 annually rather than collecting it from his monopolistic public utility.

This utterance by the president of the Capital Transit Co. explains the source of the high-powered lobby that has been responsible for the smearing campaign directed against the good intentions of the distinguished chairman of the District of Columbia Committee of this House, Mr. RANDOLPH, when he introduced a bill, in August 1939, to raise the gasoline tax here.

The selfish profiteers of a 2-cent gasoline tax in the District of Columbia tried to create the impression that our honored chairman and colleague, the gentleman from West Virginia, was serving the big oil companies, when he was in truth serving the interests of his own constituents in West Virginia who pay a 5-cent gasoline tax, exclusive of the Federal tax.

This same high-powered lobby seems to be able to set aside and nullify a very fine report by a special subcommittee of the District of Columbia Committee, submitted through Mr. POAGE, of Texas; also to disregard a fine report on the gasoline-tax subject submitted by the Streets and Traffic Subcommittee of the District of Columbia Committee, of which Mr. SCHULTE, of Indiana, is chairman; and to cast serious reflections upon the official report by Captain Whitehurst, of the Highway Department of the District of Columbia.

All these reports recommended an increase of 2 cents per gallon in the gasoline tax in Washington. These fine reports were discredited by this high-powered lobby which is determined to save $120,000 per year for this transit monopoly which is giving Washington high-priced, low-quality transportation service, and through their high-powered lobby have silenced the fact that the streets of the city of Washington are worn out and torn up by the busses and streetcars operated by this monopoly. It is high time that the Congress looked over the inside workings of the Capital Transit Co. This monopoly had the audacity to recently publish a paid display advertisement in all the Washington press showing how motorists carrying one person "clutter up" the streets while a street car carrying 50 people does not. I invite any Member of this body to go to the corner of Pennsylvania Avenue and Fourteenth Street, any morning during the week, and look up Fourteenth Street, and see who is monopolizing the use of the streets; then go to Thirteenth Street, just one block east, and look north on this street, and count the busses in sight, and see who is monopolizing this street. Streetcars are lined up bumper to bumper on Fourteenth Street from Pennsylvania Avenue north to H Street, and busses, bumper to bumper, on Thirteenth from Pennsylvania Avenue to I Street.

It is a notorious fact that all vehicular traffic in Washington is geared up to favor the streetcars and busses. This is made possible because this high-powered lobby has been able to hood-wink Congress all these years. It is also a notorious fact that this transit company does more to damage the streets by use of its heavy busses than any other agency in Washington. Of course, they do not want to keep up these streets, and they use the gullible Washington motorist and his District of Columbia association to "pull their chestnuts out of the fire for them."

This same lobby worked against additional traffic police, because it would mean more gasoline taxes for them to pay. For a number of years the Major and Superintendent of Police has begged and pleaded with Congress for more traffic police and police to control crime. Each time he was refused. Why? Because behind the scenes has been this ever-present high-powered lobby, "keeping watch over its own." It did not want anything to happen that would suggest a reason for more gasoline tax in the District of Columbia.

This lobby history may throw some light upon recent developments in this gasoline-tax controversy. The Whitehurst survey was authorized by an act of Congress and paid for by an appropriation of this body. The purpose of this survey was to secure an official determination of the needs of the District of Columbia for the solution of its traffic problem, and to suggest means of adequately financing the needed improvements. This study was an official one, authorized by Congress, and when completed was to be a guide for intelligent congressional action.

The result of this scientific survey, now known as the Whitehurst plan, was to evolve a program of improvements necessary to permit a proper and efficient flow of traffic, and to save human life, which has been so ruthlessly sacrificed in the past few years.

The report called for an expenditure of more than $40,000,000, to be completed in approximately 8 years, and to be financed by an additional gasoline tax of 2 cents. This report was approved by the District Commissioners, and they directed the Corporation Counsel of the District of Columbia to prepare a bill to carry out the proposed tax program. Accordingly H. R. 5307 was prepared by the Corporation Counsel and introduced by Chairman JENNINGS RANDOLPH, of the District of Columbia Committee.

The Randolph bill, H. R. 5307, provided for an additional gasoline tax of 2 cents and was the same in principle as the bill which I introduced in April of this year, H. R. 4549, so I announced that if the District of Columbia Commissioners desired to reach my objective in this way, that I would support the Randolph bill which he introduced July 14, 1941.

After the introduction of H. R. 5307 as aforesaid, the Fiscal Affairs Subcommittee of the District of Columbia Committee proceeded to hold hearings upon both H. R. 4549, my bill, and H. R. 5307, although they had been advised by the District of Columbia Commissioners that they favored the passage of the Randolph bill, H. R. 5307.

This last hearing of the Fiscal Affairs Subcommittee was conducted for the purpose of talking the District Commissioners and Captain Whitehurst out of raising the gasoline tax to 4 cents as proposed by these two bills, which said Fiscal Affairs Subcommittee suggested that the gasoline tax be only raised to 3 cents, or an added tax of 1 cent instead of 2 cents.

During the course of this hearing Captain Whitehurst was asked to advise the subcommittee what improvements could be made with an additional 1-cent tax, and what could be done with 2 cents.

He accordingly advised them that the program would be delayed in its completion from an estimated 8 years by using an additional 2-cent gasoline tax, to an estimated 12 years or more by using an additional 1-cent gasoline tax. That is with the 1-cent additional gasoline tax, traffic murder and mayhem would continue for 12 years, instead of levying a 2-cent additional tax and ending it in 8 years.

At this hearing before the Fiscal Affairs Subcommittee, to which I have referred, the Capital Transit Co. had its representative who again officially advised the subcommittee that an additional tax of 2 cents would cost Capital Transit Co. $120,000 per year, and that if they had to raise the tax, that the Capital Transit Co. preferred that it be raised only 1 cent, and thus pass the other $60,000, repre-

sented by 1-cent tax, on to our constituents.

Long prior to the Whitehurst report, the Bureau of Efficiency in 1932, as shown at page 8 of the Poage report, recommended that the District of Columbia gasoline tax rate be raised to 4 cents.

Mr. Speaker, I give you this brief history of the gasoline-tax controversy to show Members of this House what has been happening in the consideration of this subject. I want Members of this body to know what interests they have been serving instead of looking after the interests of their own constituents; I do not believe that it makes much difference to the average motorist in the District of Columbia whether he pays a 2-cent gasoline tax or a 4-cent gasoline tax. I notice they travel over the United States considerably and when they get away from Washington, D. C., in any direction, they pay from 4 to 7 cents per gallon State gasoline tax. I have not heard them murmur about it.

However, these transportation monopolies that live off the public, and do more to destroy the streets of Washington than any other agency, through use of their heavy busses are vitally interested in this question, and do not, hesitate to appear before the Fiscal Affairs subcommittee or any other congressional committee considering the subject, and voice their selfish objections.

They induce citizens' associations to join them by going out to their meetings and telling them that they will have to curtail traffic accommodations if there are added gasoline taxes.

The big oil companies are, as a matter of principle, vigorously opposed to any increase in gasoline taxes in the District of Columbia, and everywhere else. They have actively opposed every increase in the gasoline tax in the District of Columbia, openly and above board. Their representatives have appeared before committees of Congress upon numerous occasions. An examination of the records of those hearings will disclose this fact. Their association recently put out a bulletin to its members in which the increase in the gasoline tax was opposed.

It was stated that an increase of 2 cents per gallon in the gasoline tax in Washington would be a Christmas present of millions of dollars to the big oil companies, because they are secretly rebating a kick-back of all or part of the excess gasoline tax to their dealers in Maryland and Virginia in the Washington price area. We have not seen any of the big oil companies in here asking for this Christmas present.

I do not know that the big oil companies are doing this. I do know that the differential in gasoline tax as between the District of Columbia, and Maryland and Virginia gasoline tax has permitted the Washington gasoline dealers to engage in a venomous price war from time to time, which has been ruinous to the Maryland and Virginia dealers. I do know that this group of Washington gasoline dealers organized themselves into a combination which caused the Attorney General of the United States to demand its immediate dissolution. I also know that this differential has resulted in adulteration of gasoline to such an extent that the District of Columbia prosecuted certain Washington dealers for such adulteration and short measure. This same group opposes a legitimate 4-cent gasoline tax in the District of Columbia so as to equalize it with the gasoline tax paid by the constituents of every Member of Congress with one exception.

Adulteration and "bootleg" gasoline and fraudulent practices of gasoline dealers was the subject for a demand for corrective legislation for the District of Columbia by the Commissioner of Weights and Measures.

I know this also, and I speak as a lawyer, too, that if any large oil company is granting to a Maryland dealer in the Washington price area, a 1-cent rebate, and charging another dealer within 2 miles of him, but outside the Washington price area, the full price, that such company is violating the Robinson-Patman Act, which forbids sales of the same class and kind of article to like purchasers at different prices.

This is a proper subject for the Attorney General of the United States, and the Federal Trade Commission to study. Of course, if this practice is stopped by legal proceedings by the Attorney General, dealers in the Washington area in Virginia and Maryland, who have their life's savings invested in the real estate and buildings in which they conduct their business, will be ruined and they can thank Congress for their unhappy plight.

This condition is permitted simply because a high-powered lobby is against paying any tax it can avoid, even when the money is needed to improve streets to save human life. This is an evidence of the "soulless corporation" of which we have heard so much.

Mr. Speaker, it is time for Members of this Congress to think of the interests of their own constituents, and not of how much money they can save in gasoline taxes for some Washington, D. C., public utility. It is also time for us to give some consideration to the subject of traffic control, and traffic murder as we know it in Washington, D. C.

We have a twofold duty to perform here; on the one hand, we must protect human life in the District of Columbia from traffic murder. We must provide adequate police protection so that we will not have to divert police from ordinary police duty to traffic duty to the detriment of the safety of citizens of Washington. This city is notorious for its record of unsolved crimes. The history of one crime recently indicates that it was perpetrated in the daytime, downtown, in a thickly populated area, yet no policeman was near enough to even see the automobile used for this purpose, or to see the criminal dispose of the body in broad daylight. These things are a disgrace and are the result of trying to protect a monopoly against a reasonable gasoline tax; to protect it against a gasoline tax comparable to that paid by our own constituents.

I said we have a twofold duty to perform; we must protect the citizens of Washington, D. C., and we must be fair to the Federal taxpayer who is our own constituent. Is it fair to this Federal taxpayer to ask him to help Washington, and at the same time allow Washington a much lower gasoline tax rate than our Federal taxpayer constituent pays? The answer to that question is with you.

In the consideration of this present traffic problem, two conclusions are inevitable. We must have the Whitehurst program executed, or some other equally as expensive; and Washington must pay for that program. Congress cannot justify its position to its constituents, if it appropriates a large sum of money from the Federal Treasury to pay for any part of this improvement, and at the same time permit the gasoline tax in the District of Columbia to be fixed at a point lower than the average of the States. There is another certainty that has to do with saving human life, and that is this program must be completed as speedily as possible, having in mind a reasonable gasoline tax program. There is no excuse for delay; there must be no such unreasonable excuse for delay as saving a large public utility $60,000 a year gasoline tax.

If a 2-cent additional gasoline tax will provide a completed Whitehurst plan in 8 years, and the present bill provides for a completed Whitehurst plan in 12 years, the present record of traffic murder should dictate to us that we should immediately amend the present pending bill, H. R. 5558, to read 2 cents instead of 1 cent. It should be completed much sooner than 8 years if it can be done without laying too heavy a burden in taxes. It is not too heavy a tax burden to collect from Washington motorists what our own constituents pay in gasoline taxes. There is certainly no justification for delaying the completion of this Whitehurst plan 4 years longer just to save the Capital Transit Co. $60,000 a year. How many lives can you buy for $60,000? If the life of my loved one was involved in the transaction, I would not trade it for the whole Capital Transit Co. investment.

Why this sudden change from H. R. 5307, introduced by Mr. RANDOLPH at the suggestion of the District of Columbia Commissioners, to H. R. 5558, introduced by Mr. RANDOLPH at a later date? Whose interest does it serve?

Certainly not the unfortunate people of Washington who will go to their graves as a result of traffic accidents, which the Whitehurst plan is designed to save or lessen the possibility thereof. Certainly not the Washington motorist who may be involved in a traffic accident that will take his life or involve him in an accident which may subject him to a large damage judgment. The Washington motorist is not complaining about this tax, if he gets value received for his money. It is only a false leadership of the Washington motorist that wants to shift his tax liability to the motorist in your congressional district and mine. One interest served is the large utility interest that always wants to avoid tax without regard to human safety. If this improvement is needed—and everyone admits it is—then why not provide the money and complete it at the earliest

possible moment and stop this traffic murder in Washington?

Why not provide an adequate supply of traffic police, so that ordinary police can be released to look after the safety and well-being of Washington citizens, so that our disgraceful civic record, of rapings, murder, and other major crimes will decrease? Is it worth the money an additional 2-cent gasoline tax will produce to make Washington a safe place in which to live? Or shall we save $60,000 a year for a public utility?

Mr. Speaker, I am a crusader for low taxes. I wish that I could now wave a magic wand and reduce the tax burdens of the Federal taxpayer. I do not see how this can now be done in view of the present state of the National Budget. However, we can save the Federal taxpayer whenever the opportunity presents itself. We certainly do not want to add to his tax burden the burden of some other group of taxpayers. It is not the local tax burden which will ruin this country; if it is ever ruined by overtaxation, it is the Federal tax which will produce this result. Local taxes are near to the taxpayer, and the local taxpayer has the opportunity to adjust expenditures to tax ability, but the Federal tax in its source of enactment, as well as the appropriating power, is far removed from him and not easily recognized, and I might add not so easily controlled. The burden of protecting the Federal taxpayer is your job and mine.

However, the bill which I am discussing is not a bill to raise taxes, it is a bill to place the tax where it belongs, and equalize the tax burden as between the District of Columbia taxpayer and the Federal taxpayer. It is a bill to relieve my constituents and yours of a tax burden belonging to the citizens of the District of Columbia. If we do not now provide the tax money to make this Whitehurst improvement, sooner or later Congress will be called upon to accelerate this improvement, and of necessity we will have to donate Federal funds to do it.

That has been the history of the past, and have we any right to expect the future will be any different? Whenever an improvement was needed in Washington, and there were no funds in the District of Columbia account, the Federal Government has donated the money. Attached to this address is a list of Federal donations to the District of Columbia from 1925 to 1941 which Members of Congress could study with profit, in the light of the low gasoline tax rate in Washington, D. C., as compared with your States, and the ridiculously low gasoline tax rate in Washington.

I appeal to the citizens of the Nation to arouse themselves to a realization that Washington, D. C., has had an abnormal increase in population, and one of the largest pay-rolls in the world; that merchants and businessmen of the District of Columbia are waxing fat on their profitable business and low taxes, at your expense.

These people are in Washington because the Government has provided them with good jobs and they are making plenty of money. They would not stay here if that were not true, and when they do not like it here they can leave. You citizens of Indiana, Ohio, West Virginia, Texas, and other States do not owe anything to Washington, D. C., that you do not owe to yourselves. You certainly do not owe Washington from $6,000,000 a year or more, and have Congress permit them to enjoy the cheapest gasoline tax rates in the country, as evidenced by this gasoline sales tax. Washington citizens should bear their just share of gasoline tax burden, and if they do not they "mooch" on you, because of large Federal gifts of money by Congress. This may be a small item in the annual Budget, but these small items make the sum total of your ever-increasing Federal tax bill. Ask your Congressman to stop this inequality now, by increasing the gasoline tax in the District of Columbia 2 cents.

I call upon the taxpayers' associations all over America to rise up in righteous indignation, and look after your own interests.

Your tax burden is increasing year after year, and is destined to increase if we do not watch every expenditure. Certainly you cannot afford to permit Washington to have the lowest gasoline tax rate in the Union, and still contribute to their expenses through large Federal gifts. Your tax money helps to provide these gifts. Your Federal tax would be less if Congress required the District of Columbia to bear its share of the gasoline-tax burden. If you are told that there is nothing to this statement, and that Washington taxes are not low, ask the person with whom you are discoursing, how about the 2-cent gasoline tax in Washington, D. C., as compared with the 5-cent West Virginia, the 4-cent Ohio, and the 4-cent Indiana tax, and the 4.4 average for the United States? They may distort the general tax ratio, but they cannot distort the comparison I have just stated. Your immediate action is required; write and telegraph your Congressman and Senator now.

In closing, let me say again, to the Members of this Congress, if we put off to a 12-year or more finishing date the completion of the Whitehurst plan, we are indirectly responsible for every case of traffic murder in the meantime. If we limit the number of police because of inadequate traffic officers, we are indirectly contributing to the continued high criminal record of the Nation's Capital. We are prolonging a national disgrace in crime. If we should have this Whitehurst plan at all, we should have it as quickly as possible. If we do not need it, then quit talking about it. If the present traffic situation is a satisfactory one, then let us go on with our traffic congestion, high traffic murder record, and save tax money for public utilities in Washington. If we do need it, and the District of Columbia Commissioners have said we do, and recommended that it be completed in 8 years, then why try to talk them out of it, in favor of a continued distressful situation?

Members of Congress, who are we serving? The constituents out in our congressional districts, the people of Washington, D. C., who need the Whitehurst plan completed quickly, or public-utility interests, who ask us to delay this program? The vote on this bill will answer the question.

H. R. 5558 should be amended to read "2 cents" instead of "1 cent," and thus level the gasoline tax rate near to the average of the States. Then give Washington the completed Whitehurst plan in 8 years or less, instead of delaying it to 12 years.

Federal contribution to the District of Columbia by years and amounts per year

1925	$9,000,000
1926	9,000,000
1927	9,000,000
1928	9,000,000
1929	9,000,000
1930	9,000,000
1931	9,500,000
1932	9,500,000
1933	7,775,000
1934	5,700,000
1935	5,700,000
1936	5,700,000
1937	5,000,000
1938	5,000,000
1939	5,000,000

Canada Does Not Want the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EDITORIAL FROM THE MONTREAL GAZETTE

Mr. BEITER. Mr Speaker, under leave to extend my remarks, I include herein an editorial from the Montreal Gazette of September 5 1941, on the subject of the St. Lawrence seaway, entitled "We Learn About Ourselves."

This is further proof that Canada does not want the seaway. When the issue is brought before the House for consideration let there be no mistake about that.

The editorial follows:

[From the Montreal Gazette]

WE LEARN ABOUT OURSELVES

Promoters of the St. Lawrence seaway project at Washington are supplying some interesting information about Canada, interesting and surprising, all the more so in that it emanates from an official source. A booklet has been issued containing certain remarks by Congressman L. C. RABAUT, Democrat, of Detroit, who asked a number of questions. Answers to these questions are supplied by M. J. Danielian, director of the St. Lawrence survey, in the United States Department of Commerce. Says Mr. Danielian: "The St. Lawrence project would strengthen our defenses in the northeastern corner of the North American continent by giving us a protected inland water route to our new military base at Newfoundland. At present, because there are no rail connections east of Quebec, all supplies and equip-

ment for our Newfoundland base must be sent through the Atlantic sea lanes. In time of war this route might be hazardous, but with completion of the seaway defense materials could be sent down the St. Lawrence River to Newfoundland without fear of interference from enemy naval units."

There is so much wrong with this statement, particularly as made by a Government official and used for propaganda purposes, that any Canadian reader must be inclined to question the accuracy of his own reading. So far as water facilities are concerned, these are present now and can be used for the purpose which Mr. Danielian has conjured up. There is a 14-foot all-water route from the foot of Lake Ontario to Montreal and a route of a minimum depth of 35 feet from Montreal to Newfoundland. Ships of 14-foot draft can transport supplies from any point on the Great Lakes to the head of ocean navigation, and vessels of 35-foot draft can operate between Montreal and Newfoundland, or from Sorel, Three Rivers, or Quebec, all ports with modern equipment and connected by rail with all parts of the United States. So much for that.

Mr. Danielian asserts that "there are no rail connections east of Quebec." He has not so much as glanced at a Canadian railway map, assuming, of course, that he has made his statement in good faith, that he is honestly ignorant of the facts. The main line of the Canadian National Railways, extending down into the Maritime Provinces, reaches the port of North Sydney, Nova Scotia, a point within 100 miles of the Newfoundland railway terminus at Port Aux Basques. Materials for the United States base in Newfoundland can be sent to Sydney by rail from any place in the United States. It is an extraordinary thing that the director of the St. Lawrence survey, speaking and acting for the United States Department of Commerce, should make himself responsible, and the Department responsible, for a statement so widely at variance with the facts, that he did not even take the elementary precaution of ascertaining what the facts are. The information was easily available, probably in Mr. Danielian's own office, but it was not obtained and apparently not sought.

The trouble is that this kind of propaganda is likely to influence congressional and other opinion in the United States and to have a bearing upon congressional judgment. An assertion from a presumably authoritative source is always likely to be accepted because of its origin. In this instance acceptance is certain wherever knowledge of the truth does not exceed Mr. Danielian's understanding of it. If the St. Lawrence waterway issue is to be decided on its merit, well and good, but it should not be determined on misstatements and misinformation.

A Yank From Oxford

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

EDITORIAL FROM THE GOSHEN (N. Y.) DEMOCRAT

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Goshen Democrat, Goshen, N. Y.

I believe that the distinguished war record of Hon. HAMILTON FISH during the World War should be a passport to the hearts and minds and confidence of those whom he has the honor to represent. There is no doubt that his experience in the European conflict of 24 years ago should qualify him to speak with some authority with reference to the plots and intrigues of foreign nations that gave rise to the present turmoil in Europe.

No man is better able to appreciate the danger of sending an A. E. F. to Europe, totally unequipped, than my distinguished colleague whose record of patriotism and military service stands high in the thoughts and appreciation of every true American.

The editorial follows:

[From the Goshen (N. Y.) Democrat of September 12, 1941]

A YANK FROM OXFORD

Orange County's interventionist faction, revolting against the no-war policies of Congressman FISH, went out of the county, region, and State to get an opponent to debate the Congressman on his policies in Warwick next week. It reached into the very heart of the so-called lunatic fringe to select as the defender of its beliefs one of the typical Roosevelt theorists who've been doing their best to hurl this Government on the rocks of destruction. The interventionists' oral gladiator will be Prof. William Yandell Elliott, industrial consultant in the Office of Production Management and a member of the faculty of the School of Public Administration at Harvard University.

It would seem to us that the obvious necessity of going outside its own group to secure a debater places our country's interventionist clan in the blank-cartridge category—noisy but impotent. It seems like a confession on the part of our interventionists that they have no member in their ranks possessed of sufficient pro-war ammunition to stand up in a verbal duel against the antiwar pellets of Congressman FISH.

That's enough to deprive the interventionists of much of their smoke before the debate even takes place. But what, we would say, delivers a very damaging blow to the interventionists' cause is the fact they selected a Yank from Oxford to do their shooting.

Professor Elliott, although undoubtedly a brilliant and able gentleman and a fine upstanding citizen, was nevertheless educated abroad. He attended the Sorbonne in Paris and Balliol College at Oxford. He thus spent a number of his formulative years in England and on the Continent, lived their ways, was part and parcel of their thoughts and viewpoints.

The ways of Europe are not our ways. The philosophies of the peoples of Europe, raised amidst international intrigues, hates, and jealousies, are not our philosophies. Their inherent beliefs that war is eternally necessary to settle their disputes are not our beliefs.

Because of his early associations with the British, it may be presumed that Professor Elliott has a considerable affection for them and their ideas. We wouldn't say that he is a dispenser of British propaganda for war in this country, but we would say that our interventionists reached out a little too far in obtaining a champion for their cause.

Why didn't they choose a typical American, one who hasn't lived in England and doesn't possess British leanings? They could not have done much better at getting a true British sympathizer—one who would like to see us in the war to aid our European cousins—unless they had reached out and snared Winston Churchill himself.

Retailers for Defense

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

ADDRESS OF DONALD M. NELSON, EXECUTIVE DIRECTOR OF THE SUPPLY PRIORITIES AND ALLOCATIONS BOARD AND DIRECTOR OF PRIORITIES, OFFICE OF PRODUCTION MANAGEMENT

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a speech by Hon. Donald M. Nelson, Executive Director of the Supply Priorities and Allocations Board and Director of Priorities, Office of Production Management, at the Retailers for Defense dinner given by the National Retail Dry Goods Association at the Mayflower Hotel, Washington, D. C., Monday evening, September 15, 1941:

I am happy to take part in helping launch the Retailers for Defense Week.

It is not only because I am a retailer myself and feel at home in this group. There is another reason. The retailer touches the public—directly, intimately, daily—as no Government organization can hope to do. And this defense program is a public program; it symbolizes an aroused public arming, standing up to defend its fundamental American rights against any threat the world can offer.

I want to congratulate you retailers on your excellent cooperation with Secretary of the Treasury Henry Morgenthau on the sale of defense bonds and stamps. Under the chairmanship of Major Namm you are doing an important job. At this moment you are performing a genuine service to the defense program by offering the public a chance to invest in the country's defense and in the country's future.

I do not believe that at this date I need spend much time describing that threat or explaining the terrible urgency of our task. For 2 years we have seen the menace to our freedom slashing its way toward world mastery. For 2 years we have had to live with the realization that the blessings we enjoy—freedom, plenty, the right to speak and worship and act as we please—are blessings we can keep only so long as we stand ready and able to defend them vigorously. The time for talking about how and why we are threatened is past.

But it is vitally important for us to talk in some detail about the things we propose to do to save our freedom.

Hitler has boasted that he has allies in every country that opposes him. His greatest allies, he has said, are doubt and confusion. Now doubt and confusion can came from several sources. They can come from uninformed or designing persons who deliberately play Hitler's game by preaching disunity, stirring racial or religious hatreds and suspicions, arguing that our perils are imaginary, and that this emergency is synthetic.

You are familiar with their line. It is designed to confuse you. They want to create doubts in your mind as to the wisdom of our whole defense program. They don't seek to convert you to nazi-ism. All they need as a weapon is the doubt they can create in your mind.

They want you to think that there is no danger of military action against the Western Hemisphere. They would like you to believe that a Hitler victory in Europe and over Britain would not affect us adversely. We would trade with Hitler after the war, they say, and everyone would be happy.

I might point out right here that any such trade would be on Hitler's terms, exclusively. We could offer no economic resistance.

That is the line they follow. Beware of their words, their doubt-inspiring phrases. Seek the facts and base your conclusions on the facts alone. Then we may be sure that the good sense and the aroused determination of the American people can deal effectively with the authors of such sentiments.

More dangerous are the doubt and confusion which arise when the public does not understand what is being done. We who are responsible for planning and directing this defense program must take the public into our confidence. We must not only see that the proper things are done and done promptly: We must also see that the public understands why those things are being done, so that the will of the entire Nation can be united and made effective.

In other words, the American people have a right to know what is ahead of them. They have a right to know what this defense program is going to mean to them in its effect on their everyday lives. We are going to demand much of them: We can do no less than explain factually what is going to be demanded and why it is necessary.

I must begin by saying frankly that we have only begun to feel the effects of this defense program. In a sense, everything that has been done so far is preliminary. Much has been accomplished: We are today, for example, producing finished defense goods at a rate of $1,250,000,000 a month. When you consider the immensity of the task of converting a peaceful nation into a great arsenal, that is a remarkable achievement. Yet it is not nearly enough.

Take everything we have done so far—the effort we have made, the energy and determination we have summoned—and then double it. Our slogan henceforth might well be "Double or nothing." If we don't double our present effort, and pile still more on top of that, we face the fate that has overtaken a dozen other nations who gave too little and gave it too late.

What does that mean to us, in terms of everyday life?

Broadly speaking, it means that in every area of national life we have got to work off the fat and harden the muscle. We cannot waste anything—not the labor of one man, not the use of one pound of needed material, not the service of one useful bit of machinery. I mean that literally. Strong as we are and rich as we are, this job is going to take everything we have. We can no longer afford to waste anything.

Let me explain, as simply as I can, why that is so.

To begin with, we must greatly increase our defense production. Military-requirement schedules must and will be stepped up. In every conceivable way we must turn our matchless productive plant to the job of stocking the arsenal of democracy. We must outdo everything we have yet planned.

At the same time we must provide the things which our civilian economy needs. Notice—I said the things that it needs. Everything that it does not really need is, in a sense, and for the duration of this emergency, sheer waste. But the things that our civilian population really needs must be produced. The military program is only part of our defense effort. It rests basically upon the civilian economy; if that economy is not kept strong the entire effort collapses. Fully as important as stepping up military production is the job of keeping our civilian economy in good running order. But by good running order I mean providing for the civilian economy only those things which are absolutely essential to keep it on a maintenance basis. I do not mean business as usual. Business as usual is out: It has been out for some time, although many have not yet realized it. Protection of our country against danger from any quarter has first call on our resources. While we are providing that protection, we must also see that those things which are necessary to the daily life of the American people are provided in adequate volume.

Obviously, that double task is going to impose a tremendous strain on all of us. It is going to require some very great readjustments. It is going to mean, for instance, that the production of things we do not really need will be very sharply upset. If there is a factory which takes needed materials, needed manpower, and needed machinery to produce things which we can get along without, it must be converted to the production of things that we cannot get along without. In every way possible, we are compelled to use all of our materials, all of our men and all of our factories for the production of essentials. Whether they are military essentials or civilian essentials makes little difference. We draw the line, not between military and civilian production, but between the things we have to have and the things we can temporarily get along without.

That means—for the duration of the emergency—a somewhat lower standard of living for all of us, particularly as to the luxuries we practically take for granted. We might just as well face that fact without trying to disguise it. A high living standard involves the production of a great many frills and trimmings. In our present condition, frills and trimmings are waste. And we cannot—for our country's life, for the sake of our freedom, for the sake of everything we live by—afford to waste anything these days.

So we are going to give up the frills and the trimmings. We are going to give them up because we have counted the cost of this tremendous effort and know that it is worth it. We are going to give them up because we are determined, above everything else, to make this a world in which freemen can live—a world in which the pleasant, comfortable extras of daily life need not be blotted out by the permanent demands of a great war machine, a world in which our sacrifices are temporary rather than permanent.

This is going to reach down into our homes and touch us where we live. Yet, just because we have resolved to look unpleasant facts in the eye without disguising them is no reason why we should make them look worse than they really are. In many ways this business of giving up the frills and trimmings is not going to be a real hardship at all. In one very broad and important field, which is of immediate interest both to the retailer and to the consumer, it will actually be a blessing in disguise.

I am referring to the simplification of lines and styles of the goods which are produced for retail trade. Notice that I said "simplification," not "standardization." There is a world of difference. We do not propose to standardize styles. We do not propose to tell the American people that they must all sit in standardized chairs, wear standardized shirts, get up to the tune of standardized radios, and crawl dejectedly into standardized beds at the end of dull, standardized days. Simplification is much different.

Every retailer knows that he does most of his business on a small part of his stock. If he could carry fewer styles and sizes of things—fewer styles of shoes, fewer styles of washing machines, fewer styles of overcoats and dressers and kitchen utensils and vacuum cleaners—he would be better off, provided that the elimination of the abandoned styles was performed wisely, with the best interest of consumer, retailer, manufacturer, and national economy in mind. Nor would the consumer feel any particular hardship. After all, we are not exactly asking the American people to bear a great load if we ask them to select their winter blankets from among half a dozen sizes and colors instead of from among 30 or 40. No one suffers much if he has only four new car styles to choose between instead of having a dozen, provided that the cars which are offered are just as good.

In the same way that styles and lines can be reduced, the frills and trimmings that go on things can be cut down. The best illustration I can think of is that familiar object, the city fire engine. Your city's fire engine will be just as useful—it will go just as fast and put out fires just as efficiently and speedily—if it is made without the shiny brass and nickel trimming, if aluminum and copper are cut to a minimum, if that imposing brass bell in front of the driver is replaced by an ordinary siren. It won't win any prizes in parades, to be sure, but it will provide just as much fire protection. And during this emergency we can give up some of our glitter without suffering very much.

I have gone into a good deal of detail about all of this, because this is one of the most important fields in which we can reduce waste. Those extra styles, those frills and trimmings, those decorations and ornaments which are made from the critical materials needed for defense—for the duration of this emergency they are waste and we are going to get along without them. Within a day or so the Office of Production Management will announce a broad, detailed campaign to bring those savings into effect. The job will be done the democratic way. Everyone who is interested will have a chance to be heard. But it will be done just as speedily and effectively as we know how to do it. And we are not going to miss anything.

You have heard a great deal about priorities in the last few months. You are going to hear much more about them in the near future. Priorities orders, as you know, are the means by which we try to make certain that needed materials go to the places where the defense need is greatest. I would like to spend just a moment discussing the general principles by which we are going to administer these orders.

As I understand priorities, it is simply a process of putting first things first. You and all other businessmen have a right to expect us to simplify it as much as possible. You have a right to expect our organization to give you quick, intelligent, unprejudiced, and accurate service. You will get such service. And we, in our turn, have a right to expect from you an understanding of the importance of these controls and the assumption that we are working for the common good.

We will give you decisions on all priorities matters the minute we can make them.

We do not have any favors to give or any favorities to give them to.

None of us in this organization will "put in a good word" for anybody or any company at any time.

A representative of a little business will get exactly the same consideration as a representative of a big business.

In other words, we are going to handle this priorities business as swiftly, as smoothly, and as efficiently as it can possibly be handled. We will issue priority orders only when they are absolutely necessary, and when they are issued we will enforce them rigorously and without hesitancy. The im-

mense majority of American businessmen, of course, play the game fairly on these priorities rulings. The percentage which chisels and evades is very, very small; yet as you all know, a few chiselers and evaders can spoil things for the honest majority. I want to assure you now that the chiselers and evaders will be taken care of. The willing cooperation of the many is not going to be spoiled by the evasiveness of the few.

All of this talk of controls, of rules and regulations, of converting business from one line of activity to another—all of this, of course, is unpleasant. I don't like controls and restraints any more than any of you like them. But I think it is all-important for us to realize that we are either going to accept a great many temporary controls now or live in a world where permanent, iron-tight controls are the order of the day.

For that, after all, is what is at stake in this whole world struggle.

We believe in freedom. We live by it. We have been used to it for generations. It is almost impossible for us to imagine life without it. Yet what is going on now is nothing less than a life-or-death struggle between a way of life which is based on freedom and a way of life which is based on the denial of freedom. If this war is lost freedom is gone—everywhere. It will vanish here just as surely as it has vanished already in the lands which are under the iron heels of the dictators' storm troops. It will vanish because freedom and slavery cannot go on inhabiting the same world. And if it vanishes, the era of free men, free business, free economies is ended. Controls piled under controls will govern every commercial activity. Every businessman will be a pawn in the hands of a superorganization; every workingman will toil under conditions which he cannot lift a finger to alter.

So these emergency controls, irksome though they may be, are things we must accept for our own sakes. We will accept them gladly—as long as we realize that they are in fact emergency controls, and hence temporary controls.

For in this great struggle we are not thinking at all of the present moment. We are thinking of the future. This profound effort of ours would not be worth making if it were not the only way of making sure that we can be free in the future as we have been in the past.

What we do in this emergency must be planned carefully. It must not merely insure the mustering of the greatest possible strength—the individual controls and actions by which we muster that strength must be planned and put together in such a way that they can be dismantled after the emergency is over. We are defending our free economy—free, in every meaning of that glorious word—and we must so defend it that when the peril is beaten back, as it will be beaten back, our economy and our Nation can be truly free. The real wave of the future does not carry with it an elaborate set of controls and restrictions—by our strength and with God's help, it carries instead an era in which all of us can be our own masters, submitting only to those controls which we agree are in the common good.

The immediate future is dark; not dark with uncertainty and confusion, but dark simply because we have a great number of hard things which must be done quickly. But the point of it all is that by the long view the future is bright. Our country, our America, our freedom—they will come out of this ready to go forward again. This dark hour is but an incident in the great history of a free people who are determined at all costs to be forever free.

Readjustment of American Soldiers in Civilian Life

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 15, 1941

Mr. WICKERSHAM. Mr. Speaker, I have come to the conclusion that the economy of any given people inevitably dictates the ultimate form of government of that people. Since the discovery of America, the world has recognized it as a land of economic opportunity, which gives its inhabitants not only economic existence, but also that right to develop political thought and democratic principles. Wealth has been produced, wealth on the scale that raised the standards of living to heights never before known to a human family.

The Congress of the United States has voted and is continuing to vote billions of dollars as taxes upon the American citizens, for their protection, that these economic and democratic principles may be perpetuated.

Four-fifths of the world's population are now engaged in war, and with this destructive existing world condition it seems to be generally conceded that it is absolutely necessary for our very existence to expend these large sums of money, and not only that but to call in from every walk of life the finest of our American young men to build a stronger Army, Navy, and air force for our national defense.

This brings up the most serious problem that any nation ever faces—that is a reconstruction period, or the period of readjustment which necessitates the placing of these young men in positions where they can earn a decent living, build an adequate American home, and take their place in society in their respective communities alongside of the man who was not called to service.

Human society itself recognizes the general welfare of the people, and that means to give them a chance for livelihood, to provide economic opportunity at least for their bare existence, and beyond that to prosper, if possible. There can be no freedom, there can be no liberty, nothing else, if this requisite is not present in the government of man. Therefore let us as individuals join our minds and hearts and give our best thoughts in an effort to work out plans and policies, both national and State, that will afford these young men, who have been called away from their respective jobs and are now working for us at $21 per month, an opportunity on their return from the service to take up where they left off and continue to develop into finer and better community builders that the democracy of America may continue to live. If the American people do not prepare such a system whereby these young men will have an opportunity in life on their return from the service, the economic existence, American democracy, and most precious of all things, the American home itself, are in danger of being destroyed.

What's Wrong With the Isolationists?

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

ADDRESS OF AUGUSTUS F. LINDBERGH, OF BIRMINGHAM, ALA.

Mr. PATRICK. Mr. Speaker, Augustus Lindbergh did not ask that I have his speech included in the RECORD. I heard it and requested of him that privilege, and I hope you may read and digest what Gus Lindbergh has to say and has said. Please let me specially call your attention to his statement regarding the fact that our isolationists in this country are fighting Hitler's battle in America. Please also study what Mr. Lindbergh has to offer regarding the difference between the right of a minority to be heard—heard to advance its ideas—and that minority's fighting to the bitter end to overthrow the already established wish and program of the democratic majority.

The address follows:

Fellow Americans, we face the greatest crisis of our entire history. The time for dissension and division of opinion has long since passed. We are at war.

The time for united action is here and now.

For days, for weeks, for months, end on end, the greatest battle of America's part in this war has been going on. Wittingly or unwittingly, knowingly or unknowingly, there are a few in this country—commonly called isolationists—who have been fighting Hitler's battle. As to whether or not they know that they are fighting Hitler's battle I cannot say; but I say that they do know—as they go about this country sowing seed of dissension and disunion, distrust, and inevitable disaster, that Hitler's best weapon is his ability to divide his enemies.

These people are not only trying to isolate us from Europe, they would isolate you from your own Government.

What is wrong with these so-called isolationists? There seems to be but one answer, and that is quest for power. In my studied opinion, the burning ambition of many of the isolationist leaders is to be elevated to positions of power in the Government. Some who are already in the Government want higher places. Some who do not hold places in the Government want any place they can get. A large number have their eyes turned toward the White House. Frankly and fearlessly I say that their ambitions are such that they would gamble the very existence of the

United States in their hope to attain their goal. They play politics in its lowest form.

To these men I have this to say: That any Congressman, any Senator, any isolationist who puts his political ambition above his country may find that he has misjudged the temper of the American people. They are better informed today than they have been at any other time in American history. The demand for aggressive leadership on the part of our elected leaders is greater than ever before.

The man who recognizes the danger to America today, and faces that danger courageously, is likely to be remembered longer and to stay in office longer than the fellow who does not.

To this group of so-called isolationists I would say further that the foreign policy of our Government has been fixed, lo, these many months. It is now too late to quibble over policies. And, again, I would say to this group that the average American seems to have a better understanding of his Government than do the leaders of the isolationists. We understand our Government to be a representative democracy. Our Americanism demands that we bow to the will of the majority in our Government. Once a policy is decided upon it is not the idea of us average Americans that mere individuals should go about the country saying, "Such may be the policy of the country, but I am not for it, and I intend to fight it to the bitter end." Such is not democracy. It is anarchy. It is nothing, more or less, than mob rule, and unless certain so-called leaders clear up their understanding of our Government, they are driving us head-on into disaster. The policy of these isolationists comes very, very close to being treason.

I would again say to these isolationists that by far the great majority of the American people are behind the President of the United States. We average Americans had our say in November last year, we will have our say again in 1944. That is the American way, the democratic way of doing things. We, like Stephen Decatur, are for our country, right or wrong. We do not appreciate any attempt to incite rebellion against the legally elected administration in Washington.

I am for the foreign policy of my Government. I am willing for the National Government to make and to execute whatever plan may, in its judgment, be necessary for the preservation of these United States, and for obtaining and securing to us an everlasting free peace. But, as for me, I want no part of a peace negotiated with that gangster, Hitler. And, I say, there can be no peace as long as Hitler and his horde of heathens run loose upon this world.

To offset, to counteract, the poison propaganda of these isolationists—who would negotiate a peace with Hitler—is the duty of every true American; and, I ask of you Americans who hear me tonight to read the history of Europe and decide for yourselves whether or not we can make a peace with Hitler. Hitler has had treaties with every nation of Europe. I ask you simply, has he kept his written word? Has he kept the peace when it suited him to make war? You know that he has not!

Since I have mentioned true Americans, I might pause here to define a true American. The test of a true American is whether or not he or she can subordinate his or her will to that of the Government in times of national emergency. I have said, and I say again, that BURTON K. WHEELER and Charles Augustus Lindbergh have failed to meet that test.

But, you say: Who are you to question these men? I am just a southern-born, southern-reared, country boy from Alabama. I do not pretend to have occult powers. I'm just a lawyer, a plain ordinary American citizen. Some of us Lindberghs are like that—ordinary, plain citizens.

I haven't flown an airplane across the Atlantic and I haven't been elected to the United States Senate, but, in my opinion, neither of these accomplishments has any particular qualities for brain-building.

Like most Americans, I don't hesitate to say what I think, and so, just as an ordinary American citizen, I am having my say, and as such, I have a right to say that no man has a right to obstruct his government during a national crisis—and that is exactly what some of those on Capitol Hill in Washington, and one member of the family of Lindbergh are trying to do now.

In my opinion, and the opinion of the people of Alabama, and of the Nation as shown by Dr. George Gallup's poll and the one in Fortune Magazine, Hitler must be beaten. We average Americans say that the time is here for aggressive, determined, decisive, united action. We say that the time for dissension and division of opinion has long since passed; that no man has a right to put his party above his country; that no man has a right to be a Democrat before he is an American; that no man has a right to put the Republican Party and his own personal ambition above his Americanism.

It seems to me I can remember a place in my sixth-grade history where there was a picture of a disjointed snake. There were 13 pieces, each with the name of one of the original Colonies. Under the picture were written these words: "Join, or die." At another place in my history book I found these words: "United we stand—divided we fall." No truer statements can be made of our position today.

I am sure that Hitler must smack his bloody lips in glee each time one of these isolationists suggests that there is no need for alarm; for has it not been his boast that America will be an inside job? Hitler counted on disunity. Dividing our people is part of the Nazi plan. In Hitler's book he writes: "It will be a simple matter for me to produce unrest and revolts in the United States."

Except for their attempt to create disunity, I can't even tell you what most of the isolationists stand for. They say that they are for a strong defense—yet they vote against every defense measure. Now, I do not accuse these isolationists of being Hitler's paid agents in this country; I simply say that whether these men are deliberate Quislings or unconscious ones, they are Hitler's greatest allies. Through exactly their kind of tactics in other countries Adolf Hitler has been able to forge his ring of enslavement.

There are a few things that I would like for these isolationists to explain. I would like for Charles Augustus Lindbergh to explain why it would be disastrous for Europe if the United States started shooting? We are already in the war. Does he not mean that it would be disastrous for Hitler and Hitler's ambition to enslave the world? And, may we ask, what could be more disastrous for France, Belgium, Holland, Denmark, Poland, Greece, and all the rest, than to have Hitler's iron heel on their necks. We would like for all of them to explain just what makes them think Hitler would keep a negotiated peace? Do they have private assurances? We would like for them to explain just how they chose the name "America First"?

How does it happen that in England the friends of Hitler had as their slogan "Britain First"? How does it happen that in certain South American countries that the Nazi revolutionists were using the same slogan? Why is it that many of their statements follow the pattern, and are often in the exact words, of that lying propagandist, Dr. Goebbels? Tell us why you would have us stand by like sheep to be slaughtered?

No, gentlemen, your opposition comes too late. The foreign policy of the United States is fixed. You can accomplish nothing other than to give aid and comfort to Hitler. You are sowing a whirlwind, and you shall reap a storm; a storm of protest and resentment. You have misjudged the American people. I tell you now, that you will not, as you hope, ride to power on the seed of dissension and distrust, division and disunity which you sow.

I have faith in the American people. They have always been able to think through—and to take straightforward action. They can and will do this again.

Yes; the great majority, the overwhelming majority, of the American people are looking to Franklin D. Roosevelt for leadership and action. We average Americans are grateful that in this trying time he has the courage to face the issue squarely. Our President has a job somewhat similar to the one the immortal Lincoln had—the Lincoln that we southerners love, not because he had the power and the might to crush the South, but because he had the courage to save the Nation. Lincoln did not want war. No one wants war now. But, war in its shooting stage may come; and when it does, we want to be fully prepared. We want the ships and the guns, and the tanks, and the planes; we want the best and the strongest Army. We want the help of the men in the plants; but in order that we may have all of these, and in order that we may be prepared, we want, and must have, unity now.

America has no choice to make today. Hitler made that choice for us months ago. He decided that there was no room on this world for nazi-ism and democracy. We cannot decide whether or not we shall fight, but only when we shall fight; and delay may deprive us of that choice. I am not in favor of waiting for Hitler to come over here; nor even until he is able to set up bases from whence he can strike. I am not in favor of waiting until Hitler's jumping jack—Japan—decides to jump. The only thing Hitler can understand is a shooting war. Let's give it to him, and sink Japan's fleet now. And then, in the oriental custom, send them a note saying that we are very, very sorry; yes, very, very sorry—that we didn't do it sooner.

Well, folks, remember there is one Lindbergh, Augustus Franklin Lindbergh, the country boy from Alabama, who is no appeaser; and who is not afraid of what the future holds for the United States of America under the leadership of Franklin D. Roosevelt. Unite behind our Government now; follow it wholeheartedly; and when the dark clouds of these trying times have passed, Old Glory will still proudly wave, over the land of the free and the home of the brave. Good night.

Opportunities Which the United States Has Missed to Engage in Foreign Wars

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

RECORD OF WARS 1800–1941

Mr. REED of New York. Mr. Speaker, what a glorious opportunity the United

States has missed during the years that have intervened since George Washington advised against entering entangling alliances abroad, except when the United States departed from its traditional foreign policy in 1917 and again in this year of our Lord 1941.

Think of the dead, the blind, the crippled, the insane who might have been heroes of foreign conflicts, plots, and intrigues during the past 140 years. I insert a list of the lost opportunities for participation by this Government in the quarrels and wars abroad during that period:

THE RECORD, 1800–1941

1801 The old German Empire broke up, and all territory on the left bank of the Rhine was ceded to France.
1802 French aggressions in Holland, Italy, and Switzerland.
1805 England declares war on Spain. France fights Austria.
1806 Napoleon enters Berlin.
1807 Napoleon defeats Russia.
1808 Napoleon invades Spain.
1809 Napoleon is excommunicated by Pope and puts Pope in jail.
1810 France annexes Holland. Turks driven out of Balkans.
1811 War starts between United States and England.
1812 Napoleon declares war on Russia.
1814 France invaded from all sides. Napoleon to Elba. British sieze and burn Washington.
1815 Napoleon leaves Elba, is defeated by British and Germans at Waterloo, then sent to St. Helena for life.
1816 Holland annexes Belgium.
1817 British wars in India.
1822 Greeks and Turks at war. Civil war in Spain.
1823 French Army enters Spain.
1824 British battle for Burma.
1825 Russia wars on Turkey.
1826 Russia invades Persia.
1827 Turks driven from Greece.
1828 Russia overruns Rumania.
1829 England and Austria intervene against Russia.
1830 Revolution in Poland and France. Belgium revolts from Holland.
1831 Prussia and Austria aid Russia against Poland.
1832 Egypt revolts against Turkey.
1838 French bombard Mexican ports. Debt collection, old style.
1839 Britain wars on China.
1846 War between United States and Mexico.
1848 Schleswig-Holstein fights Danish annexation
1849 Danish-Russian war.
1850 Britain blockades Greece. Prussia and Austria war.
1854 France and England war against Russia.
1856 British war on China and Persia.
1861 Civil War in United States.
1864 Germans defeat Danes.
1866 War between several German states. Austria wars on Italy.
1867 Civil war in Japan.
1868 Britain invades Abyssinia. Spanish revolution.
1870 Franco-German War.
1871 Alsace-Lorraine goes to Germany. Back to France in 1918 and back to Germany in 1940.
1874 Spanish civil war.
1876 Balkan wars.
1877 Civil war in Japan. Russia wars on Turks.
1879 British war on Zulus.
1880 Boers and British battle.
1881 France wars on Tunis.
1882 Britain wars on Egypt.
1884 Japan wars on Korea.
1885 Russia wars on Afghanistan.
1887 Balkan wars. Italy wars on Abyssinia.
1894 Japan wars on China.
1895 Belgium seizes Congo state.
1898 Spanish-American War.
1899 Britain wars on Boers.
1900 Boxer War in China.
1904 Russian-Japanese War.
1910 Japan takes Korea.
1912 Balkan Wars.
1914–18 Russia, France, Britain, Italy, United States, Japan, Rumania, Serbia, Belgium, Greece, Portugal, and Montenegro, 12 nations, battle Germany, Austria-Hungary, Turkey, and Bulgaria.
1917–18 The United States of America participated in the above war.
1920 to 1930 A breathing spell and period of disarmament conferences, which obviously disarmed no nation except he United States.
1931 Japan seizes Manchukuo.
1934 Italy takes Abyssinia.
1937 Japan develops an "incident" in China.
1939 Germany takes Austria, Czechoslovakia, and Poland. France and England declare war on Germany.
1940 Russia takes part of Finland. Germany seizes Denmark and defeats Norway, Holland, Belgium, and France.
1941 Germany and England at war; Italy, Rumania, and Japan, against Germany in 1914, like the figures of the year, they have reversed their positions and are with her in 1941.

Great Lakes-St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

RADIO ADDRESS OF HON. GEORGE A. DONDERO, OF MICHIGAN

Mr. DONDERO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I herewith include a radio address delivered by me over station WJR, of Detroit, Mich., on September 13, 1941, on the subject of the Great Lakes-St. Lawrence seaway project.

I sought to rectify many misunderstandings and exaggerations of this project. It is the only project in the United States comparable with the Panama Canal. It is the master project of the North American Continent. Those in opposition to the seaway have made statements and claims which do not square with the facts.

There are three elements outlined in the address which should have the attention of every thoughtful person—its possibility to navigation, its power expectancy made possible and incident to the navigation feature, and the element of national defense. This includes the shipbuilding facilities of the Great Lakes. The opening of this waterway will add another ocean to the commerce of the world—the Great Lakes, which contain one-third of the fresh water of the earth.

The address follows:

ANNOUNCER. At this time we introduce the Honorable GEORGE A. DONDERO, Member of Congress for the Seventeenth District of Michigan and high ranking member of the Committee on Rivers and Harbors of the United States House of Representatives, who will discuss with us some of the various phases of the St. Lawrence seaway and power project and the situation with reference to the bill authorizing its construction, which was recently favorably reported by the committee.

Congressman DONDERO, the St. Lawrence seaway is a project for which the people of Michigan and other States in the Great Lakes region have worked for over a long period of years. Just what work would be involved in the completion of this project?

Mr. DONDERO. The amount of work involved is not nearly as extensive as many believe. The entire seaway system consists of the Great Lakes, the Soo channels, the St. Clair and Detroit Rivers, the Welland Canal, and the St. Lawrence River. Most of the necessary work in the Great Lakes and the connecting channels has now been completed Canada completed the Welland Canal in 1932. The major portion of the work will be devoted to opening up a 48-mile bottleneck which now exists in the International Rapids section of the St. Lawrence River and the harnessing of 2,200,000 horsepower of electric energy developed incidental to the river improvement. This is a logical step. If a section of track 48 miles in length in one of our transcontinental railroads were obstructed by rock, or if a similar section of the Lincoln Highway were washed out by flood, a way would be quickly found to remove the rock from the railroad or replace the concrete in the highway so that traffic might be resumed. That is substantially the situation that exists relative to the St. Lawrence seaway. When it is completed, a 2,400-mile deep-water route with 27-foot channels, capable of accommodating nearly 70 percent of the freight cargo ships of the world, will be provided and ports on the Great Lakes will then have direct access to the ports of the world.

ANNOUNCER. Statements have been made to the effect that the St. Lawrence seaway would cost as much as a billion dollars to complete. Since the work necessary to complete this project is limited to that which you have outlined, it would seem that this figure is greatly exaggerated. Just what would be the cost to the United States?

Mr. DONDERO. The figure you mention indicates that the statement came from an opponent of the seaway, for it is more than five times the official net estimate. According to Brig. Gen. Thomas M. Robins, of the United States Army Engineers, a member of the Joint Board of Engineers appointed by the United States and Canada to make a complete survey, it will cost the United States $285,000,000, and nearly one-third of this total will be returned to the United States through the sale of power to the State of New York. When the project is completed the United States will have expended about $302,000,000, less $93,000,000 from power sales, and Canada about $277,000,000. Because of Brigadier General Robin's knowledge of rivers and harbors problems, his statement on this phase of the seaway project is entitled to the utmost weight.

ANNOUNCER. Congressman DONDERO, what factors make the seaway of such vital importance to the Great Lakes region?

Mr. DONDERO. The potential economic advantages of the seaway are numerous. Every survey of this phase of the project indicates that the great Middle West, which has almost one-third of our total population, would enjoy greatly reduced transportation costs, which would be reflected in lower living costs and in a higher net return from the exported products of our farms, our factories, and our mines. Not only would it provide direct water transportation to foreign ports, but to the coastal ports of the United States, enabling our agriculture and industry to

successfully meet world competition. This would result in expansion of our industry and afford added volume to rail and motor transportation systems, and this in turn would provide greater opportunity for employment in the great Middle West. The effect of the seaway would be to create a new frontier for America and open up vast channels of trade not now enjoyed by the great inland empire surrounding the Great Lakes. Cheaper transportation costs will make it possible for this country to compete with cheap labor costs of other countries without reducing the standard of living of our workers.

ANNOUNCER. The President has asked for the seaway as a defense project. In what way would our defense be strengthened by the availability of the seaway?

Mr. DONDERO. The President has sound reasons for wanting the St. Lawrence seaway as part of our national-defense program, and I concur in the President's viewpoint. First, the seaway would make possible the building of naval and cargo vessels in Great Lakes shipyards which are beyond the range of bomber attack by any power on earth. Second, the assurance that the seaway would be promptly completed would enable the Government to immediately spread more than a billion dollars in ship contracts among Great Lakes shipyards; this would greatly relieve the pressure on coastal shipyards and provide an additional source of employment in this section. Third, United States Army engineers state that the project can definitely be completed within 3 to 4 years, and this means that construction of cruisers could be commenced at once, as the seaway would be ready to carry them to the sea as soon as they are ready to join our Navy.

ANNOUNCER. It is frequently said that the defense value of the St. Lawrence seaway is of little importance because the present emergency will be over before its completion.

Mr. DONDERO. That argument is advanced by opponents of the seaway, but unfortunately there is nothing on the horizon which justifies this conclusion. The recent turn of events in Europe indicates that the present conflict will be of long duration. So long as this condition prevails in the world the United States must be fully prepared to meet any eventuality. Even should the war clouds suddenly part and the sun once more shine through, the United States will need the seaway more than ever in the competition for world trade that is certain to follow, regardless of the outcome of this war. It is agreed by traffic experts that after the war competition among nations for world trade will be intense and low transportation costs will be a vital factor. This will be particularly important in such markets as the Latin-American countries. The seaway is one of the most vital phases of our present national-defense program.

ANNOUNCER. What is labor's attitude toward the seaway? Mr. John L. Lewis contends that it will displace coal miners and has placed his union, the United Mine Workers of America, on record as opposed to the St. Lawrence seaway.

Mr. DONDERO. Mr. John L. Lewis did appear before the Committee on Rivers and Harbors in opposition to the seaway, and it was my privilege to question him at some length. His contention, however, was quite thoroughly disproved by Mr. N. R. Danielian, director of the St. Lawrence survey, Department of Commerce, in his report on the effect of the seaway on the coal industry. According to this survey, the claims of the coal operators and the mine workers concerning the disastrous effects of the seaway upon the coal industry are unfounded in fact, unsupported by past experience, and definitely erroneous. The facts supporting this conclusion are set forth in Mr. Danielian's report. Both the American Federation of Labor and the C. I. O. in Michigan have announced their support of the seaway. The statements of Mr. Frank X. Martel, of the American Federation of Labor, and of Mr. Tracy M. Doll, of the Wayne County Industrial Union Council, favoring the St. Lawrence project are included in the record of the committee's hearings.

ANNOUNCER. Congressman DONDERO, as a member of the Committee on Rivers and Harbors, you actively participated in the hearings on the seaway and conducted much of the cross-examination of opposition witnesses. Would you say that the project was approached in a partisan manner?

Mr. DONDERO. Representative JOSEPH J. MANSFIELD, of Texas, the chairman of the committee, a Democrat, afforded a fair opportunity to both proponents and opponents of the seaway to present their respective cases, and in some instances called upon Republicans, your speaker included, to preside over the hearings. At no time during the hearings, which covered a period of 2 months, was there any evidence of a partisan attitude in the conduct of its sessions. It was my privilege to work with Assistant Secretary of State Adolf A. Berle, Jr., who negotiated the agreement between the United States and Canada, and I believe that every Member of Congress would do well to follow the example set by the committee and give first consideration to the welfare of the great Middle West and of the Nation as a whole in determining his attitude toward this master project of the North American Continent. Henry Clay once took a very antagonistic attitude toward a project which was of vital importance to this section and a part of the seaway system we are now discussing. The Kentuckian, in opposing the canal on the Sault Ste Marie, said that it was—I quote—"a work beyond the remotest settlement in the United States, if not in the moon" and that to build it "would permit Ojibway Indians to paddle down in birchbark canoes in order to see the folly of the white man." That canal has since become a teeming water thoroughfare, moving this year more than 100,000,000 tons of iron ore and other materials essential to our national defense. This tonnage exceeds the combined total of the Panama and Suez Canals, both channels open for commerce throughout the year, as compared to the 7-month period of ship movement through the Soo.

ANNOUNCER. The seaway project has now been reported favorably, and I am sure that your comments on the action of your committee would be of interest at this time.

Mr. DONDERO. The Committee on Rivers and Harbors, after nearly 2 months of hearings, voted 17 to 8 to include the seaway in what is known as an omnibus bill. This omnibus bill is an authorization bill and not an appropriation bill. It will authorize the President to start work on only those projects with a definite defense value. Since the President himself pleaded for the seaway as a defense measure, it is apparent that we will get started immediately if the omnibus bill passes. The Florida ship canal and other projects which I have consistently opposed, and still oppose, are embodied in this same bill. These, however, cannot be justified as defense measures and there is nothing in the bill to indicate when their construction may be undertaken. I personally would very much have preferred that the St. Lawrence seaway be considered on its own merits, entirely divorced from any other project. It was introduced originally in that form; but, as committee hearings progressed, and as pressure was applied by the opposition, a favorable report from the committee appeared doubtful. It was then included in the omnibus bill at the suggestion of the President.

ANNOUNCER. Now that the seaway has been reported, what will be the opposition strategy?

Mr. DONDERO. It is possible that every single project in the omnibus bill, except the seaway, might be retained. You may be sure that a determined effort will be made to strike the seaway from the bill when it reaches the floor of the House. If this attempt succeeds—and it will be backed by a well-organized and effective lobby—the omnibus bill will be passed without the seaway. For this reason it is imperative that every Senator and every Representative from every State in the Midwest rise above party politics and above persuasion by selfish groups and support this section's right to an outlet to the seven seas and access to the ports of the world. When debate starts in the House, around the first week in October, the same opposition we heard in committee—an opposition presenting the strange spectacle of coal miners teaming up with utility and railroad representatives and operating with unlimited funds—will redouble their efforts to strike the seaway from the bill.

ANNOUNCER. Congressman DONDERO, what can the people do to aid you in your fight to make the seaway a reality?

Mr. DONDERO. Opponents of the seaway have an excellent chance of succeeding unless the people of Michigan and other States in the Great Lakes region stand solidly behind their Senators and Representatives and urge their united support of the seaway. Some of these Congressmen who have supported the seaway for 20 years are now in doubt. Some have been cajoled and threatened by the opposition and have heard very little from the home folks who want the seaway project completed as soon as possible. The Detroit seaway committee has taken the initiative in organizing support for the seaway and friends of the project will help materially by offering their cooperation and assistance to this committee.

ANNOUNCER. Apparently the time has arrived for the people to take a hand in the fight to get the seaway started.

Mr. DONDERO. It is either now or never. Powerful opposition kept it from passage when it was previously considered on the basis of its economic value alone. Today it has that same value, plus the vital extra advantage of bolstering the defense program through added power and shipbuilding facilities. If it cannot be passed with all these favoring factors, and with the backing of a President who has a majority in both Houses of Congress, its chances of ever passing are very remote. But it can and will be passed if an aroused electorate instructs its Washington representatives to support this project which will permanently benefit the great Middle West and its 40,000,000 people. It is the only project on the North American Continent comparable to the Panama Canal. This land-locked empire of ours has a right to go down to the sea in ships and participate in the trade of the world.

ANNOUNCER. You have just listened to an interview with the Honorable GEORGE A. DONDERO, the only Michigan member of the Committee on Rivers and Harbors of the United States House of Representatives, who has long advocated the completion of the St. Lawrence seaway, a project which he has termed "the master project of the North American Continent."

Inflation!

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include an editorial appearing on August 12, 1941, in the Evening Observer, Dunkirk, N. Y.

It has taken a long time for the administration to realize that the boondoggling of billions, the creation of an overwhelming national debt, the lending, leasing, wasting, and squandering of billions of dollars bring an inevitable pay day, as evidenced by the tax bill now before the House for final action.

The officials of the Government at last admit that inflation is here; that another tax bill, more drastic than the present one, will soon be necessary; and that the specter of further tax bills to follow stands in the door of every home in the land. I have warned against this very condition from time to time during the last 8 years, and I shall still resist the expenditure of nondefense billions and all expenditures not strictly for our own national defense.

The editorial follows:

[From the Dunkirk (N. Y.) Evening Observer of August 12, 1941]

A DANGER GREATER THAN WAR

It is not certain that price control alone can stop a run-away inflation. It undoubtedly would help but it now appears that it will not be applied with sufficient force to do much good. By the time Congress gets through with the exceptions (i. e., wages and farm prices) the teeth will be pretty well extracted.

Obviously the Nation wants price control as a safeguard against the disaster of inflation—but for the other fellow, just as we think the other fellow ought to do all the conserving of gasoline. Labor is entirely willing that prices should be controlled unless the control hits wages unmindful apparently of the obvious fact that wages are the largest single factor in total price. Farmers take the same point of view in respect to farm products. Politicians pander to these numerically large elements.

People are helpless in the face of groups powerful enough to influence politicians and we are clearly headed for trouble unless groups and individuals recognize their responsibilities. We can and should buy defense bonds as one safeguard against inflation. We can and should curtail buying and be thrifty, but there is a serious question of whether we will or not before it is too late. The Nation needs every possible governmental aid against so terrible a danger.

Inflation is no idle threat. It is not a danger to be scoffed at. The German people who lived through the inflationary period of the early twenties fear inflation more than they do war. It can be much more terrible as a human disaster. If we hope to prevent it we must not only act personally and individually but we must lend our collective cooperation to the Government. The defense against this threat calls for quite as much patriotism and sacrifice as the defense against foreign invasion.

THERE ARE MANY TO PROTECT

Why this sudden furore about inflation, anyway?

Who cares?

You care, for one.

You care if you are one of the 45,000,000 Americans who hold social-security cards, or the wife or child of such a holder. You care if you are one of the nearly 40,000,000 Americans who are beneficiaries of ordinary life insurance, or of the 20,000,000 industrial policies, or the 25,000 group policies.

And that begins to get along to almost everybody.

The spectacular losses in a period of inflation come to those who have money. But, on the other hand, such people usually manage to wangle through it somehow. It is the little fellow, the fellow on a small and inelastic salary or wage, the fellow with the small savings account or insurance nest egg who is swept down into the depths of unspectacular misery in a run-away inflation.

Many more people have a stake in preserving some kind of stability in the relationship between money and the prices of things than ever before. Forty-five millions of people now have social-security accounts who did not have them a few years ago. Such of them as have made over $250 a month, for instance, for a period of 10 years will, when they reach 65 years of age, begin to receive $44 a month until they die. Such a man's widow, his unmarried children under 18, are also in line for benefits.

So every man and woman working under Social Security has a stake in preventing inflation even though many of them are apparently not conscious of it. For if, by the time they reach age 65, that $44 a month won't buy cigarettes, the whole elaborate scheme for their protection and security collapses just when the power to earn is also gone.

That is why every effort must be made now to restrain the rising price-wage cycle. That is why the Government is trying to sell defense bonds. In buying defense bonds, you lend your actual money to the Government, which will pay it back after 10 years with interest. If the Government does not get enough money that way, it will borrow it from banks, which simply create the credit where no money existed before, thus expanding the currency without adding correspondingly to production. That is inflation.

The prospect of inflation is not something that concerns only the rich. It concerns every man, woman, and child in the United States, and the children, perhaps, most of all.

Mr. Speaker, the devastating consequences of inflation are not new. An eminent English lawyer and economist, writing in 1850, warned his countrymen of the perils of inflation caused from excessive debt and waste and extravagance in these words:

As long as we can contrive to pay the interest of the debt, we postpone the fatal consequences of our past extravagance.

But who can contemplate, without a shudder, the dawn of that morning when it shall be announced that the dividends [interest on the Nation's debt] can no longer be paid.

Every banker, every merchant, every insurance company is at once insolvent. No checks, no banknotes are of any value. Even specie disappears. Every man hides or clutches with a death grip his sovereign or shilling. There are no funds to pay wages. None to support the poor, none to carry on the government, or preserve the peace. * * * What was yesterday the most valuable property, today exists not. The just title to all other property is gone, too.

Mr. Speaker, the distinguished author whose observations in the light of subsequent events have proved so prophetic, makes this further comment:

Debts are the most disagreeable subject to which the attention of debtors can be solicited. The public, deluded by fallacius hopes of benefit, sometimes from commercial changes, pursues its favorite theory, till the pursuit is given up as hopeless, or experience undeceives it. It then chases some fresh phantom. Persons of more reflection are apt to silence apprehension by the selfish hope that things will last their time.

Governments, all the while, are too happy if, by temporary expedients, they can make ends meet or, at the very best, secure a small margin of receipt above expenditure; and have no notion of such a degree of political virtue as would lead them to make any sacrifice to insure the financial prosperity of their successors.

Mr. Speaker, the tax bill—H. R. 5417—it is estimated, will yield $3,553,400,000 and it is heralded as a measure to prevent inflation. The fact is that it will yield in revenue during the fiscal year 1942 only $1,900,000,000, while of this $1,200,000,000 will be required to pay the interest on the national debt. The balance of $700,000,000 for national defense to meet commitments of $52,000,000,000 for such purpose cannot but emphasize to what extent the people must eventually be taxed to preserve the credit of the Government.

The Pending Tax Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement concerning my position on the Revenue Act of 1941:

During my legislative experience I have stated frequently that I would always make every effort within my power to advance and defend the theory of an equitable distribution of the tax load, taking into consideration both the ability of the taxpayer to pay and his obligation to his Government resulting from the benefits he has received therefrom.

For many days I have considered the various phases of the bill in question, the so-called Revenue Act of 1941, and I cannot feel that I would be justified in supporting it. Accordingly I am opposed to its passage, and had there been a record vote on the bill I would have been recorded against it.

Many weeks ago, in letters to leaders of the Congress who are primarily concerned with the task of drafting tax bills and in personal interviews with them, I proposed and urged enactment of a gross profits tax to defray the cost of national defense. At the same time I proposed that such a bill be so written as to provide revenue for both national defense and for the payment of the cost of establishing a reasonable, direct, Federal old-age pension system to replace our present unsatisfactory State-Federal cooperative pension plan under the Social Security Act.

At a time when there are some who are certain of making vast profits from national-defense production while others are unfortunately and unavoidably suffering from economic maladjustment, I feel that my gross profits tax plan is fully justified. It would have taxed most those who are most able to pay and in so doing would have placed the defense tax on an entirely equitable basis. Those who make the most profit can afford and should be willing to pay for that privilege.

These facts would not be true of the present bill.

My opposition is in the nature of a friendly protest and in support of my frequently stated tax policy. I am convinced that the time is near when Congress will be required to adopt the gross-profits tax.

Character Is Essential in All of Life

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 28, 1941

LETTER PUBLISHED IN THE POINTER, WEST POINT MILITARY ACADEMY

Mr. LUDLOW. Mr. Speaker, at the request of friends of West Point Military Academy, under leave to extend my remarks in the RECORD, I include a letter which was published in The Pointer for May 9, 1941. The Pointer is a magazine published by the cadets at West Point. The letter was written by an unknown American Army officer in France to his son, who was about to graduate at West Point. The letter as published in the Pointer was as follows:

MY DEAR SON JIM

The Corps is indeed fortunate to be able to read at this time one of the most remarkable documents ever printed in the Pointer. Twenty-two years have passed since these words were penned; yet they might well have been written yesterday.

HEADQUARTERS FIFTH ARTILLERY BRIGADE,
Dudelange, Grand Duchy of Luxemberg,
January 26, 1919.

MY DEAR SON JIM: For one reason at least, or one of many I hasten to add, I was very glad the war ended when it did, for you would have doubtless been expecting on your graduation from West Point some sort of "Letter from father to son on starting in life," or "Advice from an old soldier to a young one."

And having knowledge of our work over here you may have looked for something very helpful, some sort of solution of the difficulties; or possibly some rules of procedure and conduct in your own work.

It was precisely because I knew my inability to help you as I felt the desire to, son, that I was rejoiced in a measure that you had to go back for a time to West Point, and that, therefore, I did not have to make the attempt. For I have been unable to discover or to formulate any such general rules, any easy solution of the difficulties of life either on the field of battle or in general; any sort of ever-ready "slide rule" you might have taken out of your dispatch case and found applicable for every, or even any, problem.

The men I have seen succeed here appear to me to be generally the ones I saw doing well before the war, and for the same reasons as to character, energy, and application. It has seemed to me, therefore, that the old rules of conduct and preparation are the only ones that I know about yet.

I have seen men work in different manners, of course, as is natural for people with different temperaments. Some are in a great hurry when things are moving quickly and get those around them pretty nervous. Others are steady and calm when the crisis comes and are a great help to the rest. Some of those who seem to be of a phlegmatic disposition appear to get excited; and some men of nervous temperament are very calm when the decisions have to be made that affect not only themselves but also the lives and fortunes of others; and so it goes, very difficult to sum up.

Some pray in danger, even at times when others feel that all ought to sleep and get strength for the next task; some get very wrought up and swear a bit, though in time of danger even those who are accustomed to use profanity are liable to be cleaner in speech and word.

Some are able, it seems, to get the whole world out of their minds save the "mission" for the moment, and thus to concentrate the whole value of their minds on the proper solution of the problem with which they are then confronted. This is very helpful, for even the hardest problems usually come to you phase by phase, and if each is successfully handled, the next is made easier, of course.

1919, 1941—WHAT DIFFERENCE THE DATE WHEN ETERNAL TRUTHS ARE BEING SPOKEN?

So if I were to try to give you any rules I know I would make poor ones. In a general way, I can only say it is the old, old rule of the book: Character and diligence and industry—always industry and zeal and speed; speed unconnected with flurry or confusion, though, and so that others may be carried along without making them nervous or getting them confused. Everything has to be watched and double checked, especially the first days and weeks of battle—work with new officers and men. If you have all the plans well made and it seems that nothing can go amiss, yet you must still take other precautions to see that it does go right.

As to prayer, my idea is that like most precautions for war, it is helpful indeed, but like the others it may—yes, must—have to be done in the years before the war or the emergency. (The French officer with my brigade says General Foch rarely misses a chance to attend mass.)

One or two old and well-known maxims still seem new to me: "If you are in doubt in a tactical way, the best thing is to go forward"; "without any specific orders move toward the sound of the guns"; "the more you can arrange to go personally among your men the better they will feel and the better they will do."

All this involves the steady effort to think as little as you can do of your own fortunes and your own comfort of course; it necessitates so far as you are concerned a surrender—or as near to it as you can come.

While the tasks are difficult at times and the results demanded—and remember always it is the result and not the means or the difficulties that must first of all concern you—are not always easy to accomplish, yet even when in command you are not left alone or without many aids. The cheerfulness and loyalty and bravery and clear judgment of comrades and assistants are a great help.

Then there are often audible voices—even in the din of battle—some welcome and some unwelcome. The Old Devil naturally likes to have a say at times. The Voice of the Spirit of Duty and the Spirit of Honor—the two old fellows who travel so much together and who are such great chums—can be heard at times too, and they always like to be clear and brief, even though they are shy and not given to intruding if not wanted. The voice of ambition some hear very clearly, and to some it appears to be a great aid; others may not be helped so much by this spirit—it may be that this old fellow's advice ought to be examined closely before being followed too quickly.

Then you will never be where the spirit of the past is not close, and the voice of helpful people who love you accompany it. Among those that are potent I agree with the testimony of the many who have before said the same thing, that the voice of counsel of good women who seem to be near you is of great value and aid. You would have been fortunate in having that of two of such judgment and vision as your mother and "dear grandmother"—who was to me so good a second mother, while I had also the advantage of the clear memory of my own mother's ideals and splendid powers.

So you see I have done a good deal of writing and have been unable—as I knew would be the case—to formulate any new things for you, son, or to make any easy rules.

With lots of love,

Affectionately,

DAD.

Conditions in Milk-Producing Industry

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

STATEMENT OF A FARMER TO A CINCINNATI TIMES-STAR REPORTER

Mr. BROWN of Ohio. Mr. Speaker, recently we have been hearing much regarding increased farm income, agricultural prosperity, and the high prices that are being received by tillers of the soil for products from the farm. Most of such reports emanate from those having no real knowledge of farm conditions.

I represent a rural district. As a publisher of a number of newspapers it has been my business for many years to record farm conditions and happenings. I am also the owner and operator of several farms. Both as a newspaper publisher and as a farm operator, I know there is no great prosperity in the agricultural sections of the Central West. Of course, the industrial boom in the cities, that has come from war expenditures, has brought about a better market for some agricultural products. As a result some of the farmers of the Middle West are better off today than they were a year or so ago, for prices of some farm products have risen a little more rapidly than the cost of things the farmer is required to purchase.

However, such a condition does not prevail as far as the milk producers are concerned. Today in my section of Ohio, in the Cincinnati milkshed, most of the farmers are receiving less for their milk than they were paid 6 or 8 months ago. This in spite of ever-increasing costs. Recently a number of the newspapers in the Cincinnati milkshed area made a careful survey of the entire milk-producing and distribution situation. Officials of the Department of Agriculture have conducted investigations and hearings. For the benefit of the Congress, and for the enlightenment of those not informed as to actual conditions on the milk-

producing farms of this country, I am herewith including a statement given by a farmer in my area by a Cincinnati Times-Star reporter. I believe this statement paints a true word picture that graphically describes the present situation on many of the farms of America, and is worthy of careful study and consideration. It is as follows:

[From the Cincinnati Times-Star]

(By Joseph Lashly)

I have been a farmer in Hamilton County for 24 years. I work hard and according to the other farmers in this district, I am a good operator. It might surprise you to know then, that during the next month or so, I plan to close up my farming operations and go into the city to look for a job in one of these defense plants. The way things stand now, my 18-year-old daughter makes more money working 40 hours a week in an office than I do, working 76 hours a week on a farm.

Now there's nothing very unusual about a farmer quitting business. I don't mind telling you though, that there's a lot of farmers in this neighborhood who feel the same way I do. They are willing to give up the land they love for a few solid dollars in a pay envelope. I can't tell you about all their difficulties but I can tell you about mine. So here goes:

OWNS 100 ACRES

I am 46 years old. My farm includes 100 acres and is in a district that has the reputation of being one of the best farming lands in the State. My one daughter works in the city and the other two, one 21 and the other 16, help my wife in keeping up the house and doing chores around the farm. I have no sons.

This farm I work has been in the family for 75 years. My father-in-law is the owner. Each year I give him one-half of the grain—wheat and corn—that I produce. During the past several years he has just about gotten enough out of this to pay the taxes and insurance. In other words, he got about $400 last year out of a farm that is worth $20,000.

I am not the kind of a farmer who keeps lots of records. I do know this, however. Last year I worked as hard as I have ever worked in my life. When I sat down and figured out what all this work had brought me, I found that I had taken $400 out of the bank to keep living. In other words, instead of being ahead, I was behind $400.

ALL DAIRY FARMERS

Let me give you a few examples of what I have to put up with. All the members of my family have been dairy farmers. About 5 years ago, I had 16 of the finest Holstein cows you could find in this part of the State. In some months I shipped as much as 12,000 pounds of milk. I was working hard but I was making money.

Then, several things began to happen. The cost of dairy feed started to climb, the drought burned my pastures but my milk checks became smaller and smaller—although I was turning out just as much milk. The price of beef went up so I started selling my cows. Now I turn out only a half can of milk a day and the cattle I have are nothing but scrubs.

You might ask, "Why don't you go back into the milk business? Prices are going up."

Here's the answer. A decent milk cow now sells for about $100. There was a day, though back in 1930, when I could get all I wanted for $35. I would need at least six cows to start back in business. That would be $600.

HASN'T GOT $600

I haven't got $600, and even if I did, I doubt if I would spend it on cows. The chances are that I would work hard all winter with those animals and then find out that I lost money. If I go into the city and work for $20 a week, I'm sure that I'm adding to the breadbasket, and that's something.

If you think it's just the milk business that's bad, listen to what happened to me last year: I decided that I would raise hogs. In addition to buying the pigs, I also spent about $250 fixing up the pigpen. I worked like a draft horse. Every day I went into the city and bought skim milk to feed the hogs. They blossomed like sunflowers. I thought I was sitting on the top of the world. Finally I took them to yards—the fattest hogs you've ever seen. They paid me $6.15 per hundred pounds. That was just enough to pay for the skim milk and the transportation. I lost my shirt on that deal.

ONLY EMPTY CANS

I have never been one to oppose Government regulations. Several years ago the Government man told me that I would have to build a new milk house. According to the regulations, it had to be built out of concrete. I went into the city and hired a union bricklayer. I worked with him every day—in fact, I worked much harder and longer than he did, because my day starts at 5 a. m. and I am never finished until about 8 p. m. The result was that my milk house cost me about $200. The only thing in that milk house now is a bunch of empty cans.

Most city people who talk to us farmers seem to think that we're rolling in clover. One man asked me why I didn't get the bank to lend me $2,000 to put me back into the business. Frankly, I don't think I'd ever get the $2,000 back. The reason is simply that things cost too much—that is, everything but the things I sell. For instance, you can't get a farm hand now for less than $50 to $60 a month, plus his keep, of course. I did my thrashing this year with a couple of 15-year-old boys. They were worth $1 a day, but I had to pay them $1.75.

Now, I don't want you to misunderstand me. I know that I am a farmer, and I know that my place is on the farm. I don't want to go into the city to work, but I'll have to. I have to eat, just like anybody else. If I can't eat and pay my bills working the earth, then I'll go into the city and work in a defense plant. You say that's bad, because my farm is also a defense plant. I agree with you, but I'm dern quick to add that there's no boom on my farm.

If you say that my present tough luck is just temporary, I'll agree with you on that in general principle, but that's all. I have been having tough luck now for 4 or 5 years, and I just can't take it any more. There was a day—for instance, back in 1927 when I cleared $1,000 out of this farm. That was money in the bank. In addition to that I bought about $1,200 worth of new equipment and paid cash for all of it. In that year housewives could buy a quart of milk for 13 cents. I was getting $3.45 a hundredweight for my milk. Now the housewife still pays 13 cents for her bottled milk, but my milk checks show that I'm not getting much more than a $2 blend price for the milk I sell.

NOT MAKING MONEY

During the past few years they've made the business of buying and selling milk so complicated that most farmers can't understand it. All we know is that we're not making money and that we can't continue under this present set-up. I don't know if the Government, the dealers, the cooperative milk associations, or us farmers are to blame. Some say the consumers have brought this situation about because they won't pay a decent price for the things they eat. No matter who's to blame, I think something should be done about it right quick.

Constitution Day

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

Mr. VORYS of Ohio. Mr. Speaker, September 17 is Constitution Day. We celebrate the signing of our Constitution in Philadelphia 154 years ago by the Delegates who had labored through the sultry summer of 1787. Today we have the oldest constitutional government on earth. In a time of world-wide war and revolution, our Constitution is once more on trial. Our celebration this year should be more than a perfunctory ceremony. We should study what our Constitution means to us and determine how to preserve it.

Our Constitution was a part of the American Revolution. The Declaration of Independence was not only an announcement of the freedom of the North American colonies from British rule, but a declaration of the inherent freedom of all men from interference of all government with life, liberty, and the pursuit of happiness. This is why it was of eternal and universal significance. The American Constitution furnished the machinery by which these freedoms were assured to the American people.

A constitution is—what constitutes a government—the way it works. We are all familiar with the broad provisions of our Constitution; an executive, a legislative body, and a judiciary all with limited powers; a Congress consisting of a Senate and a House of Representatives, so that large and small States may have fair representation. The powers of the central government over the States are limited.

We have a Bill of Rights guaranteeing the fundamental freedoms of individual citizens against all branches of their government.

We speak of the Constitution as the bulwark of our liberties. We must remember that it does not operate in a vacuum or in general. It either affects individual men in their daily lives or it is of no effect at all. It gives individual men who are temporarily holding public office power to do things that they could not do without the Constitution. It puts limits upon the activities of men who temporarily hold public office which would not exist without the Constitution. It gives the individual citizen certain rights and certain duties which otherwise he would not have.

THE REAL CONSTITUTION

The parchment bearing the words of the original Constitution with the original signatures of the men who made it rests in a beautiful shrine in the Library of Congress in Washington. No American can look upon it without deep feelings of awe and reverence. The real Constitution of our country, however, is either impressed in the minds of our citizens and

guides and controls and limits what we do, or else it is not a constitution at all, because only in this way does it "constitute" our Government and our way of life. It is either alive or it is dead. It is not enough that we should know the provisions of the Constitution and give them lip service. We must not only have it, we must not only know it, but it must guide and control the activities of those among us who are in temporary positions of power in order to serve the individual citizen.

OUR CONSTITUTION NOT AN INVENTION

We think of our Constitution as an invention of the founding fathers, but no single provision of it was new to the Revolutionary veterans who labored to form a more perfect union. They simply combined principles which had been tested by their own experience in local government, colonial government, continental government. The perfect combination was new; the elements which composed it were old.

OUR CONSTITUTION APPLIES IN EMERGENCIES

We are sometimes told that our old "horse and buggy" Constitution was not intended to apply in emergencies. We should never forget what Chief Justice Hughes pointed out, that our Constitution was evolved in an emergency with the very purpose of controlling, guiding, and limiting our Government and our citizens in emergencies.

OUR CONSTITUTION MAKES REVOLUTION UNNECESSARY

The Constitution was formed in a revolutionary era by men who understood revolutions, who knew what made revolutions come and the terrible cost of revolutions. Therefore they provided, not a rigid code, but a broad set of basic principles which had been tested by experience so that changes in the details of government could take place within the framework of the Constitution. They provided machinery for amending it, so that there would be no reason for violent revolution in order to make necessary changes in our form of government. Twenty-one times the people have changed their Constitution by amendment. The people have no reason for revolution in our country in order to change their government.

The only revolution which will come is a change made in our living Constitution by our Government itself without amendment and without consent of the people.

THE PRESENT CRISIS

We face such a danger now. Our President is exercising war powers which he does not have under our Constitution, which are without precedent in our history and in conflict with recent acts of Congress.

WAR POWERS UNDER THE CONSTITUTION

What does our Constitution say about war, acts of war, acts leading toward war?

Article II, section 8, says:

The Congress shall have power * * * to define and punish piracies and felonies committed on the high seas, and offenses against the law of nations; to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water; to raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years; to provide and maintain a navy; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

These are the powers given to Congress.

What are the Presidential powers regarding war: Article III, section 2, provides:

The President shall be Commander in Chief of the Army and Navy of the United States.

That is all.

The framers of the Constitution knew about war. Most of them were war veterans. Eighteen of them had been officers in the Continental Army. Forty-six of them had been legislators; 16 were Governors or presidents of States. They knew about the military and legislative and executive problems involved in war as soldiers and as civilians. They knew that for carrying on a war, for directing the actual fighting, there should be one single head, a combination President and Commander in Chief. They also knew that no single individual, wise as he might be, should have the power to decide when or under what circumstances we should fight or do things that lead to fighting. George Washington, their great commander in chief, the man they knew would be first President, was present and yet with his advice and consent, they gave not to the President, but to the Congress, the power to define and punish piracies and offenses against the laws of nations, to declare war, to make rules governing the land and naval forces, to repel invasions.

In the Constitutional Convention, when someone suggested that the war-making power be given the President, Elbridge Gerry said he "never expected to hear, in a republic, a motion to empower the Executive alone to make war."

Today, 154 years later, the Executive alone is making war. Is this still a republic?

NO PRECEDENT FOR PRESIDENT'S ACTION

President Roosevelt, in announcing his "shoot-on-sight" order to the Navy, said: "This situation is not new" and "My obligation as President is historic."

He based this on our naval action against the French under President Adams and against the Barbary pirates under President Jefferson.

Neither of these justifies the President's action. Both were fully authorized by Congress. Both were wars, for Congress can exercise its war powers without formally declaring war.

In 1798 Congress passed a whole series of acts creating our Navy, building up our Army, mentioning the Republic of France by name, and on July 9 passed an act specifically authorizing the President to "subdue, seize, and take" French armed vessels.

Our Supreme Court held that this was war. Chief Justice John Marshall held this in the case of *Talbot* v. *Seeman* (1 Cranch 28), stating:

The whole powers of war being, by the Constitution of the United States, vested in Congress, the acts of that body can alone be resorted to as our guides in this inquiry.

In another case, deciding that our action against France was war, Justice Chase said (*Bas* v. *Tingy*, 4 Dallas, 35):

Congress is empowered to declare a general war, or Congress may wage a limited war; limited in place, in objects, and in time.

Justice Washington said:

Every contention by force between two nations in external matters, under the authority of their respective governments, is not only war, but public war.

On February 6, 1802, Congress passed an act specifically providing:

It shall be lawful for the President to instruct our Navy "to subdue, seize, and make prize of" vessels of Tripoli, on the coast of Barbary.

Both of these wars were to protect our peaceful commerce. Neither was to protect arms going to a belligerent in American-owned ships, in spite of a neutrality law recently enacted, which forbids American vessels to go to belligerent states, and forbids American citizens to travel on belligerent vessels or through combat areas. The lease-lend bill did not provide for "maintaining intact * * * our line of supply of material to the enemies of Hitler"; instead the lease-lend bill not only specifically provided that it did not authorize convoying, but the word "transfer," as applied to lease-lend materials, was stricken from the bill before it was enacted, to make clear the intent of Congress that we were not agreeing to maintain a line of supply.

THE ISSUE

The gravest threat to our constitutional government today comes not from without but from within and not from below but from above. We are not united on the questions of whether we should fight and when and where. The determination of these questions by Congress in the American way, the constitutional way, will unite us, whatever the decision may be. Our present course of evading the constitutional way of settling these questions is destroying our way of government. We, the people of the United States, in order to insure domestic tranquillity and provide for the common defense must hold fast to the Constitution our forefathers ordained and established.

National Catholic Community Service

EXTENSION OF REMARKS

OF

HON. ANTON F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

RESOLUTION BY STUDENTS OF NAZARETH ACADEMY, LA GRANGE, ILL.

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

In general assembly the students of Nazareth Academy voted unanimously the following resolution:

"Whereas owing to general world conditions the Congress and the President of the United States deemed it advisable to conscript certain classes of young men into military service; and

"Whereas such conscripts need every spiritual and material support that the civilian population can offer; and

"Whereas in recognition of such need there has been ordered and established an authorized organization known as the United Service Organization, whose responsibility is to afford or supply means of alleviating, insofar as possible, the hardships and inconveniences of conscripted and enlisted men serving in the United States armed services; and

"Whereas one of the officially designated organizations of the United Service Organization is the National Catholic Community Service, whose duty is to take care more especially of the needs of Catholic conscripts and enlisted men: Be it

"*Resolved*, That we, the students of Nazareth Academy, actuated by the highest motives of Christian charity, desire to participate in the meritorious work of the National Catholic Community Service. We therefore pledge our aid and assistance to Rev. William O'Connor, D. D., the duly authorized representative of the National Catholic Community Service, in any and all ways that we may be of service. In doing this we realize we are only doing our patriotic duty, as also performing a distinct service in Catholic action."

VIVIENNE FIALKA,
General Chairman.
GENEVIEVE STALZER,
General Secretary.

LA GRANGE, ILL., *September 12, 1941.*

They're Asking for Disaster

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of September 14, 1941:

[From the Milwaukee Journal of September 14, 1941]

THEY'RE ASKING FOR DISASTER

An excellent argument for selective service training and for making the training system permanent in this country comes out of the meeting at Baldwin, Kans., of the Methodist Youth Fellowship, a new organization that aims to enroll 2,000,000 young Methodists between the ages of 15 and 23.

This group starts out by demanding repeal of the Selective Service Act. It wants complete free speech in the Army camps, including the right to agitate for anything the young men think up. It wants conscientious objectors exempt from any kind of service, even that semicivilian training that they can now be given in lieu of direct Army duty.

So here we have youth meeting under the guaranteed freedom of America, saying what it pleases, doing what it pleases, but not willing to turn a hand to aid America in maintaining that freedom. In fact, it wants to make the task of those who are willing to defend America harder by agitating among trainees, among conscientious objectors, and among those who are trying to split the country wide open on foreign policies.

These young people know, they must know, that they are living in a world of aggressor nations where youth is being regimented—the German Nazi phalanx, the Italian Fascist phalanx, the Japanese phalanx—to take away all freedom from young people. And here they undercut the effort of the freest nation on earth to maintain its position. They would break up its Army and send the young men home. Pending that, they would break up the discipline of the Army. In short, their program is to leave America defenseless.

If such movements as this ever succeed, America will be defenseless. And these same misguided young Methodists will be heiling a Hitler. What this country needs as much as anything else is the discipline that selective service gives youth, a discipline and a sense of duty to society that our homes, our schools, and our churches failed to give when we all grew soft and flabby in the lush twenties and whiny in the depression thirties.

Conditions in the Small-Loan Business

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

Mr. SHEPPARD. Mr. Speaker, on June 27, 1941, I filed House Resolution 251, which is now pending before the Rules Committee; and in the Appendix of the CONGRESSIONAL RECORD, page A3301, under title "The Consumer Credit Loan Condition," it is stated—

That a $15,000,000 loan-shark racket got its start in World War No. 1. If by its intriguish implementing processes of systematic oppression indulged in by the operators in taking advantage of the needy, grew to the unwieldy and unbelievable volume of $2,000,000,000 in such a relatively short time, how long would it be before the same identical operators would be in control of the Nation's credit?

At the time of the statement it was inferentially said that unless some checks were taken and the brakes set, the control would be the natural result of the accretion of interest accumulations.

The loaning agencies fearing that there would be some practical steps taken in the way of investigations and national legislation took the bit in their teeth, and by an apparent sincere looking master stroke of intrigue they are temporarily in control.

You may ask, "How are they in control?"

A man who is the reputed national authority on consumer credit in all of its ramifications, but particularly small loans, has been the virtual dictator of the drafting of the rules on consumer credit regulation and the fixing of the policies of the Federal Reserve Board. In other words, the Board deferred to what they assumed was authority. This authority was the reflected influence of an attorney, admitted by Dr. Nugent, the dean of the attorneys for the licensed loan sharks, as was his father, also admitted by Dr. Nugent, the dean of the attorneys for the earlier loan sharks. For a record of Dr. Nugent's recognition of this attorney's talents one need look no further than his introduction to the attorney's book, Annotations of Small Loan Laws.

No disciple ever spoke with more reverence than does Dr. Nugent; he literally fawns encomiums over this attorney. He is a good attorney, but for whom?

In the light of the facts that are revealed in the following short paper, how does Dr. Nugent reconcile his trusted position in the Federal Government, his position as director of the Remedial Loans Division of the Russell Sage Foundation, his honored degree as a doctor of economics with this attorney's influence that is reflected in the Board's regulations of consumer credit? The attorney's ethics are explained by his interest in the Household Finance Co.

The foregoing is a grave charge, but it and other cumulative events are so overwhelmingly convincing that I feel that it is my duty to be of record.

The States now regulate installment loans. The social theory upon which the States have undertaken this regulation is: That the loans are made to meet the pressing needs of those who, due to their circumstances, are unable to bargain prudently with those that have money to lend. It is upon this theory that small-loan companies are licensed to engage in the business. Originally there were no institutions that would make such loans to the oppressed. To induce reputable capital to engage in the business the rate of interest that a licensee charged was fixed by a compromise between the Russell Sage Foundation and a group of leading loan sharks, at 3½ percent per month on remaining unpaid balances, on amounts of $300 and less. Providing a loan of $100 is paid off in equal monthly installments in 1 year, the cost to the borrower is $22.75.

The ceiling rate of charge in the various States now is from 2½ percent per month, to 3½ percent per month. In many of the States the principal amount to which these rates may apply has been raised to $500. Space does not permit a rate table, but the average gross rate allowed is 3 percent per month, or 36 percent a year.

The law permitting this charge was conceived a generation ago. Conditions were entirely different. There was all told invested in the small-loan business, only $15,000,000, in annual turnover.

Today in which is termed personal-loan companies, that is to say, those that operate under the Uniform Small Loans Act, there is an annual investment turnover of $1,000,000,000. This is exclusive of the billion or so outstanding in the hands of commercial and industrial banks, credit unions, and others. Excluded also is the one hundred and fifty million in the hands of 240-percent loan sharks hereinafter referred to.

This billion-dollar bonanza, with all of its attendant machinations, has been placed under the Federal Reserve Board, including the scheme of systematic oppression perpetrated on between seven

and eight million families, at an average annual cost to them of between three hundred and fifty to four hundred million dollars. It is being demonstrated every day that it can be done at one-tenth of this cost, and still net, to properly supervised and administered agencies, a comfortable margin of profit, and one comparable to other businesses which are clothed with a public interest. An approximate $300,000,000 in defense savings among the most needy is not a small governmental objective.

The perpetrators of this open and notorious financial scandal and scheme to mulct needy borrowers of this excessive sum of money are wolves in sheeps' clothing parading under the banner of reform. Their stock is being sold on the stock exchanges of the Nation; their insidious propaganda is spread upon all the financial pages. They have literally thousands of lobbyists and fixers at work. They employ hundreds of writers to write subtle maudlin sob-sister tales reciting the virtues of the friendly licensed loan companies. Their executives are paid salaries of seventy-five to one hundred twenty-five thousand dollars per year. Their executive offices are moved to Florida during the winter months. Trips across the continent are made by groups of five and six executives by airplane and luxury trains with no more economic restraint than a subway ride. Hotel suites are maintained at daily costs of from twenty-five to one hundred dollars. Long-distance tolls, telegraph, and other expensive communications are employed at a cost of hundreds of thousands of dollars a year. Inspired surveys by colleges and universities and the publication of books, pamphlets, and reports setting forth half truth and statistical lies manufactured out of whole cloth—all under the guise of helping out the small borrower, but in fact at the expense of the needy borrower.

The Federal Reserve Board has, along with the regulation of installment selling, inherited the condition that surrounds this billion-dollar bonanza.

The Chairman of the Board has announced that it does not essay to reform. It has issued its regulations. A careful analysis of them confirms this statement.

Other than to make some ridiculous exemptions and limit the term on a loan of $1,000 and less to 18 months—which is far too long a term for necessitous small loans as they are being mishandled today—the regulations are innocuous-looking camouflage.

In the light of the oppressive condition that is affecting the economic existence of one-sixth of the population of the Nation's most needy, the express language of the Executive order, the declared policy in the preamble to the regulations, "that the uncontrolled use of credit tends toward inflation," and "in the public interest for defense savings," the statement by the Chairman of the Federal Reserve Board anent nonreform when applied to the loan business is both shocking and alarming. The power to regulate carries with it the duty to act in the public interest.

Let us get specific now and direct our attention to the treatment of the borrowers who borrow from the national chain loan companies. At the invitation of glaring and deceptive newspaper advertising, blaring radio announcement, and incessant pounding by direct mail, he applies for a loan to meet what to him is a pressing and anxious need. The advertising invited him to borrow any amount from $25 to $500 and repay it the easy way. He applies for a loan of $50. After he has been allowed to sit on the anxious seat long enough to become flexible and pliant, he is given a high-pressure selling grill to borrow $150 or $200. He takes not what he needs but the amount that he is directed to take. An anxious person is a literal slave to the greedy wishes of a money lender.

You may ask why the lender loans the borrower more than he needs. When they first started in the 240-percent loan-shark business the lenders learned that the money lending business is a business of marketing averages and all they needed was a specified number of customers paying them a given amount each month. The plan used in the days before they became legal loan sharks was to loan an amount, that the lender knew the borrower would be unable to repay, usually the amount of the borrower's weekly salary, from fifteen to thirty dollars for a period of 2 weeks or so, and charge him at the rate of 20 percent a month, or $1 for $5, $2 for $10, and so on up. Seldom did they allow a borrower to make a loan over $50. The average time that a borrower stays on the books of lenders doing this type of business is 2 years.

There is approximately $150,000,000 being loaned to borrowers under this plan at the present time. A great portion of it is under the control of lenders that are also lending under the Uniform Small Loans Act, as sponsored by the Russell Sage Foundation.

Pause a moment and consider the borrower who has applied to a licensed loan shark for a loan of $50 for a needy purpose and has been maneuvered into borrowing a sum greatly in excess of that amount in order that the lender can keep his lending business on a profitable basis and thus retain his license to mulct and maintain his position in society as one who is helping out the little fellow. This cruel treatment of these seven or eight million borrowers is implemented by the lenders under the Uniform Small Loans Act, to bring about an economic condition in the borrower's life that renders him easy prey to debt enslavement for a period on the average of 6 years. It is the same old wolf, the small short-term 240-percent lender dressed in sheep's clothing, with his howl ingeniously tuned to resemble the bleat of the lamb.

In passing it is well to observe that a license to engage in a business carries with it the duty to conduct the business on an ethical and fair basis.

During the 6 years that the needy borrower stays on the books of the legal loan sharks, he is what is called by the sharks refunded on the general average every 7 months. "Refunding" means loaned more money, a sufficient amount, not to serve his pressing needs, but one to keep the average individual loan balance of the loan office at a figure that will be profitable to the lender. You may ask how this can be done; it is a simple problem when one observes that the borrower was loaned an excessive amount in the first place in order to weaken his future condition. Again it is made more simple due to the fact that the lenders agree among themselves that they will allow from two to four separate and distinct loans to any borrower. Such agreements have the dual effect of weakening the borrower as a result of which the wily and wealthy lenders pay off all the others and hold the borrower in bondage much longer. It is by these and many other confidence schemes that the individual loan balance average is kept to a figure of great profit.

There is a definite pattern upon which to calculate what this great gross profit is. A local Washington, D. C., bank, engaged in the small-loan business, with a volume running into the millions of dollars, has a cost per customer per month of 70 cents. A large western bank doing a State-wide small-loan business has a monthly cost per customer of approximately 55 cents. These costs include imputed interest, loss reserve, supervision, executive salaries, rent and all other items of expense that are attendant to operating a legal small-loan business on a moral basis. The western bank charges the borrowers at the rate of 6 percent per annum on remaining unpaid balances. The Washington bank charges a slightly higher rate, that on the average is 8 percent per annum.

A comparison of the per dollar cost between the banks' gross costs per month per customer reveals that the legal loan sharks are making several hundred percent monthly profit.

To simplify the calculation we shall choose a $150 marginal-loan balance that a borrower is kept owing to a legal loan shark year in and year out. If the rate is 3½ percent per month on remaining balances, as it is in Virginia and Maryland, the borrower pays $5.25 a month. Over a period of a year he pays $63. After the first year he has in his possession only $97 and at the end of 6 years he has paid $378 for the use of $97, the money two-thirds of which he had no pressing need. At this point a cogent observation is: That in the States where the gross ceiling rate is cut to 2½ percent per month, the lender simply requires the borrower to borrow a greater amount—and thus keeps his perfidious scheme as profitable as ever; and more enslaving to the needy borrower.

The fact that a system of loan shark operation is costing needy borrowers 700 to 1,000 percent more than the normal cost of handling, is an economic and social monstrosity that cannot be shushed down by the insipid casual remark that conditions are better than they used to be in the old days.

The only loan-shark condition that this Nation has ever had—and the one that is so patently un-American today has been brought about by the knavish intrigue of the wolves in sheep's clothing, now in control of the billion-dollar loan-shark racket.

Banks, credit unions, nor any reputable lenders will not and cannot compete with these immoral and unsound practices. These institutions follow a policy, that

loans must be conservative. Hence they loan less than the borrower thinks he needs.

By their omission to take affirmative remedial action the Federal Reserve Board's regulations impliedly ratify the foregoing conditions.

This condition is known to Congress as it has been spread upon the pages of the RECORD. Likewise, it is known to others holding responsible positions, as those in agencies regulating inflation. The social and economic need for business enterprises that justly serve needy borrowers is essential to the public welfare.

Such a criticism and charge as the foregoing calls for constructive suggestions as to a remedy; it is as follows:

A relentless and vigorous congressional fact-finding committee, the cost of which would be nominal in comparison to what would be recovered in funds heretofore erroneously exempted from taxation.

Why Not Let the Rich Pay It?

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of September 14, 1941:

[From the Milwaukee Journal of September 14, 1941]

WHY NOT LET THE RICH PAY IT?

Some of the tables presented to the House Ways and Means Committee in its hearings of the revenue bill are worthy of general attention. Among these is the table showing the distribution of income to families and single individuals in 1935–36.

This table shows that 17 percent of American families and single individuals in that year had gross individual incomes of less than $250. It shows that 31 percent had incomes of less than $750 and that 59 percent had incomes of less than $1,250. In fact, less than 5 percent had incomes in excess of $3,500 and less than 1 percent had incomes in excess of $10,000. Only 87 families and individuals out of the country's 39,458,300 had incomes in excess of $1,000,000.

These figures indicate clearly enough why it is impossible for the Government to sustain its activities only by high taxes on the wealthy—there just are not enough of the wealthy to begin to foot the bills, even though every cent of their income were taken from them.

The table shows that, if every cent of income of all persons having more than $100,000 a year were taken, only a billion dollars would be realized. If all the income of persons having more than $50,000 a year were taken, the yield would be only two billions. We would have to confiscate all income above $6,000 to get ten billions. To meet this fiscal year's expenditures of some nineteen billions we would have to confiscate all income above $2,800.

The fact is that there are so many persons of small income that the total income of these persons is enormous. More than 50 percent of total earnings of people of the country go to persons and families with incomes of less than $2,000. Eighty percent of the total income is in the hands of those getting less than $5,000 each. It is thus obvious that, no matter how heavily we tax the top, a considerable part of tax income must come from those earning less than $5,000. The total income of those getting less than $250 a year in cash is almost double the income received by those having annual resources of more than $1,000,000 each. The reason is that in the first category there are 2,123,534 families and individuals, while in the second there are only 87.

Liberty—Equality—Fraternity

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

ADDRESS BY NICHOLAS MURRAY BUTLER

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the RECORD, at the request of the Senator from New York [Mr. MEAD] and the Senator from Connecticut [Mr. MALONEY], who are absent, an address entitled "Liberty—Equality—Fraternity," delivered by Nicholas Murray Butler at the Parrish Memorial Art Museum, Southampton, Long Island, August 31, 1941. I have obtained an estimate of the cost of printing the address. The estimate is $135.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What has happened? This question is being pressed throughout the world by a startled and perplexed generation. It is asked not only by philosophers and intellectual leaders but by millions of men and women of every sort and type who are not scholars and who make no claim to scholarship. It is being asked in every land. Interest in this question is profound, alike in Europe, in Asia, in Africa, and in the Americas.

It was no less an authority than Gibbon who said of Tacitus that he was the first of historians who applied the science of philosophy to the study of facts.[1] The time has come to do whatever may lie in our power to learn the lessons taught by Tacitus and by Gibbon. The one outstanding philosopher in the world of today, the Italian Benedetto Croce, has just now published a volume of absorbing interest which offers the best possible approach to an understanding of what is really going on in this twentieth-century world.[2] A reading of this remarkable book will go far toward giving to men and women of today an insight into the forces which are at work in the world and a comprehension of their significance and of how, if at all, they may be controlled.

The shock of these happenings has been so great that vast numbers have been stunned by it. What they had supposed to be well-founded faith in controlling principles of thought and of morals, of social, of economic, and of political organization is treated with disdain and contempt. The rule of reason has been displaced by that of cruel and merciless brute force, while the precepts of morals and the ideals of religious faith are disregarded entirely. The great religions of the world are despised and assailed for the reason that they, each and all, call for faith in a God, an overruling Providence, who does not happen to come under the jurisdiction of any present-day despot but must, if He exists at all, be that despot's rival and competitor. Moreover, the ruling agency of these relentless despots is irrational and violent emotion. It uses as its battle-cry: "We do not know where we are going—come along!" It has been clever enough to take possession of ardent and ambitious youth by its absolute control of the schools and the process of education and by the elimination of a score of the world's historic universities with that freedom of thought and of expression which is now more than 200 years old. By powerful and most ingenious military organization and equipment these new animal forces have conquered one civilized and free people after another. These conquered peoples, being deprived of the instruments of war and of the capacity to produce them, are helpless to resist the armed forces which serve not only as their police but as their rulers, both local and national. In short, we are learning how easy it may be to conquer and to rule the world if religion and morals are thrown to the winds and if the whole of the world's instrumentalities in the making and use of armed force are confined to the governments of the ruling despots.

Had it been predicted that the rapid development of liberal thought and policy which became so obvious in the seventeenth century, which reached its age of enlightenment in the eighteenth and which could record the achievements of the English, the American, and the French revolutions, would be followed in another century or two by the appalling reaction which now everywhere confronts us, the prophet would have found himself without believers and without honor in his own country. Of all the manifestations of this reaction, none has been more startling or more ominous than the formal renunciation and denunciation of that truly great motto, Liberté Égalité Fraternité, by those who for the time being are in position to speak for the French people. One might think that it would have seemed sufficient to offer new interpretation to these words, but to disavow them completely and to have them removed from the hundreds of public buildings on which they had so long been carved, simply passes comprehension. Incidentally, it reveals an obvious lack of a sense of humor.

What is it which has made possible and caused these literally preposterous acts? The only answer can be that they are the result of acceptance, willing or unwilling, of a doctrine of social organization which would substitute permanent class groups and distinctions for that form of free and orderly social, economic, and political organization which represents and reflects the spirit and the ideals of a true liberalism. Since it is plainly impossible to go back, either in France or elsewhere, to a ruling class of landowners or inherited nobility, this can only mean the intention to set up by force a state of fixed and permanent economic, social, and political classes to displace a state of free men to whom every opportunity for improvement, for distinction and for service would be open. It is grotesque to call this a new order. In all essentials it is one of the oldest orders that human history records. This indicates, once more, how important it is for

[1] Gibbon, Edward—History of the Decline and Fall of the Roman Empire. London: Methuen & Co., 1896. Vol. I, p. 121.

those who would guide their fellow men, to be in possession both of a map and a compass.

In their present form these doctrines reflect and would apply the teachings which were pressed upon the world nearly a century ago by Karl Marx and the group of which he was a ruling member. One has only to read the story of the life of Marx at Cologne, in Paris, in Brussels, and in London to see to how great an extent what he said and wrote was the outcome of that spirit of envy, hatred, and malice by which he was surrounded throughout his life. Indeed, all attempts and plans to suppress or to limit individual accomplishment on other than moral grounds have this same foundation. It may be communism, it may be nazi-ism, or it may be the less extreme fascism, but each and all reflect and embody that spirit of envy which is the unworthy result of observing the rise in the world of others than one's self.

Of course, these attempts at restriction, compulsion, and despotism are all advanced on grounds of public interest and public advantage. It is the common man, so-called, the ordinary man, who is to be protected by them. The fact is, however, that what is being attempted would have just the opposite effect. It would sentence the individual, however talented, however ambitious, or however competent, to remain in the group or class into which he was born. It would stop all true progress and substitute mechanical mass production for individual originality, achievement, and high human service.

It is moral principles and moral ideals, and those alone, by which an individual's work in the world should be limited. Any limitation imposed by sheer force without regard to moral principles is reactionary in the extreme, as well as destructive of all excellence. Instead of being in the interest of the great mass of the people, it is distinctly and violently against that interest. It would destroy the very foundations upon which free institutions rest and would substitute some one of the many forms of despotism for that free government through public opinion which we have come to know as democracy. Under such a system of social, economic, and political organization and government liberty, equality, and fraternity would all disappear. When Voltaire wrote that "It is inevitable that mankind should be divided into two classes, with many subdivisions—the oppressors and the oppressed," he turned his back upon the rule of moral principle and assumed a world where selfishness and force alone were in control.

Croce points out that the German philosopher Hegel was the author of the famous statement that history is the history of liberty.[2] The story is a long and fascinating one, since it reveals the power of the wish for liberty and the skill with which, in one form or another, the rule of liberty was strengthened through the centuries. It makes it plain that, as was said by Montesquieu, "Liberty does not consist in doing what one pleases * * * Liberty can only consist in being able to do what one ought to do." This great struggle reached its victorious climax as the eighteenth century drew to its close, when the people of what was to become the United States of America formulated the Bill of Rights and incorporated it in the newly adopted Federal Constitution, and when shortly thereafter the French people, acting through their Constituent Assembly at Versailles in 1789, drew up as their guiding principles the Declaration of the Rights of Man. The English people had begun still earlier, although with less formality, to write modern history in this field of thought and action.

Today probably no word, unless it be "democracy," is used so carelessly and often with so little understanding as the word "liberty." It is fundamental that liberty is not a grant by government, but that government is a delegation of power by people who have liberty, and that this government must always be subject to their control. It is the chief business of a free people, and their greatest responsibility, to see to it that the government which they have set up does not, under one pretense or another, invade the reserved field of liberty and restrict it in a manner which the free people themselves have never authorized or contemplated. In a democracy the state and government are wholly distinct. The state is the field of reserved liberty plus the field of government. State and government can only be identical when liberty has wholly disappeared. The constant struggle of those who are, consciously or unconsciously, enemies of liberty is to increase, even to multiply, the function and authority of government. Education, on the other hand, is the instrumentality by which the people are to be taught and trained to use so wisely their opportunities in the field of liberty that the public interest is constantly carried forward constructively and helpfully, without inviting or permitting government to invade the field of reserved liberty. The notion that all governments in what we call democracies are truly representative of the whole people and that their every act is to be accepted by the people without discussion is most unreasonable. Theoretically, in a democratically organized state, government represents the will of the majority of the people, but, in fact, as very little study of election statistics will show, what government too often represents is really the influence of small, well-organized, persistent and frequently self-seeking minority groups. The political history of the American people abounds in illustrations of this fact. Some of them are familiar, but many of them, having taken place beneath the surface, have been known but to the few. Actually, in our Federal system of government the one and only representative of the whole people and the only one chosen by them is the President of the United States. Senators chosen from and by the several States and Representatives in Congress chosen from and by the various congressional districts are in many cases brought forward by very small but stubborn and ambitious groups and carried through to election by a vote of only some 10 percent to 30 percent of the entire possible vote of the State or district which they then claim to represent. This is one reason why calm, dispassionate, and nonpartisan consideration of problems of outstanding public interest and importance is so often impossible, since the attention of members of the Federal Legislature is almost wholly fixed on those matters which are urged upon them persistently—and often with threats—by highly organized and self-seeking minorities. It is this habit which throws light on what Jefferson called the morbid rage of debate.

The chief problem which confronts the lover of liberty is the preservation of that liberty. It faces two dangers—on the one hand, regimentation and despotism, and on the other hand, license. Free men have long since drawn a clear line between liberty and license. It was Burke who asked, "What is liberty without wisdom and without virtue? It is the greatest of all possible evils." What he meant was that without those two limitations liberty becomes license.

The Sixth, Seventh, Eighth, and Ninth Commandments which Moses brought down from Mount Sinai were written into the moral law and then into the statute law of one people after another. Violation of any one of these four commandments is not an act of liberty, but of license, and this violation has long since been made a crime, punishable as such. There are many other misuses of liberty which have not risen to the height of being defined as criminal, but which are unreasonable, improper, and even dangerous acts of license.

The line between liberty and license can never be drawn with mathematical accuracy, but the wise man instinctively knows where that line is. Unbalanced and confused imaginations lose sight of any distinction whatever between liberty and license. There are organizations for the defense of civil liberty whose energies and exhortations are often directed to the defense of what are plainly uncivil liberties, namely, license. Those who are victims of such states of mind become not only a public nuisance, but often a public danger. Moreover, they bring about undeserved criticisms of liberty itself, and are pointed to by those who prefer despotism as evidence of the folly of trying to establish and preserve liberty for mankind in general. Probably liberty has no more powerful enemy than license. Men are often deceived by what is license, when they would be quick to understand and to resent an attack on liberty by despotism. In the present-day economic organization of the world, it is of vital importance that the free man preserve his freedom, both from invasion by government under the guise of advancing the public interest and from undermining by license with all its dangers. The words of Madame Roland still echo across the years, "O liberty! how many crimes are committed in thy name!"

The fundamental liberties of the individual are those defined in our own national Bill of Rights. They are freedom of religion, freedom of speech and of the press, freedom of assembly, freedom to petition the Government for a redress of grievances, and those other forms of freedom which are defined in the first 10 amendments to the Federal Constitution. When that Constitution was under consideration, the opinion was expressed by many that the primary principles of civil liberty might well be taken for granted and need not be written into the new Constitution. The years which have followed afford abundant proof of the wisdom of those founding fathers who would take nothing of this kind for granted, but who insisted that a definition of the fundamental rights of the citizen be formally incorporated in the Constitution. Had this not been done, the history of the American people would have been very different from that which it now is. We have this clear-cut, fortunate, and philosophically sound definition of our liberty, and it is our highest duty to see to it that that liberty be preserved and protected and not weakened, undermined, or lost by careless indifference to attacks upon it, often well disguised and highly mischievous, from within. This means everything, not only to the people of the United States, but to the whole world of tomorrow.

Fundamentally, equality means the equality of all in respect to civil, economic, and political rights and equality before the law. It does not mean, and could not possibly mean, equality of individual ability, of individual capacity for achievement or in value of individual service to one's fellow men. Considerations of physical strength and health, of mental inheritance and equipment, and of environment, from all of which difference of opportunity arises, make such equality wholly impossible. No two individuals are ever exactly alike, and unless they were exactly alike, they could not possibly be equal in this mechanical sense. We see something which approaches mechanical equality among those confined in prison or those compelled to work either with hands or with brain under conditions rigorously imposed by a dominant power. Among a people which enjoys liberty, equality quickly reveals itself by the rise to positions and opportunities of steadily increasing importance

[2] Op. cit. p. 59.

of those men and women who exhibit exceptional ability and capacity for achievement. In the industrial history of the American people there are illustrations without number of the capacity of the individual, given his opportunity, to rise to positions of high administrative power and responsibility solely by use of that equality of opportunity which our free institutions offer to him. Of those who are at the present time the chief administrative officers of 12 of our greatest railway systems, 5 began their service as clerks, 2 as office boys, and 1 each as fireman and engineman, as track laborer, as stenographer, as telegraph operator, and as rodman. This record tells its own story of the opportunity which is open to excellence. Many other similar instances could be found by an examination of our industrial and commercial organizations.

All those schemes of social, economic, and political organization which would mechanically impose equality of service, of reward and of opportunity upon all, would invent a kind of equality wholly out of consonance with liberty. If that sort of equality is to come first, then there will be no liberty. The right to work, to earn and to save, and to use one's savings to increase production and to meet human needs, is fundamental to democracy. This right cannot be limited by any doctrine of permanent social and economic classes which are engaged in perpetual struggle for gain at each other's expense. Nor can it be limited by enforced membership in any group or organization—religious, political, social, economic, or industrial. Any such enforced limitation is not only undemocratic but it is antidemocratic. It is only equality based upon liberty, and which is liberty's companion, that is real and which can carry civilization forward, generation after generation, through the efforts and the leadership of the most competent.

It is many years since I first had occasion to point out in a public address that a chief business of democracy is to produce its own aristocracy. That is the way in which democracy discovers those who are most competent to render it important and responsible service. It does this through the establishment of equality of opportunity in the field of liberty. This democratic aristocracy will not be one based upon birth or inheritance. It will not be one based upon wealth or artificial advantage or upon that type of advantage which is known as privilege, but it will be one based only upon ability and capacity for achievement. That democracy will be most secure and most likely to last which can and does produce this aristocracy of its own and is guided by it.

Today the democracies, including our own, are subject to grave and in many ways deserved criticism because of the fact that they so often allow differences of opinion on minor matters and the passion for long-continued debate to postpone action at a time when their own prosperity, and indeed their own safety, depend upon their acceptance and support of a sound public policy adjusted to the needs of the moment. It is this characteristic, so often revealed in the recent history of the British, the French, and the American democracies, which has led to the taunts, the cynicism, and the sneers directed at them by the world's present-day despots and their groups of blindly devoted followers. It is for a democracy quickly to make it plain that it can be and is an efficient form of government, and that neither liberty nor equality need be or will be weakened or sacrificed in order to attain efficiency of the highest order. We Americans can learn much from a study of the world's history during the past 30 years, as well as from a study of the problems which faced Abraham Lincoln and of those which face the President of the United States today. Quick and wise efficiency is the secret of their fortunate solution. One of Woodrow Wilson's wisest remarks was that "the highest and best form of efficiency is the spontaneous cooperation of a free people."

Given liberty and equality, there remains fraternity. That is a state of mind and of conduct which is the outgrowth of liberty and equality working successfully together to guide an orderly, a progressive, and a liberal society. Fraternity reveals itself in those hundred and one acts of kindly thoughtfulness and care which are in so large a degree characteristic of present-day America. It is the spirit of fraternity which leads to great benefactions, made in the public interest by those who by reason of ability or good fortune have honestly acquired large wealth. Those who are really moved and guided by the fraternal spirit do not keep these vast fortunes for the members of their immediate families, but they bestow them in the public interest upon those institutions and undertakings which represent and reflect the fraternal spirit at its best. These are colleges and universities. They are hospital and art museums. They are undertakings in the field of music and the fine arts. They are institutions to promote scientific discovery and application of new knowledge to the wants and needs of man. They are institutions for the care and guidance of the dependent and of those who by reason of personal deficiency or disease are unable to care for themselves. Were there no fraternal spirit, all such helpless individuals would be told to care for themselves, and if they could not do so, to pass out of existence and let Nature take its course. That is the barbaric but not the civilized method of dealing with one's fellow men.

What is called capital is civilization's greatest achievement. Capital is what has been gained by work. It is earnings and savings used to increase future production and to cooperate with others in multiplying that production. The mother of Karl Marx was a very wise woman, for she wrote: "If Karl had made a lot of capital instead of writing a lot about capital, it would have been much better."[4] If one will read the story of the life of Andrew Carnegie and of John D. Rockefeller and see how, as unprecedented success attended their life work, they had in mind from the very beginning the service of their fellow men through the use of the fortunes, however large, which they might acquire, he will see the working at its best of what is contemptuously called the capitalistic system. Both liberty and equality would be far less efficient and far less deserving of enthusiastic and devoted support were they not accompanied by fraternity. It is fraternity which learns the lessons that liberty and equality have to teach and that characterizes a social order made up of civilized human beings who will not willingly let their fellow men suffer or be in want.

Where, then, could we find for the guidance of tomorrow a motto more abundant in promise and more sound in principle than Liberty Equality Fraternity? To think that after receiving for a century and a half the approval and the applause of civilized men, this noble motto is now attacked and even ridiculed is the best possible evidence of the backward character of the world-wide revolution which is under way and which has, for the time being, conquered France. If men were really civilized and if their word, formally and authoritatively given, could be depended upon, this backward revolution might have been much more speedily met and checked. It is only thirteen years since the governments of almost every nation in the world united with their fellow governments to renounce war as an instrument of national policy and to proceed to the settlement of international differences and disputes in a spirit of peaceful discussion and judicial determination. The ink was hardly dry upon this great treaty, known as the Pact of Paris, when some of the governments which had signed it began to prepare for war more vigorously than ever before in history. Their men of science were set to the invention and perfection of new instruments for military use. The children in their schools were disciplined and trained not to enjoy and to understand liberty, but to do as they were told, to obey without question and to submit to the emotional guidance of formulas and phrases, every one of which meant war and preparation for war. It was those nations which accepted the Pact of Paris in the spirit in which they signed it that did not engage in these preparations and that, therefore, were the first subject of attack when the new despots undertook to take over the rule of the world for the establishment of their new order. The democracies lagged in military preparation, and they lagged because their peoples believed what their governments had said and were innocent enough to take it for granted that all other signatory powers were honest and faith keeping. Such is the explanation of much which is now going on all about us, of the undermining of national spirit and national unity of purpose by every sort and kind of public enemy, and which has led to the pathetic downfall of France and the literally appalling attack upon Great Britain and its people. This is neither the time nor the place to attempt a forecast of what the immediate future has in store. If, by any fortunate chance, the chief enemies of liberty, equality, and fraternity, which are now carrying on a stupendous military contest between themselves, should wreck and ruin each other, the door would be open to a new era of progress, provided the democracies have the insight, the courage, and the intellectual capacity to take the lead in organizing a truly new world on those principles of liberty, equality, and fraternity which must rule if prosperity and peace are to return and to endure. The federal principle has now established itself in so many forms and over so many different areas that there can be no question but that it will afford the key to the solution of the chief political problems which world organization has to offer. That economic nationalism which has had so much to do with promoting world confusion, world competition, and world war, must give way to that international trade system which great seers like Adam Smith and Richard Cobden, John Bright and Gladstone long ago saw to be as necessary as it is sound. There is no more reason why every independent sovereign nation should supply all of the physical wants of its own people from territory under its own flag than there is that it should supply all of their intellectual wants and needs from men of science, men of letters and intellectual leaders who speak that language and who owe that allegiance. Ideas go about the world with instant speed and without obstruction. Why should not men's economic needs be satisfied in like fashion? All that is required to answer this question is high intelligence, insight, courage, and adherence to the motto, Liberty Equality Fraternity.

For the time being the people of France have been compelled, officially at least, to turn their back upon those noble words. They have been flatly told that their system of free, democratic government has broken down and that there is no way by which it can be reestablished. Government by decree, through the agency of definite and fixed economic or social groups or classes, is hailed as the substitute for democracy and its hopeful successor. What is called "this reformation" is to be brought about by selection of the elite from all rungs of the social ladder. This selection, however, is not to be made

[4] Beer, M.—The Life and Writings of Karl Marx. New York: International Publishers, (no date), p. 31.

through equality of opportunity for all, but by the definite act of a higher and controlling power. In other words, "by decree" is to take the place of democratic legislation. Surely, as great a people as the French will not permit so reactionary a condition as this to remain forever. The intellectual history of the French people is so superb that their intellectual life cannot die. It may be for the time being in a state of coma or it may be held in chains, but it will return to its self-control, to its freedom and then, sobered and disciplined by the experiences of this generation, it will write those words "Liberty Equality Fraternity" upon hundreds of walls, this time to remain for ages to come.

The opportunity of world leadership, now offered to the American people, is so unprecedented that our responsibility is too great to be measured in ordinary words. When world leadership was with Greece and then with Rome, civilization, however, magnificent in its intellectual manifestations, was so simple and so undeveloped in the economic and industrial fields that what the Greeks and Romans were able to accomplish was quickly made plain and written into history. Conditions today are not only different, but wholly new. This twentieth-century world of nearly one hundred separate national units has cherished the hope and the belief that each national unit, whether large or small, might be made secure and protected in its national independence by international cooperation, international law, and the judicial settlement of international disputes. The American people have been committed to these principles from the very beginning of their history. They have cherished them, they have hailed them, and time and time again they have given vigorous and emphatic illustration of their faith in them. Unless the small national group can be protected by its fellow national units, there can be neither liberty nor equality nor fraternity in the national and international life of the world. It is idle to use these words as applicable only to individual life and thought and conduct. They must also be applicable to national policy and to international life and thought and conduct. If the American people can lead the thought of the world to turn its back upon any system of social, economic, or political organization which rests upon fixed and definite classes or groups with a resulting spirit of class consciousness, then indeed will the door be open to the progress of a truly liberal philosophy of life and of government. The call of today and tomorrow is to the people of the United States. Will they hear that call? And will they answer it in the spirit of their great forefathers—of Washington and of Franklin, of Hamilton and of Jefferson, of Madison and of Marshall, of Webster and of Lincoln? If they will, the future peace and prosperity of this now torn and broken world will be as secure as human thought and human power can make it.

Advertising

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

ADDRESS BY PAUL GARRETT

Mr. REYNOLDS. Mr. President, on August 14 I requested unanimous consent, which was granted, to place in the Appendix of the RECORD the text of an interesting and illuminating address by Paul Garrett, vice president and director of public relations of the General Motors Corporation, dealing with the part played by advertising in the development of our American formula. It is an address well worth perusal and study by everyone interested in the preparation and publication of the printed word. It was delivered as the keynote address at the Advertising Federation of America convention at Boston, Mass., on May 26, 1941. Mr. Garrett is chairman of the board of this organization.

I have learned from the Government Printing Office that printing this material in the RECORD will exceed the amount of space allotted, that being two pages. I was at the same time advised by the Government Printing Office that the address will occupy two and one-third pages of the RECORD, and will cost $105. I now resubmit my request, and ask unanimous consent that this very excellent address be published in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADVERTISING—AN INTEGRAL PART OF OUR AMERICAN FORMULA

(By Paul Garrett, vice president and director of public relations, General Motors Corporation)

I would like to feel that in keynoting this convention I have the honor to voice a philosophy of advertising that reflects the beliefs and hopes of a far vaster audience than is here present.

I do not know how many men and women in this country live by work in this great field. They make up a large group. But I desire to go beyond them. For, more than ever the things that concern us in this convention are of concern to the whole people. The future of all depends upon what is done in 1941, and in the years ahead, to groove a course that will keep this Nation strong.

The flow of events has forcibly directed our attention to the problem of defense. To stimulate the flow of materials, to speed the production of mechanized equipment, to apply without stint our energies and skills to the business of defense—these are the vital tasks before us, the urgent responsibility of every individual.

However, our views may vary as to method, all agree we must at any cost make our country and its institutions impregnably secure. The most sacred of these institutions have to do with individual freedoms. The great struggle under way in the world is for the preservation of these. Freedoms which over centuries men fought to acquire now have been brought into peril. These freedoms have been the bulwark of our American way of life. Freedom to think. Freedom to speak. Freedom to worship. Freedom to achieve. And, present as a result of all these, freedom of individual initiative—the opportunity for every individual inspired by some worthy incentive to work out his own destiny.

ADVERTISERS HAVE PARALLEL RESPONSIBILITY

Every man and woman in this room is eager to help. On the shoulders of industry falls a heavy part of the defense job. But on the shoulders of advertisers falls a parallel responsibility. I would like to explore with you some of the ways we may make a contribution.

But what specifically can the advertiser do? All sorts of questions come up. Is advertising needless effort in case the demand for goods exceeds the supply? Is advertising at a time like the present patriotic? Should consumer demand at a time like this be stimulated? Should advertising be cut in the interests of economy? Should advertising be prepared by the same formula as before? To what extent should copy be themed to the emergency? What are the obligations of advertising today and tomorrow?

The history of America is the history of stout and serviceable men. Everything accomplished here traces back to some individual who, possessing the freedom to do so, was spurred on to initiate something new. It is this opportunity for man to pioneer his way up that we have always fought for. It is basic in our character to keep man free to do what he wants.

In our own case these freedoms have found important expression in the development of things that make for a full life. I do not need to enumerate all of the cultural and spiritual benefits. I would like to enumerate a few of the material benefits. It is an appropriate occasion to examine them in relation to their source, for they have set America apart. They support the broad foundations upon which our institutions rest. They result from the freedom of men in this country to create new projects as nowhere else in the world.

Look back not many years ago to a time when we had no radios, no electrical household appliances, no automobiles, no moving pictures, no plastics, no wireless communication, no telephones, no electric refrigerators, no air-conditioning, no rayon, no incandescent lamps, no canned foods, no bathtubs, no air travel, and no streamliners.

IT IS NO ORTHODOX CONCEPT

We cite these things commonly as products of mass production. And so they are. But who would say they have come to be necessities of American life solely because we learned earlier than the rest of the world the art of mass production? Of what value would mass production be without mass consumption? How could we stimulate mass consumption without mass merchandising? And how could we have mass merchandising without mass advertising?

You and I have been remiss in failing to establish in the public mind a clear knowledge of the part advertising plays in this peculiarly American mass-production formula. It is no orthodox concept, but I would like to see more widely understood the fact that advertising basically is a vital part of our economy, equally important with designing, engineering, and production.

PRODUCTS MUST GO TO MARKET

People understand the elemental forms of merchandising. One of the earliest bits of homely wisdom was "not to buy a pig in a poke." People like to window-shop—and, certainly, window displays are one form of selling. They like to see goods offered for their choice on counters in a retail store. You could not run a modern drug store without observing this simple principle of selling. They like to look at a mail-order catalog—which does with paper and printer's ink what the retail store does with counters.

But when it comes to advertising—which is simply a time-saving and money-saving method of putting show windows or counters or catalogs before thousands and millions—they question whether it is economic. What people have consistently failed to understand is something pointed out by Prof. F. W. Taussig in one of his books on economics, which is that production is not complete until goods come to market. Unless they get to market production is futile.

Failure to understand the importance of distribution has cropped up many times in history. During the first years of the Russian revolution the distributors of goods—salesmen, jobbers, and retailers—were pretty thoroughly liquidated. According to the phi-

losophy of Karl Marx, as interpreted by Lenin, these middlemen were exploiters, taking their cut of the wealth produced by labor.

But it was found too late that some machinery of distribution was essential, so the Soviet state had to improvise a system of its own. There is every evidence that the economic cost under this system of distributing goods to consumers has not been reduced. Certainly standards of living as reported from Russia today do not indicate that any Utopia in distribution has been attained. On this same point a recent volume on economics points out: "The Falacy is that produced wealth has the same value when and where it is produced as when and where it is finally exchanged for consumption."

IS PART OF A LARGER PROCESS

Advertising is the use of a controlled message to make more people acquainted with a product, a service, a company. It is the use of a controlled message to spread an idea. The advertiser may register his message through paid space in publications, time on the air, space on boards, presentations through motion pictures or approaches by direct mail. But the essential is that he controls the message. He fixes the direction of its thought. He pays money to give the message position.

Advertising is really a form of public relations. It requires the same careful analysis as any other public approach. It requires more. The very fact that the advertiser can enforce his advertisement upon people makes it doubly important that he shape the approach with the utmost care. We need advertising written with a better understanding of people. Editorial news copy gets publication only when it attains a high standard of projected public acceptance. Should not we in the business impose upon ourselves a sort of advertising editorship to scrutinize our advertising copy to make it ever meet the same rigid tests?

Advertising, then, is an integral part of a larger process. Once the product is created, advertising multiplies its exposure. It opens to the customer new ways of attaining things he wants. Through a fractional charge it saves him dollars in the long run by making possible lower unit production costs.

Theories of planned distribution are built on standardization of the buying habits of people. What more fallacious program could be proposed in the name of progress? American living standards have risen, and the American horizon has lifted precisely for the reason that we have never limited even in our own minds the number of possible things we might secure for ourselves tomorrow.

COMPETITION PLOTECTS FREEDOM OF CHOICE

Freedom of choice in the market place induces that competition which is a source of progress and a protection of the customer's pocketbook. The competitive struggle accompanied by the use of advertising to present ever greater customer benefits than are offered by any competitor becomes an effective means of insuring over the years steadily growing customer satisfaction. Advertising by carrying news of products and services extends to the buyer an ever-widening freedom of choice. And it is this freedom of choice which is so basic an element in our modern economy. Advertising thus is a vital instrument in maintaining open the channels through which products and ideas flow to help create an integrated and self-reliant nation.

I am well aware that in a recent survey of popular attitudes it came out that 69 percent of the people believe advertising increases the cost to them of things they buy. Forty-three percent even believe that a 15-cent package of cigarettes carries an advertising load of 5 to 9 cents or more. You and I know that such a concept of advertising costs is absurd. The cost of advertising a package of cigarettes actually is not 9 cents or even 5 cents. It is not 1 cent. It is a fraction of a cent. But people formulate their opinions about advertising costs not on facts but on what they understand to be facts.

ADVERTISING POLICIES FOLLOW INDUSTRY

Nothing is to be gained by refusing to recognize that advertising has been under attack. It has been labeled as uneconomic, misleading, wasteful. But is it too much to suggest that the case against advertising has largely been built up from specific advertisement rather than from consideration of the principle of advertising as an economic force? This confusion between advertisements and advertising has made it easy to prove a plausible case by citing poor or wasteful advertisements to demonstrate that advertising is wrong. It is like condemning water when a poor swimmer drowns What ought to concern the consuming public is that advertising provides an instrument fundamental to economic growth under the American formula.

Without mass advertising of goods we could never have produced at so small a cost for so many people so many luxuries they have come to regard as necessities. Lacking it what country has done so? It is the integration of mass designing, mass engineering, mass producing, and mass advertising that has created our mass-consuming society.

Looked at soberly, most of the questions asked nowadays about advertising are really not questions that should be directed to the advertiser as such at all. They pertain in a more realistic sense to industry itself. For advertising in the emergency as out of it must follow industry. Policy for business must always determine policy for advertising.

Production is the task of industry, and in the give-and-take of enterprise we have developed a productive capacity surpassing any other. Production today is vital to defense. Unlike the past, war today is a war of materials. It is more than that. It is a war of techniques—techniques of warfare—techniques of living in a wartime world. So people are turning to American industry to meet their very great need in time of crisis.

INDUSTRY MEETS A CHANGING SCENE

Apparently it has taken a defense emergency to impress upon many people their own reliance upon industry. Its functions to some are becoming clear for the first time. The very qualities once criticized are now seen as basic to national strength. It is a matter of significance that industry again stands high in public esteem. It is important that industry so conduct itself as to hold that esteem steadfast.

As defense production takes an increasingly greater share of national effort, the new problems of industry will take an increasingly greater share of advertising thought. In this rapidly changing scene industry needs the guidance of advertising counsel sensitive to public attitudes. Advertising's task of smoothing the way all along the channels of distribution between factory and market will become infinitely more intricate as defense requirements extend the area of dislocation. Many familiar products, familiar packages, accustomed buying habits are likely to become disturbed. Advertising must lead the customer through this labyrinth of change by careful and continuous explanation of whys and wherefores. It is not inconvenience but unexplained inconvenience that will break down public confidence.

DEFENSE WORK WIDELY SPREAD

In the first stages of defense, to get the program under way, it was essential that large initial orders be placed with organizations in a position to take complete responsibility for them. The Government thus could start jobs off quickly and gain the advantage of centralized management skilled in large-scale production in speeding the program to full bloom. The concerns themselves undertook the difficult tasks represented by these big defense contracts in full recognition of a public responsibility. The second stage, which we have already entered upon, permits of a multitude of supplementary contracts of great variety calling for the facilities of thousands of smaller shops and plants throughout the country. But even a big defense contract given for execution to a big company does not mean that the big organization is hogging the work.

Whatever benefits of increased employment there may be in a defense job are diffused far and wide through the usual production procedures. For example, the Allison airplane engine is not made in Indianapolis alone. Its materials, parts, and supplies are drawn from 65 different communities extending from Iowa to Connecticut. All kinds of things from carburetors to cotter pins are made by men who never saw an Allison engine. But each of these men plays in his community just as important a role in defense as the men who man the machines in the great Allison plant itself.

Similarly the G. M. Diesel engines that drive the new Navy boats are not as people suppose solely the product of Cleveland, but involve the work of many men in many places. From 178 different communities spread over 25 States from California to Vermont come parts, materials, and supplies for those engines.

In like manner, an order for a tank or truck or machine gun gets reflected in jobs and materials and services that reach into a thousand communities.

SOUND INTERPRETATION REQUIRED

As a public-relations man I am sorry it is common practice to refer to defense business in terms of dollars. For it is not like other business. The company with which I am associated has been asked to produce defense materials—which is to say Army trucks, machine guns, marine Diesel engines, shells, aviation engines, bomber parts, and many other items of a technical nature—in a volume approaching $800,000,000. But a defense volume of $800,000,000 would be better understood if put another way. Expressed differently this represents roughly 200,000,000 man-hours of work. A man-hour is a man at work for an hour. You cannot put them all to work at once but it multiplies out into enough defense assignments for the company to keep 100,000 men busy a year. And even that does not take into account all of the work of supervising, engineering, designing, and executive employees. Nor does it take into account all of the man-hours going into raw materials, finished and semifinished parts, transportation, and all the rest which would multiply the figure I have given you.

I cite this example to impress upon you that the phases of a company's business expanded by defense work present a very different set of public attitudes with which to reckon than do the phases curtailed by defense work.

This company, for instance, already has announced the suspension of its new model introductions applicable to 1943, work on which would normally begin at this time. In other words, the 1942 models, on which work was started more than a year ago and is now largely completed up to the production stage, will continue through 1943. Furthermore, with respect to the 1942 models shortly going into production, the automobile industry cooperating with the Office of Production Management has already agreed to a cut in production amounting to 1,000,000 units.

Such adjustments occurring in any field put up to the advertiser the problem of meeting a whole new set of questions people will

be asking. Will there be enough products next year to go around? Will they be inferior as a result of substitute materials? What about prices? Profiteering is linked in the public mind to war. Buyers of merchandise become skeptical. Accordingly—whether we wish it or not—product advertising by its implications will convey an institutional impression.

Everywhere defense and nondefense activities are intermingled. They mix and merge. Influences overlap. No clean-cut lines can be drawn. Directly or indirectly our whole industrial structure is coming to be affected by the driving efforts for production. The expression "peacetime goods" becomes a relative term in our economy So closely are the various units of our industrial network tied together that the consequences of every action are telegraphed throughout the whole fabric.

AN INFORMED PUBLIC ESSENTIAL

In explaining the processes of defense advertising performs the task of explaining the processes of industry. That in itself is important. But it does more. It helps build an informed public opinion on defense. This is indispensable to national confidence and cooperation, as witness the consequences of the lack of it in France. We are just beginning through company advertising to develop themes helpful to government to industry, and to labor in working toward greater unity for a strong defense.

And so, like industry, advertising is inseparably linked with certain things worth preserving. Industry and advertising have evolved together over the years. Advertising as we know it does not exist in Germany, Russia, Italy, and other dictator nations. In those countries business has lost its right to interpretation.

BROAD POLICIES ANSWER QUESTIONS

Drawing to a close I submit that the very concept of advertising as an integral part of our American formula suggests by implication the answers to most questions that confront us.

First. Is advertising needless effort in case the demand for goods exceeds the supply?

In answer to this question, posed at the beginning, I say that advertising, even in case the demand for goods exceeds the supply, is not needless but needful effort in the same way that designing, engineering, production, and merchandising are needful. In England they have maintained their advertising of established business institutions as well as of goods and services available to people. Regardless of any momentary position of supply and demand it is important to the economy to maintain the product in public consciousness against a time when the demand may not exceed the supply.

Second. Is advertising at a time like the present patriotic?

I say that advertising at a time like the present is patriotic in the same sense that production, except as it interferes with defense, and merchandising, except as it disrupts the defense flow, are patriotic. It is patriotic unless it is put to an unpatriotic use. You have heard it said we do not want business as usual. No; we need something better and more vigorous than that. We need business as unusual—in lines and places where it does not interfere with defense. How else can we support defense? How else can we bring to bear our full superiority?

Third. Should consumer demand at a time like this be stimulated?

I say that, except in those clear cases where defense would suffer loss of a particular material or service, consumer demand helps defense by strengthening the economy to meet the burdens of defense. No consumer should be stimulated to demand something needed for defense, but production for defense, which comes first always, needs to be backed by a strong people. In an all-out effort for defense a reliant civilian helps the reliant soldier.

PRESERVING THE FUNCTION OF ADVERTISING

Fourth. Should advertising be cut in the interest of economy?

This question springs from the assumption that advertising is an extravagance or an indulgence. I say it should not be cut just because it is advertising. Policy in advertising must follow policy in production and merchandising. As the flow of goods in particular industries is cut, the advertising of those goods will be affected. But the function of advertising must be judiciously preserved as an integral part of the formula upon which our economic strength is based.

Fifth. Should advertising be prepared by the same formula as before?

Advertising should never be prepared by the same formula as before. It needs persistent refinement to keep it sensitive to public impulse. The advertiser to get the desired result must learn to penetrate but not offend a defense psychology.

Sixth. To what extent should copy be themed to the emergency?

To the extent that the theme is genuine and performs a service. It depends upon factual and emotional phases. It depends upon the manner of use. Here is a question that every advertiser will have to answer for himself and that some are learning how to answer in relation to their own positions with great skill.

MORE UNDERSTANDING THROUGH ADVERTISING

Seventh. What are the obligations of advertising today and tomorrow?

I say that the greatest obligation of all is to strive for ever better understanding through advertising. Years ago we strove for more honesty in advertising. I would like to see us fight now for more understanding through advertising. We have learned how to be honest, but we have not learned how to be understood. Most of the world's troubles grow from lack of understanding. What a power for good it would be if this most powerful of public relations instruments could turn its great talent to the creation of a better understanding among our people of their own institutions.

It is not popularly understood who benefits most from the American formula. It is the worker who with a machine can make a dollar an hour as against a previous dollar a day without a machine. It is the customer who could not even hope otherwise to own the things this mass economy brings to his doorstep.

Our inherent strength lies in the processes that have served individuals. Efforts of the individual produce more here than anywhere else. Our technique of mass production has prepared the way for that.

But mass production is not self-perpetuating. It is through individual enterprise and initiative that we produce wares. It is through individual enterprise and initiative that we distribute them. It is the customer that makes the choice.

A VITAL INSTRUMENT IN A FREE ECONOMY

Unparalleled freedom of choice in the market place is what our freedom of the right to advertise inescapably supports. Advertising thus viewed becomes a vital instrument in a free economy keeping open the flow of products and ideas.

Freedom of choice in the market place is of itself a symbol of those other freedoms of choice which are the essence of our democracy. Did you ever stop to consider how one of these great freedoms grows in a sense from freedom to advertise? I mean freedom of the press and, if you please, freedom of the radio. It is their independence—economic as well as political—which keeps the press and the air free.

Looking beyond the emergency we will be confronted with the all-important problem of finding ways to offer jobs to men returning to civil life, to help restore and rebuild our normal processes. In anticipation industry must direct researches to create new products and new services. Is not advertising in a favored position to contribute something? You are sensitive to public desires. You are skilled in the art of anticipating wants. You are skilled in the art of developing new markets. With all the matters you have immediately at hand I plead with you to keep one eye on these burning problems that will confront us as the emergency passes.

BROADER RESPONSIBILITIES

I would like to end on a note of constructive warning. Advertising is at the most important stage of its career. Its practitioners can do it more harm than in normal times, or they can do it more good through exceptional service when the country needs it. We are living in emotional times. People will be swayed by emotion as well as reason on issues connected even indirectly with defense or war. It is no time to think of advertising only in advertising terms. We must think of it now, if ever, in public-relations terms. We need to watch what we say and how we say it for its effect on people, not merely as customers but as citizens of a country bending great efforts to produce materials for its own defense and for its own future existence.

In all things let us strive to build for tomorrow a better understanding of those principles and institutions vital to our national strength. That is a task ahead for us in advertising—a responsibility that is ours in helping to work out the great American formula.

American Legion Convention

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

ADDRESS BY HON. HAROLD H. BURTON, OF OHIO

Mr. BURTON. Mr. President, last Monday the American Legion met in national convention in Milwaukee. The fact developed that in the Senate there are 24 members of the American Legion, exactly one-fourth of the Senate. In the House of Representatives there are 145 members of the American Legion, exactly one-third of the House. That being the case, I was requested by the Legion to make a statement to the national convention from the point of view of a Legionnaire in Congress. I ask unanimous consent to place in the RECORD the statement which I made under those circumstances.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To the American Legion I bring greetings and a call to mutual helpfulness from your

24 Legionnaire Senators who are exactly one-fourth of the United States Senate and your 145 Legionnaire Representatives, who are exactly one-third of the United States House of Representatives.

The Nation thanks you for the generation of service you have given to it in your early years. I congratulate you and our National Commander Milo J. Warner upon the record of this year. Today, I bring a new and personal call to each of you as a man of mature years, a man proven in loyalty and experienced in the value of preparedness. I bring it to you as men who have felt the strength of organized manpower, guided by practical experience and driven by the irresistible power of united free men.

Recently there has appeared an effective pamphlet entitled "You Can Defend America." "Black Jack" Pershing says of it: "I commend its message to every American."

It tells of the Chinese Wall and how secure China felt behind it. Then the invader came and three times China found her enemies inside her gates. They did not storm the wall. They simply bribed the gatekeepers.

It tells of the Maginot line of France and how secure the French felt behind it. Yet France fell. There was a gap through which the invader came. That gap was in the spirit of the people.

Today we are building a wall. It is called "total defense." There must be no gap in the character of those who man this wall.

This pamphlet then says in simple soldier language: "America needs guts as well as guns. National character is the core of national defense. Congress can't vote it. Dollars won't buy it." It is our job to build it. It means the building of sound homes, team work in industry and a united nation. I call you to that work. Now!

Looking to the distant future I have great hope for America and for the world, if the people are but permitted to develop their opportunities in peace. I see practically no limit to the horizons of improved standards of living for the men and women of tomorrow, if they but have the chance to develop them.

Unfortunately, before we reach the happy future we must face the unhappy present.

In 1917 we were in the front line. We followed the policies of those who directed our Nation. Today, all of us are at G. H. Q. Today our generation must set the pace and make the plans that will uphold, defend, and develop this Nation.

It is time to think clearly on the fundamentals, call no names and rise above all parties and prejudices. America is greater than any of its parts. We must make sure of the survival of America's freedom and ideals at all costs. We must not fail. We must not falter. We must not even flinch. At the same time, knowing the suffering, waste, and folly of war, we owe it to America to win this war, if possible, without fighting it. Gen. Chiang Kai-shek has said, "The more we sweat in peace, the less we bleed in war."

To preserve America's freedom means to preserve our 48 States, our insular possessions, the Western Hemisphere, and our ideals. This does not mean that we will fight someone else's war. It does mean, however, that we will unite in keeping secure, at all costs, all of the territory and all of the principles for which our fathers and our comrades have sacrificed so much. For this we must now work, as once we fought, side and side. No matter what the obstacles may be, we must, now, as then, overcome them all.

We must do it on whatever scale the task demands and with whatever sacrifice of time, money, and comfort it takes. Congress has appropriated the necessary dollars but appropriations are not guns. Our Nation has made a good start, but, as yet, our production of modern antiaircraft guns is negligible. We have made a good start, but, as yet, our production of heavy tanks is negligible. We have a good one-ocean navy of about 325 major naval vessels. We have made a good start on a two-ocean navy of at least 700 major vessels, but it will take 4 or 5 years to complete it. We have made a good start, but, as yet, our production of combat planes is about 700 a month, while the Nazis, production is between 2,000 and 3,000 a month. Our ammunition is not ready, and this time there are no loaded French 75's to be borrowed.

Our lend-lease law has been the key to gaining time while we continued to prepare. Let us understand that law clearly. It involves no alliances with any government. It implies no support of the internal policy of any nation. America's duty under it is to America. It authorizes the President to supply materials and supplies to any nation, if, but only if and when, the President deems the defense of that nation vital to the defense of the United States.

Today only the strong can be safe. The Nazis are waging a relentless, lawless, boldly announced campaign to conquer the world. Their Army sings: "Today Europe is ours, tomorrow the whole world." They follow no rules but the rules of force. We cannot gamble at all with the safety of our Nation, our children, or our principles. It is the inescapable responsibility of our generation to make America safe, from without and from within. That means both within our frontiers and within our own hearts and minds.

We could choose no more favorable place for the test, than on our own famous industrial assembly lines. Agriculture, labor, industry, capital, and government share the obligation. It is to unite, work, produce, play a little, laugh a little, grouch and kick a little, but put the work through faster and better than can anyone else in the world. We must make ourselves too strong to justify the risk of an attack upon us. If attacked, we must win. We must live up to our own possibilities.

This calls for what?

It calls for a united faith in God and man, stronger, higher, and broader than the world has ever known. It calls for a vigorous, invincible civilian, as well as military, defense.

It calls for a deep faith in the people of America. It calls for faith in the soundness of representative government, and in the freedom of religion, speech, press, assembly, and opportunity.

It calls for devotion to the spirit, as well as the letter, of our Constitution and our laws. It calls for voluntary governmental efficiency, economy, and financial responsibility, and for popular support of it.

It calls for sound homes, teamwork in industry and a united Nation.

Most of all it calls for men and women who will put mutual helpfulness above selfishness, in every form, at home and in the community. It calls upon us to inculcate a sense of individual obligation to the community, State and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy, to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

America's strongest weapon is her example.

America's greatest strength is the unshakable devotion of every American to his home, his country, and his God.

Lead on, men of the Legion, lead on.

Wisdom's Warning to a War-Weary World

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

POEM BY HORACE C. CARLISLE

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the RECORD a poem written by Mr. Horace C. Carlisle entitled "Wisdom's Warning to a War-Weary World."

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

WISDOM'S WARNING TO A WAR-WEARY WORLD

Our great President wisely has spoken
The plain truth, without favor or fear—
The disastrous news had to be broken
To the nations of this hemisphere,
That some power has got to crush Hitler,
Or else he will subdue the whole world—
But this never shall be,
In the land of the free,
Where the Stars and the Stripes are unfurled.

These piratical dictators, drunken
From excessive success on the sea,
Have illegally, brutally sunken
Ships of commerce, by Hitler's decree
Some of them in the western-world waters,
Some of these by the United States
Operated and owned,
Or in sympathy loaned,
In this war against covetous hates.

In the few individual losses
Of American-owned ships, we see
Naught to fear; but when Hitler's mob crosses
Over into the realm of the free,
The free nations on this side the water
Read the writing on destiny's wall,
That they've got to prepare,
On the land, sea, and air,
For their own self-defense, lest they fall.

The plain truth is that these acts of brutal
International lawlessness are
But the manifestations of futile,
Groundless hopes to abolish, by war,
Freedom of the high seas to all nations—
But, unless Hitler's forces subdue
England's forces and ours,
And all Western World powers,
His tyrannical dream can't come true.

Hitler's government, in plain defiance
Of the laws of the sea, and the rights
Of all nations, has placed its reliance
On his power to rule by affrights—
His unmerciful pirates are sinking
Ships at will, without warning, as they
Seek to gain the control
Of the sea, as a whole,
To which they claim the sole right-of-way.

With control of the seas, their next motion,
Undeterred by the frowns of the fates,
Would be then to cross over the ocean,
And drop bombs on the United States;
For, if we should let England surrender,
And her Navy falls into his hands,
Sure as night follows day,
For our folly we'll pay,
When his pirates rain bombs on our lands.

Hitler's plots, intrigues, and machinations,
And his sabotage in the New World,
All are known, for their great devastations,
'Neath the Stars and the Stripes high unfurled—
They've obstructed industrial progress,
And, of late, have become so intense,
That they're holding at bay
Our great program, today,
Of preparing for our own defense.

To succeed in world mastery, surely,
Hitler must get control of the seas,
But the Great British Navy, securely,
Guards them still, with comparative ease—
And it's plainly America's duty
To regard England's fight as her own;
For if England should fall,
At the end of it all,
We'd be forced to fight Hitler alone.

It must oft be explained to the peoples
That, while England's great Navy survives,
Will our church bells ring out from their steeples,
To our parents and children and wives,
Invitations to worship together
The Almighty—who overrules all—
But our freedom to praise
The great Ancient of Days
Would end if England's Navy should fall.

It is time for American statesmen,
Everywhere 'twixt the North and South Poles,
To stop being deluded by hate's men,
That are seeking, by conquest, controls
Of the rest of the whole world's resources,
To the one end that they may enslave,
In conquest's bloody name,
All the victims they claim,
That were one time so proud and so brave.

Not the whispers of passive appeasers
Will keep Hitler from this hemisphere—
No sporific, soft, lullaby easers
Will cause him not to conquer through fear;
Hitler has no more heart than the ocean,
But treads under all things in his path,
And the nations of earth
Are fast driven to dearth,
Who've encountered his satanic wrath.

There were no war-inspired operations
When the *Greer* was so foully attacked,
This was no struggle 'twixt warring nations:
It was just a vile villainous act,
Just another step forward, creating
A world system on force alone based,
To see if we would fight,
Or give them the green light,
To go on their mad way in post haste.

Many nations have met with disasters,
Some of them nations of special note,
But they would not look into their master's
Eye until he had them by the throat—
The great United States and Great Britain,
In the presence of all the wide world,
Vow that they'll never make
This tremendous mistake,
While the Stars and the Stripes are unfurled.

We have sought and we now seek no shooting
War with Hitler, but we will defend
Our land boldly 'gainst his wholesale looting
And destruction, on through to the end.
Nazi submarines and flying raiders,
Menace to peaceful ships on the sea,
Are, like rattlesnakes there,
Sent to strike and not spare
Any ship, matters not whose it be.

In the waters which we deem essential
For our peace-loving Nation's defense,
We'll construe it to be providential
To strike first, ere the foe can commence.
Hitler's mad air and submarine raiders,
Over here, are not here for their health,
But are here to destroy
What we so much enjoy,
Our great Government and our great wealth.

Other Presidents had problems, surely,
Much like these that are vexing us now,
But they rested their hearts' hopes securely
Upon Him before whom all must bow—
While it's right to fight with all our powers
Such an inhuman, world-wrecking foe,
We're aware that we must,
For divine power trust,
In the God from whom all blessings flow.

Our great people have faced other crises,
And have triumphed always in the end,
And stand ready to make sacrifices—
On their loyalty God can depend—
With American courage we'll conquer,
With American tact we will win,
With American prayers
We'll plow under despairs,
And grow stronger than we've ever been.

And, with that inner strength that comes ever
To a free people who know they must
Pray "Thy will be done," and whose endeavor,
Without question, proves "In God we trust,"
Who in their daily lives preach and practice
The one golden rule that the Lord taught,
"Do to others as you
Would have them do to you,"
We will win—if we trust as we ought.

—*Horace C. Carlisle.*

The Weak Links in Our Defense

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

ARTICLE BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I respectfully request unanimous consent that there be published in the Appendix of the RECORD an article which I prepared for the American Magazine entitled "The Weak Links in Our Defense." The article was published in the issue of September 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WEAK LINKS IN OUR DEFENSE

(By United States Senator ROBERT R. REYNOLDS)

(EDITOR'S NOTE.—Is Uncle Sam's screen of ocean outposts wide open to invasion? The powerful chairman of the Senate Military Affairs Committee exposes dangerous gaps in the front line of hemisphere defense and proposes ways to repair them.)

For many years I have advocated an iron shield of defensive bases to protect the Western Hemisphere. I have traveled tens of thousands of miles at my own expense, studying prospective bases in the Atlantic and Pacific, from the Arctic to the tip of South America.

Long before this war began I urged acquisition of British and French bases in this hemisphere as payment on the war debts. Months before France fell I introduced such resolutions in the Senate. At last, when we swapped 50 destroyers for certain British base sites, France had fallen under the domination of Hitler, and it was too late to obtain the French sites except by force.

Because of the study I have made of these matters, and because of my responsibility as chairman of the Senate Military Affairs Committee, I consider it my duty to point out certain dark spots in our defense base picture. I want to suggest immediate action, and to point out the brighter future prospects if we do what is needed.

As I write, our Nation is still at peace, but most of what I have to say would apply with equal or greater urgency if we should enter the war.

On the dark side I will mention the dreadful health conditions around some of our newly acquired bases; the regrettable attitude of certain British and Canadian officials toward our joint problems; the prompt need for plugging large existing holes in our defense screen; and the slowness of our diplomacy.

I mention health first, because many of our boys sent to these new bases are beginning to write alarming letters home to their parents, and wild rumors, injurious to home morale, are being spread. The facts are bad enough, but we can face them when we know exactly what we are up against.

For example, we have been granted certain areas for bases in Trinidad. This British island, so charming to the eye of the tourist, has a population tragically ravaged by communicable disease. The percentage of venereal infection is probably as high as anywhere in the world. Malignant malaria, spread by the mosquitoes which infest the island, is everywhere. In the schools adjoining our area, from a third to a half of the children were found to have this malaria.

Leprosy is common, and by no means all of the lepers are isolated. There are dysentery and typhoid, tetanus, rabies, and hookworm. There are swarms of rats and some danger of plague. Yellow fever is a possible threat. There are poisonous snakes and deadly scorpions.

A stealthy terror is the blood-lapping vampire bat. Many of these bats carry the infection of paralytic rabies, which is invariably fatal. This sinister animal works so quietly that the victim usually does not know he has been attacked until he wakes up in a pool of blood.

British Guiana, on the coast of South America, where we are building a base, has the same high malarial and venereal dangers as Trinidad, with the additional menace of filariasis, a blood-parasite disease transmitted by mosquitoes. About 25 percent of the population of British Guiana is infected with it. It is incurable, and sometimes results in a disfigurement, sometimes in death.

These things are not pretty to discuss, but it is extremely important for the American people to know about them. One of the greatest things Winston Churchill ever did for British morale was to tell his people the difficulties confronting them, starkly, and honestly. Our people are of the same character.

Americans want to know just what we are up against in health conditions, and then they will not be afraid. We have the finest medical corps in the world, with experience gained in Panama, Puerto Rico, and the Philippines. I know they can lick every one of the problems I have mentioned, and the people ought to be told about this, too. They want to be assured that every resource of our medical profession and of our great research foundations is placed at the disposal of our Army in this fight. Only so can we prevent alarmist rumors, which have already begun to circulate.

While on this subject, I urge the fullest possible publicity, consistent with vital military secrecy, for everything concerning these island bases. Trustworthy reporters should be allowed (as they have not been, thus far) to go to the scene and write first-hand ac-

counts. I am moving at once to obtain funds to permit members of the Military Affairs Committee to visit the bases and inspect progress. The American people are paying for these bases, in money and the service of their sons, and they are entitled to know what is going on.

In these island bases, as you see, we shall have to spend vast sums for health protection alone. In addition, we must spend our millions for airports, barracks, fortifications, roads, water supply, utilities, dock and harbor installations.

And yet, as many fail to realize, we don't even own these most important areas where we are sinking millions of dollars. True, we have 99-year leases. That is a long time in the life of a man, but a short time in the life of a nation.

If England, with the passing years, should become unfriendly to us, or should become involved in alliances with other powers, our leases might lapse, our investment and security be lost. I hope and believe this will not happen, but here, where the safety of our children and our children's children is involved, we must be realistic. In the last 150 years Britain has fought beside and against Germany; beside and against France; beside and against Italy; beside and against Russia; beside and against the United States.

History reveals no permanent international friendships. Therefore, we should move at once, while the time is ripe, to make our hold on our outposts more secure.

In his original deal for these bases President Roosevelt swapped 50 of our old but still formidable destroyers. Since that time, however, the United States has granted practically unlimited material aid to Britain, with a $7,000,000,000 fund as a starter.

This opens the way for entire reconsideration of our defense bases. We have given Britain carte blanche on material aid. Why should she not, in return, give us carte blanche in setting up bases to defend this hemisphere?

The leases from Britain, by the way, did not give us the land for the bases. They merely gave us the right to dicker with the private owners of the land, sometimes at fancy prices, sometimes by cumbersome legal process, for the use of land for our bases. Considering that our bases are defending the islands for Britain as well as for our own interest, this was a remarkable procedure. However, that was what we did, and we will let it pass.

But now, with our aid flowing steadily to England, is the time to reopen the question. I suggest that our ownership in the base areas be made complete and direct, at once. I suggest also that a commission be appointed to consider the advisability of taking over the islands themselves.

I am surprised that the suggestion to give us outright ownership in the base areas has not come from the British themselves. I do not criticize the British for defending their own interests. I admire them for it. But, even from their point of view, I question whether their attitude has been wise. They convey the impression always that they are doing us a great favor. We are put in the position of pleading for what they should grant with open arms. And to some extent this applies to the Canadians, in regard to the big gap between New England and our new base in Newfoundland.

Newfoundland is certainly valuable as an advanced base. But, because of its rocky coast line, its harsh climate, its storms, ice, and fogs, its inaccessibility, it is not suitable for a major air and naval base. The ideal place for such a base would be in Nova Scotia or New Brunswick, with fine harbors, fair weather, and all-year-round availability.

I understand that the Joint Canadian-American Defense Board have discussed granting us such a base, but that Canadian officials have raised certain "political" objections. I consider any delay in this crucial matter dangerously shortsighted on the part of both our countries.

In criticizing the attitude of the British and Canadians, I do not imply that we ourselves are blameless. Our whole diplomacy, in acquiring defense bases, has been slow, late, and timid. Will Rogers' saying that America never lost a war or won a conference still seems to hold good.

This doesn't mean that I agree with the firebrands who want us to seize Dakar in Africa, and the Azores Islands, two-thirds of the way across the Atlantic I think that would be folly. The prime requisite in an outpost is that you should be able to get to it quicker and reinforce it faster than the enemy. Both Dakar and the Azores are more accessible to European powers than to ourselves.

The argument is that Dakar threatens South America, that Vichy owns Dakar, and that Vichy is under Hitler's thumb. True. True also that it would be madness for us to let Hitler's armies establish themselves in South America.

But the finest base to avert that threat, and to protect all of South America, would be on the bulge of Brazil, say at Natal or Recife.

That is by far the most dangerous gap in our shield of hemisphere defense Failure to plug that hole, in the year following the fall of France, has been our greatest diplomatic error. It should be promptly and firmly repaired.

We have talked a lot about defending South America. We have sent ambassadors of good will there, too many of them. We have made many altruistic statements about neighborliness, and hands-across-the-Caribbean.

But on the one thing really necessary to defend South America, a good base on the bulge, we still have nothing definite at this writing. Meanwhile, there remains one of the chief sources of friction with our southern neighbors, namely, our attitude of superiority toward people with pride and traditions equal to our own.

I urge that our negotiations with Brazil be pressed with the utmost energy, honesty, and realism. The time is now. If the worst should happen—if Hitler should win—it might be too late. The South American nations might refuse us any concessions, for fear of offending the conqueror Furthermore, it takes time to establish such bases, and every day is precious.

All these outpost problems, including those with England and Canada, should be settled at once, while the war is on. When wars end, the whole atmosphere changes suddenly and unpredictably. Strike while the iron is hot.

If we do this, then indeed we shall be able to weld about our country a band of steel, the finest defensive outposts possessed by any country in the world. That is the bright side.

To the north we have the friendly and virile Dominion of Canada and the polar ice cap. To the northwest, beyond Canada, we have Alaska. From Alaska, stretching out like a mighty arm for 1,500 miles in the northern Pacific toward the empires of Russia and Japan, we have the stepping stones of the Aleutian Islands. I think we should build certain small outposts in the more westerly of these islands.

Northwest of Alaska lies Wrangel Island, 80 miles long, 35 miles wide. As aviation progresses into easy Arctic flying, it may become a base of immense importance. Yet our people, and apparently our State Department, don't even know whether it belongs to us or to Russia. Both have claims to it. This should be promptly determined, so that we can lay our defense plans accordingly.

Coming down the Pacific coast, we have the superb fortified bastion of the Hawaiian Islands. Farther south, off the Panama Canal, there are the strategic islands of Cocos, belonging to Costa Rica, and the Galápagos, owned by Ecuador. We need small bases on these islands, and negotiations should be pressed at once, though the urgency here does not compare with that in Brazil.

Coming over to the Atlantic, we are making a small beginning in Greenland and should also have a small seasonal outpost in Labrador. Then the advanced base in Newfoundland. Then, with all speed, we should plug the next gap by a major base in Nova Scotia and/or New Brunswick. Then Bermuda and the chain of islands in the West Indies stretching down to British Guiana. Finally a proper base on the bulge of Brazil and possibly a smaller base down near the River Plate.

These bases will require expense, effort, and unrelaxing vigilance over the years to come. They will be worth it. They will enable us and our descendants to go forward, resolute and secure, to the great task of making our country an even happier place to live in.

Col. Charles A. Lindbergh

EXTENSION OF REMARKS
OF
HON. WILLIAM H. SMATHERS
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

EDITORIAL FROM ATLANTIC CITY DAILY WORLD

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial appearing in the Atlantic City Daily World, under the heading "An invitation to laughter."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Atlantic City Daily World]

AN INVITATION TO LAUGHTER

The proposition of the America First Committee to run its cross-country loud-speaker ex-Col. Charles A. Lindbergh for the United States Senate and then (it is to laugh) for the Presidency indicates that the group's conception of domestic politics is as warped as its program of foreign policy.

The "Loon" Eagle, as he WAS so appropriately called by Senator WILLIAM H. SMATHERS, boasts one of the most amazing downhill popularity records in the history of our country.

Acclaimed as a national hero when he flew the Atlantic in the company of a ham sandwich and a cat, he accepted the homage of an adoring populace with hauteur.

He had an opportunity to recoup the public esteem when his life was blasted by the cruelest tragedy of our generation. When his sorrowing countrymen poured out their hearts in sympathy he ignored their offered solace. Bitterly castigating the country of his birth, he forsook it and took up a residence in an alien land.

Since that time his conduct has been the strutting of an egomaniac across the stage of public life.

Accepting with smirking self-satisfaction the fawning false idolatry of a Goering, he was awarded and proudly wore the military decoration of a barbarian, foreign power.

Returning to America he set himself up as an oracle of wisdom on international

politics and alined himself against the determined course set by his President and Congress.

When his theories were not accepted with the honor due a messiah his bitter nature once again came to the fore and he turned on the best minds of his Government with invective and abuse.

And if "Lindy" ever does try to ride his America First Rah-Rah-Nazi outfit through Jersey, he's going to suddenly find that there are a few people who don't approve of his ideas. One rumor stated he would seek G. O. P. backing. We can't fathom the idea that the Republicans would stoop to backing Lindbergh.

It certainly would be a test—Senator SMATHERS against Lindbergh. It certainly wouldn't be a contest. SMATHERS stands for Roosevelt 100 percent and makes no bones about letting people know it. The vote would be so overwhelming, if there ever were such a contest, that Mr. Lindbergh might suddenly awaken that there are a few people who don't like him or his policies. Personally, we doubt if the vote would awaken him.

Midwest Monetary Federation

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

ADDRESS BY ANDRAE B. NORDSKOG

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include the major portion of an address by Andrae B. Nordskog given before the Midwest Monetary Federation, Wednesday, June 18, 1941, at Chicago, Ill.:

"Whoever controls the money of the nation, controls that nation," said President Garfield.

And President Andrew Jackson, in 1832, said: "If Congress has the right under the Constitution to issue paper money, it was given them to be used by themselves, not to be delegated to individuals or corporations."

Most of us would agree that to permit a private individual to usurp the powers of Congress as they relate to the coinage of money would seem inconsistent indeed. For, to vest this sacred congressional prerogative in one individual would be gross discrimination against the rest of our citizens, and would therefore violate the fundamental principles upon which our Government is founded.

This raises another important question: Under what provision of our Federal Constitution is Congress empowered to issue perpetual charters to individuals who form corporations?

I have failed to find such congressional authority in our Constitution. But I do find in article X of the so-called Bill of Rights in our Constitution the following provision:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States are reserved to the States respectively or to the people."

Therefore if the power to grant charters to private individuals for the purpose of forming corporations was not delegated to the United States by the Constitution that power is reserved to the States respectively or to the people.

This, then, leaves corporations now operating under purported Federal charters without constitutional authority so to do.

The only authority vested in Congress to regulate commerce among the several States, but not to grant corporate charters, is found in article I, section 8, subsection 3 of our Federal Constitution.

Beginning from that premise, then, our only logical conclusion must be, that banking corporations operating under purported Federal charters are doing so without constitutional authority.

In article I, section 8, subsection 5 of the Constitution, it provides that "Congress shall have power to coin money, regulate the value thereof, and of foreign coin, and fix the standards of weights and measures."

There is not a semicolon between those words; it is all in one sentence.

Has Congress delegated its authority to fix the standards of weights and measures to Sears, Roebuck & Co.? Has Congress delegated its power to operate the Army and Navy over to Montgomery Ward & Co.? Has Congress delegated its power to levy taxes to the Metropolitan Life Insurance Corporation?

I hear a negative answer to all of these questions. Congress has not delegated any of those functions to private corporations.

Has Congress delegated its power to coin money and regulate the value thereof to private banking corporations? Yes; it has.

Does Congress have any more right to delegate its powers of coinage to a private corporation than to delegate its powers to operate the Army and Navy to a private corporation? Quite evidently not.

What is the greatest single power which is vested in Congress under the Federal Constitution?

The power to coin money and regulate the value thereof.

Is the power of coinage greater than the power to levy taxes?

Indeed, much greater. Consider, if you will, that during President Hoover's administration, the total Federal tax levy was around $4,000,000,000 a year; while under our prevailing system of coinage we had in checkbook turn-overs in 1 year during the same period, a total of $1,200,000,000,000. And, as the result of manipulation by private corporations who usurped the powers of Congress, by improper regulation of the value of money, such check-book turn-overs dropped in following years to about one-half their former volume.

During the Constitutional Convention certain bankers proposed that Congress should create only the metal coins, leaving the creation of paper money to the private banks. But Benjamin Franklin bitterly opposed such a division of authority, and the proposal was defeated. This, then, left Congress in full control over both metal coins and paper money.

When a 20-year charter was sought for the creation of the Bank of the United States (a private institution), which would permit the private issuance of paper money, President Washington appointed a special committee of three consisting of Thomas Jefferson, Secretary of State; Edmund Randolph, Attorney General; and Alexander Hamilton, Secretary of the Treasury, to make a report as to the constitutionality of the proposed charter.

A minority report was made by Hamilton favoring the charter. Mr. Randolph said it was contrary to the Constitution; while Mr. Jefferson declared it was repugnant to the Constitution.

However, the bill was passed in both Houses of Congress and given approval by President Washington. After the first so-called Bank of the United States came into being in 1791 and began to issue paper money, Thomas Jefferson declared: "I believe that banking corporations are more dangerous to our liberties than standing armies. Already they have raised up a money aristocracy that has set the Government at defiance. The issuing power should be taken from the banks and restored to the Government and the people to whom it properly belongs."

The charter of the first Bank of the United States came to an end in 1811. The charter for the second Bank of the United States began in 1816. At the hands of President Andrew Jackson its doom was sealed when he refused, in 1832, to sign a bill for the renewal of its charter, and that bank died in 1836.

Taking advantage of a national stress during Lincoln's time, the bankers pushed through Congress a bill which purportedly permitted Congress to grant charters to national banks.

Private corporations were allowed to issue national-bank notes and to circulate them as money. By being permitted to put in reserve only a fractional part of each deposit, these banks, over all, were enabled to loan out many times the sum total of such deposits.

Although Secretary of the Treasury Salmon P. Chase had urged President Lincoln to sign the national-bank law, upon seeing the evil effects of it in actual operation he said: "My agency in procuring the passage of the National Bank Act was the greatest financial mistake of my life. It has built up a monopoly that affects every interest in the country. It should be repealed. But before this can be accomplished the people will be arrayed on one side and the banks on the other in a contest such as we have never seen before in this country."

Depressions recurring with a degree of regularity in the United States over a period of several score years can be traced directly to the manipulation of currency and bank credits at the hands of the bankers.

During the Civil War period President Lincoln approved the bill providing for the Government issue of paper money, commonly called greenbacks. So successfully did these greenbacks circulate that many political leaders favored the creation of more of the same kind of money.

Not so kindly did the bankers take to this competitive idea of Uncle Sam. From 247 Broadway, New York City, Mr. James Bull, Secretary of the Associated Bankers of New York, Boston, and Philadelphia sent a circular letter in 1877 to members of their association, as follows:

"DEAR SIR: It is advisable to do all in your power to sustain such prominent daily and weekly newspapers, especially the agricultural and religious press, as will oppose the greenback or issue of paper money, and that you also withhold patronage from all applicants who are not willing to oppose the Government issue of money.

"Let the Government issue the coin and the banks issue the paper money of the country, for then we can better protect each other. To repeal the act creating bank notes, or to restore to circulation the Government issue of money, will be to provide the people with money and will therefore seriously affect our individual profits as bankers and lenders.

"See your Congressman at once and engage him to support our interests, that we may control legislation."

During the days when gold and silver coins were circulating freely in this country and nearly all types of bank notes were redeemable in specie, gold or silver, the banking fraternity was quick on the trigger in referring to any proposal that the Government should issue its own paper money, that this would be fiat money.

Now, when private bank notes are redeemable only in some other type of paper money, we wonder just what fiat money is. Will the banker please tell us?

The preamble to the Federal Reserve Act says that it was to provide for an elastic currency. Webster defines the word "elastic" as something which can be stretched, and, once stretched, will rebound.

Boys familiar with slingshots know that the stretching process is slow, but when the aim has once been made the rebound is very rapid.

And so it is with currency or credit expansion. That process is slow, but when contraction begins, its speed increases at a terrific rate, wrecking everything it touches.

The Federal Reserve law purportedly was adopted also for the protection of the banks of this Nation—to prevent them from failing. But in the short period between 1921 and 1933 more than 15,000 banks in this country failed, or more than 50 percent of them—this being by far more bank failures than this country had ever seen in any like period in American history.

Following a period of currency and credit expansion, the Federal Reserve Board held a very secret meeting with the class "A" directors of the 12 Federal Reserve banks on May 18, 1920, in Washington, D. C. No one outside of that circle knew at that time just what took place behind those closed and closely guarded doors.

One thing the outside world did know, and that was that shortly after that secret meeting was held, the rediscount rates which, for a long time, had hovered around 2 percent per annum, suddenly were jumped to 4 to 6 to 8 and even 9 percent, with call rates up around 20 percent.

Not even sure-shot gamblers could take chances on such rapidly changing bank rates.

Result? The wholesale calling and cancelation of loans. Refusal of banks to extend credit to many worthy patrons even at those high rates of interest.

Mercantile, wholesale, and manufacturing establishments failed by the thousands; yes, by scores of thousands. Millions of workers were thrown out of employment. Hundreds of thousands of farms were lost by hard-working farmers.

Financial chaos ensued. Banks failed, both large and small. Depositors, unable to get their savings and active cash deposits from the banks, were thrown onto charity.

During the readjustment period from 1924 to 1929 the Federal Reserve banks, under the leadership of the Federal Reserve Bank of New York, No. 2, launched another daring expansion of currency and credits.

On that fateful day in October 1929, however, their house of cards again fell. Yes, fell with a crash that resounded all around the world. The stock market cried aloud for hospitalization that was not to be had. Stores closed. Factories closed. Banks closed by the hundreds monthly. Public schools and other educational institutions closed their doors. Crime increased; the unemployed sought State and Federal aid. Taxes were increased because of it; price levels fluctuated wildly and made it almost impossible for going concerns to know what trade policies to adopt.

On June 24, 1935, Mr. Adolph Miller, then a member of the Federal Reserve Board, laid the blame for the crash of 1929 to the vast credit inflation of the Federal Reserve Bank of New York. That which was stretched out of proportion had to bounce back, and bounce back it did—with a vengeance, leaving wreckage and waste in its tracks.

Following the major crash of 1920, Gov. W. G. P. Harding of the Federal Reserve Board wrote an article entitled "Why We Cannot Have Another Panic," but it seems that there is need for an amendment to that opinion after seeing what took place in 1929.

The Federal Reserve Board in its annual report in 1919 called attention to the fact that the 12 Reserve banks for 1918 had gross earnings of $67,584,117, the net earnings being $55,446,979, or just about 10 times the amount of the dividends paid. The net earnings were at the rate of 72.6 percent on an average aggregate capital for the year of $76,342,000. And the Board also called attention to the fact that it had reiterated previously that the Federal Reserve banks were not organized for the primary purpose of earning unusual profits.

Notwithstanding this warning the 12 Federal Reserve banks in 1920 showed average net earnings of 160.7 percent, the highest net earnings after payment of 6 percent dividends to member banks, having been earned by the New York Federal Reserve Bank, 211 percent on its paid-in capital, and the lowest net earnings of 53 percent having been earned by the Federal Reserve Bank of Dallas, Tex., after having paid the 6 percent annual dividend to its member banks. The New York Federal Reserve Bank on its approximate $25,000,000 capital, earned $54,000,000 net in 1920 after having paid its member banks the usual 6-percent dividend.

I point this out in order to show that some unseen force, somewhere, governed the policies of the 12 Federal Reserve banks other than the Federal Reserve Board which frequently had cautioned these banks that they had not been organized primarily for profit, but rather for service to the member banks and to the commercial world.

Following the wreckage left in the trail of two major depressions between 1920 and 1930 the Federal Deposit Insurance Corporation was formed with about one-half of the capital stock being subscribed for by the Federal Reserve banks with voting power and the balance subscribed for by the United States Treasury without voting power.

The capital stock outstanding is about $290,000,000, with a surplus account of $206,000,000. The Federal Deposit Insurance Corporation may, in an emergency, expand its capital stock sales in a ratio of 3 to 1 over the amount of the outstanding stock by sales to the R. F. C. or to the United States Treasury together with an additional $250,000,000 to be subscribed by the R. F C. and Treasury if requested to do so.

Roughly, this would provide the Federal Deposit Insurance Corporation with a capital and surplus of a little over one and one-half billion dollars. In event of another serious run on our banks, with deposits of about $60,000,000,000, how far would the F. D. I. C. go in liquidating those frozen accounts?

In the event of the purchase of F. D. I. C. stock by the R. F. C. and the Treasury, then more Government bonds would be put on the market to be purchased by whom? With 95 percent of the assets of the F. D. I. C. invested in Government bonds, to whom would these bonds be sold in event of the forced liquidation of all our banks? Is it not time now to think on these things?

The Government has no idle cash with which to buy F. D. I. C. stock. So it would be forced to try to sell bonds to the banks or to the public at a time when no funds were available for such purchases.

Where, I ask you, would this financial merry-go-round stop?

In order to remove any doubt which may exist relating to the dominance of the Federal Reserve System by the Federal Reserve Bank of New York, I will quote from a statement made to the United Press at Washington by Adolph C. Miller, member of the Federal Reserve Board, June 24, 1935. "It is abundantly clear," Miller said, "that acceptance by the Board of aggressive [money] easing action proposed by the New York Federal Reserve Bank in 1927 and of complete abandonment of restraining action in the second half of 1928 proves that the Board, under established tradition, was, first, too quick to fall in line with a daring and dangerous proposal and, later, too slow to assume the leadership which was needed and was lacking at the most critical time."

Miller asserted that under the leadership of the New York bank, "discount rates were forced down in other banks and that when the Chicago Reserve Bank refused to follow, its rate was ordered reduced. Cheap credit late in 1927," he said, "expanded stock-market activities and a disastrous speculative situation developed. Government securities were sold by banks and gold exports were allowed to tighten the money market. But the rise in stocks had acquired too much momentum."

To head off what Mr. Miller termed a "daring and dangerous" credit-easing program into which the New York Federal Reserve Bank had drawn the Federal Reserve Board, leading to the 1929 stock-market crash, the Reserve Board, on February 2 of that year, used "direct pressure" for banks to discourage speculative loans.

This caused an acute controversy over a period of months between the Federal Reserve banks and the Reserve Board with reference to the respective merits of the policies of control through discount rate advances and through direct pressure.

Federal Reserve Board Member Miller concluded with the assertion that "the leadership of the Federal Reserve System rested with the Federal Reserve Bank of New York."

Here we have confirmation from the lips of a Reserve Board member that a scarcity of needed money was created artificially by the Federal Reserve banks.

We see from Mr. Miller's statement that Government securities were sold by the banks and gold exports were allowed to tighten the money market. Here then we see the law of self-preservation in operation. The banks just had to save their own hides no matter how other institutions were skinned. However, several thousand banks got caught in this financial "Frankenstein" and closed their doors, as did scores of thousands of other business institutions.

In this major catastrophe we have plenty of evidence that the power to "coin money and regulate the value thereof" is a function so sacred that it should never be entrusted to private individuals or corporations as it now exists for the purpose of selfish and private gain. That function should be exercised by our Congress for the benefit of all of the people as the Constitution plainly provides.

Mr. Miller admits that the New York Federal Reserve Bank (a private institution) actually dominated the Reserve Board and dictated the policies of all of the other 11 Federal Reserve banks.

We have proof-a-plenty, that the so-called elastic currency, fiat, or what have you, was subject to the most wildly inflationary and deflationary tendencies of any type of money this Nation has ever known.

Members of Congress, with their right hands raised, declare, when taking their oaths of office, that they will uphold and enforce the Constitution of the United States of America.

Very well; our Constitution provides that Congress, not the private, Wall Street-controlled banks, shall coin money and regulate the value thereof. I have heretofore shown you from the lips of a Federal Reserve Board member that the private reserve banks dominated by the New York Reserve Bank were responsible for the wild expansion of credits in 1927 and 1928, and for the rapid contraction of same by "direct pressure" in 1929, leading to the greatest financial disaster in American history.

Congress has the sole and exclusive power to coin money and to regulate the value thereof. That function should never be shopped out to speculators who would gamble at the expense of the Public Treasury.

Directly responsible to the electors of this Nation, Congress would be compelled to control this function for the benefit of the people. Honestly administered by Congress, the

coinage of money would be based on the needs of the people instead of on the theory of dollar scarcity for the benefit of the banker. The banker has his rightful place in our commercial wheel, but that place does not include the assumption of a congressional prerogative provided for in our Constitution.

Scientifically controlled for the benefit of all of our people and institutions, Congress could supply all of the money needed to carry the commerce of this Nation to its destination. Unemployment would be unknown. Prosperity would attend our efforts. We would truly become a powerful nation, because we would at last be free from the forces that have heretofore violated our Constitution in coining money primarily for their own private gain.

Tariff on Cuban Sugar

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

STATEMENT BY COL. W. F. GILES

Mr. SANDERS. Mr. Speaker, in view of the recent ruling by Price Administrator Henderson fixing the price of sugar, and the misinformation that has been published in the press in regard to this situation, and the effect of this price regulation upon the consuming public, I ask leave to print in the RECORD, under permission to extend my remarks, a statement made on September 9, 1941, by Col. W. F. Giles, of Louisiana, to the Committee for Reciprocity Information. Colonel Giles is president of the Sugar Cane League of Louisiana and is a practical farmer of outstanding ability.

This statement is so lucid and clear I believe it will be read with interest and benefit by the Members of this House, and will be a valuable contribution to the facts pertaining to this public issue.

Colonel Giles' statement is as follows:

Speaking as the representative of the American Sugar Cane League of New Orleans, La., the brief filed on August 23 asked that the State Department make known to domestic producers the propositions concerning sugar which are to form the basis of negotiations with the Cuban Government. We requested that the State Department make a declaration of its intentions, in order that we might intelligently discuss what is in prospect. Ostensibly, this public hearing is a part of the democratic process of permitting interested parties to express their views and to submit their recommendations; but we find ourselves in a position of uncertainty and helplessness in the absence of any declared intention on the part of the State Department. We are required to argue by assumption.

Our concern is not imaginary but is based upon experience. For instance, in 1939 there was a public hearing, but everyone assumed that the basic relationship should be maintained of a reduction in tariff and the existence of a quota system. Instead, the State Department changed the language of the original Cuban trade agreement, which established a completely new arrangement. The Tariff Commission having reported that the difference in cost of production amounted to a $1.50 tariff rate on Cuban sugar, the President of the United States put the $1.50 rate into effect in 1934. Later in the same year the reduction from $1.50 to 90 cents was justified, in part, by the fact that the Cubans would be restricted in the amount of sugar which they could import under the quota system. Accordingly, when the President suspended quotas in September 1939, the $1.50 rate of duty on Cuban sugar was reinstated; but, in December 1939, the language of the agreement was so changed that, if the quotas are suspended, there would be no restoration of the $1.50 tariff rate. The reinstatement of the higher rate would only occur in case the quota provisions of the Sugar Act should expire.

Such a change has destroyed the concurrence of the reduced duty and quotas, which change was made without notice and without an opportunity for the producers to be heard. We protest strongly against such a procedure and request that the original language of the 1934 Cuban trade agreement be restored.

In the absence of any declared intention on the part of the State Department, we submit that the facts concerning our relations with Cuba, in terms of sugar, fully justify a demand that the tariff on the importation of Cuban sugar be increased. Cuba today has a guaranteed market in the United States for the greatest quantity of sugar that it has imported into the United States in more than 10 years, and the price paid for that sugar is considerably higher than the average price of 10 years. Thus, Cuba is being permitted to market more sugar at a higher price. Therefore, the tariff rate should be increased in proportion to the added benefits enjoyed.

And not only is Cuba permitted to market larger quantities of sugar at higher prices in the United States market but the price paid for Cuban sugar in the so-called world market is today more than double the price which Cuban sugar has commanded in that market for several years. It is well known to anyone who keeps informed about the Cuban marketing of sugar that usually two-thirds of the Cuban production has been marketed in the so-called world market at a lower price. The Cubans have averaged out the total accordingly to get a favorable price for the whole crop. But this year Cuba is marketing more than 85 percent of its production in the United States at the highest price obtained in several years, and even the balance which is being sold to England and other world markets is listed at a doubled price. Thus, any way you take it, Cuban sugars are in an improved position.

The national-defense agency known as O. P. A. C. S. has fixed a price for raw sugar in the United States at 3½ cents, which is claimed to be a fair and reasonable price for raw sugar. The Cubans have disagreed and have withdrawn from the market for almost 30 days. Of course, this is consistent with the usual Cuban practice of taking advantage of every opportunity to force the price of sugar in the United States upward. They did this in 1920 when the consumer paid 25 cents a pound for sugar, and they tried it again in 1939, when the European war was declared, forcing the President to suspend quotas to bring the price down. Now they have made demands involving questions of lowered freight rates to the United States; making available ships; an advance in the price ceiling; and finally, a reduction in the tariff.

The sugar program adopted by the United States Government in 1934 was declared to be for the purpose of alleviating the distressing conditions in the sugar industry. The period referred to was 1931, 1932, and 1933, during which time Cuban raw sugar sold for $1.16, while domestic raws sold for $3.16. At the $3.50 pegged price, with a 90-cent duty, Cuba is getting an increase of 114 percent, while domestic raws are sold at only a 10-percent increase. Should the 75-cent rate of duty be imposed, Cuba would be receiving an increase of 137 percent over the 1931–33 period, while domestic producers are receiving a mere 10-percent improvement over the distressing conditions which the Federal Government sought to alleviate.

In yesterday's paper we read about certain offerings for future delivery, on a basis which includes concessions in the tariff on Cuban sugars. It is reported that the owners of Cuban sugar are making contracts which anticipate a tariff reduction of 15 cents per 100 pounds. What is the basis of such a concession? What information do these Cubans have which is not available to us? The State Department, having refused or failed to respond to our request for a declaration of intention, must we assume that Cuban producers are better informed on the subject than we are? But we do submit the plain fact that if a price of 3½ cents for raw sugar is justified by O. P. A. C. S. as a fair price for domestic producers, then there can be no justification whatsoever for the maintenance of such a price, if another department of the Government would grant to Cuban producers a tariff concession which would, in effect, give them a price of 3.65 cents, while domestic producers are forced to accept 3.50 cents.

If the purpose is to give Cuba a better price for raw sugar, the solution seems fairly simple and plain as far as Government procedure may be concerned. The going price of raw sugar on August 12 was 3.80 cents, when O. P. A. C. S. set a ceiling of 3.50 cents. This was tantamount to reducing the price of raw sugar 30 points. Now, if the Cubans need 15 cents, would it not be simpler and more efficient for O. P. A. C. S. to raise its ceiling to 3.65 cents, so that domestic producers could enjoy the price, as well as foreign producers in Cuba? Why go through all the travail and labor of negotiating a supplemental trade agreement and reducing tariff during an emergency period where consideratıons are not based upon normal conditions? Due to increased costs of production, domestic producers need the 3.80-cents price more than Cuba needs the 3.65 cents.

We ask in complete sincerity that the negotiators who represent the United States Government in the negotiations on a supplemental Cuban trade agreement give first consideration to the interests of the domestic producers in matters concerning sugar. In doing so, the facts will require that the tariff on Cuban sugar be increased. We further recommend that the original language of the Cuban trade agreement be restored, whereby reductions in the tariff on Cuban sugar below $1.50 shall continue in effect only as long as the quota provisions of the Sugar Act are operating, so that such tariff reduction below $1.50 will be concurrent with the operation of quotas.

The CONGRESSIONAL RECORD of Friday, September 5, contains a statement by Senator JOSEPH O'MAHONEY, of Wyoming, which we feel should be part of the record of these hearings. At a time like this, when the question of national defense is of transcendent importance to all officials of our National Government, the unity of the people of the United States becomes a paramount consideration. The Senator from Wyoming has been a leader in proposing and drafting sugar legislation expressing the intent of Congress. He has interpreted the intent of Congress in congressional debates and in proposing the language of the Sugar Act and the amendments thereto. Therefore, his solemn expression, evidently concurred in by other Members of the United States Senate who participated in the discussion Friday night, is a development which must necessarily re-

ceive the highest consideration of the officials of the State Department and the negotiators on behalf of the United States Government. Quoting from page 7558 of the CONGRESSIONAL RECORD for September 5, 1941, Senator O'MAHONEY, of Wyoming, declared:

"I have no intention of appearing before the Committee for Reciprocity Information because I have lost faith in the value of such appearance. I have lost faith that the presentation of any evidence there will affect the decision to be rendered. So I prefer to make my statement here in this body, which, having considered the facts and the evidence, has on numerous occasions indicated its belief that the domestic production of sugar beets and sugarcane should be encouraged in order that the American consumer of sugar might not be exploited by those who produce sugar in offshore areas."

America's War Status

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

ARTICLE BY MARK SULLIVAN

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan in the Washington Post of September 17, 1941:

[From the Washington Post of September 17, 1941]

AMERICA'S WAR STATUS—DEFINING "FREEDOM OF THE SEAS"

(By Mark Sullivan)

The new status of the United States with respect to the war is contained in two speeches—that of Secretary Knox to the American Legion September 15 and President Roosevelt's radio address to the people September 11.

In terms of action the new status is this: Our Navy will, on sight, destroy or capture any Axis submarine or surface raider within certain waters.

Within this broad statement are some distinctions. As respects what our Navy will attack, Mr. Roosevelt uses the term "Axis." The term used by Secretary Knox is "Axis controlled."

Probably no distinction between those two terms is intended. Both terms, if interpreted broadly, would include Germany, Italy, and Japan. But no one supposes there is any intention, at this time, to attack Japanese naval vessels. Presumably what is intended is German and Italian vessels—primarily, of course, German ones, since they are the ones practicing widespread aggression.

Again, as to just what we will attack, there is a curious distinction, upon which Mr. Roosevelt and Mr. Knox agree. Both say that what we will attack are "submarines or surface raiders." Apparently we do not intend to attack German bombing planes, though these are, in certain waters, as destructive as submarines or surface raiders. One reason for omitting German bombing planes may be that these operate mainly over narrowly restricted waters—that is, waters close to the area of actual war. To include German bombing planes in what we will attack might raise a question about the precise waters in which our new policy applies.

And this is a really important and delicate question. In just what waters will we attack? As defined by Secretary Knox, the waters are "between the American Continent and the waters adjacent to Iceland." As defined by President Roosevelt, the area is broader—Mr. Roosevelt says "in the waters which we deem necessary for our defense."

Mr. Roosevelt's definition is, obviously, the one with the higher authority. In Mr. Roosevelt's mind, just what are "the waters which we deem necessary for our defense"? Once, in an informal conference, Mr. Roosevelt defined the waters we might deem necessary for our defense as anywhere in the seven seas. Probably this is what we mean, or what we will mean and practice as our relation to the war progresses. As we now deem waters around Iceland necessary to our defense, so may we later deem waters around the Azores, or near Dakar in Africa, or practically anywhere in the Pacific—practically anywhere in the world.

Is this new policy of ours justified? The answer is "Yes."

To try to arrive at the answer by careful argument would be futile. The first requirement for argument is agreement upon the meaning of terms. And about the terms involved in the so-called international law of the present situation there is no agreement. "Freedom of the seas" means to Germany what Germany says it means; it means to us what we say it means. Germany declares a "war zone," which includes the waters about Iceland; we declare a "defense zone," which includes the same waters. The "war zone" of one nation overlaps the "defense zone" of the other. Germany defines "contraband" as one thing, we as another. And so as to blockade and the other technical terms of so-called international law. Indeed, the very term "international law" is itself inexact. Hardly can "international law" be said to exist. For there cannot be law unless there are courts to interpret what the law means—and there are no international courts.

From refinements about all this sort of thing we had best get away; we should merely be lost in a fog of words. We can base what we have done upon actions by Germany. One alone, the sinking of the *Robin Moor*, is sufficient.

The *Robin Moor* was an American merchant vessel in the South Atlantic, thousands of miles from any war zone. She was sunk by a German submarine, without provision for safety of crew and passengers. We can omit any discussion about whether her cargo was contraband. The manner of the sinking, standing alone, was contrary to everything that has ever passed as international law, and contrary, as Mr. Roosevelt says, to "every principle of humanity." Besides it was, as Mr. Roosevelt says, "in direct violation of international agreements signed by the Government of Germany" several years ago.

The *Robin Moor* was sunk almost 4 months ago. Had Germany offered explanation or apology or reparations, we might have assumed the sinking was a mistake. As President Roosevelt says, "it would be unworthy of a great Nation to exaggerate an isolated incident." In the absence of explanation by Germany—and in the presence of other sinkings and attacks continuing to this day—we are obliged to assume the sinking of the *Robin Moor* was part of a general attitude of Germany toward us.

That the most powerful Nation in the world should permit a merchant vessel of its citizens to be sunk as the *Robin Moor* was and fail to do what we have now done would be to forfeit the respect of the world and forfeit the confidence of its own people.

A Century of Culture at Fordham

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

ADDRESS OF GOV. HERBERT H. LEHMAN

Mr. MARTIN J. KENNEDY. Mr. Speaker, A civic celebration of the centenary of Fordham University, the president's dinner, was held last night at the Hotel Waldorf-Astoria. The president of the University Alumni Association, Mr. Paul T. O'Keefe, acted as toastmaster. At this celebration, officials of the Federal, State, and City governments, delegates from leading colleges and universities, members of the alumni, and thousands of friends paid tribute to Fordham.

President Roosevelt and the Nation were represented by Vice President WALLACE. The Most Reverend Amleto Giovanni Cicognani, apostolic delegate, spoke for the Holy Father; Gov. Herbert H. Lehman for the State of New York; and Dr. Harry Woodburn Chase, chancelor of New York University, for the colleges and universities. The addresses delivered by these distinguished visitors, and by the President of Fordham, Father Robert I. Gannon, S. J., and Archbishop Francis J. Spellman, were broadcast Nation-wide. The address of Governor Lehman is one that should find a ready response in the heart of every citizen of our beloved country. In his characteristic, straight-forward manner Governor Lehman gave expression to a problem which now besets the minds of the leaders of this land, national unity.

I hope every Member of the Congress will read the words of the Governor, because, in his address, he points the way which we may well follow. It offers a solution to the evil of racial and religious intolerance which is now rampant in our country and which is a real and permanent threat to our national unity.

In recognition of his splendid and unselfish record of public service, Fordham University has awarded to Governor Lehman the honorary degree of doctor of laws.

I have great admiration for this metropolitan institution of higher learning and for its large and distinguished student and alumni body. I deem it a privilege to make part of the CONGRESSIONAL RECORD the address delivered by Governor Lehman and thus mark this historic centennial celebration of Fordham University.

The address is as follows:

Today the world is faced with dangers which threaten civilization itself. In a great part of the world force has usurped the place of reason, might is triumphant over right. Dictators demand that men obey them blindly and deny the right of men to follow the dictates of their conscience. Moral values, they say, exist only through

the fiat of the State, itself ruled by a dictator. There, indeed, the light of religion is burning dimly. Perhaps more than ever it is the duty of religion to hold high the torch which it has received; to feed the flame until once more it burns so brightly that all the world may see it and again exclaim, "In Thy light we shall see light."

It is our good fortune in this country that freedom of thought and conscience is safeguarded by our fundamental law, and what is perhaps even more important, by the character and spirit of the people. And it is becoming every day more clearly evident that for the solution of the great problems which face mankind, mankind needs freedom of thought and conscience, needs moral values and spiritual ideals. Everywhere thoughtful men are constrained to recognize that we have been prone to apply standards of value which are evanescent rather than standards which remain eternally true.

I rejoice, therefore, that the one-hundredth anniversary of the establishment of this great university is to be made an opportunity to consider the other side of life—the religious and ethical and spiritual aspect of life. This anniversary reminds us that even today there are men and institutions standing firmly for those intangible things without which life is not worth living—the ideals of justice, mercy, and humility.

The past several decades have brought both to poor and to rich comforts, conveniences, even luxuries, undreamed of in the past. Through scientific and mechanical progress we have achieved an age of plenty, and yet in spite of the plenty, and some even say because of that plenty, we have felt during the last years a widespread and acute economic depression. New means of communication have almost wiped out space and distance; but as means of communication have increased, the nations have erected more and more barriers against each other. Almost everywhere we see intolerance and repression and loss of freedom of the individual. Men have lost faith in one another. In the fierce struggle to gain a livelihood or to acquire wealth, modern man gives little heed to the method he uses. Too often he feels that one man's gain necessarily involves another's loss. As in the evil days, described in the Bible, "each man is for himself and against each other."

Individual ruthlessness finds its counterpart in the relationship between the nations of the world. The rule that might makes right now governs wide areas. There the only argument which has been effective during the last years has been force and violence.

To the problems of economic distress and war there has been added a third, intolerance, hatreds, and repressions. Fundamental human rights and liberties which we have thought were inalienable are now completely destroyed in many lands. Even in this country they are now being challenged.

We cannot permit these liberties to be destroyed. We can protect them and American democracy only if we have complete national unity of the spirit.

Division between our people must not be allowed to exist if democracy is to be preserved. Hate begets hate. Intolerance begets intolerance. Oppression of the individual or of groups inevitably leads to the oppression of other individuals and groups. Wherever racial or religious division has raised its ugly head the death knell of human liberties has been sounded.

An attack on one religion weakens all religious faiths, since the basis of all true religion is identical—charity, justice, and tolerance.

Those who would sow the seeds of discord between those of different faiths are dangerous enemies, both of religion and of democracy. They would tear down the pillars of morality and freedom.

The fight against those who would destroy religion and spirituality is a common fight of all churches.

How can religion solve the problems that confront us? What has religion to offer us today? How can religion furnish us with a basis for a happier, nobler society, a just and peaceful world? Fortunately, we of both the Christian and Jewish tradition may find in our Bible a clear statement as to the message and meaning of religion and its relation to problems. Through Moses the world received the two commandments, "Thou shalt love the Lord thy God with all thy soul, and with all thy heart, and with all thy might," and "Thou shalt love thy neighbor as thyself." In these two commandments are summed up man's duty to his God and to his fellowman. They represent the spirit of all true religion. Again, in those few phrases of the prophet Micah, we find the essence of religion stated so sublimely, so straightforwardly, that none can mistake it: "It hath been told thee, O man, what is good and what the Lord doth require of thee; only to do justly and to love mercy and to walk humbly with thy God." Here are the essentials of all religion, summed up without complication and without omission. Here too, are the essentials of social justice.

It is this combination of justice and mercy and humility before God which the world needs today. Religion, with its belief in a universal Father, religion with its insistence upon the reality of the force working for righteousness in the world—religion, I say, is the natural ally of all those who would bring about a real brotherhood among men, and end for all time man's inhumanity to man. If justice and mercy would supplant selfishness and lust for power which dominates the actions of men, if reverence for God and respect for man created in the image of God motivated our lives, would brutal war and shallow materialism darken the face of the earth? If these fundamentals of religion were truly to rule in the hearts of men, could we not banish poverty, violence, and intolerance from the world?

Once again, religion must come to rescue the world from barbarism and destruction.

Albert G. Rutherford

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

Mr. SCOTT. Mr. Speaker, the death of our colleague, and my good friend, occurred at a time I was unavoidably absent from Washington, with official permission of the House, and, accordingly, I did not then have the opportunity to pay my respects to his memory.

Colonel RUTHERFORD was beloved by his friends; he was not only an able and efficient legislator and public servant who was devoted to duty, but also a considerate and genial companion. I shall never forget the cordial greeting he extended to me when I arrived in Washington as a new Member of Congress; how he made me feel at home, and the many courtesies he showed me. Often I joined him in the section of the House we Pennsylvanians call the "Pennsylvania Main Line," and benefited from his kindly wisdom and helpful advice. I had the greatest respect for his sound judgment and good counsel, and can fully appreciate the great loss sustained by his constituency, our State and Nation. We will miss him sincerely, but the example of his fine record is an inspiration to me, as it must be to many of my colleagues. We have lost, but we shall not forget, our friend and colleague.

Post-War Planning Program

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

MEMORANDUM BY THE NATIONAL RESOURCES PLANNING BOARD

Mr. BEITER. Mr. Speaker, I have introduced a bill, known as H. R. 5638, to amend the Employment Stabilization Act of 1931. The bill is a companion to a Senate measure sponsored by Senator ROBERT WAGNER, of New York.

The National Resources Planning Board advocates the enactment of this legislation as a part of a post-war planning program of public works. Their memorandum on the legislation, prepared at my request, is of wide interest and I submit it to the Congress, together with a copy of the bill, for consideration:

MEMORANDUM ON H. R. 5638, A BILL TO AMEND THE EMPLOYMENT STABILIZATION ACT OF 1931

This bill is proposed to carry out recommendations made by the President in two of his messages to the Congress during this session.

In his annual Budget message on January 3, 1941, the President said:

"During this period of national emergency it seems appropriate to defer construction projects that interfere with the defense program by diverting manpower and materials. Further, it is very wise for us to establish a reservoir of post-defense projects to help absorb labor that later will be released by defense industry. * * * Throughout the Federal service * * * projects are being deferred until a more appropriate time. However, surveys and the planning of new projects will go forward so that construction can be resumed without delay. This will produce a long list of public-work projects, apart from defense construction, arranged according to priorities. Such a list could be submitted to a future Congress for the appropriation of funds to put it into operation."

Again in his message of March 17, 1941, transmitting the annual report of the National Resources Planning Board on the development of resources and the stabilization of employment in the United States

(H. Doc. 142, 77th Cong., 1st sess.) the President said:

"Because of the current national emergency, projects not needed for defense have been temporarily deferred. As a result, we are now in the process of storing up a reservoir of nondefense work which can be loosed when the pace of rearmament slackens. * * * If projects are to be ready at hand for rapid inauguration in times of need, the surveys and investigations, the engineering plans and specifications must be prepared in advance. Authorizations and financial arrangements must be already agreed upon. The planning * * * fund, suggested in the Board's report, would make available a shelf of useful projects without in any way committing the Government to the immediate construction of such works."

The proposal embodied in the bill grows out of the Government's experience during the past 10 years in planning and administering large scale public-improvement programs.

Beginning in 1931, the Congress in enacting the Employment Stabilization Act declared it (sec. 8 (a) of the act) "to be the policy of Congress to arrange the construction of public works so far as practicable in such manner as will assist in the stabilization of industry and employment through the proper timing of such construction, and that to further this object there shall be advance planning, including preparation of detailed construction plans, of public works."

To make effective this declaration of policy, the Congress directed (sec. 8 (b), (c), and (e) of the act) each construction agency of the Federal Government to prepare and keep up to date by means of an annual revision a 6-year advance plan and program of public-works construction with estimates showing projects allotted to each year. Plans for the acquisition of sites and the preparation of advance detailed construction plans "for not less than 1 year in advance" were to be included in the agencies' 6-year programs. The act also provided for the collection of "information concerning advance construction plans and estimates by States, municipalities, and other public and private agencies which may indicate the probable volume of construction within the United States or which may aid the (Federal) construction agencies in formulating their advance plans."

Before the provisions of the act of 1931 had gone into full operation, the Government had embarked on a series of large-scale programs using construction as a means toward employment stabilization. Federal expenditures for, and the financing of, new construction (including grants and loans) increased from less than a half billion dollars during 1931 to more than two and a half billion during 1939. Since then such expenditures and new financing have topped even the latter amount because of the defense program.

From the experience gained since 1931, three points have been particularly outstanding.[1]

1. A coordination of the public-works policies of the Federal, State, and local governments is necessary in order to avoid having the efforts of the Federal Government to expand public-works activities frustrated by the curtailment of expenditures by States and cities. The following table shows the effect on the total volume of public construction of the curtailment of public construction by States and cities during the period 1930 to 1940.

Estimated expenditure of public funds for new public construction, 1930–40 [1]

[Millions of dollars]

Calendar year	Public construction financed by Federal funds	Public construction financed by State and local funds	Total public construction
1930	307	2,469	2,776
1931	422	2,156	2,578
1932	460	1,334	1,794
1933	647	707	1,354
1934	1,380	794	2,174
1935	1,234	616	1,850
1936	2,335	881	3,216
1937	2,043	845	2,888
1938	2,085	1,103	3,188
1939	2,206	1,314	3,520
1940	2,281	[2]1,143	[2]3,424

[1] Including work-relief construction.
[2] Preliminary estimates.

If some means could have been found during the period from 1930 to 1940 to hold State and local public works expenditures steady, then the Federal grants and increased Federal expenditures for public construction would have had the increased employment-creating effect for which they were intended. As it was, Federal grants for non-Federal public construction generally took the place of, rather than added to, construction expenditures by States and cities.

One way of assisting in maintaining a steady volume of State and local public construction is to encourage the formulation of long-term programs of public improvements and financial plans. Long-range programing of State and local public activities, in conformance with the long-range financial resources of the governments involved, would go far toward smoothing out the curve of State and local activity, and also would provide a sound basis of administration for any financial assistance which the Congress might decide to make available during periods of depression. Such State and local public improvement programming is one policy which the Federal Government should encourage in order to assure that future Federal grants for public improvements will provide an addition to, rather than a replacing of, expenditures by the States and local governments.

2. The objectives in using public works and related activities as means for obtaining employment stabilization have been twofold: (1) The building of works and the supplying of services to meet the needs of the country; and (2) providing employment for idle men and resources during any period of depression.

A series of emergency programs of public works may fail to achieve one of these over-all objectives. While it is true that employment creation was the primary purpose of such emergency programs, it is also true that such employment was to be used in building useful needed works and improvements. The consequence of emergency programs was a sort of dead-line type of administration, in which too often projects had to be selected in accordance with their degree of readiness and the quickness with which they would put great numbers of men to work, rather than in accordance with the urgency of need for the works and improvements being undertaken. When these two criteria—immediate employment and urgency of need for the works and improvements—worked together, valuable national, State, and local improvements resulted; when the criteria were in conflict, too often the project values had to take second place.

A continuing planning policy established by the Congress would make it possible to prepare plans considerably in advance for projects that might be included in public improvement programs. Then, if and when the Congress provided appropriations for expanding such programs quickly, projects with high national, State, and local values could be selected to give immediate employment. Administration of the program would be facilitated to the extent that project selection could always be in terms of the two criteria—employment created and urgency of the need for the improvement.

3. It has been amply demonstrated that many months may elapse between the making of appropriations for a large program of public improvements and the actual employment of great numbers of men. This delay is occasioned by the time necessary to carry out the preliminary surveys, studies, and investigations, to make the detailed plans and specifications, to arrange for financing, to acquire land, to advertise for and receive bids and award contracts, and to organize operations. Although problems of great difficulty must first be solved, it is possible to shorten or telescope some of these time elements. For example, current custom delays the surveys and preparation of detailed plans until after funds are appropriated for carrying out a project. These steps in preparation could more logically be taken in advance of decision, so that the legislative body would have more accurate data on which to judge the merits of proposals. But here, too, there are some serious problems to be faced. Such planning would have to be undertaken long before the need for an expanded program becomes apparent, and the key to taking these steps is the advance provision of funds for the preliminary planning work.

To provide funds some years in advance for the survey and engineering work involved on public projects presents, of course, the hazard that costs will be incurred on many projects that may never be undertaken. To the extent that this occurs, the procedure would be a wasteful one. However, the hazard is not particularly great if the financing of this preliminary work is properly administered. Exercise of sound administrative judgment would reduce to minimum the losses involved. In any event, the losses that would come about might quite properly be considered as low-cost insurance against an emergency. The cost would, without question, be far less than the cost of being caught unprepared.

Thus, our experience during the past decade has clearly shown that the policy declared by the Congress in the Employment Stabilization Act of 1931 needs to be implemented further by the advance provision of funds to be made available by administrative allocation to Federal agencies and to State and local governments for preliminary studies and for the plans and specifications for public improvements, works, and related activities, with the clear understanding that such advances would represent in no sense a commitment to undertake such projects at any time. The provisions of H. R. 5638 authorize the appropriation of funds for just such purposes.

Under the proposed legislation, the Employment Stabilization Act is amended by adding a new section authorizing the appropriation of funds to the President "for the making of such examinations, surveys, investigations, legal studies, comprehensive plans and programs, engineering plans and specifications, and forms of legal proceedings, as may be necessary to facilitate and expedite the selection, financing, and inauguration of public improvements, works, and related activities." The President is authorized to allot such funds to agencies of the United States and to make advances to the States, Territories, and island possessions, and their agencies and political subdivisions. The President may use such agencies as he may designate for making such allotments and advances. Provision is also made for the President to make such rules and regulations

[1] See also the reports of the National Resources Planning Board on "Development of Resources and Stabilization of Employment in the United States" and "The Economic Effects of the Federal Public Works Experience, 1933–38."

as may be necessary to cover the allotments and advances, including requirements as to reimbursement, or as to contributions of funds, services, or materials, in connection with advances to States, Territories, and island possessions, and their agencies and political subdivisions.

Primary authority and responsibility for administering the funds are vested in the President, inasmuch as the authority and functions under the Employment Stabilization Act were transferred to the Executive Office of the President by Reorganization Plan No. I and are "administered under the direction and supervision of the President by the National Resources Planning Board" (sec. 4 (a) of Reorganization Plan No. I).

The proposed legislation would enable the appropriation of funds to carry on the following specific activities:

1. Examinations, surveys, and investigations could be undertaken by one or more Federal agencies in cooperation with such State and local governmental agencies as may be concerned, for studying proposals directed toward the preparation of comprehensive plans and programs for the protection and development of the resources of the Nation. These studies could cover a single proposed project or a group of them; the development of a drainage-basin area, a land-use area, a forest or a mining region; in fact, the areas to be covered will be largely determined by the type of problem or resource under consideration. Additional authorizations and funds are needed for the over-all type of surveys and investigations which must be made if the water, land, and forest resources of the Nation are to be developed and put to their best use; if our future highways and airports are to be properly located and of the size necessary to carry the anticipated traffic; if the blighted areas of our cities are to be rebuilt; if the proper kinds and amounts of housing are to be provided; and if our public-health services, our public buildings and our welfare institutions are to be located and designed to provide a maximum service with a minimum outlay.

There is need also for coordinated planning and survey work by Federal, State, and local agencies, so that one agency is not working in ignorance of the proposals of another. For example, if a State agency is planning a road system or studying a school-building program, and a Federal agency is planning a water project which may flood certain areas, or render them unsuitable for use, it is the better part of wisdom to make sure that no new roads or schools are planned for an area which eventually may be flooded. Better yet, the road, school, and water planning should be only segments of a coordinated or joint over-all planning effort for the area involved.

2. Legal studies and forms of legal proceedings could be undertaken in advance of authorization of projects to avoid legal obstacles and the delays now often encountered before public projects can be undertaken. Most local public bodies are subject to strict constitutional and statutory limitations and requirements in the making of loans and contracts involving cumbersome and lengthy procedures and often including the necessity for special elections. Debt and tax limitations sometimes prevent borrowing by public bodies where there is the greatest need for public improvements. Using the experience of the last 7 years it should be possible to suggest new procedures which, upon adoption by State and local governments, might materially reduce the length of time necessary to get projects under way.

3. Comprehensive plans and programs could be developed in order to provide adequate consideration of all the developmental needs of a community or area in appropriate balance and to establish a definite and effective order of undertaking the most needed projects. Such plans and programs could be prepared: (1) by Federal agencies; (2) by joint action of the Federal, State, and local agencies concerned; and (3) by State and local governments covering only their own activities with financial and technical assistance from appropriate Federal agencies.

These comprehensive plans and programs are the means by which individual projects proposed as a result of the surveys and investigations are placed in their proper relationship to each other so that the development of any individual area or region in the Nation follows a well-considered pattern. This procedure makes possible the provision of roads and schools coincidental with the opening of new lands; the building of community facilities in tempo with new industrial developments; and the rehabilitation of cities by removing blighted areas in accordance with long-term plans.

4. Engineering plans and specifications could be prepared by two different procedures:

(a) Allotments could be made to Federal agencies for the preparation of detailed plans for those individual projects in their 6-year advance programs. Over the past 10 years, the Federal Government has spent on the average $500,000,000 annually for "direct" Federal construction projects. Currently it is estimated that such Federal agencies have detailed plans for only about $265,000,000 of projects in their backlog. This would be less than the expenditure in an average year. Further, detailed plans have been prepared for only approximately 10 percent of the total cost of the projects in the advance programs. To carry out the declaration of policy by the Congress in the Employment Stabilization Act, detailed construction plans should be available for not less than 1 year in advance, i. e. they should cover not less than $500,000,000 of Federal direct construction.

(b) Advances could be made through Federal agencies to State and local governments for the preparation of detailed plans for individual projects in the comprehensive advance plans and programs of State and local governments. Prior to 1931 and the decline in the total volume of non-Federal public construction, State and local public construction averaged more than $2,000,000,000 a year, reaching a high of approximately $2,500,000,000 in 1930. Preparation of detailed construction plans should cover not less than 1 year of such construction in advance if the Federal grant-in-aid and loan agencies are to carry out the policy declaration of the Congress.

The Federal Works Agency, in cooperation with the National Resources Planning Board, is sponsoring a project which will operate with Work Projects Administration funds and staff to determine the approximate volume, nature, and distribution of potential public works which may be undertaken by local and State agencies after the reduction of defense activities. But this inventory of need will not be enough, and funds will be required to provide for the investigations, surveys, and preparation of detailed construction plans which are so essential before the "dirt can fly."

Also, it is important to note that there is no reason that advances could not be made to State and local governments for plan preparation and be repaid from funds appropriated by the State and local governments if they decide to undertake an improvement without any financial assistance whatsoever from the Federal Government; or if such financial assistance for carrying out an improvement is made available by the Federal Government, the advances previously made for plan preparation could be deducted from the grant or loan so made.

Finally, five points should be emphasized in connection with the proposed legislation:

1. The authorization of appropriations which the bill proposes supplements existing authorizations of Federal agencies for survey and planning work. The proposed authorization is not intended to supplant any existing authorizations.

2. The intent of the bill is to allot or advance funds for survey or plan preparation only when such preliminary work is in accord with or for the purpose of developing a long-term plan for community, State, regional, or national development.

3. Any allotments or advances from funds appropriated under the proposed authorization would not represent, in any sense, a commitment by the Congress to appropriate funds to undertake at any time the projects covered by plans made under such allotments or advances.

4. The bill provides for advances to State and local governments for plan preparation by their own staffs and consultants. It does not propose Federal domination of the design and planning work of State and local governments; nor does it propose that the Federal agencies should create staffs to replace the staffs of such State and local governments.

5. The bill provides a form of insurance against the time when emergency programs again may be necessary. It assures that if and when such time comes, plans will be ready and, if the Congress so legislates, men and materials can be put to work more quickly and on better undertakings than would be the case otherwise.

[H. R. 5638, 77th Cong., 1st sess.]

A bill to amend the Employment Stabilization Act of 1931

Be it enacted, etc., That the Employment Stabilization Act of 1931 is amended by adding the following section:

"SEC. 9. There is hereby authorized to be appropriated annually such sums as may be necessary for allotment to agencies of the United States and for advances to the States, Territories, and island possessions, and the agencies and political subdivisions thereof, by the President, through the Federal Works Agency or such agencies as he may designate, and under such rules and regulations as he may prescribe, for the making of such examinations, surveys, investigations, legal studies, comprehensive plans and programs, engineering plans and specifications, and forms of legal proceedings, as may be necessary to facilitate and expedite the selection, financing, and inauguration of public improvements, works, and related activities: *Provided*, That advances to States, Territories, and island possessions, and political subdivisions thereof, shall be subject to such requirements as to reimbursement, or with respect to contribution of funds, services, or materials, as the President may determine."

A United America

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

EDITORIAL FROM ST. LOUIS GLOBE-DEMOCRAT AND ILLINOIS STATE REGISTER

Mr. LUCAS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial which was reprinted by the Illinois State Register of September 15, 1941, having been

previously printed in the St. Louis Globe-Democrat, entitled "A United America."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Illinois State Register of September 15, 1941]

"A UNITED AMERICA"

(Today the State Register yields this editorial space to the following editorial which appeared under the above caption in the Sunday St. Louis Globe-Democrat. You are urged to read it carefully, bearing in mind that the Globe-Democrat is a powerful Republican newspaper and foe of the New Deal.)

The time has arrived for plain talk about the grave international situation. The time has come when Americans must forget their bickering and name-calling and inflammatory oratory and face the facts as they should be faced—as a united Nation.

American disunity is precisely what Hitler wants, and his wishes have been gratified too long. We can't afford to play his game any longer.

The American Navy has received orders from its Commander in Chief, President Roosevelt, to shoot on sight German and Italian war vessels which enter waters within our defense zone. He reached this decision after a series of attacks on American ships by German submarines and bombers.

He told the Nation and the world last Thursday night that we do not want a "shooting war" with the Axis Powers, but we will defend to the limit of our strength our historic right to freedom of the seas, and we will keep the line of supply open to all nations now fighting Hitler and his satellites.

There never may be a "shooting war"; we prayerfully hope not. But a "shooting war" may start today, tomorrow, or next week, if the Axis Powers force the issue. We are, therefore, in a state of incipient, undeclared war with Germany and Italy which may flame into formal war on a moment's notice. This is the situation, and the Nation never faced a more apprehensive future.

In urging that America stand united against a peril which is real and constantly growing, the Globe-Democrat stands squarely behind President Roosevelt and his foreign policy. If this seems incongruous to some in view of this newspaper's consistent differences with the President over his domestic program—the New Deal—we reiterate that there is no relation between the two programs.

Today we are faced with an international crisis which threatens our national existence, our physical existence as a free and independent entity among the nations of the world. The President, with access to facts not available to most of us, long ago saw the oncoming danger and, with such forces as he could command, took steps to thwart it.

From the start, he has been opposed by individuals and groups which have seen in complete isolation America's only security against war. We will grant that, for the most part, these individuals and groups have been sincere in their bristling challenges. There has been a regrettable excess of harsh words passed between the isolationists and those who champion the administration's program. Last week witnessed a lamentable effort by these die-hard noninterventionists to inject racial intolerance into the debate. We refer to testimony before a Senate subcommittee investigating the motion-picture industry and Colonel Lindbergh's address at Des Moines. In both instances, the Jews were excoriated as warmongers. This base appeal to racial prejudice indicates desperation rather than reasoned argument.

America has arrived at this brink of war by clearly discernible processes. Hitler's expanding Reich has beaten 19 countries to their knees. England alone has stood against his attacks, excepting Russia which has had only 3 months of war. It is Hitler's plain intention to rule the world and he is off to a good start. After Europe is conquered, the Western Hemisphere is next on his agenda. The blueprints of Nazi aggression the world over are written in the blood of victim countries. There can be no mistake as to the German dream of world overlordship.

The frontier of United States defense—of the defense of the Western Hemisphere—has been set in England by the President. The waters of the Atlantic must be free to American shipping if Hitler is to be stopped.

We agree with the President that this is true, and are convinced that this is the solemn and studied judgment of the majority of the American people.

We abandoned formal neutrality with the adoption of the lease-land act. All-out aid to Britain is our program, because by saving England we are saving ourselves. All-out aid can mean but one thing—not only manufacturing planes, and tanks, and other war material, but delivering them in England.

Hitler by at least four unwarranted attacks on American vessels seeks to halt that effort. He has launched a campaign of unrestricted submarine warfare to destroy our bridge of ships across the Atlantic. By so doing he has defied us to proceed with a program which the majority of Americans agree is our first protection against ultimate Nazi attack.

Can he get away with it? The President says "No"—and the echo rings from Maine to California. We seek no war with Hitler, we want no war with any of the Axis Powers. But we will fight if we must—God forbid.

Our course has been set by the President. Right or wrong, it is the course we must follow.

Up to last Thursday night honest doubters could express themselves freely—and did. But the President's defense program, drastic as it is, must not be sabotaged henceforth by the Wheelers and Lindberghs and Nyes. They have spoken their pieces and should retire.

From now on the United States must be a united Nation. To take our stand otherwise is to play Hitler's game under his own rules.

The Constitution's Birthday

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New York Herald Tribune of September 17, 1941:

[From the New York Herald Tribune, September 17, 1941]

THE CONSTITUTION'S BIRTHDAY

The Constitution which was signed in Philadelphia 155 years ago today was transmuted into the Government of the United States as Europe was on the brink of a great revolution and a world war. It was the product of men who themselves had waged and won a successful revolution. Yet so firm was its foundation, so sound its structure, that this Government has survived through civil strife and new world wars, while only one of those governments which existed in 1787—the Government of Great Britain—has escaped destruction or catastrophic revolution. Today, with the world in the throes of another great revolution—this time a revolution of reaction—and another great world war, the American Constitution stands out more than ever as the impregnable fortress of a free people. The government which has been built up within its sturdy frame is as vigorous and determined as ever. It is engaged in helping to defeat the forces of reaction abroad. It has resisted the efforts of those who have sought to weaken it from within through creating disunity and distrust.

Americans have a right to pride in the fact that the strength of their country today is so much a product of the Constitution. The dominating philosophy of the men who framed this document was that there are certain rights which no Government agent may deny to any citizen. Their own experience had taught them that these rights were precious beyond belief. They knew that these were the pillars of freedom. Therefore they sought to make these rights secure for all time and for all Americans. In the light of what has happened to similar rights under the heel of Europe's dictators their foresight and wisdom stand out with fresh luster. In fact, the war in Europe today is a contest between those peoples who believe in these rights and the Axis dictators, whose entire philosophy is based on the destruction of these rights.

The Constitution is thus symbolical of a cause as well as the embodiment of a philosophy of government for free men. The more it is studied the more its strength is apparent. The longer it has endured the greater has the world's respect for it become. Today more than ever it deserves to be celebrated, for today more than ever it is apparent that the principles which it embodies will prevail and that, to use the famous words of Abraham Lincoln, "government of the people, by the people, for the people shall not perish from the earth."

National Youth Administration

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, September 17, 1941

RADIO ADDRESS BY AUBREY WILLIAMS

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a report on the help the National Youth Administration has extended to 4,000,000 American youth since 1935, as made to the people of the United States by Mr. Aubrey Williams, N. Y. A. Administrator, in an address broadcast last Monday night in the National Radio Forum on a program arranged by the Washington Evening Star.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of September 16, 1941]

YOUTH FINDING IT HARD TO GET DEFENSE JOBS—N. Y. A. CHIEF DESCRIBES TRAINING PROGRAM IN RADIO FORUM ADDRESS

(The text of Mr. Williams' address follows:)

From the summer of 1935 and up to the present time it has been costing each one

of you in my radio audience about 71 cents a year for operation of the National Youth Administration. In those 6 years that expenditure on the part of each citizen has made it possible for you to provide opportunities for 4,000,000 American young people. Two million of these youth are students whom the N. Y. A. has given the chance to work their way through schools and colleges. The other 2,000,000 are out of school and unemployed youth for whom the N. Y. A. has provided useful work and the background of practical experience essential for jobs in private industry.

That, in summary, is where your 71 cents a year has gone—to provide opportunities for 4,000,000 American youth.

Even in past years—in the days when 6,000,000 young people were looking for jobs and finding none—there were some who questioned the wisdom of your investment in young people. Today, with defense employment—and with thousands of young people in service in the armed forces—there has developed an easy complacency that anyone can get a job who wants one—that we need not worry about youth any longer—and a question is raised whether your investment in the N. Y. A. is still essential.

These are the days of essentials, for young people and for all of us, and jobs are one of the first. How do our young people fare in regard to jobs?

MANY STILL UNEMPLOYED

A year's experience with the defense program has compelled many of us to revise our ideas about employment prospects for youth. A year ago it was widely predicted that the first year of defense would break the back of unemployment by creating 6,000,000 to 7,000,000 jobs. Today we know that the actual increase was less than half the number predicted. Forecasts of the immediate end of unemployment were premature. As the Secretary of Labor has pointed out, "there will still be a reservoir of unused labor in July 1942."

That is one of the most important facts facing American youth today. Despite increased defense employment, large numbers of them are still unemployed. It is unfortunate, but true, that at a time when the Nation is making every exertion to use all its resources for production, one of its best resources—its young people of working age—remains in large part idle and unused.

Why is this true? You and I are concerned because the progress of defense production is vital. We are interested because we have sons and daughters and what happens to any American youth may happen to our own. Young people themselves—at a time when we are calling for speed and still more speed, production and still more production—want to know why they are denied a chance to work.

To date, something like $56,000,000,000 has been appropriated or authorized for defense purposes. To become the arsenal of the democracies we are transforming old industries and creating new ones. Factories and yards which had been producing peacetime articles at a peacetime tempo have been converted into defense plants and are feverishly turning out guns, planes, and tanks, and ships. It has been a tremendous effort. Its effect has been felt in all sections of the country and at all levels of society.

JOBS WENT TO THE SKILLED

But this enormous effort has not yet reached great numbers of young people who are in the labor market trying to find work.

The answer as to why this is so is not an easy one. We know that the needs of defense industry have created thousands of new jobs. We know that large numbers of new plants had to be built, that others had to be expanded. But we know also that much of the demand for the work has been concentrated—concentrated both by geographical location and by specialized occupation.

The lion's share of defense orders naturally had to be awarded to plants which were already in operation at their existing locations—and the labor force had to be drawn from the existing supply of skilled and experienced workers who alone could do the highly specialized work required.

It is well known that prime defense contracts have not been evenly distributed among the several States. During the 13 months ending in June of this year the War and Navy Departments, fighting for speed and economy, awarded almost one-third of all announced major prime contracts to three States. These same three States contain only one-sixth of the Nation's youth population. Six States, with less than one-third of the youth population, obtained more than one-half of all defense contracts. At the other extreme, 24 States, with considerably more than one-fifth of the Nation's youth, were awarded only about one-twentieth of the prime defense contracts I am not here criticizing the War or Navy Departments. I am discussing how these things affect young people.

Defense orders, that is to say, have been concentrated in the large urban and industrial areas where youth make up a smaller proportion of the population than in other areas. The proportion of youth is highest in those agricultural areas which have experienced the smallest pick-up in employment, and in some cases have even experienced decreases. The result is a continued pile-up of unemployed youth.

Efforts to spread the work by farming out orders have not yet been sufficient to correct this basic unevenness. The concentration of defense work in the Northeast, the Pacific coast area, and in the Atlantic and Central States has thus created sharp local or regional demands for workers while leaving other areas almost untouched.

MANY BECOME STRANDED

But the accident of geography alone would not be enough to keep young people out of work. They are the most mobile part of our population. When they hear of a boom somewhere they are only too ready to pack up and migrate to the spot where jobs are available. This brings us to the second of the serious barriers which keep youth out of defense work.

While it is obvious that defense industry needs an enormous number of new workers, it is less understood that these workers must possess some experience or training. They must know how to do certain things. There are some interesting figures on this point which were supplied last June by the Department of Labor. By April 1942 the Department estimated that the basic defense industries—like aircraft, shipbuilding, machine tools, ordnance, and several others of similar importance—would require almost 1,500,000 additional workers. But it was estimated that less than one-sixth of these could be unskilled; the remaining five-sixths had to be professional, subprofessional, skilled, or at least semiskilled.

This is not to deny that unskilled or inexperienced workers have been able to get jobs in defense industries; in some sections, and under extreme pressure, employers have had to hire such labor as was available. But by and large, the young worker without work experience, or without skill, has relatively a slim chance of breaking into defense industry compared with the worker with work experience or skill.

Under such circumstances, when inexperienced youth migrate to defense centers—and I know from personal observation that large numbers of them have—many of them fail to find jobs and are simply stranded, thus adding new difficulties to any already aggravated youth problem, and increasing the strain on the living and health facilities of the defense area.

APPRENTICESHIP DIED OUT

I find it impossible to blame these young people. The Nation was no more prepared for the defense boom than they were. The cold facts are that for the past 30 years we have done about everything we could to take work out of the lives of young people. The moves by which we have done this have for the most part been, in themselves, good. We have extended the ban against child labor—a good thing, but the schooling we substituted left out productive work. Generation after generation of young people have come of age without having gained any experience which would help them make a living. Industry quit training them 12 years ago. Apprenticeship practically died out. We took physical, manual work out of the lives of young people in America. This was as true in other parts of the world as in our own country. This probably is the most important single fact regarding young people of the past quarter of a century. There can be little doubt that this condition had much to do with the rise of youth movements and their later capture and use in the totalitarian nations. In our own country, being more thoroughly established in the democratic form, no such political or industrial organization of the discontent and destitution of young people has arisen. But only those who have worked at the job of providing them with some positive aids know to what extent efforts have been made in this country to capitalize upon idleness and destitution of our young people. The basic trouble is due to the fact that we have taken work out of their lives. With the defense needs now upon us, we now find that one of the weakest spots in our industrial preparedness is the shortage of qualified workers with all the necessarily wide variety of special skills required for defense production.

Even with the great needs of the defense situation facing us, we only gradually woke up to the true state of things. For up to a certain point, while industry was absorbing the unemployed skilled workers on hand, production expanded rapidly. Then expansion became more difficult, in large part because of the scarcity of trained workers. At that point our failure to train young workers became evident and now constitutes a major bottleneck in the defense program.

The quickening tempo of production, resulting either directly or indirectly from the defense program, has boosted total employment to an all-time high. In spite of the difficulties of changing over from peacetime production to defense production, employment by July of this year rose to 39,241,000 in nonagricultural industries, an increase of 1,770,000 over the best month of 1929.

HELPS YOUTHS TO LEARN

Compared with the past decade, the number of unemployed is low. According to the latest data available, there were in August 5,300,000 unemployed workers But 2,200,000 of these were youth. This means that of all the employed those in the narrow age group from 16 to 24 comprised 42 percent. The enormity of this percentage lies in the fact that this age group comprises only 25 percent of all the workers in the labor market.

I dislike figures, but these are necessary: At the end of March 1940, when the last population census was taken, if the unemployment of youth had been in proportion to the unemployment of older workers between 25 and 44, the number of unemployed youth would have been 1,300,000 less than it actually was.

Even with all that has happened in taking work or training out of the lives of young people, there is still a popular notion that young people get hired first. This is not true, for, despite their eagerness to work, despite

their energy and ambition, youth having no training or experience are naturally more liable to unemployment than any other age group. The reason is obvious as soon as we ask ourselves what kind of workers industry—particularly defense industry—requires to do the job. Choosing between a job seeker with work experience and one without previous experience, between a worker who is acquainted with shop practices and one who is not, the employer naturally picks the applicant who has worked before, and who can offer an already developed skill.

Fortunately, at least to some extent, the Government has recognized this problem. It has developed experience-giving work projects to help young people obtain the skills they need for work in industry, particularly in defense industry.

The National Youth Administration was created during the depression to deal primarily with this problem. Established in 1935 to provide work projects for needy unemployed youth, the N. Y A is preparing thousands of young men and women for jobs in defense industry. It does this by giving them practical, on-the-job, productive work. Its flexibility and widespread activities are enabling it to meet preemployment problems that could not be met by any other agency.

In 800 shops and production projects throughout the country, with 3,800 work stations, 70,000 to 80,000 youths are learning the precise skills which defense industry needs. They learn the job by doing it—by handling the same sort of equipment and using the same mechanical processes that will be required of them when they leave N. Y. A. to enter defense industry.

WORK IN MACHINE SHOPS

In machine shops they work on drills, lathes, and milling machines—and they produce machine and equipment parts, hand tools, and dozens of other items. In welding shops youth are working on the same equipment that they will use in building ships. In our radio shops, where they learn how to repair and operate radio equipment, they turn out useful products and at the same time prepare themselves for jobs as radio operators and technicians.

A large number of N. Y. A. projects employ young women, who are well adapted to many kinds of defense work. They learn to use industrial equipment and acquire manual dexterity. On all kinds of N. Y. A. projects—shop work, construction, hospital and health assistance, conservation, clerical projects, sanitation work—youth learn a job by doing it.

On hours arranged not to conflict with their working time, N. Y. A. youth attend classes under the Office of Education for instruction in subjects which are closely related to the actual work they are doing. They take courses in blueprint reading, shop arithmetic, drafting, and other technical studies which supplement and expand the work experience and skills learned on the job.

Each youth is steered into the occupation for which he is best fitted. If possible, square pegs are kept out of round holes. Before assignment to project work, each youth is interviewed to determine the type of work experience that would most nearly fit his interests and abilities. Once he is on the job, his progress is watched and evaluated. Through vocational guidance and job rotation on the subject, each youth is permitted to try his hand at a number of different types of work, so that he may find the activity which best suits his abilities.

A labor migration system has been started. Shops and resident centers are established near defense-work centers. Youth are selected from N. Y. A. shops in the small town far removed from the centers of defense work and sent to these N. Y. A. work centers from which they secure employment in defense industries. At Nepaug, Conn., for example, several hundred were able to get jobs in defense work during the month of August. There are some 70 of these youth labor-supply centers now in operation at places like San Diego, Houston, Wilmington, South Bend, and so forth. The youth work out their maintenance and keep the $10 in cash that they receive per month.

BIG PROBLEMS REMAIN

This is the prosaic account of what the National Youth Administration does with its money. It is not the whole account, for its work includes not only a defense work experience program but also the giving of work to 200,000 other youth on projects varying from building small schoolhouses to making garments for needy people. In addition to this there is the whole student-work program which provides work for 450,000 students in 1,600 colleges and 2,900 high schools to enable them to continue in school.

But all of this leaves youth with two big problems: One is that we are now running at the rate of an annual national income of about $85.000,000,000 and still there are hundreds of thousands of eager, able youngsters to whom the gates of gainful employment are closed; the other difficult situation is that at the time we are desperately trying to give effective aid to those forces struggling to defeat nazi-ism and are in need of every capable hand we possess in this effort there are around about us scores of hundreds of thousands of young people seeking eagerly to find some way to make their young strong hands capable and useful but who are not being used. We simply must find some way to include them in this effort.

This business of being included in the effort for the defense and security of our country has come to be a great privilege. This is especially true in the case of young people. Youth senses that something significant is happening to men and women of good will in all parts of the world. They want to be a part of it. They sense that paralleling the evil loosed upon mankind there has occurred a renaissance of the love of the good, and that men are again proving their willingness to make sacrifices—sacrifices of their means, their time—yes, even of their lives—for the good. They sense that there is a great challenge in the world today, a challenge for the good—an incredible renaissance of the spirit. They, like ourselves, sense it wherever they go. They feel it from the men in the shops, from the crowds on the streets, from the atmosphere on the trains; they hear it in the voice of the President, in the speeches of Churchill—and youth everywhere want to be a vital part of it. They feel in it something akin to a new brotherhood of man bound together by an abhorrence of the bestiality and brutality of the Axis war party. In it they feel a rising hope that means for them a newer and freer world for tomorrow. They know that they must first destroy the evil that now has the world in fear and terror, but they also know that that must not be the end. They know that the forces now mobilizing in the hands of the world's millions of people of good will must not only preserve democratic institutions for which they are now fighting, but that this same power must be exerted to eliminate conditions which are the effective denials of the democracy that has given rise to these forces for its defense. They insist that we must eliminate the denials of the promises of the democratic way of life.

EAGER TO TAKE PART

I have just returned from a visit to 18 States. I have seen the world's most powerful democracy in action—a united people turning to the task of producing the vast quantity of goods needed for the defense of democracy everywhere.

Primarily I went to see what is happening to the young people of this country under the tremendous impact of the defense program. Two convictions, reinforced by everything I saw, now stand out in my mind.

First, there is the conviction that the young people of America are eager to take their part. I feel as if I have seen, talked to, and been part of the future of America, and what I saw was good. Youth are eager to work and eager to make democracy work. If we deny them this opportunity we will make a terrible mistake.

The second conviction grows out of the first. In spite of the progress made, we are not doing all we can to use the services of these young people. If we deny them the opportunity for useful work, if we fail to spread that opportunity, we are denying ourselves the services of a powerful and constructive force. Our programs of giving them a chance are working in the right direction, but they are not extensive enough. Compared with the immense need for qualified workers and with the large number of unemployed youtl still available, our sights still are too low. We have the method, the resources, and the plan. What we need is more determination to stick to it until the job is done.

There is good reason to believe that this is going to be done. It seems to have been necessary for the Nation to have become endangered of its very life for us to restore young people to a participating part in our vital affairs—to allow them to work for its strength and security. I hope this will be true.

Mrs. Sara D. Roosevelt

POEM BY HORACE C. CARLISLE

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks, I herewith attach a very pretty poem by Mr. Horace C. Carlisle, dedicated to the President's mother:

"She openeth her mouth with wisdom; and in her tongue is the law of kindness."

—*Ecclesiastes xxx: 26.*

MRS. SARAH D. ROOSEVELT

M-other—name that all men love—
R-ev'rently the Nation's Chief,
S-ince his mother's called above,

S-eeks from that source his relief.
A-nd, in his deep sorrow, he
R-ealizes that he must
A-lways bow to God's decree—
H-e has placed in Him his trust.

D-eath is heaven's golden key.

R-ich in graces that abide,
O-f which she'd a doube share,
O-ft, on bended knee, aside,
S-he met God in secret prayer.
E-very day 'twas her intent,
V-erily, to wisely live,
E-arnestly, where'er she went,
L-iving, most of all to give
T-o us such a President.

Prime Minister Mackenzie King Says Canadian Government Approves the Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

STATEMENT OF HON. W. L. MACKENZIE KING, PRIME MINISTER OF CANADA

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of Hon. W. L. Mackenzie King, Prime Minister of Canada in which he gives reassurance that the Canadian Government approves the Great Lakes-St. Lawrence seaway.

Of late the impression is being given to the Congress and the American people that Canada is opposed to the project, which is refuted in the statement of her Prime Minister, who calls attention to the fact that Canada has already signed an agreement between the two countries—Canada and the United States—known as the Great Lakes-St. Lawrence Basin agreement.

The statement follows:

NEW YORK, September 14.—Interest of the Canadian Government in the Great Lakes-St. Lawrence seaway and power project has been indicated "in an unmistakable manner," Prime Minister W. L. Mackenzie King wrote in an exchange of correspondence which was made public today (Sunday) by Edward J. Noble, of the Seaway for Defense Committee.

The Prime Minister declared that "the construction of the project would advance the defense measures in which the two Governments were concerned and would promote the social and economic welfare of the peoples of these neighboring countries."

Mr. Noble had written to Mr. Mackenzie King that hearings before the Rivers and Harbors Committee of the House of Representatives "have developed certain testimony purporting to indicate a presumed lack of interest on the part of the Canadian Government." Mr. Noble's letter added that "this type of testimony is intended by the opponents of the project to wean away public support" from the project.

Herewith are both letters:

SEAWAY FOR DEFENSE COMMITTEE,
New York, N. Y.

The Right Honorable
W. L. MACKENZIE KING,
Ottawa, Ontario, Canada.

MY DEAR MR. PRIME MINISTER: You may be interested to learn of the formation by Americans in public and civic life of the Seaway for Defense Committee. Its purpose is to bring to the American public the true facts concerning the Great Lakes-St. Lawrence seaway and power project, in the belief that an accurate presentation of the facts will result in the development of a favorable public opinion in respect to the project.

The hearings before the Rivers and Harbors Committee of the House of Representatives have developed certain testimony purporting to indicate a presumed lack of interest on the part of the Canadian Government in the project. Naturally, this type of testimony is intended by the opponents of the project to wean away public support. Of course, we who favor the project recognize the agreement between Canada and the United States as being constructive evidence of the intentions of both Governments. At the same time, we would be very happy to give currency to any statement on the subject which you might deem appropriate in the circumstances.

Very truly yours,
EDWARD J. NOBLE,
For the Committee.

OFFICE OF THE PRIME MINISTER,
Canada.

EDWARD J. NOBLE, Esq.,
Seaway for Defense Committee,
New York, N. Y.

DEAR SIR: I was very much interested to learn from your letter that a Seaway for Defense Committee has been formed by Americans in public and civic life, for the purpose of bringing out the true facts concerning the Great Lakes seaway and power project.

I note your statement that the hearings before the Rivers and Harbors Committee of the House of Representatives have produced testimony indicating a lack of interest on the part of the Canadian Government in this project.

It would not be appropriate for me to make any formal pronouncement with regard to the merits of the seaway while the matter is before Congress. Further, it would not be possible for the Canadian Government to place before the public all of the considerations which will need to be examined before Parliament. On the other hand, I feel justified in pointing out to you that the interest of the Canadian Government in this project has been indicated in an unmistakable manner. The Great Lakes-St. Lawrence Basin agreement was signed by me in order to carry out a project approved by the Canadian Government as a whole. Under the constitutional system in this country, the signature of an international agreement is of necessity an indication that the agreement has been approved by the members of the Government who are, of course, responsible to Parliament.

The reason for signature is equally clear. The records placed before Parliament in March last show the basis of the action taken by the Government. The conclusion was reached that the construction of the project would advance the defense measures in which the two Governments were concerned and would promote the social and economic welfare of the peoples of these neighboring countries.

When this measure is brought to Parliament for the enactment of the necessary legislation and for parliamentary approval preceding ratification, the views of the Canadian Government will be presented in more detail. Meanwhile, I feel bound to confine myself to the general statement which indeed is a necessary inference from the fact of signature of this agreement by members of the Canadian Government.

Yours sincerely,
W. L. MACKENZIE KING.

Problems of the Small Manufacturer

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

LETTER FROM A CONSTITUENT

Mr. KEEFE. Mr. Speaker, the small manufacturer in our country is confronted with a crisis that threatens his very existence.

Meetings are being held throughout the country to devise ways and means to prevent the economic dislocations that are inevitable in our present priorities set-up. Thousands of small manufacturers, who are the very backbone of our Nation, are finding it increasingly difficult to maintain operations and employment. The condition is presently acute and serious and should attract the immediate attention of the Congress. Discussions with numerous small and large manufacturers recently indicate their concern for the future.

One of the best contributions to the subject I have received comes from a small paint manufacturer in the district I have the honor to represent. He wrote me under date of September 10, following a personal conference. Because I believe this letter to be indicative of the intelligent thought of the operators of small manufacturing plants throughout the country, I desire to read this letter, as part of these remarks, in the hope that it will stimulate the Congress and the Nation to action on this most important subject. The letter follows:

SEPTEMBER 10, 1941.

MY DEAR FRANK: The small American manufacturer is face to face with a crisis. That crisis is real; it is here now.

It is daily producing unemployment; it will continue to produce more. In an incredibly short time it can produce complete dislocation and economic as well as social ruin and chaos.

The situation is recognized by many and will be felt by many more. It can be remedied, and it must be solved quickly.

The principal contributing factor is a shortage of materials, made acute by the wholesale, and perhaps necessary, diversion of materials to meet the needs of national defense.

The small manufacturer is told by his source of supply that he can no longer expect delivery of raw materials unless he can supply that source with evidence in the form of preference rating certificates indicating that the material purchased is to be used in the preparation of materials for national defense. The necessity for such regulation and restriction is not seriously doubted, and full sympathy and compliance for the most part is much in evidence.

Obviously, the only alternative is to solicit defense business, and this has, and is being done. It is being done with a keen appreciation of the quantities involved, the general absence of credit hazard, and in many cases with a wholesome and sincere desire to help. Competition is expected, and profits beyond a subsistence level are not seriously hoped for.

The point I want to bring out is that most of us know what the score is, and our bids and figures represent prices barely sufficient to keep our plants running, our men employed, and our businesses solvent. Surely that is an ambition which needs no real justification or defense. It is a sad commentary on the administration of our economy that this situation cannot or is not being guaranteed.

When the small businessman bids on defense work, he invariably finds that "his price is out of line," not withstanding the fact that he has been forced to seek this business in desperation, and has gladly foregone hopes of normal profits to insure the securing of this business, without which he cannot hope to exist.

Repeated efforts bring the same results, and there is little evidence to suspect at this time that the future will bring about a change.

For the most part, the small businessman is no stranger to adversity, and happily I predict he will not sit silently by and watch his business vanish, his men and associates impoverished, and his home and community destroyed. They are already consolidating into pressure groups, and will militate against this situation.

I am, as you know, Frank, a small paint manufacturer, specializing in protective coatings for industry. A very large portion of the materials we use in the manufacture of our products are made from chemicals, now placed on the critical list by the Government. Their use has been restricted for defense purposes, and so it is absolutely necessary we secure some of this business. Right here I want to say all of the manufacturers are in the same boat.

In the past 6 months raw materials have raised in price, increases have been paid to labor and management, containers and other factors affecting prices have all produced a condition that have forced an increase in paint prices.

With this in mind, it is bewildering to discover that several large paint concerns have actually reduced prices on Government specification materials, and at the same time have increased prices on materials for civilian consumption.

It is quite obvious that their prices of governmental specification materials for Government use do not represent provision for normal and regular overhead and similar charges consequent to the operation of their business. It may interest you if I quote an official of a very large paint company to whom I complained about this situation. He denied a price quotation of $1.11 per gallon for a certain Government specification material, stating that when they added their necessary charges incident to manufacture and sale, that they could not "sell a gallon of water for that price, let alone paint." Unfortunately, I had seen the invoice.

There is absolutely no good reason for this vicious competition on Government specification paint materials. And there is also no good reason for the same situation prevailing in other commodities.

It is suicide for our national economy to permit this and similar situations to exist, because it is first, the end of small business, and just as surely the beginning of economic collapse for all.

Something, yes, I use the word advisedly, must be done, and it must be done immediately. It should be of major concern.

Now what to do about it? I do not pretend a profound knowledge of economics, or any other science involved in its solution. I'm not even sure its solution will involve academic skill. I've thought about it considerably, discussed it with my colleagues, and have seriously and honestly tried to think out a solution, for I believe at least an effort, however devoid of foundation in science, should accompany the protest.

Naturally, every man thinks of the solution to his problem in terms of what will help him, even though he may have a deep appreciation of the fact that it might not be so valuable to his fellow businessman in its application to his particular business and situation.

I give you below my solution. I do not claim it to be bullet proof, but I ask you to consider and so to respect it as a sincere effort to make a step in the right direction, and failing to do even that, it will provoke some thought, and therein lies the beginning of a successful conclusion.

I suggest that the Government establish a price to be paid on all paints made according to Government formulas and specification and intended for use on Government defense work. Note I have not included paints for civilian use, because that involves considerable complication that can be readily avoided here.

I propose that such a price be based on a cost of raw materials purchased in less than carload quantities which represents the average basis of purchasing of small manufacturers. That labor rates be figured at prevailing union rates, and the price quoted f. o. b. factory. Overhead and factory burden as well as profit be determined after a cross-section survey of small plants, and an average figure adopted. This does not involve any tremendous amount of research, because it will be found after a search that after all details are considered, the selling price for paint products will be within a few percent either way of double the raw material cost.

For example, if the raw material for a certain paint costs $1 after all charges of labor, burden, container, sales expense, depreciation of equipment, etc., are considered, the sales price will be very very close to $2, and the profit will come from 5 to 10 percent depending upon the skill and resources of the particular plant producing the material, and therein lies the spirit of free enterprise. If one plant can be more efficient, they can profit more, as perhaps they should, but here we don't prevent competition by making a price so very low that only one or two could possibly bid and take the business without ruin to themselves.

I am not unmindful that periodically the price may have to be adjusted in the light of some fluctuation, but I do believe that in principle, for the duration of this emergency, and until such a time that normal business conditions are restored, and once more initiative, service, and other qualities that secure business can once again operate, we must of necessity favor a general policy to fix prices to prevent the wild inflation that is sure to attend the skyrocketing of prices.

Surely this picture may have some drawbacks, but I think the way we are headed today is certain ruin if somebody doesn't bring the situation, and similar ones I have mentioned, to light with a view of really trying to do something about it.

I beg of you to realize that the situation I have described to you is typical of business in your district, and all over the country. I ask you to place yourself in the position of the management and the labor in these businesses, to contemplate seriously what this means to the community and our national economy. I am sure the picture you will develop for yourself will move you immediately to the action for which you are so eminently qualified and courageously indulge in.

Thank you very much, Frank, for the courteous reception you gave me this morning. It was most kind of you to give me so much of your time, and believe me to be ever grateful.

Wisdom's Calls From Frescoed Walls

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

POEM BY HORACE C. CARLISLE

Mr. WOODRUM of Virginia. Mr. Speaker, Mr. Horace C. Carlisle has written some very appropriate verses on the words of Thomas Jefferson on the walls of the south reading room in the Library of Congress. They are as follows:

WISDOM'S CALLS FROM FRESCOED WALLS

To Jefferson's broad, resourceful brain
These verses owe a debt—
For every wise thought that they contain,
Too wondrous to forget,
At Jefferson's reading room, appeals
To readers, great and small,
Whose loftier vision, there, reveals
His writing on the wall.

The ground of liberty we must gain
By inches—what we get
We must be contented to attain,
From time to time, through sweat.
It takes time, used wisely, to persuade—
Although it never should—
Freemen to do, without being made,
What is for their own good.

Those people who labor in the earth,
The chosen ones of God—
If He has His chosen ones—are worth
Their places on the sod—
With genuine virtue, they've the right
To live, and hold in shape
Life's sacred things which otherwise might
From this free earth escape.

The earth belongs to the living—they
May manage it, therefore,
As they may please, and its proceeds may
Be theirs till they're no more—
The masters of their persons they are,
And consequently these
May govern, led by law's guilding star,
Their persons as they please.

The mass of the people, if made wise,
Will see, and never cease
To know that their own best safety lies
Along the path of peace—
Enlighten the people, everywhere,
And they will find the way—
And tyranny will, in dire despair,
Flee, as night flees from day.

The people of every country are
Its guardians of their rights,
The safest of instruments, by far,
Wherewith to win their fights—
The liberty we love will endure,
Entrusted to the hands
Of trustworthy people, wise and pure,
Who follow God's commands.

—*Horace C. Carlisle.*

Mexico's Day

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Washington Evening Star of September 16, 1941:

[From the Washington Evening Star of September 16, 1941]

MEXICO'S DAY

Today is the one hundred and thirty-first anniversary of that September 16 when the patriot priest Miguel Hidalgo y Costilla proclaimed the independence of the Mexican

people. His country in 1810 stood in sorry need of the freedom he desired for it. The rule of Spain had been a costly failure, and he long had been conscious of the futility of compromise with alien tyranny. How he was driven to the conclusion that liberty was as necessary as air to breathe is a story which not all North Americans have been privileged to hear. The present moment is an appropriate time for its retelling.

Father Hidalgo in his youth was merely a simple, unpretending student of the Word. It never occurred to him to be interested in politics. But he could not help being concerned about the poverty of the Indians, and in the interest of their prosperity he dared to sponsor an experiment which the royal government resisted. The manufacture of silk, he believed, would add to the wealth of his flock. He imported silkworms to that end, only to have them destroyed by agents of the viceroy. The experience, so the record says, "drove him to rebellion." Several officers of the garrison of Guanajuato joined him in revolt. "His eloquence had a remarkable effect on the multitude, * * * and when, after his oration, he unfurled a rude copy of the picture of Our Lady of Guadalupe, * * * the war assumed the character of a crusade." But a shortage of ammunition obliged him to retreat, and he finally was captured and shot as a traitor, July 27, 1811. So bitter was the hatred of Spain that even the mention of his name was forbidden.

The dream of independence, however, did not die when Father Hidalgo fell. Rather, it was strengthened by his martyrdom. The struggle for the supreme ideal of human emancipation continued. Indeed, it still is carried forward by men and women who love Mexico. What greater immortality could any hero ask?

Mr. Roosevelt Starts the Convoys

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

EDITORIAL FROM THE GREEN BAY (WIS.) PRESS-GAZETTE

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Green Bay (Wis.) Press-Gazette of September 13, 1941:

[From the Green Bay (Wis.) Press-Gazette of September 13, 1941]

MR. ROOSEVELT STARTS THE CONVOYS

Those who have been listening to broadcasts by the rulers of the principal powers upon this earth could not fail to be favorably impressed by the President's tone and manner of speech in his fateful address of Thursday night. Absent from it was the roar and bawl consistently employed by Moscow, Berlin, and Rome, as well as some of the turbulent blatancy occasionally used by Mr. Churchill.

If the distinction, which must have been agreeable to our people, could be carried from the manner of delivery to the quality of the thought employed, we might have left the bloody European grapple for power, pride, and position far in the rear. But such is not the case.

There is some very plain merit to the President's indictment of Berlin, although Mr. Roosevelt was stretching the fabric as though it did not cover his limbs when he tried to gather under the folds of the American flag ships that were sailing under foreign registry. The outstanding and inexcusable offense, which involves neither dispute among participants nor possible claim of justification, relates to the *Robin Hood*, the American vessel whose skipper was taken aboard the submarine and explained his cargo only to see his vessel destroyed because it was going to a South African port. Passengers and crew were left upon the swirling tides a thousand miles from shore in direct violation of a compact to which both Germany and this country are signatory. Their escape from death after long and cruel hardship was only through a sustained smile from Heaven. And the President was able to state that Hitler had failed two further duties in respect to this attack, one to apologize for it, which would be tantamount to a promise to avoid future incidents of like character, and the other to make offer of reparation for the loss of the ship and cargo, a written obligation of Germany's under the compact mentioned.

The only other all-clear case of apparently wanton offense by the Germans was that of the *Steel Seafarer*, sent to the bottom 200 miles short of Suez.

The President is not candid when he cites destruction of American-owned vessels sailing under Panama registry. He should have added that they are so sailing because it is contrary to an act of Congress for them to carry what they carry and go where they are going if kept under the American flag.

But Mr. Roosevelt denied a purpose to hasty action or that intemperate attitudes would be taken by this country over isolated instances of piracy or outlawry.

At any rate, with the evidence before our people fairly undisguised, the President has elected to take what he calls "the only step possible," and he has taken it, because, he says, "My obligation as President is clear and inescapable."

It is easy to refute the President by his own language and without reaching far back, either.

Only a short time before this war broke out, and while its clouds were plainly visible upon the hushed horizon, the very same President who is now going to convoy ships of all nations with the American Navy, issued this statement to the same people who listened to his recent broadcast:

"Peace is threatened by those who seek selfish power. The world has witnessed similar eras, as in the days when petty kings and feudal barons were changing the map of Europe every fortnight, or when great emperors and great kings were engaged in a mad scramble for colonial empire

"We hope we are not again at the threshold of such an era. But if face it we must, then the United States and the rest of the Americas can play but one role:

"Through a well-ordered neutrality to do naught to encourage the contest, through adequate defense to save ourselves from embroilment and attack, and through example and all legitimate encouragement to persuade other nations to return to the ways of peace and good will."

That was the most accurate prescription Mr. Roosevelt ever penned. But he abandoned it.

The broadcaster of Thursday night was exactly the same Mr. Roosevelt who, after this war started, asked Congress for an amendment to the neutrality law with this particular representation and promise:

"This Government will insist that American ships keep away from the immediate perils of the actual zone of conflict. Contraband cargoes are to be carried in the purchasers' own ships at the purchasers' own risk."

Mr. Roosevelt has in different months actually pointed his country to every important direction of the compass and said: "Follow me; this is the way to safety."

At the outset we were going to turn our back upon the war entirely. We would extend no credit. Then we changed to financing a large share of the struggle. Gradually, step by step, we have abandoned every course originally taken, reversed every promise made, swallowed every representation spoken.

Needlessly has the President added personal insults to the German rulers. It was all right for Mr. Churchill to call Hitler a guttersnipe. Their countries were at war. It was a sore breach of international behavior for Mr. Roosevelt to abuse the rulers of any country with which we were at peace. It is this attitude which has helped create a warlike condition between the nations. And, we repeat, it has been wholly unnecessary.

Today the President denounces those who, through firm opinion and clear conviction, refuse to wobble in their courses but adhere to the positions taken by himself earlier in the conflict. They are now close to traitors.

To cap the climax the American Navy is to convoy not only American ships, but the ships of every power on earth. And this convoy will go at least to Iceland, some 2,200 miles from this country.

Mr. Roosevelt was author of the expression: "Convoys mean shooting and shooting means war."

In making his decision the President says that he has given it a lot of thought and devoted to it a lot of prayer. We have no difficulty in believing him. But we would add another element that has influenced him mightily, the rare plea and mystic inducement of Winston Churchill covering several days' congenial conference near Nova Scotia.

We wish the American people could have heard that plea, a marvelous mixture of flattery, pride, fear, awe, peril, and compassion. But since Mr. Roosevelt can still see Nazi legions landing on these shores we rather think that Mr. Churchill sprinkled his presentment generously with tales of Nazi supremacy and how they can easily cross the Atlantic ocean and land here if they should take the idea to head.

And so we are to be cast toward war in a brand new manner—by Presidential direction and in defiance of public opinion and lacking the constitutional requirement of an act of Congress.

Labor Day

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

ADDRESS BY HON. JERRY VOORHIS OF CALIFORNIA

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include herewith an address delivered by myself on Labor Day to the Labor Day meeting at Pasadena, Calif., on September 1, 1941:

There is no honor that could be given me that I would appreciate more than to be asked by an American labor movement to speak at a Labor Day meeting.

If there is one thing that has made America different from the other nations in the world, it has been that here we have honored the people who did the hard, tough job, and

have looked down on those who didn't, whereas in most other nations it has been quite the opposite. When the man in overalls ceases to be the ideal of the American boy, something fundamentally American and something very important and valuable to our country will have ceased to exist.

Never has there been a time when it was so important to strengthen and protect the free organizations of the American people. The very hope we have of seeing democracy triumph over dictatorship depends in large measure upon those organizations. Every dictator in the world has, as one of his first acts, destroyed the labor movement in that country. Why did they do this? They did it because they knew—and we must know it, too—that in spite of any difficulties or arguments to the contrary, free organizations of labor, as well as other free organizations among the people, are the very heart and sinews of a democratic society.

And so when some misguided or short-sighted or deliberately reactionary people propose that measures be taken that would lead to the destruction of organized labor in America, they are working against democracy and not for it, as they claim so loudly.

Labor in America today has a very great responsibility and labor, I am confident, recognizes this. Repeatedly has labor pledged its very fullest support to the national-defense program and it has not asked the passage of special legislation, the granting of special favors before it would cooperate—as some other groups have done. No; I think American labor sees that there is no other group in all society that has so great a stake in keeping alive a vigorous democracy, as has labor. Were this not the case we should not have found labor working as hard as it has been doing to secure over-all agreements and contracts with employers, which, based on the recognition of the men's right to organization, collective bargaining, and fair wage, provide that strikes and lock-outs shall not be resorted to for the period of the contract or the emergency, as the case may be. But labor wants to enter into such agreements and to sign such contracts freely, as free men. And naturally it is opposed to any move which would, in effect, amount to requiring men, whatever the conditions of their work, to labor against their will for a private employer.

The price of freedom at a time like this is responsibility. The protection of the right to strike will be found to a very great extent in repeated demonstrations on the part of labor that it will not use that right but will instead resort to the machinery of the Conciliation Service and the National Defense Mediation Board. And I think that the main reason we were able to defeat a number of antilabor measures in the House of Representatives has been because Members of that body had come to realize that labor did and would continue to recognize its responsibility to the Nation in this critical time. I think Congress has been saying, "We believe such legislation is unnecessary because we have confidence in the patriotism and sense of responsibility of American labor." I know labor will never take advantage of that confidence.

It has been said repeatedly that the struggle against the European dictators would be decided in the workshops. And Mr. Ernest Bevin, No. 2 man in Britain's cabinet, in speaking to a group of bankers made this significant statement: "Everyone of us here knows that England could better spare every man in this room today than she could spare one man who knows how to manufacture an airplane propeller.

American labor today is asking no special privileges or advantages I am sure. Labor does ask a square deal. Labor asks, and has a right to ask, that the working of priorities on material should not result in the destruction of the businesses of hundreds of small employers or the loss of jobs by thousands of men. This is a problem that has got to be met and dealt with. National defense has got to come first but a part of national defense is to keep all our factories and all our men busily at work, and every time any kind of factory closes it weakens America that much. Our aim must be a national wealth production of upwards of $110,000,000,000 a year so that we shall not only be able to produce the necessary means of defense but so we shall also be able to pay for them, and so that all our reserves and all our men will be taking part in the job of keeping America strong. In working out this problem nothing less than full cooperative action of Government, industry, and labor will be sufficient or effective.

And labor asks too, that this great national effort should not be the occasion for profiteering on the part of anyone. It asks that vigilance be shown in this regard that at least as much be said in the press and by public officials about the profits of Bethlehem Steel, for example, as about a 10-cent-an-hour wage increase for the workers.

Nor does labor seek to avoid the payment of its fair share of taxes. But we do ask that it be remembered that up to date, taking all forms of taxes into account, American families making incomes of less than $1,000 per year have paid as big a percentage of their incomes to Federal, State, and local governments as have families with incomes of $9,000 and $10,000. All we ask after all is that this tax burden be really distributed in accordance with ability to pay.

On the matter of the rising cost of living and so-called inflation, I have a few words to say. I know all will agree that one thing we want is fair and better prices to the farmers of America for their crops. But we don't want to see speculators buying up supplies and holding them off the market waiting for a price to rise and neither do we want to see an inflationary spiral of prices get started. All I have to say on this is that while no doubt something must, can, and should be done about this situation, there is one thing that ought to have been done long long ago which would not only have gone a long way toward preventing inflation now but would also have made unnecessary a great part of the present increase in the public debt, and, most important of all, would have rendered a deflation and unemployment impossible after this thing is all over.

That measure of which I speak is a constructive reform of our monetary and financial system so that Congress and Congress alone would, as the Constitution itself provides, coin, issue, and regulate the value of the money of America. If this had been done—if it could be done now—it would be in greatest part the answer not only to our fear of inflation but to the rise in the public debt and to our future fears of deflation, bankruptcy, and unemployment.

And that brings me to the last thing I want to say. It is not enough for us to prepare simply to defend or preserve democracy. We must make democracy a dynamic force—a hope and spirit in the hearts of our people which will catch hold of them and spread throughout the world. It is not enough to build a great military defense. We must do that but we must do more. We must be about the job of building an American new world—a world in which there will be full production and a full home market for our crops and goods among our people—a world in which as long as there is any so-called farm surplus at all we will determine that there shall be no hungry children in the land—a world in which every cooperative effort of the people to solve their own problems will receive our encouragement and our help.

Because I believe this so earnestly I have introduced House Joint Resolutions Nos. 59 and 76. These resolutions, similar to one by Senator WAGNER in the Senate, would create now a national commission to develop and present to Congress and the President a program which will make sure that when this national-defense period is over we shall not fall into a great depression, that our people's power to buy will not be allowed to collapse, that we shall continue to produce as fully and with as many people employed to meet peacetime needs and to rehabilitate a war-torn world as we are doing now for defense.

America confronts the very greatest crisis in her history. Will we be drawn into the war? I do not know. I doubt if anyone does. But one thing I do know. America has taken her stand for democracy and free government and for defense of our hemisphere against any forces that seek to force any kind of totalitarian government upon us here. From that position we must not retreat a single inch. Our determination to keep our organizations of labor, of business, of government, free of totalitarian agents must not be lessened. Our readiness to stand by our democratic institutions and defend them by whatever means may be necessary—that readiness must not be weakened. America will, I earnestly hope, seek no war nor send men to foreign continents. But let us highly resolve that anyone who interprets the spirit of this great Nation as a hesitant, a disunited, or a weak spirit will find out to his sorrow how wrong he has been.

And as we go forward into the future let us most of all resolve that whatever sacrifices may be demanded shall be equally shared in proportion to the ability of people to bear them and in proportion to what they have left after the sacrifice has been made.

As in no other nation in all the world America's destiny is in her own hands. I believe we will meet that destiny. I believe it because I am sure there is a new spirit growing among us—a spirit of devotion to the Nation and to one another and a spirit of insistence upon justice to our own people as well as the people of other nations with which we have dealings.

Peace Points of the Pope and Peace Points of the President

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

ADDRESS BY HON. HENRY A. WALLACE

Mr. LYNCH. Mr. Speaker, in these critical times I believe that it would be well for the people of our country if they would read the address delivered by Vice President HENRY A. WALLACE at the centenary celebration dinner of Fordham University at the Waldorf Astoria Hotel in New York last night.

Delegates from more than 400 colleges, universities, and learned societies and high representatives of the church, state, and military and naval services were among the 2,000 persons at the dinner who heard the Vice President deliver his nationally broadcast speech which follows:

It is not strange that the great leader of our democracy should again and again recognize the fundamental importance of religion.

He knows, just as you here at Fordham know, that at the very heart of both Christianity and democracy is the proposition that the individual human soul is sacred and that the voluntary relationship of one soul to another is based on the fundamental link which both have to God the Father. And so it happens naturally enough that the political belief in democracy and the religious belief in Christianity should produce somewhat like results. No true Christian can speak bitterly against the Jew, the Negro, or the yellow man. Some individuals may be born with greater ability than others, but this difference in inborn ability does not depend primarily on race, color, or economic status

We have a profound belief in the United States that we are living in a chosen land, in a land chosen to serve the world in the establishment and preservation of the great freedoms; the freedoms which are vital alike to the Christian faith, to political democracy, and to the sacredness of the individual human being. But believing we are living in a land chosen for a high destiny of service is totally different from believing in the inherent superiority of one race over all other races and of one scientific, godless culture over all other cultures. Our faith is humble, profound, and essentially peaceful. The other faith is bloody, boastful, intolerant, superficial, and temporary.

The Hitler house is built upon the sands and the winds are blowing. I predict that behind the walls where lie France and Poland, Belgium and Luxembourg Holland and Norway, Yugoslavia and Greece, the winds are blowing at the foundations of Hitler's house. Force untempered by justice brings the tornado to the house of force itself. No one can predict the day of the fall of the house of Hitler. But all men of keen perception know that this house will fall from within through the falsity of the architect—through the refusal of Hitler himself to believe that the human being and his rightful needs are the bricks and mortar of any permanent house of God and government on this earth.

Speaking of the great freedoms, I remember it was my privilege, the day after the death of Pope Pius XI, who I hope some day will be revered as a saint in the Catholic church, to speak of his contribution to that freedom about which all of us have thought too little—freedom from want. Without freedom from want the dignity of man is too often sacrificed. With regard to this particular freedom, the democratic record has not always been too good, but it has been the best record which man has experienced. By the grace of God and the democratic process, the life of the common man shall be enriched in the days to come.

Fordham University has long been an outstanding exponent of the social doctrines of the Catholic church. This university has always taught that democracy is primarily spiritual and moral and that from these sources spring political and economic democracy.

Time and again President Roosevelt has spoken in language which must seem strangely familiar to the professors of the University of Fordham You will remember that in his message to Congress 9 months before the war broke out he said, "Storms from abroad directly challenge three institutions indispensable to Americans now as always. The first is religion. It is the source of the other two—democracy and good faith. Religion, by teaching man his relationship to God, gives the individual a sense of his own dignity and teaches him to respect himself by respecting his neighbors."

On many subjects will be found almost exactly parallel passages in the President's messages and speeches with the sentiments expressed in the Papal Encyclicals. Nowhere is this likeness more striking than in the statement of peace aims. Shortly after the war broke out, in his Christmas message of 1939, Pope Pius XII stated five peace objectives, the first of which expressed the belief that all nations, large and small, strong and weak, have the right to life and independence.

Paralleling this first objective are the first three points of the eight-point democratic peace aims. You will remember how they read:

"Their countries seek no aggrandizement, territorial or otherwise; they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned; they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereignty and self-government restored to those whose have been forcibly deprived of them."

The second of Pope Pius XII's five points deals with freedom from the heavy burden of armaments. This second point of the Pope is in essence identical with the eighth and last of the democratic peace aims.

Pope Pius XII in his third point, which comes out for the establishment of institutions which will serve to guarantee the loyal and faithful fulfillment of the peace terms, parallels the sixth of the democratic peace aims which asks for a peace that will afford to all nations the means of dwelling in safety within their own boundaries, and which will give assurance that all the men in all the lands may live out their lives in freedom from fear and want.

Pope Pius in his various peace messages invariably stresses the spirit of justice and universal charity, the law of God, as vital to peaceful international relations. President Roosevelt stated the close relationship between democracy and religion nearly a year before the war began in his memorable message to Congress, saying: "Where freedom of religion has been attacked, the attack has come from sources opposed to democracy. Where democracy has been overthrown, the spirit of free worship has disappeared. And where religion and democracy have vanished, good faith and reason in international affairs have given way to strident and brute force."

In the little publication entitled "A Centenary Interpretation of What Fordham Means," I read the sentence: "Fordham educates for peace, but not for pacifism." So it is with President Roosevelt. One of his first official acts in early 1933 was to cable the sovereigns and chiefs of 54 nations the following: "If all nations will agree wholly to eliminate from possession and use the weapons which make possible a successful attack, defenses automatically become impregnable and the frontiers and independence of every nation will become more secure." May these prophetic words bear fruit

The President's objective was peace but he was not a pacifist. Hitler answered President Roosevelt's request with a demand for more guns. Fortunately Roosevelt was not a pacifist and began building ships, a fact which will ultimately contribute mightily to the outcome of this war in both the Pacific and the Atlantic.

The American people are tremendously interested in peace today, but they are not pacifists. They would hate to see this war end prematurely in a way which would insure a third and more horrible war in our generation. The American people want to see this war ended justly on the basis of the five points enunciated by the Pope, on the basis of the four freedoms, and on the basis of the eight points agreed to by the two great democracies and approved by all the rest. They want to see peoples impoverished and starved by the Nazis given a chance. They want to see a peace established so just that it will last for our children and our children's children. They want to see recognized an international bill of rights and duties, rights recognizing the sacredness of the individual human soul, the security of small nations, and the possibility of poor people earning enough to remove the fear of want. Into the peace fabric there must be built not only rights but duties—a sense of duty to world humanity. Thus dreamed Christ and the prophets. We can, if we so will, make this dream a reality.

The social teaching of the Catholic Church is especially opposed to Hitler's new order. The way to meet the economic and social challenge of all so-called new orders which deny the sacredness of the human soul in its relationship to God is to present a democratic new order which under God will carry out the four freedoms and the eight peace aims. A free economy and a Christian leadership must remove the fear of war. Only by world organization may this be done.

It so happens that a general European war has always, and will always, shake the United States to the very depths. It is not merely idealism but also sound business sense to take the very deepest interest in the type of world organization which has in it the promise of preventing the outbreak of war on other continents. Pope Benedict XV, writing in 1920, said, "All states should put aside mutual suspicion and unite in one sole society, or rather family of peoples, both to guarantee their own independence and safeguard order in the civil concert of peoples. A special reason, not to mention others, for forming this society among the nations is the need, generally recognized, of reducing, if it is not possible to abolish it entirely, the enormous military expenditures which can no longer be borne by the states."

The present Pope, in his Christmas message of 1939, speaks on behalf of establishing juridical institutions to consider and adjust situations which might otherwise break the peace.

Fordham University has a great challenge placed before it. Christ commanded His Apostles to go and teach all nations. Fordham, as a Christian institution, is tremendously interested in the skill and understanding which the statesmen of the United States demonstrate in handling world affairs. Are we by our actions bringing closer the day of great peace, when all the nations will flow unto the mountain of the Lord? Fordham University, I know, has already contributed toward that day through its teaching and through its distinguished alumni. Especially may I mention Archbishop Spellman, who has given such enlightened leadership both to church and state.

Whether it be the future of Fordham, the future of the United States, or the future of the world itself, we believe with the psalmist, "Except the Lord build the house, they labor in vain that build it." And also from the Psalms, "The stone which the builders refused is become the headstone of the corner. This is the Lord's doing; it is marvelous in our eyes."

The Lord is building a new order. It is not Hitler's new order built on his alleged superior race, but it is a new order built on justice, charity, and peace. In the building of that new order the United States has been given a unique responsibility, both during the present war and in the peace to come. United States failed, due to lack of prayer- After World War No. 1 the people of the ful understanding. After World War No. 2 we must not fail. With the help of the Almighty we shall not fail in the building of a just and lasting peace—the house of the Lord in which all the nations of the world may live harmoniously, joyously, and fruitfully.

The Morality of Our Entrance Into This War

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 16, 1941

Mr. THILL. Mr. Speaker, the overwhelming majority of the people in this country oppose our entrance into the present conflict overseas. These Americans are patriotic individuals who place the interests of the United States above those of any other nation. In spite of the determination on the part of sound-thinking citizens to keep out of the war, President Roosevelt, on September 11, 1941, issued orders to the Navy to shoot. Roosevelt knows this means war, for he himself has uttered the words, "Convoys mean shooting and shooting means war."

Secretary of the Navy Frank Knox disclosed that the President's order to shoot went into effect September 16, 1941. There is the sad picture which means, perhaps, the loss of thousands of American lives in naval warfare.

If we look at the moral questions involved in our entrance into this war, we must agree that the warmongers are wrong and the majority of Americans are right. The following article is interesting to read and study:

[From the Tablet, Catholic weekly, Brooklyn]

A MORAL SENSE WITH US

Religious publications in their attitude toward involving the United States in war never overlook the morality of the question. There is almost a unanimity of viewpoint on the topic. These publications assert there must be a justification for entrance into war. Once there is a sufficient reason for conflict there must first be exhausted every attempt at arbitration. War is always a last resort.

The fact that a person says someone else is going to attack us at some distant time if he defeats someone is not a sufficient reason for conflict. Neither does the economic argument, which is usually based on power politics or economic determinism justify spilling the blood of innocent people.

As far as can be seen in the present situation affecting the United States entrance into war, there is no moral reason or justification. Moreover, there is every moral reason for our country remaining out of the suicidal conflict. Assuredly our leaders have promised us over and over again we would not enter any foreign conflict. They would not send our Army, Navy, or marines to engage in a distant strife, and this pledge is morally binding. All the moves which are said to have led us close to our entrance were enacted to keep us out of war; here we have another moral obligation.

Secretary Knox, who demands we enter war now, less than a year ago asserted he was against sending American youths to graves in distant places. He has gone back on his word. Of course, he has not the right, constitutionally or otherwise, to send Americans down the hell holes of catastrophe. It is unfortunate that the majority of the American people—those who want peace and see no reason to go to war—do not seem to be represented in the President's Cabinet.

Perhaps the worst offender of all in relation to the moral side of war is Wendell Willkie, for whom millions voted thinking he was antiwar, but who turned his back on them to engage in warmongering. It was bad enough for Mr. Willkie to deceive the American people, but it is even worse for him to attempt to fool the foreign nations as he did in his July 4 broadcast abroad. Then Mr. Willkie said:

"And despite the occasional hesitation and doubts, the American people will reach out, will give their utmost to see that this precious thing we call 'liberty' shall not disappear from the world, either in Europe or in Asia or in America."

That is untrue. Russia and other nations have been in slavery for centuries and Americans never objected to their role. And today, contrary to Mr. Willkie, Americans will not, and could not, give their utmost to safeguard liberty all over the world—including places where liberty is not wanted. The vast majority of Americans are overwhelmingly against being used as cannon fodder to establish liberty in Russia, Germany, Africa, and dozens of other countries.

One report on Monday called for a repudiation of the United States Constitution, together with a repudiation of the wishes of the people. This article quoted a radio speaker as asserting the President of the United States should alone decide when, where, and how our country should go to war. Notwithstanding that the Constitution specifically asserts that Congress, as the representative of the people, alone can declare war, this speaker would violate the Constitution and thereby destroy popular government. It follows that if the reigning President can contravene one part of the Constitution he can contravene any part, including the guaranty of religious liberty. The suggestion is so absurd that it hardly needs rebuttal. Destroying the Constitution, prohibiting the people or their representatives from voting on an issue that affects them and their children so smacks of nazi-ism that one can only feel sorry for the person making such a proposal.

This is the United States of America, not totalitarian Germany or Russia. Here we have "government of the people, by the people, and for the people"—not by one individual. Our Government rules with the consent of the governed. "But the people do not fully understand; they have not all the knowledge," say newcomers to our shores and chauvinists. That's it. The people cannot decide. They are only supposed to fight and die.

Moralists have long decided expediency or popularity is not the rule for good conduct. Again that sounds just like Hitler. Here, too, we have another moral argument, for it is said the Nazis are worse enemies of the United States than the Reds. Perhaps arguments can be used on both sides, but what difference does it make? Would you prefer cancer or creeping paralysis? You would answer "Neither." And Americans who love their country are not making any choice between Nazis and the Soviet. They hate both. They want nothing to do with either. They hold no brief for any totalitarians. And they would consider it immoral and indecent, treacherous and hypocritical to send American boys, American wealth, or American goods to either Hitler or Stalin—both enemies of God and man—not more, not less, but both exemplars of international thuggery.

Morality demands the United States keep out of this war. Patriotism which casts aside the fear mongers insists we stay out of war. The people to the tune of 3 and 4 to 1, are opposed to entering the war. Oh, yes; they have experience, they have the facts—they got both in 1917 and 1918 and so did their parents. The minority, the warmongers, who themselves will not fight, have taken one defeat after another. They planned to lead the country into war long ago. Unable to get the people to go to war they now want to invite it. Let us keep defeating them. Every day we stay out saves hundreds of more American lives and keeps back the tears of American mothers. Hold fast to the Constitution. Permit Congress to, in fact demand that the people, decide. Away with mass suicide. Let us think of peace for the masses. Make morality and principle the rule and do not follow the line of broken pledges which has made Europe and Asia places to keep away from.

Wage Increases

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

LETTER FROM SOUTHERN COUNTIES GAS CO. OF CALIFORNIA

Mr. VOORHIS of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am glad to include this general letter to employees sent out by the Southern Counties Gas Co. It sets forth a policy which I believe could serve as an example for employers generally.

SOUTHERN COUNTIES GAS CO.
OF CALIFORNIA,
Los Angeles, Calif., August 9, 1941.

To all regular employees:

Effective August 1, 1941, every regular employee of the Southern Counties Gas Co. whose present salary is less than $300 a month will receive an increase of $7.50 a month as a special defense period wage adjustment. In addition, the company will increase its current rate for temporary laborers from $5 to $5.40 a day.

These increases are made in view of current and prospective increases in the cost of living. They do not permanently alter our agreed schedules for starting, basic or standard salaries as published in appendix A of our Statement of Employee Relations Policy. We hope that better gas weather in coming months will produce sufficient revenue to meet these added pay-roll costs.

There has been a great deal of publicity regarding higher prices. People have been quick to cite instances in which the price of some given article has "soared out of sight." United States Department of Labor figures, however, show that since the beginning of the war (September 1939), through June 1941, food prices in the Los Angeles area have advanced 10.5 percent. All living costs, including food and rent have advanced 4.3 percent. Meanwhile, in the same period, Southern Counties Gas Co.'s average salaries have increased 8.84 percent.

These percentages are quoted not to argue that changes in living costs have been unimportant, or to indicate that changes in the future are unlikely. We merely feel that our employees should have accurate Department of Labor figures. We also feel that the company's salary scale has more than kept pace with such actual changes as have occurred.

The current increase is based upon the desire of the company, so far as possible, to maintain the "real wages" and the living standards of its employees. Due to fixed

rates, and the fact that we expect no unusual war profits, we cannot promise to meet fully a really violent inflation. We do, however, promise that the company will from time to time, examine the trend of living costs, and consider its ability, through actual income from the sale of gas, to assist the employees in meeting higher prices.

Yours truly,

SOUTHERN COUNTIES GAS CO.
OF CALIFORNIA.

Oneida Ethnological Study Project

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

LETTER FROM A CONSTITUENT

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to me by a constituent:

ONEIDA, WIS., *August 21, 1941.*

Hon. JOSHUA L. JOHNS,
United States House of Representatives,
Washington, D. C.

DEAR MR. JOHNS: We of the Oneida Ethnological study project have been apprised of the fact that on August 1, 1941, you caused to be entered into the CONGRESSIONAL RECORD a communication from E. P. Boland, of Green Bay, Wis., to you under date of July 15, 1941.

After serious consideration, we are assuming that you are not very familiar with local conditions. The nature of the letter is such that any self-respecting person would request its correction.

In the first place, you are probably aware that Mr. Boland is not a farm operator, as witnessed by his giving his address as the city of Green Bay. His business is in real-estate transactions. He does have supervision of several small farms on the former Oneida Reservation. On these farms he has operators who operate the farm single-handed like any small farmer, with the exception of haying, threshing, and silo filling, which in no case exceeds a week's time. We see no place where four men can be given constant employment. The result: not much money, not much food, slim Indian.

Mr. Boland is not very well informed as to the activities of the Oneida language and folklore project and its successor, the Oneida Ethnological Study. For that reason, we feel that he is not qualified to pass judgment as to its usefulness to such an extent as for it to be entered into the governmental records of the Nation. Our wages are only $57.60 per month. They are not $70, as Mr. Boland claims

We are satisfied that schools of higher learning desire knowledge of our tongue and former good qualities.

In paragraph 4, sentence 3, Mr. Boland makes a statement, viz, "12 big, fat, lazy Indians." That can and may be considered as slander, liable under the law for character damages. Evidently, Mr. Boland's past activities among the Oneidas make him feel immune to any accounting for any injury he may give to the Oneidas.

We do not concur with Mr. Boland's view that the Episcopal Church has depraved itself when it countenanced the project and offered its facilities.

On July 15, 1941, there were seven men and three women on the Oneida Ethnological Study. The average weight and dimension of the male group is far below that of Mr. Boland. The people on this project are all encumbered with dependents, averaging five dependents to each worker. The monetary demands for food, clothing, and other necessities of life leave very little spare money to be used for recreation, if you care to class drinking as such. And we believe it is so taken by most people throughout the United States.

We believe it would help clarify the first two sentences in paragraph 4 if we add, "It took 25 years to make the Oneidas 90-percent landless." We wonder if Mr. Boland considered the works as useless, worthless W. P. A. projects when the W. P. A. people cleaned out his stone quarry and furnished labor on building new road fences on his farm.

We feel that Mr. Boland's difficulties in getting assistance, in the Army style, is due to the fact that he has incurred the Oneida's animosity by his past dealing. Contrary to Mr. Boland's contention, heretofore, we have not associated our fortunes of life to any political party. We were only thankful to the United States Government for providing a system whereby our living was made possible. Thanks to Mr. Boland, we now know whence cometh our help.

We are greatly grieved at your action in placing such statements in the CONGRESSIONAL RECORD without, we believe, first verifying the same, especially after you had condescended to speak to us Oneidas on the aforementioned Episcopal Church grounds on July 4, 1939.

Heretofore, we had gloried in the knowledge that the illustrious George Washington had recognized the efforts of the Oneidas as one of the few Indian tribes to have contributed to the victory of the American Colonies, thus making possible the establishment of these United States of America. In memory of these sacrifices of the Oneidas, the Oneida-United States treaty of 1794 was consummated, giving to us an annuity in commemoration.

Still having trust in you, we believe that you will make some amends to assuage our grief.

Very truly yours,

Andrew Beechtree, correspondent; John A. Skenandore; Guy Elm; David O. Skenandore; Oscar H. Archiquette; Hyson Doxtator; Ida Blackhawk; Alma Thomas; Stadler King; Sherman I. Skenandore.

The Shooting War Is Ordered

EXTENSION OF REMARKS
OF
HON. LEWIS D. THILL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. THILL. Mr. Speaker, on September 11, 1941, in a radio speech, President Roosevelt ordered a shooting war. Not the people, not their elected representatives, the Congress, but the President alone, made the decision for war. Some Americans have been stunned by Roosevelt's action; others are apathetic, failing to realize the severity and the full import of the President's order to shoot. The following editorial discusses the question of a shooting war. Although Roosevelt has on previous occasions flouted the Constitution, I cannot believe that any man would be so base that he would order the suspension of elections in our constitutional Republic.

[From the Washington Times-Herald of September 17, 1941]

SEPTEMBER 16, 1941—MARK IT WELL

Last Thursday evening, September 11, President Roosevelt told the American radio audience that he had given shooting orders to the Navy.

"But let this warning be clear," said the President. "From now on, if German or Italian vessels of war enter the waters the protection of which is necessary for American defense, they do so at their own peril."

Those orders went into effect yesterday, September 16, 1941. Their extent was disclosed by Secretary of the Navy Frank Knox in his Monday speech before the American Legion convention at Milwaukee:

"Beginning tomorrow, the American Navy will provide protection as adequate as we can make it for ships of every flag carrying lend-aid supplies between the American continent and the waters adjacent to Iceland. The Navy is ordered to capture or destroy by every means at its disposal Axis-controlled submarines or surface raiders encountered in these waters."

Those are a lot of waters. Navy shooting patrol over them was assumed by the President and put into effect by the Secretary of the Navy without consulting Congress.

This is an open act of war. As of September 16, 1941, the United States is again at war with the German Government.

It will be a big date in our history—how big most of us will probably begin to realize only after the sinkings begin in earnest.

This act of war was committed in disregard of article 1, section 8, subdivision 11, of the United States Constitution:

"The Congress shall have power * * * to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water."

A revolution has occurred in this country, between last Thursday and today. We are now in the hands of a military dictatorship, which apparently intends to proceed without consulting Congress beforehand as to any major move in this war.

That Congress would have approved a declaration of war at this time is extremely doubtful, in view of the 203–202 House vote by which the service time extension bill squeaked through.

HOW ARE THE PROSPECTS?

Where do we go from here?

We don't know. But we think we go first through the phases of an inconclusive shooting war at sea with the Germans, and that we go eventually to a second A. E. F. and a bloody show-down on the European Continent. We do not believe Germany can be beaten except in such a show-down. It is not certain, either, that Germany can be beaten even by that means, this time.

The pretext that we are suppressing piracy is invalid and so is the plea that President Jefferson once ordered the United States Navy to suppress the Barbary pirates

on Africa's west Mediterranean coast. In the former case, we might lose a gunboat or a frigate. In the present case, we are going up against the world's greatest military power, and may lose our freedom, and are sure to lose our shirts because of the staggering expense in money, matériel, and men of such an effort.

NOT SO BIG—IF

If any congressional elections are held in November 1942, we think the war party is going to be voted out of control of the House of Representatives. We expect most Americans by that time to be even more displeased than they are now with the war party's intermeddling in this latest European war, and more appalled at the possible disastrous consequences of what the war party is doing.

In view of the fact that a shooting war was ordered yesterday without Congress consent, the above "if" is neither idle nor frivolous.

If, however, the war party calls off the 1942 congressional elections, by some executive dictum on the plea of national emergency, we think there will develop some kind of revolutionary activity against the war party.

Power Development and Utilization of Natural Resources

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, September 18, 1941

STATEMENT BY ACTING COMMISSIONER BASHORE, BUREAU OF RECLAMATION

Mr. CLARK of Idaho. Mr. President, on September 8 last I asked and obtained unanimous consent to have inserted in the Appendix of the RECORD a statement by Acting Commissioner H. W. Bashore, of the Bureau of Reclamation, which he made before the Subcommittee on Public Lands and Surveys under Senate resolution 53. The statement is a remarkable epitome of reclamation and power development in the West. The statement was returned to me with the information that it was in contravention of the rule of the Joint Committee on Printing in that its printing would exceed 2 pages of the RECORD. The estimate furnished by the Government Printing Office indicates that the cost will be $135. I again ask unanimous consent to have the statement of Acting Commissioner Bashore, which I think is invaluable, inserted in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Bureau of Reclamation was born 40 years ago of the imperative need for conservation and economic utilization of the natural resources in land and water in vast areas west of the Mississippi River.

Today it stands prepared to aid this committee in formulating and the Congress in executing an all-out program which will open to the Nation that arsenal of mineral resources which lies beneath the mountains and deserts of the West.

Through its electric power operations, the Bureau of Reclamation has laid the foundation for the most effective development and utilization of these resources so vital to the national defense. Power plants in operation or under construction in 13 States serve areas where airplanes and ships are being built, aluminum produced, and great military establishments are training many thousands of American soldiers to defend their country.

These power plants scattered from the Rio Grande to the Pacific Northwest point the way to what can be achieved in advancing mineral activities through using the latent power resources that abound in this region. With the West facing critical deficiencies in electric energy, the Bureau of Reclamation is ready to begin construction of projects which will avert what otherwise may be catastrophic consequences.

If the mineral resources of the West are to be brought into the service of the Nation in the current emergency, low-cost power must be available to every location where strategic materials are located. Such power is essential in extracting the minerals from the earth as well as in operating, fabricating, and servicing industries, and for the population engaged in these activities.

Secretary Ickes has called your attention to existing and prospective power deficits. On the basis of a $36,000,000,000 annual defense expenditure, there will be material increases in estimates of power deficiencies west of the Mississippi River. Reports are that 1945 requirements will demand an increase in present installations of more than 2,100,000 kilowatts of dependable power By 1946 the need rises to nearly 2,500,000 kilowatts, according to this calculation. The 1945 deficiency now forecast is about twice the estimate of power deficiency we made last June when we were considering all scheduled Federal installations and new aluminum allocations on the west coast and in Arkansas.

To combat the threatened black-outs in mineral developments and the thwarting of other defense efforts, the Secretary cited a list of potential multiple-purpose power projects prepared by the Bureau of Reclamation at his request. The total capacity of approximately 9,000,000 kilowatts which could be provided by these projects include the capacity of half a dozen proposed steam plants to balance the systems, and could be brought in from 1943 to 1947 Of course, the completion of these projects within the period is contingent on the necessary priority authorizations and on funds being made available to begin construction immediately of those for which surveys have been completed. The steam plants will utilize such resources as western coal, oil, and gas. The map which I have had prepared and which I will discuss later, shows the location of about 50 potential projects, in addition to existing Federal developments. These also include possible installations at Grand Coulee and Boulder Dams.

While power for national defense provides the immediate urge for most of these projects, they all will serve one or more other beneficial purposes. Through irrigation they will assure adequate food supplies and opportunities for settlement for thousands of families during the current and post-defense periods. Rural electrification will be advanced, domestic and industrial water supplies will be assured, floods and soil erosion controlled, navigation improved, wildlife refuges maintained, and recreation facilities provided.

Before going into a detailed discussion of the apparent and prospective power deficiencies in the West and the power program of the potential projects which have been listed, I want to call your attention to certain related phases of these reclamation developments. These activities parallel the objectives set forth in Senate Resolution 53 in other than defense contributions. They assure a flow of other permanent peacetime benefits. First, the communities which have sprung up or expanded in the wake of irrigation, stand as what is described in Senate Resolution 53 as monuments to "free competitive enterprise and the investment of private capital." This has been made possible by a wise and farsighted national reclamation policy through which natural resources in land and water were made available for home building and agricultural production. Fifty thousand farms and 250 cities and towns with a population of a million persons owe their existence directly to reclamation.

The purchasing power of these communities equaling a quarter of a billion dollars annually to the farms and factories of the Midwest, East and South, illustrates the natural benefits flowing from these developments. The taxable wealth created and maintained runs into high figures—many times the investment the Federal Government has made, principally in reimbursable funds, for the construction of irrigation works.

Reclamation has kept open the Nation's last frontier. It is providing the family-size farms, which are the backbone of the country. It has contributed to the stabilization of the livestock industry of the West and is aiding in the maintenance of a population growing at twice the national rate.

Water conserved for irrigation in many instances serves the additional purpose of producing electric power. Revenue from power has made feasible the irrigation of land which otherwise would have remained desert wastes. A logical extension of the power program will provide for the installation of a few economically located steam plants. These will balance hydro production and make the electric output more valuable.

The combined development of hydro and steam power as outlined in this statement will aid in the objective mentioned in Senate Resolution 53—"the conservation of mineral resources to the fullest extent consistent with their proper development and utilization"—and will also serve the national defense and provide for post-emergency needs.

It has been quite evident that the West was facing a shortage of power which could not be met by the enlarged program of the Bureau of Reclamation as authorized in the winter of 1940–41, even with the speed-up of the Grand Coulee and Bonneville Dam schedules. Attention is directed to the fact that one large utility on the Pacific coast, which had deprecated the idea that it could not supply the demand for power, frankly admitted in May of this year that it had had to revise its figures upward to meet new Federal forecasts, demonstrated to be more nearly accurate.

In giving you examples of the rapidly changing picture with respect to power deficiencies in the West, I should explain, perhaps, that for the purposes of this study the lower Arkansas Valley, as well as Oklahoma and all of Texas, are included. The Bureau of Reclamation is conducting basin-wide investigations in these States in cooperation with other agencies. Consequently, in presenting the power situation west of the Mississippi as a whole, these States are included.

Much of this territory west of the Mississippi, which occupies nearly half of the land area of continental United States, is heavily mineralized.

Present estimates of additional dependable capacity desirable based on a $36,000,000,000 annual expenditure for national defense show, for the region west of the Mississippi, an increase in deficits of 100 percent by 1945 over the estimates we previously had made.

These estimates of additional dependable capacity desirable by years are as follows:

	Kilowatts
1943	902,000
1945	2,018,000
1946	2,455,000

(No 1947 estimate is made.)

For the Pacific Northwest alone the studies of the Bonneville Power Administration, which distributes Grand Coulee Power, indicate a deficit in installed capacity, after presently planned installations at Grand Coulee and Bonneville are made, by years, as follows:

	Kilowatts
1943	512,000
1945	901,000
1947	1,200,000

Including all of Oregon, Idaho, and Montana, the Bonneville Administration reports indicate deficits for years as follows:

	Kilowatts
1943	934,000
1945	1,384,000
1947	1,754,000

I present for the record a tabulation of the capacity of hydroelectric installations existing and scheduled by the Bureau of Reclamation and the Bonneville Power Administration, both under the Department of the Interior, by the close of 1946. The Bureau of Reclamation now has in operation 28 plants, with installed capacities totaling 953,962 kilowatts on 17 projects of the Bureau in 11 States. At the end of each year the capacity will total as follows:

	Kilowatts
1941	1,364,962
1942	1,615,462
1943	2,066,062
1944	2,621,062
1945	2,676,062
1946	2,836,062

The entire capacity of Bonneville totaling 518,400 kilowatts will be installed by the end of 1943. This will bring the total installed capacity, including Indian Office plants, under the Department of the Interior, to 3,337,462 kilowatts.

The installed capacities of operating plants and the schedules of installations by the Bureau of Reclamation and the Bonneville Power Administration are as follows:

Bureau of Reclamation—Capacity in Bureau of Reclamation plants in operation July 1, 1941

State	Project	Present kilowatt capacity
Arizona	Salt River	600 15,400 850 5,100 10,400 30,000 1,600 7,000
Do	Yuma	1,600
Arizona-Nevada	Boulder (9 generators)	704,800
Arizona-California	All-American	5,400 9,600
Colorado	Grand Valley	3,000
Idaho	Boise	1,875 8,000
Do	Minidoka	8,400
Nebraska-Wyoming	North Platte	4,800 1,400
Nevada	Newlands	1,500
New Mexico	Rio Grande	24,300
Texas	Colorado River	45,000
Utah	Strawberry Valley	1,150
Washington	Grand Coulee (2 small generators)	20,000
Do	Yakima	2,400 187
Wyoming	Kendrick	32,400
Do	Riverton	1,600
Do	Shoshone	5,600
Total		953,962

Program of Federal installations

SCHEDULED INSTALLATIONS, BUREAU OF RECLAMATION

	Kilowatts
Washington, Grand Coulee Dam, August 1941	108,000
Arizona-Nevada, Boulder Dam, August	82,500
Washington, Grand Coulee, December	108,000
Arizona-Nevada, Boulder, December	82,500
Arizona-California, Parker Dam, December	30,000
To be added June-December 1941	411,000
Total by close of 1941	1,364,962
Washington, Grand Coulee, March 1942	108,000
Arizona-Nevada, Boulder, July	82,500
Arizona-California:	
Parker, January	30,000
Parker, February	30,000
To be added during 1942	250,500
Total by close of 1942	1,615,462
Washington, Grand Coulee, June 1943	108,000

Washington, Grand Coulee, August	108,000
California, Keswick Dam, October	75,000
To be added during 1943	460,600
Total by close of 1943	2,066,062
California, Shasta Dam, January 1944	375,000
Arizona-Nevada, Davis Dam (Bullshead), June	180,000
Montana, Fort Peck, January	35,000
To be added during 1944	590,000
Total by close of 1944	2,621,062
Idaho-Anderson Ranch (Boise), January 1945	20,000
To be added during 1945	20,000
Total by close of 1945	2,676,062
Colorado Colorado-Big Thompson (6 projects)	160,000
To be added during 1946	2,836,062

BONNEVILLE DAM PROJECT SCHEDULE, (BONNEVILLE POWER ADMINISTRATION, DEPARTMENT OF THE INTERIOR)

Capacity installed July 1, 1941	194,400
Oregon-Washington, August 1941	54,000
Total by close of 1941	248,400
Oregon Washington, January 1942	54,000
Total by close of 1942	302,400
Oregon-Washington:	
January 1943	54,000
July 1943	54,000
September 1943	54,000
December 1943	54,000
Total by close of 1943	518,400
Grand total, Bureau of Reclamation and Bonneville Power Administration, Department of the Interior [1]	3,354,462

[1] The Office of Indian Affairs operates power plants on Indian projects, of which the San Carlos in Arizona with 13,000 kilowatts of hydro and 4,800 Diesel are the largest. The others are small and serve no commercial purposes.

DEFICITS IN POWER IN THE WEST

The rapidly changing picture with respect to power demands in the West, as I have indicated, has led to a series of sharp upward revisions of estimates of the needs for new installations. It has been exceedingly difficult to make forecasts of demands which stand up for as long as a month.

No sooner is an estimate made than some new element is injected to force its revision. In the last week we have revised our estimates, made a month ago, again upward. This was made necessary by new figures related to a $36,000,000,000 per annum defense effort. We are aware, however, of an impending revision already. Active negotiations are in progress looking to a contract calling for 196,000 additional kilowatts of power from Boulder Dam for a magnesium plant. High-grade magnesite from beds in the north central section of Nevada are proposed for use.

Responsible agencies studying the power markets and demands have provided estimates of potential deficiencies in power in western areas as follows:

Pacific Northwest: In addition to present capacity and all that which is now scheduled for installation, a deficiency of 900,000 kilowatts by 1945 and 1,200,000 by 1947.

Southern Oregon: By 1945 a deficiency of 60,000 kilowatts.

Northern California and northern or western Nevada: Even after completion of the Central Valley project and the 150,000-kilowatt steam plant planned in connection with it, as well as other scheduled installations, a deficiency of 183,000 kilowatts will develop by 1945 and of 337,000 kilowatts by 1947.

Pacific Southwest, including southern California, Arizona, and southeastern Nevada: After all scheduled installations at Boulder, Parker, and Davis (Bullshead) Dams on the Colorado River, and other scheduled installations, deficiencies of 250,000 kilowatts by 1945 and 375,000 kilowatts by 1947 are expected.

Utah-Idaho: Deficiencies of 75,000 to 125,000 kilowatts by 1945 and from 150,000 to 200,000 by 1947.

Colorado-Wyoming-western Nebraska: Deficiencies of 50,000 to 75,000 kilowatts by 1945 and 75,000 to 125,000 by 1947.

Montana: Definite figures are unavailable, but shortages are apparently imminent.

Arkansas-Oklahoma-Kansas-southern Missouri: Deficiencies in part due to recent allocations of 240,000 kilowatts for aluminum production of 417,000 kilowatts by 1945 and 516,000 by 1947 are expected.

Texas-New Mexico: Deficiencies of 212,000 kilowatts by 1945 and 295,000 by 1947 are in prospect.

North Dakota-South Dakota: Although indications are that the defense demands will be relatively small, increasing deficits are anticipated ranging from 25,000 kilowatts in 1945 to 50,000 in 1947.

The crises which these estimated deficiencies would represent, if they were permitted to develop, can be averted, of course, by the construction of new projects to provide the desired power and by the installation of additional machinery, as at Boulder and Grand Coulee Dams, where that is practicable. Increasingly it becomes evident that these deficiencies must not be permitted actually to develop. The problem in power production which they represent must be met by action in time.

The Bureau of Reclamation, which has been for many years the principal Federal agency in the construction of power projects in the West, feels its responsibility. Having constructed such projects as Boulder Dam and Grand Coulee, it is prepared to move promptly and effectively in meeting the power problem of the West in this emergency in connection with mineral developments and other industrial uses. At the same time we feel that we can make a permanent contribution to the advancement and stabilization of the West through these multiple-purpose projects.

In making a list of potential multiple-purpose projects through which the deficiencies in power can be met before 1947, the Bureau of Reclamation has considered possible generators for Boulder Dam and Grand Coulee in addition to those scheduled for installation before the end of 1943.

Access has been had to reports of the Office of Indian Affairs of a potential project in the Pacific Northwest and to those of the Corps of Engineers, United States Army, which has conducted extensive investigations in the Arkansas Valley and elsewhere.

Steam plants are included where held desirable to balanced proposed hydro installations in California, Utah, Colorado, and Arkansas.

The map we have prepared shows the status of the various Federal projects as follows:

Projects in operation in brown.

Projects under construction in yellow.

Potential hydro projects in red.

Hydro plants are shown in solid colors; steam plants are checkered.

Green spots indicate existing Federal reclamation project areas.

The relative capacities of the existing and potential installations are indicated by the sizes of the blocks, as follows:

The smallest block shows capacities of 25,000 kilowatts or under.

The other sizes range upward to indicate the ultimate capacities of the largest power plants in the world—those at Grand Coulee and Boulder Dams.

Investigations have been practically completed on all projects which probably can be brought into operation by 1943. Investigations on most of the other projects listed can be completed in 3 to 12 months.

By years, the installed capacity in kilowatts which can be made available with adequate appropriations and high priorities in equipment and material appears to be as follows:

	Installed	Firm [1]
1943	673,000	576,000
1944	2,005,500	1,062,000
1945	2,495,000	795,000
1946	2,947,000	1,163,000
1947	895,000	430,000
Total	9,015,500	4,026,000

[1] Firm power is defined as output available continuously 24 hours a day.

In explanation of the symbols on the maps, I shall discuss briefly the relationship of these potential projects, including possible additional installations at Grand Coulee and Boulder Dams. Further studies are being made, and while I do not feel in a position to make suggestions as to the order in which the new projects should be scheduled for construction, recommendations can be made in the near future. But I do feel that from this list selections can be made which will assure sufficient power west of the Mississippi River to meet any demand that may be made for our all-out defense effort.

All of these projects serve purposes other than power. Their peacetime contributions to the development and stabilization of the West will forever make them worthy public undertakings. The list is subject to additions and subtractions as circumstances may determine.

In the same order that I have discussed the deficiencies in power, I will point out what can be done to avert the consequences of neglecting to utilize the resources that are available. I direct your attention to the large map to which I have referred, as well as to the list of projects with their rated and firm capacities which I offer for the record.

Beginning in the Northwest, I will take up each area separately:

Pacific Northwest: The Columbia Basin and its tributaries and other streams in this area are veritable storehouses of unused low-cost power. As an alternative to the installation of all 18 big generators at Grand Coulee, 10 other projects with installed capacities totaling more than 2,500,000 kilowatts are offered for selection.

Southern Oregon: Projects on Rogue River and Scott River (northern California) will meet all presently anticipated needs.

Northern California-western Nevada: I have mentioned a steam plant as desirable in connection with the Bureau's Central Valley project, as well as to aid in averting a power shortage in this area. Hydro developments on the Kings American and Feather Rivers, which are advanced, might well call for two additional steam plants. A plant on Truckee River in Nevada is proposed.

Pacific Southwest: In spite of advanced installations at Boulder Dam and Parker Dam and construction of Davis Dam soon to start, power deficiencies already threaten serious consequences. A hydro plant on the all-American Canal and the development of the Bridge Canyon site on the Colorado in Arizona are suggestions in addition to completing installations at Boulder Dam. A steam plant in this area may be necessary.

Utah-Idaho: Potential developments in both States offer a solution for a growing power shortage that threatens to balk mineral developments in both States. In Idaho, Anderson Ranch project is under construction and two others in the Snake River Valley offer possibilities. The Colorado Basin in Utah presents potential power sites like Split Mountain, Echo Park, and Rattlesnake on the Green, Dark Canyon and Dewey on the main stem of the Colorado. A steam plant in Utah would offer an outlet for its coal deposits and balance the predominant hydro development prevailing in the area.

Colorado-Wyoming-western Nebraska: Extension of the interconnected system of the Bureau of Reclamation in Wyoming and northeastern Colorado to sites of other feasible developments in Colorado is suggested. This would preclude deficits in power that would disastrously affect military establishments and prevent development of mineral resources in Wyoming and Colorado. The Colorado-Big Thompson project under construction will bring in some additional power, but a steam plant near Fort Collins along with other hydro developments would provide a balanced supply.

For instance, the Kortes Power Dam on the North Platte River in Wyoming is a logical expansion of the Kendrick project now in operation. Other power developments listed on the North Platte are farther upstream near the Colorado line. There are other potential projects on the North Platte River and on the Big Horn in northern Wyoming.

Montana: A development on the main stem of the Missouri at Canyon Ferry and one on the Big Horn are listed by the Bureau of Reclamation. A third project in western Montana—Hungry Horse—on the Flathead River, a tributary of the Columbia, is recommended by the Federal Power Commission.

The Dakotas: Four projects on the Missouri in South Dakota are available from which one or more could be selected.

Arkansas, Oklahoma, Kansas, and southern Missouri: In addition to Dennison and Nimrod Dams, which are under construction, eight other potential projects in the lower Arkansas River Basin have been reported on by the Army engineers. A feasible project on the Kansas River at Topeka is also listed.

Two steam plants fired by natural gas have been proposed for the Arkansas area by the Power Division of the Office of Production Management to power aluminum plants which will use raw materials from the bauxite fields of Arkansas. Tentatively, we have designated one plant as Bauxite and the other Aluminum. According to the O. P. M. release of June 27, each of the aluminum plants will require 120,000 kilowatts of power. It has been indicated that 300,000 kilowatts of steam power would provide a proper balance for the proposed hydro developments on the Arkansas and its tributaries.

Texas and New Mexico: The possibilities of power developments on the Guadalupe, lower Colorado, Brazos, Neches, and the lower Rio Grande are listed.

In New Mexico the transfer of water from the Colorado Basin to the upper Rio Grande would provide a head for power.

I offer for the record a list of potential power projects. This list is tentative in that additional projects may be recommended or some which are included may be dropped. It includes possible installations at Grand Coulee and Bonneville in addition to those to be placed in operation by the end of 1943. The approximate year of completion is given, but I wish to emphasize that completion by that time presupposes immediate authorization, adequate funds, and high priorities in equipment and machinery to achieve the necessary periods for investigation and construction. The State, name of the project, the stream on which it is located, and the name of the plant are given, together with the rated or maximum installed capacity, and the estimated firm power which will be available.

The list of potential projects prepared by the Bureau of Reclamation, including projects reported on by the Office of Indian Affairs and the Corps of Engineers, War Department, is as follows:

PACIFIC NORTHWEST (WASHINGTON, NORTHEAST OREGON, NORTHERN IDAHO)

Year [1]	State	Project	Stream	Plant	Rated capacity	Firm capacity
					Kilowatts	*Kilowatts*
1943	Idaho	Cabinet Gorge	Clark		99,000	50,000

[1] Completion possible in year indicated.
[4] Reported in California State Bulletin 26.
[5] After upstream storage.
[6] Anderson Ranch, 20,000 kilowatts under construction.
[9] Doesn't include Colorado-Big Thompson hydro plant: under construction with installed capacity of 181,000 kilowatts.
[9] Firm power of 25,000 kilowatts is dependent on completion of entire Blue-South Platte project.
[9] Hungry Horse (Flathead River) with 172,000 installed capacity reported by Corps of Engineers.
[10] Reported by Federal Power Commission Market Survey.
[11] Denison Dam on Red River is under construction and is not included in this tabulation. Ultimate capacity of 175,000 kilowatts installed and 15,000 kilowatts firm possible by 1944.
[12] Based on reports of Corps of Engineers, War Department.
[13] Part of Lower Colorado River Authority development.
[14] Reported by Brazos River conservation and reclamation district.

Revenue Act of 1941

EXTENSION OF REMARKS
OF
HON. ROBERT M. LA FOLLETTE, JR.
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, September 18, 1941

LETTER FROM FARMERS' EDUCATIONAL COOPERATIVE UNION OF AMERICA

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD a letter from Mr. Robert Handschin, written on behalf of Mr M. W. Thatcher, chairman of the National Legislative Committee of the Farmers' Educational and Cooperative Union of America. The letter expresses opposition to certain provisions of the tax bill which was passed on yesterday.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FARMERS EDUCATIONAL AND
COOPERATIVE UNION OF AMERICA,
Washington, D. C., September 17, 1941.

Hon. ROBERT M. LA FOLLETTE, JR.,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LA FOLLETTE: The National Farmers Union is vigorously opposed to the major provisions of the Revenue Act of 1941, and respectfully requests you to bring this statement of our opposition to the attention of the Senate.

Representing a third of a million low-income farmers, we agree fully with your indictment of the act, so forcefully expressed in your minority report.

Farmers—including even the poorest among us—are willing to assume a greater burden, if all taxes are first placed on the only fair basis, that of the ability to pay.

But we know, as was conclusively shown in the studies of the Temporary National Economic Committee, that farm people as well as wage earners already are paying far more than their just share of taxes as compared with corporations and persons in the upper and upper-middle income brackets. The growing use of excise, or hidden taxes, together with farm-property taxes, has deprived us of many of the necessities of life, while corporation, income, and inheritance taxes have not in any degree required like sacrifices on the part of those individuals holding large properties or realizing large incomes. This disparity is made much greater by this act, and is all the more indefensible since it now makes the people's pockets the direct source for the major share of those extraordinary profits arising out of the defense program.

The Farmers Union, therefore, considers the failure of the Congress to recapture these exorbitant defense profits as a No. 1 offense against the working and farming people of America. We note also the failure to revise the excess-profits law so that the larger corporations do not continue to strengthen their competitive position because of it. This very unfair provision cannot help but weaken the total defense effort.

We believe that higher income and normal corporation taxes should have been levied, and estate and gift tax exemptions lowered greatly, before placing further excise taxes upon items of common consumption or before lowering income-tax exemptions so drastically. There is no excuse for levying income taxes upon incomes already below the minimum needed for good health until all other possible sources have been exhausted Part of this new tax burden will inevitably reduce the consumption of health-building foods by defense workers, thus injuring farmers' markets as well as defense production itself.

We protest the failure to close the many loopholes in the tax structure, in particular the failure to eliminate even the most glaring of these loopholes—that allowing the filing of separate returns with community-property privileges.

The Farmers Union is opposed to excise and all forms of sales taxes, and therefore we look with strong disfavor upon the provision of the act which makes permanent many such taxes which never should have been levied in the first place. The extension of excise taxes to new items of the farmers' budget is a cause for real concern as to where this form of taxation will end. Especially unfair to farm people is the flat $5 tax upon automobiles, regardless of value or use, and the 6 percent tax upon telephone bills, which provides no exemption for cooperative telephone systems maintained by many farmers.

The interests waxing fat off the defense program certainly have unleashed a financial "blitz" on the common people in this act. It is a wage cut for the wage-earning and low-salaried majority of the Nation, and an increase upon the already heavy tax burdens borne by our farmers. It makes the rich richer, the poor poorer. It strengthens monopoly and hurts many small corporations and small businessmen. It leads to personal aggrandizement through taking advantage of the common misfortune and the common danger. In addition to assisting entrenched wealth, this bill is perhaps a deliberate attempt to provoke discontent and thereby bring about further partisan aims, such as the reduction of those Federal services benefiting the most needy farm and city people.

In spite of the requests of the President and of the Secretary of the Treasury, as well as the pleas of this and other organizations, the Congress has written an "appeasement" tax bill. If this act is an example of the political motto, "Reward your friends and punish your enemies," the farmers certainly need additional friends in Congress.

The Farmers Union agrees with you that the time has come to make a thorough revision of the tax system. The adequate defense of the country will require it. We propose to work with organized labor and other consumer groups during the coming year to this end. We know that we can rely upon you as a champion of progressive taxation, and we desire to thank you again for the battle which you have made in this and in previous years on our behalf.

Very truly yours,

ROBERT HANDSCHIN,
Resident Secretary, on behalf of Mr. M. W. Thatcher, Chairman, National Legislative Committee.

War or Peace—Who Decides?

REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

Mr. PIERCE. Mr. Speaker, there appeared in the Washington Post this morning on the editorial page a letter signed by Mr. Henry E. Colton, of Nashville, Tenn., which is worthy of everyone's reading. It is headed "War or peace—who decides?" I understand Mr. Colton was formerly special assistant to the Attorney General of the United States. He gives, in a few words, the historical background of our wars beginning with what took place preliminary to the War of 1812. War had already been going on for some time when Congress was informed of that fact. He gives the background of the Mexican War and of the War between the States, which had been an actuality for many weeks after the firing on Fort Sumter before the Congress was informed thereof.

This article is worthy of our consideration at this time, when we hear so many speeches about who is to decide when we are confronted with war or peace. In my opinion, history will record that the enemies of democracy will make the decision in 1941, and we must be prepared to defend our shores and our way of life.

The article referred to is as follows:

[From the Washington Post of September 18, 1941]

WAR OR PEACE—WHO DECIDES?

The power to decide whether there be war or peace is not vested primarily or exclusively in the Congress of the United States, but chiefly in the enemy and, next to the enemy, in the President as the Chief Executive and Commander of our Army and Navy and head of foreign relations.

The enemy usually, almost always, begins the war.

The President then tells Congress about the war after it has begun and asks Congress to declare that "a state of war" exists between the United States and the enemy.

The President, even before telling Congress about it, has usually exercised his constitutional privilege as Chief Executive and Commander in Chief and has struck back at the enemy as you and I would do if hit. Thus the wars of the United States have begun since the foundation of the Republic.

The British began the War of 1812 against the United States. "A state of war against the United States" already existed when Madison called it to the attention of the Congress. Even the peaceful Madison did a little fighting back against the British and the Indians. Congress didn't declare war against Great Britain, but declared "war exists between Great Britain and the United States" by virtue of the acts of war committed by Great Britain.

According to Polk, the American forces were merely reconnoitering in the southern part of Texas, recently annexed by the United States, when the Mexican forces crossed into Texas and thus passed the boundaries of the United States and attacked the forces of the United States; and the President, recognizing that war existed by the acts of Mexico itself, called for volunteers to repel the invaders and asked Congress to recognize and declare "the existence of war" between Mexico and the United States and to take effective measures for war.

According to Lincoln, the Confederates were the aggressors—attacked Fort Sumter, the President called for volunteers, the great Civil War began, and Congress was told about it afterward.

The Spanish-Cuban War, which began a little differently, is merely an exception which proves the rule.

As everybody knows, the Germans began the World War by ruthlessly sinking our ships, and Wilson fought back with armed merchantmen and, finally, when his patience was exhausted, advised Congress that

"a state of war" existed between the United States and Germany as a result of the unlawful attacks made upon our ships by Germany, and Congress then declared that "a state of war" existed and took adequate measures to defeat Germany.

The Germans have already extended World War II to us by sinking and shooting at our ships, and the President, as the Chief Executive and Commander in Chief, has issued the orders to shoot back and eliminate the German submarines and raiders from the seas which we travel—at least, within the broad zones established by us for our commerce.

Thus, the United States has already entered World War II—at least, within the zones prescribed by the President—and in due course Congress will be advised that "a state of war" exists and appropriately so declare.

While in actual practice Congress has little to do with whether there be war or peace, it, nevertheless, has a great function to perform in war—it controls the purse. By voting or withholding billions, it can make the wars of the United States effective or ineffective. To date it has never failed to recognize and declare existing war when requested by the President so to do, nor failed in its fundamental war function to carry the war on by furnishing the means for the successful prosecution thereof.

HENRY E. COLTON,
Formerly Special Assistant to the Attorney General of the United States.

NASHVILLE, TENN., *September 15.*

Revenue Act of 1941

EXTENSION OF REMARKS
OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

Mr. COCHRAN. Mr. Speaker, the revenue bill becomes a law with the President's signature, the House and the Senate having agreed to the conference report. Never in the history of our country have the people been called upon to contribute the amount that will be collected for the upkeep of the Government during the calendar year 1941, as the changes in the income tax and corporation tax will apply to next year's return based upon earnings during the calendar year 1941.

While the amounts our citizens are asked to pay are unprecedented, still they are minor in comparison with the taxes collected in Great Britain and in Canada. Roughly speaking, on a $2,500 income a married couple with 2 children in this country pay $12, in Great Britain, $530, and in Canada $115. On $5,000 a married couple with 2 children pays $271 under the new law, in Great Britain $1,655, and in Canada $735. On a $10,000 income in this country a married couple with 2 children pays $1,117, $4,305 in Great Britain, and $2,710 in Canada, while on a $25,000 income our new tax is $6,480, Great Britain's $14,817, and Canada's $10,721.

Under ordinary circumstances, I would not have voted for the tax bill, but the vote on agreeing to the conference report under the parliamentary situation placed a Member of Congress in a position to either accept it or leave it. Fully convinced that the country would be absolutely bankrupt if we did not pay part of our bill as we went along, as much as I disliked many features of the new tax bill, I supported it.

Had I been afforded an opportunity to vote directly upon the reduction in exemptions, I would have opposed it even though it would have caused some little delay and the loss of some several million dollars in excise taxes daily. I think it was a mistake to reduce the exemptions.

The cost of handling an income-tax return, where the citizen is forced to make a return but pays no taxes, is 50 cents, while the minimum cost of considering any return, no matter how small, is $1.50. Of course, on large returns where there is an investigation by a special agent, the cost runs into money, but additional amounts collected far offset the cost of administration in such cases.

When the bill was reported to the House by our Committee on Ways and Means it contained a provision which provided for the repeal of the law which enabled the husband and wife to file individual returns. Had that provision been adopted, the husband and wife would have been required to file a joint return. This provision was assailed especially by the Representatives of States having community-property laws and, despite the warning of members of the Ways and Means Committee, as well as many other Members, including myself, as to what would happen if that provision were defeated, the House in its wisdom voted the amendment down, and under the new law separate returns can be filed as heretofore by husband and wife. The only figures available on this subject apply to the taxable year of 1938. The House statistics show that 351,214 people in the United States out of 6,150,776 who filed returns, or a percentage of 5.7, receive a tax advantage. The amount of money that would have been collected, had the recommendation of the Ways and Means Committee prevailed, was estimated at approximately $329,000,000. As a result of this action by the House, when the bill went to the Senate, it was necessary to add provisions that would bring in at least $329,000,000, and this was done. In order to raise such a tremendous amount the Senate reduced the exemptions both for single and married persons and likewise increased and initiated new excise taxes which, in effect, are nothing whatsoever but a sales tax and are paid ultimately by the consuming public.

I say that in enacting a bill of this character, the principle of making those best able to pay contribute the larger amount was lost sight of.

Heretofore revenue bills have always carried administrative features contained in title II of the act. This year, rather than delay enactment of an additional tax bill which would have meant a loss of millions of dollars daily, the House and Senate agreed to bring in a separate measure this fall changing administrative features of the revenue laws as a whole. From time to time in the administration of our revenue laws, attorneys find loopholes through which their clients are able to escape taxation and when this is brought to the attention of the Congress those loopholes are closed. In a short while the Committee on Ways and Means of the House will consider a bill carrying amendments to the administrative features of the act. I want to express the hope now that when that bill is considered our committee will again make provisions that will do away with the joint-return practice and require husband and wife to make separate returns. This will not only affect the community-property States but will also affect the other 40 States of the Union, only 8 having community-property tax laws.

There is no reason why any individuals in this country should not be placed in the same category in filing income-tax returns. No one is entitled to advantage over another citizen. No one can say that it is sound legislation to grant advantages to 351,214 persons not accorded to 5,799,562 persons.

Writing tax bills is not a pleasant duty nor is voting for tax bills a pleasant duty, but necessity demands that we raise a tremendous amount of money to help pay our expenditures as we go along, and like it or not, we must provide the ways and means to raise this money.

I made several speeches in reference to joint returns. I received some letters opposing my attitude upon this subject, but I am happy to say that I answered every one stating my views in detail, and 25 percent of those who criticized my attitude later wrote me and stated that after reading my views they felt I was correct and withdrew their objection.

Mr. Speaker, in order that those interested might have official statistics bearing upon the subject of joint returns I include as part of my remarks the following table:

Total number of individual income-tax returns filed in 1938 by single persons, married couples filing joint and separate returns, nonheads of families, and community property returns, by States

State	Total number of returns filed	Number returns receiving tax advantage [1]	Number returns receiving no tax advantage [2]	Percent of total	
				Receiving tax advantage	Receiving no tax advantage
Alabama	39,010	1,536	37,474	3.9	96.1
Arizona	20,447	2,522	17,925	12.3	87.7
Arkansas	19,627	767	18,860	3.9	96.1
California	523,696	57,161	466,535	10.9	89.1
Colorado	41,701	1,878	39,823	4.5	95.5
Connecticut	130,880	7,065	123,815	5.4	94.6
Delaware	16,557	1,369	15,188	8.3	91.7
Dist. Columbia	113,425	5,004	108,421	4.4	95.6
Florida	55,940	4,267	51,673	7.6	92.4
Georgia	58,003	2,749	55,254	4.7	95.3
Hawaii	18,893	1,017	17,876	5.4	94.6
Idaho	13,223	1,713	11,510	13.0	87.0
Illinois	493,482	20,546	472,936	4.2	95.8
Indiana	121,539	3,964	117,575	3.3	96.7
Iowa	74,900	2,446	72,454	3.3	96.7
Kansas	51,730	2,007	49,723	3.9	96.1
Kentucky	53,453	2,695	50,758	5.0	95.0
Louisiana	59,019	10,399	48,620	17.6	82.4
Maine	26,676	1,331	25,345	5.0	95.0
Maryland	134,637	6,351	128,286	4.7	95.3

[1] Group consists of community property returns and separate returns of husbands and wives living together.

[2] Group consists of joint returns of husbands and wives living together, and single men and women, and married men and women, not living together, who are heads of families, or nonheads of families.

Total number of individual income-tax returns filed in 1938 by single persons, married couples filing joint and separate returns, nonheads of families, and community property returns, by States—Con.

State	Total number of returns filed	Number returns receiving tax advantage	Number returns receiving no tax advantage	Percent of total	
				Receiving tax advantage	Receiving no tax advantage
Massachusetts	297,080	17,183	280,497	5.8	94.2

Alanson B. Houghton

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. COLE of New York. Mr. Speaker, on yesterday I announced to the Congress the death of the Honorable Alanson B. Houghton, former Ambassador to Germany, former Ambassador to Great Britain, and former distinguished Member of this House. Pursuant to the permission granted to me to extend my remarks in the RECORD, I include herewith an editorial from the Washington Evening Star of September 17, 1941:

[From the Washington Evening Star of September 17, 1941]

ALANSON B. HOUGHTON

Those who were privileged to enjoy the friendship of Alanson B. Houghton will remember him always as one of the gentlest and kindliest of men. His diffidence, the measured manner of his speaking, the chivalrous thoughtfulness with which he dealt with all classes of people—those were the qualities which distinguished him among his contemporaries. If ever he was disturbed to the point of energetic resistance, the circumstance was concealed from public notice. His bearing was placidity itself. He was, in fine, a philosopher whom the aggravations of the world could not touch.

Given such a character, Mr. Houghton's success as a diplomatist is easy to understand. As Ambassador to Germany from 1922 to 1925 he earned the appreciation of the whole corps in Berlin. His post was incredibly difficult, but he met its exactions without the slightest complaint. A like observation may be suggested with regard to his services in Great Britain. He was named to the Court of St. James's at a moment when the United States needed a Minister of particular genius for tactful negotiation. To say that he justified the confidence of his country to the fullest extent is but to speak the minimum of truth. The 4 years—1925 to 1929—of his term in London were fruitful of noteworthy achievement.

Mr. Houghton, returning home at 65, was at the apex of his intellectual powers, and it was his choice to devote himself to idealistic labors. The National Industrial Conference, the Academy of Political Science, the Carnegie Endowment for International Peace, the Institute for Advanced Study, the Brookings Institution, and Washington Cathedral received his active help. He gave not merely his means but also himself—his time, his strength, his constructive spirit—to the great causes of education and religion.

The Nation to whose high purposes he was devoted is justified in being proud of such a life as that which Mr. Houghton lived. It is a fact worth mentioning that America is rich in citizens competent to appreciate and to seek to emulate his example.

Contradiction of Lindbergh's Claim That Jews Endanger United States by Control of Mediums Molding Thought

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

ARTICLE BY DOROTHY THOMPSON

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson, which appeared in the Washington Evening Star of Wednesday, September 17, 1941, entitled "Contradiction of Lindbergh's Claim That Jews Endanger United States by Control of Mediums Molding Thought":

[From the Washington Evening Star of September 17, 1941]

The remark to end all remarks on the Jewish question was made by Mark Twain, who said, "The Jews are members of the human race—worse I can say of no man."

However, Mr. Lindbergh and the Charlie McCarthys of the America First Committee in the Senate subcommittee "investigating" the movie industry have neither the wit, logic, nor humanity of Mark Twain. Mr. Lindbergh therefore managed in one breath to express his sorrow for the persecution of the Jews in Germany while advocating their persecution here if they exercise the same rights as other citizens.

Following the line taken in Washington against the movies, he says that the "British, Jewish, and administration groups" are the only important interventionists in this country, and that "the greatest danger to this country lies in the large Jewish ownership and influence in our motion pictures, our press, our radio, and our Government."

Leaving Mr. Lindbergh's motives aside, what is the plain factual truth about his statement? Is it a fact that Jews are the leading interventionists in the United States? Is it a fact that they have large ownership or influence in the motion pictures, press, radio, and Government? And if they have ownership, is there any ground for thinking that their racial origin determines the way they use their influence?

THE INFLUENTIAL INTERVENTIONISTS

I have written down a list of the most prominent and influential interventionists in the United States, in Government, radio, journalism, the press, and public life, including the two pro-interventionist organizations, the Committee to Defend America by Aiding the Allies and the Fight for Freedom.

In the Government: President Roosevelt, Cordell Hull, Henry L. Stimson, Frank Knox, and Col. William J. Donovan. In organized public activity: Herbert S. Agar, ex-Senator Ernest Willard Gibson, Bishop Henry Wise Hobson, James B. Conant, Wendell Willkie. Among the more influential radio commentators: Raymond Swing, H. V. Kaltenborn, Elmer Davis, Walter Winchell, William L. Shirer. Among journalists: Leland Stowe, H. R. Knickerbocker, Edward C. Taylor, Edgar Mowrer, John Gunther, Vincent Sheehan, John Whitaker, William Stoneman, Quentin Reynolds, and the editor of Foreign Affairs, Mr. Hamilton Fish Armstrong. Among columnists: Walter Lippmann, Jay Franklin, Raymond Clapper, Samuel Grafton, and myself.

Of these 30 names, who would certainly be the first people to be suppressed, exactly 2 are Jewish. The others are racially of Dutch, British, Irish, and German extraction; there are 3 of pure German extraction to 3 of Jewish; 4 of them—maybe more—Roosevelt, Swing, Hamilton Fish Armstrong, and Edgar Mowrer—are descendants of the oldest American families extant.

Well, are the Government, movies, radio, and press saturated with Jewish influences?

BANKS OWN FILM INDUSTRY

The only Jew in the Cabinet is Mr. Morgenthau. The policy-making bodies in foreign affairs are the President, the State Department, the Army, and the Navy. Jews are almost nonexistent in all these departments.

There are a great many Jewish executives in Hollywood. Jewish enterprise, which has never commanded really great capital in this country, was the first to see a latent big industry in the moving picture; they were the pioneers. But if I am correctly informed, most of the present ownership is in the hands of banks, and there are very few Jewish banks in America. None of the big three is Jewish: Chase National, Guaranty Trust, National City.

Radio is owned by tens of thousands of stockholders in several corporations. Does Mr. Lindbergh want to go over the lists and expropriate the stock in Jewish hands? He's got precedents for it in Fascist countries. Mr. Sarnoff, a young radio wizard, was discovered by Owen D. Young, and became president of R. C. A. N. B. C. has its own president, and he has never been Jewish. Of 26 directors and members of the advisory council, 2 are Jewish. C. B. S. has a Jewish president but not a Jewish majority on the board. Mutual is a cooperative system in which one of the stockholders is the rabidly isolationist Chicago Tribune.

PUBLIC DECIDES ON RADIO

Radio commentators have only one trouble with the broadcasting companies: They are not permitted to editorialize, and they are supposed to avoid controversy. Since the America First Committee considers even facts controversial if the facts don't help the America First Committee, and since the America First Committee organizes boycotts and letter-writing campaigns to sponsors, the lot of the radio commentator is hard. But if the public does not like the commentator, he goes off the air. Here, again, the public decides. And the most influential commentators are not paid by the networks but by sponsors. Does Mr. Lindbergh think no Jewish firms should be allowed to advertise?

Mr. Lindbergh's reference to Jewish influence falls completely wide of the mark when it comes to the press. There is an amazingly small amount of Jewish ownership of newspapers. The big news services—Associated Press, United Press, and International News Service—are not Jewish. The largest chains are Scripps-Howard and Hearst—not Jewish. The New York Times is Jewish-owned, but has an overwhelmingly gentile editorial board. Of the 11 most powerful interventionist newspapers in the country, only 1 is Jewish-owned.

POLICY WOULD CONTINUE

The most powerful interventionist weekly press is the Luce press—not Jewish. The two monthly magazines with the strongest interventionist editorial policy are the Ladies' Home Journal and the Atlantic Monthly—not Jewish.

In fact, if every American Jew died tomorrow, it would make not the slightest difference in the policy of the movies, the radio, the Government, or the press—unless, of course, Mr. Lindbergh and his followers could fill whatever positions were left vacant from the lists of the America First Committee.

There are precedents for that, too, in Fascist countries.

But, first, he would have to deal with some of us who are not Jews.

Some Fundamental Problems

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

ADDRESS BY GEORGE N. PEEK

Mr. WOODRUFF of Michigan. Mr. Speaker, Mr. George N. Peek, of Moline, Ill., formerly special adviser to President Roosevelt on foreign trade, and President of Export-Import Bank during 1934 and 1935; also the first Administrator of the Agricultural Adjustment Act in 1933, is a man who has devoted the better part of a busy life to bringing about a more equitable return on investment and labor for the American farmer. Many years ago he called attention to the fact that the farmer, when he sells his crop, is at the mercy of the man to whom he sells; that when he buys across the counter the things he must have and which he does not himself produce, he is at the mercy of the man from whom he buys, placing him in a position of disadvantage peculiar only to his particular calling.

Mr. Peek is a man of wide business experience. His experience in the activities outlined above has given him an unusual opportunity to familiarize himself with the technicalities of foreign trade, and certainly no one in this country is better equipped to discuss intelligently the economic problems which now confront us.

On September 11, 1941, at San Diego, Calif., before the Men's Republican League of San Diego County, Mr. Peek addressed himself on the subject, Some Fundamental Problems.

Under unanimous consent, I offer a copy of this speech for the RECORD. A careful reading of the same will disclose the thoughtful and scholarly way in which Mr. Peek has dealt with a subject which looms large in the future welfare of this Nation.

The speech follows:

In times of world crisis and national confusion such as these, we must look straight to fundamentals. We must moreover be able to relate our policies and programs in specific fields to a central core of fundamental national policy. Much of the confusion and danger in which we find ourselves involved springs from the failure of the present administration to define clearly for itself and for the country a central unified national policy in which each field of endeavor would have its component part. Instead, the administration has pursued domestic policies irredeemably in conflict with each other and foreign policies which have conflicted with the domestic policies they should have supplemented.

The war, terrible as it is, has done one thing for this Nation. It has awakened it with a bang. After 8 years we see what the dreamers, schemers, and bunglers have done for us. In spite of the huge expenditures of the past 8 years we see unemployment and lack of social and economic balance; we see also that we are unarmed and unprepared, standing at the brink of war. We shall have an opportunity during the next year to dispense with the bunglers and to follow our natural bent for organization, protection, and defense. To do this, however, we must elect a new Congress which must perform the functions reposed in it by the Constitution. There must be an end to a Congress which will rubber stamp everything the Executive asks; an end to one-man government.

It is the inescapable duty of the Republican Party to identify and define a basic national policy and then to coordinate with it the various domestic policies on which our functioning as a nation depends and to supplement it by a foreign policy and activity which such a unified national domestic policy demands. Our national interest must be the yardstick; to it all other policies must conform.

Every thinking man and woman views with the gravest misgivings the recklessness and emotionalism which characterize the foreign policy of the present administration. It has already affected the abandonment of the safeguard of our neutrality. It is stripping us of military aircraft and supplies, without the prospect of their early replacement, at a most critical juncture in world affairs. It threatens, if not checked, to embroil us in foreign wars, with unforeseeable losses of blood, treasure, and strength; to involve us for generations to come in the politics and intrigues of Europe and Asia; and to facilitate the establishment here of a New Deal dictatorship. This is gambling with our national security and imperiling the very foundations upon which our democracy is laid. The only way we can assist democracy abroad is by preserving and strengthening it here. Whatever our personal sympathies for the people of the British Empire may be, we should conserve our men, money, material, and energies for the sole purpose of insuring and of making effective our own national security and that of this hemisphere.

We must start with the proposition that the national interest of the American people should be the primary concern of those whom we entrust with direction of our Government. We must build for ourselves forthwith a position of military and economic defense, within the field of our potential control, so imposing and so impregnable that no aggressor will dare assail it, either directly or indirectly—a defense which will function effectively to protect us, our economy, and our institutions, regardless of the changes which may come about in other continents as a result of the tragic events now transpiring in Europe and Asia. The present war may be short or it may be long drawn out, but we can be certain that its post-war effects will not pass within our time. Our national policy must be such that it can cope with the vicissitudes of war and peace alike, and must be fashioned with that in view. All that conduces to that end must be retained and strengthened; all that does not accord with that purpose must be thrust away, no matter what its individual appeal or desirability may seem.

If we are substantially in accord on this concept of national interest as the supreme need of national policy, many of the problems with which we deal fall naturally into place and dictate their own solutions:

I. MILITARY DEFENSE

Complete self-dependence for national defense in the air, on the land and sea. A two-ocean Navy or its equivalent to make us independent of the navy of any foreign country in our relations with the rest of the world.

II. ECONOMIC DEFENSE

The immediate gearing of our industry, agriculture, transportation, and labor to wartime requirements, under a Department of Economic Defense clothed with adequate powers and unhampered by political tampering or by bureaucratic or legalistic red tape.

Development of new resources or substitutes for needed essential supplies (tin, rubber, manganese, etc., in the United States and the nations reasonably adjacent to us.

III. DIPLOMATIC DEFENSE

Reorientation of our foreign policies to conform to the paramount objective of national security, military and economic. Reaffirmation of our historic policy of no entangling alliances and that of the Monroe Doctrine. Conservation of our human and material resources to that end.

IV. INTERNAL STABILITY

Reorganization of the long-established protective system as the basis of American prosperity and social stability, and in particular its extension to insure fully the maintenance of a prosperous and self-dependent agriculture as the foundation of our economic system and of our social and political institutions.

V. FARM POLICY

The present agricultural program, as administered by Washington, is a demonstrated failure. We should, by amendment and improvement of existing legislation, make mandatory certain provisions and vigorously prosecute them administratively, so that the following shall be sustained:

The restoration of farm income and purchasing power and the maintenance of a free and self-dependent agriculture, which form the essential basis for industrial and national prosperity, employment, and security. Against the present program of restricted production and increased imports of competitive farm products, we should seek to increase farm income to its proper size

through the medium of improved prices and increased sales for American farm products.

1. The protection and full price benefit of the American market for the American farmer by the limitation to actual requirements (by tariffs, quotas, embargoes, or otherwise) of competitive farm imports or substitutes therefor.

2. The development of new uses for American agricultural products in industry and commerce and the development in the United States of the growth of farm commodities or their substitutes previously imported.

3. An American price for American consumption, independent of export or world prices. To accomplish this in the case of surplus crops on which the tariff is ineffective until such time as the home market is restored and developed, the payment of benefits upon the domestically consumed portion of such crops to compensate for lack of tariff protection and to insure a fair exchange value with the products farmers buy. When this parity price has been attained, we should provide the machinery whereby the farmers may establish a self-sustaining program, without substantial cost to the Government, through the medium of an equalization fee, substantially as provided in the McNary-Haugen bill of 1928.

4. Government assistance in disposing of surpluses in foreign trade for the best prices obtainable, bargaining for foreign markets selectively by countries and otherwise, both as to exports and imports.

5. The adoption of a long-range program for conservation of the soil for its own sake, as distinguished from schemes for production control, such program to be administered by the land-grant colleges or other responsible State agencies with Federal financial and technical assistance.

6. The encouragement of farmer-owned and farmer-controlled cooperative organizations to decrease the price spread between producer and consumer, the extension of commodity loans to farmers on a sound basis to assist in carrying seasonal surpluses and the encouragement of crop insurance under proper auspices.

7. The encouragement of the better financing of farm mortgages on a sound basis through recognized public and private agencies at low rates of interest on an amortization plan, to the end that farm ownership may be more widely distributed in the hands of those who actually work the land.

VI. FOREIGN TRADE AND FINANCIAL POLICIES

These must be shaped to protect and supplement our basic national security, the military and economic policies which that entails, and the internal stability on which national security must rest. We should concentrate control of our foreign trade and financial activities in an economic defense board.

Foreign trade and financial policy should be based upon and conform to the requirements of our domestic economic objectives. These objectives are the protection of the American market for American agriculture, industry, and labor, and the protection of American employment and standards of living. These should not be needlessly exposed to the impact of events abroad over which we have no control, nor should American recovery be sacrificed upon the altar of academic whims or internationalist diplomacy, particularly in the difficult post-war conditions with which we shall surely be confronted when the millions now engaged in warfare and in war production return to peacetime production and trade competition. Specifically, there should be:

1. A reorganization of the Tariff Commission into an Economic Defense Board as the responsible executive authority for the determination of foreign trade and financial policy in the light of American domestic interests and for the coordination of the foreign commercial and financial activities of the Federal Government.

2. The establishment of a comprehensive system of national bookkeeping, expressed in simple arithmetic, covering all our commercial and financial transactions with other nations, as an essential basis for determining questions of foreign trade and financial policy.

3. The adoption of a realistic policy of trading in the national interest under a system of quotas, and of selective imports and exports, granting tariff or other trade concessions only on a quid pro quo basis, thus returning to the traditional American policy of offering to all nations reciprocal treatment on the basis of the conditional most-favored-nation principle.

4. Congressional approval of all general trade agreements which have been or may be negotiated, as an essential to the maintenance of constitutional and responsible government.

A method by which this program may be effected is suggested by bills introduced in the current Congress by Senator VANDENBERG and Congressman ROY O. WOODRUFF, to provide for the economic defense of the United States. Under these bills all imports, agricultural and industrial, would be prohibited whenever prices were less than reasonable American prices in the American market on competing American products or their substitutes.

To summarize, we must make national security the sole criterion of our national policies. We should seek it by direct military, economic, and diplomatic measures such as are outlined above. We must establish it upon a firm basis of internal stability, to attain which a sound solution of the farm problem is indispensable. We must supplement that internal stability by foreign trade and financial policies which will strengthen and insulate that stability against the shocks and strains of wartime and post-war conditions.

We are a warm-hearted and courageous people. We must be cool-headed as well if we are not to dissipate the heritage of our fathers by following the false gods of foreign intervention and war. Our experience in Europe in 1917–19 was a costly and terrible lesson in the futility and folly of intervening in European affairs. Americans should not have to learn that lesson nor pay that price a second time, for the price is the blood and shattered lives of our young men and it may be the permanent loss of our liberties to a New Deal dictatorship.

Our aim should be to make possible to all Americans the fullest benefits of our form of government as granted by our Constitution and the Bill of Rights. The first requisite to this aim is knowledge based on reliable and comprehensive information, so that we may know what the problems are and consider them fairly. The second is a realization of the principle that foreign policies, whether political or economic, must not be permitted to destroy or impair our form of government or our standards of living.

The question boils down to this: Shall we take advantage of our position of geographic and economic security and contribute to world peace and prosperity by developing our own country and by attending to our own affairs, or shall we involve our Nation in foreign wars under the guise of protecting a theory of foreign trade which, as has been shown, is detrimental to our welfare? Shall we dilute our Nation's strength with the world's weakness? There rests our choice. Settle it by ballots, not bullets, and settle it now in the coming elections.

Be Prepared—The Boy Scouts of America Do Their Good Turn for National Defense

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

Mr. ANGELL. Mr. Speaker, the motto of the Boy Scouts of America, "Be prepared," might well be the objective of America. Too late we awoke to the fact that for the protection and preservation of our own democracy we must be prepared and that we had neglected to provide the essentials of our own national defense. America is a beehive of activity in putting our productive machine into full activity, turning out the tools and instruments and matériel so essential to protect our own people and at the same time defend the Western Hemisphere.

Active service for 25 years with the Boy Scouts of America has given me an opportunity to learn first hand the growth and achievements of this great youth organization, which has for its purpose the building into the lives of the youth of America ideals of genuine Americanism—the things for which we as a nation have stood throughout the years. If the ideals which motivate this large group of young Americans could be made the dominant characteristic of the men of tomorrow who shall rule the Nation, America indeed would be safe. In the recent drive to collect aluminum from all the households of America with which to overcome a bottleneck in this much-needed material for airplane construction the Boy Scout organization again came to the front and did a masterful job.

As a part of these observations I include the following commendation of the work of the Boy Scouts, which appeared August 1, 1941, in the Jamaica (N. Y.) Long Island Daily Press:

[From the Jamaica (N. Y.) Long Island Daily Press of August 1, 1941]

WELL DONE—THE SCOUTS SHOW RESULTS

It will not be giving away any defense secrets to report that the borough's aluminum drive was heading for a flop until the Boy Scouts stepped in and saved it.

Mobilized overnight, the boys did a remarkable job, a dramatic and convincing demonstration of what the Scouts can do in an emergency.

What they have done they can do again.

We believe that in this time of emergency, the Boy Scouts have proved themselves to be much more than a knot-tying, light-a-fire-without-matches organization.

They have performed a man's job, an important job, and they performed it while their elders were posing in front of patriotic posters, accepting obviously brand-new pots and pans from pretty girls.

In 2 days the Scouts collected more than 150,000 pieces of aluminum. They went on foot, on bicycles, in home-made wagons, in borrowed trucks, the family car, and an array of other conveyances. These they filled up and went back for more.

Literally, they rang every doorbell in the borough.

The result is that Queens has made more than a creditable showing in the aluminum drive.

Of course, other organizations, notably the American Legion and the neighborhood civic associations, did their part, but their performance pales alongside the Boy Scouts.

When the aluminum campaign was still in the discussion stage, it was proposed that it should be handled exclusively by the Scouts, but in a rush of patriotic fervor, their elders climbed on the defense band wagon, and the boys were pushed aside.

Alas, pots and pans cannot be collected with speeches. It requires perserverance and hard work, a patient door-to-door canvass.

Give that job to the grownups, and it would take days and days of committee meetings to get organized. The Scouts did it overnight.

It is comforting to know that the Boy Scouts of Queens live up to their motto: "Be prepared."

Mr. Speaker, I also include a letter from Mayor LaGuardia to Dr. James E. West, chief Scout executive, expressing his appreciation for the excellent service rendered by the Boy Scouts of America in the aluminum campaign:

CITY OF NEW YORK,
OFFICE OF THE MAYOR,
September 9, 1941.

DR. JAMES E. WEST,
Chief Scout Executive
Boy Scouts of America,
New York, N. Y.

DEAR DR. WEST: I want you to know how much I appreciate the fine service rendered by the Boy Scouts of America in the recent aluminum campaign. The splendid cooperation of the executives, Scout leaders, and troops in collecting aluminum for defense purposes have been a major contribution to the success of the campaign. Their generous support of this program is another evidence of the fine principles and high standards which identify the Boy Scouts.

Our Nation is indeed fortunate in having an organization such as the Boy Scouts which fosters the principles of democracy in the hearts of our youth, and which is always prepared to help in the defense of our country.

Sincerely yours,
F. LAGUARDIA, *Mayor.*

Mr. Speaker, as one Member of the Congress of the United States, I take this opportunity, publicly, to express my personal appreciation and I am sure the gratitude of the Nation, for this patriotic, unselfish service rendered by the Boy Scouts of America in doing their bit in seeing that the Nation itself is prepared.

The St. Lawrence and Labor

EXTENSION OF REMARKS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. MARTIN J. KENNEDY. Mr. Speaker, the following editorial should be read by the Members of Congress, because it points out a condition which has been passed over by the proponents of the St. Lawrence project:

[From the New York Times of September 18, 1941]

THE ST. LAWRENCE AND LABOR

Does the construction of a huge hydroelectric plant create much work or little? The answer apparently depends on the plant and its purpose. The Grand Coulee enterprise was heralded by the administration as a boon to labor and industry; but when the merits of the St. Lawrence project were presented by the administration's advocates before the House Committee on Rivers and Harbors, the amount of work and material required to develop the power possibilities of the International Rapids and to dig a channel for navigation from the Great Lakes to the Atlantic was treated as if it were almost negligible.

The total expenditures for labor, material, and equipment required in the construction of the Grand Coulee Dam and power plant from 1933 to February 1941 were $128,450,000. Of this amount 35 percent went to labor at the site and of the remainder 90 percent went for wages and salaries in producing raw materials, in processing and fabricating and in transporting finished products. According to the joint board of engineers, the development of the International Rapids for power and the provision of a deep waterway there will cost $266,170,000—an estimate which is less than half that of competent contractors. In the light of comparative costs it is clear that as much labor will be needed at the International Rapids, both at the site and in far-distant mills and factories, as the building of the Grand Coulee plant and its irrigation facilities demanded. An average of 4,600 men worked annually for 5 out of the 7 years that it took to finish Grand Coulee. Hence General Robins' statement before the House committee that not more than 10,000 men would be required at the International Rapids is about right. But these 10,000 must be supported by at least 17,000 producers of materials and equipment. Can we afford to divert 27,000 skilled and semiskilled men from overtaxed industries?

Three years ago the administration would have held up the example of the St. Lawrence as a work maker, but in these days the diversion of 27,000 men for a period of years is regarded as something inconsequential.

American Foreign Policy

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

ADDRESS BY HON. HERBERT HOOVER

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by former President Hoover, published in the New York Times of yesterday:

[From the New York Times of September 17, 1941]

TEXT OF HOOVER'S ADDRESS AT CHICAGO ON AMERICAN POLICY

After 10 weeks of observation I wish again to speak to my countrymen upon America's relation to this war. I shall speak analytically and dispassionately, for cool thinking is needed now as never before.

Since 10 weeks ago the military scene in the world has enormously shifted. New objectives for the American people have been advanced. The Navy has been ordered to start shooting. Our people are bewildered and divided.

No one will deny that if we keep up this step-by-step policy it will lead inevitably to sending our sons into this war. Nor will anyone deny that the realization of the objectives set before us leads to that same fate. It is the ultimate end of this road that must be looked at. And that I propose to discuss tonight.

WAR UP TO CONGRESS

But before I proceed let me make certain matters plain.

If we would preserve the very spirit of free institutions American boys must not be sent to death in this war without the specific declaration by the Congress. Congress should not be eliminated. And in the support of free institutions this debate must continue until Congress shall declare war.

Debate on war and peace ought to be lifted above intolerance and accusation. Those who sincerely and openly advocate sending our boys into this war are entitled to respect. And those who oppose it are entitled to like consideration.

I hold, and 99 percent of Americans hold, that totalitarianism, whether nazi-ism or communism, is abominable. Both forms are unmoral because they deny religion, and there is no sanctity of agreement with them. They are abhorrent because of their unspeakable cruelty and their callous slaughter of millions of human beings. I abhor any American compromise or alliance with either of them.

THE WAR SITUATION

A cold survey of this world situation will show that the dangers of ultimate totalitarian success are very much less than even 10 weeks ago. The fratricidal war between Hitler and Stalin is daily weakening both dictators.

Hitler may gain from Russia some supplies, but he now faces all the rest of Europe exhausted of its pre-war stocks of food and material. Although he has won unprecedented military victories, he has kindled behind him a consuming fire of hate.

It is now evident that he has failed to convert to nazi-ism the 200,000,000 people that he has invaded. He cannot recruit a division of dependable soldiers among them. They hate him. If he occupies all Russia it will add another 150,000,000 haters. Of the 160,000,000 people in Germany and its allies, many are becoming weary of war and of death.

The hate of Hitler will be more terrible than the blizzard was to Napoleon. His kingdom cannot live, even though he has no military defeat on the Continent.

We are assured Hitler cannot cross the English Channel with his armies. And England is even more impregnable because of this breathing spell for production of planes, tanks, and ships and our increasing aid in war tools. Her loss of ships and supplies at sea has greatly decreased, largely due to her more effective air patrol. And she daily becomes stronger in air attack on Germany.

DANGERS TO AMERICA LESS

The actual dangers to America are less today than at any time since this war began.

Thoughtful men agree that the revolution in weapons makes the Western Hemisphere impregnable from invasion by Hitler. A statement of mine some time ago was challenged. But it has been more than confirmed by Colonel Phillips, of our United States Army General Staff, who recently wrote:

"The bomber has made the American coast impregnable to invasion. And this still would be true if our Navy were inferior to that of any invading power. It makes it possible for this country to insure not only its own con-

tinental territory * * * but * * * to insure the impregnability of all North and South America."

And I may add that if Hitler had all the shipyards in Europe he could not in 5 years build an armada big enough even to start across the Atlantic.

Hitler is on his way to be crushed by the vicious forces within his regime. Patience for this is far better than spending the lives of our boys.

Under any American policy, whether interventionist or noninterventionist, in either Europe or Japan, if we have common sense we will concentrate upon building our production, give Britain her tools, and await the development of all these forces, both east and west.

FREEDOM OF THE SEAS

Mr. Roosevelt spoke last Thursday night upon the freedom of the seas and the recent incidents.

The President is right in vigorous protest at firing upon American warships. He is right in protest at sinking American merchant ships without adequate protection to the crews, even though they were all carrying contraband.

Any definition of freedom of the seas in wartime is largely academic Britain could not accept the President's definition and carry on an effective blockade.

But the President's policy of edging our warships into danger zones, of sending American merchant ships with contraband raises the most critical of all questions.

These steps to war are unapproved and undeclared by the Congress. That is not in accord with the spirit of representative government, and it should be remembered that these incidents are the consequence of violating the spirit of the Neutrality Act There are other ways than going into this war to secure reparation for transgression of our just rights and respect for them

FREEDOM FOR MANKIND

The basis of argument of those who would have us send our sons into war has greatly shifted in the last 2 months. The increasing emphasis is upon our moral obligation to send our boys to war in order to establish freedom for all men.

President Roosevelt on January 6 of this year stated that we seek "everywhere in the world" freedom of speech and expression, freedom of religion, freedom from fear, freedom from want. He has emphasized this many times since.

On August 12 the President and Prime Minister Churchill issued their Atlantic statement. They expanded these points by 9 more to 13. They are: No annexations, self-determination, self-government, equality of trade, social advancement, some sort of freedom of the seas, abandonment of the use of force, and disarmament of aggressor nations, and permanent peace.

Two weeks ago Mr. Roosevelt again referred to these questions and "our responsibility to build a democratic world."

I believe in the aspirations for freedom and peace in the world. I have myself urged and prayed and worked for them over a quarter of a century. I pray that they may yet come to the world.

But today the realistic questions which confront us are:

Can America impose these four freedoms upon Europe and Asia by sending our sons into this war?

Can America impose the nine new points on the world?

Shall we not lose in America all these freedoms by the very necessities that arise if we send our sons into this war?

VOICE OF EXPERIENCE

Here, my countrymen, you should listen to the stern voice of American experience.

Before the last World War we were indignant as we are now at aggression by dictator governments. Our sense of compassion and justice was aroused on behalf of the victims. We believed the New World could bring to the Old a new order of justice, right, and freedom. We would make the world safe for democracy. We would fight a war to end all war.

I advocated our joining in that war. I occupied highly responsible positions in the war, the peace and its aftermaths. I was part of these events. I can speak from facts, from record, from personal knowledge.

President Wilson 23 years ago in his 14 points and supplementary provisions not only declared every one of all the Churchill and Roosevelt principles and freedoms, but Wilson included still more freedoms and protections. He reflected the whole idealism of America.

We won that war. But we lost the peace. At least so far as our high purpose of freedom and permanent peace was concerned. Europe degenerated into a hell, the brew from which poisons the earth today.

It is the causes of this failure in the last World War that are important for us to examine now.

The causes of that failure of only 23 years ago lie far deeper than the viciousness of the Treaty of Versailles, or the failure of the League of Nations. The causes of that failure lie deep in the invisible forces which dominate and vibrate through the races which comprise the millions of people of Europe.

To most Americans Europe consists of magnificent cities, cathedrals, cafes, art, music, literature, great universities and monuments to heroism and human progress. Men among them have fought and died for liberty, to lift the dignity of man. From them all we have received magnificent heritage of human thought.

But other forces make the fates of these people. Here are 400,000,000 people on the continent divided into 26 races. They are crowded cheek by jowl in an area less than two-thirds of the United States. Suppose each of 26 of our States had its own language, its own racial inheritance, its own economic and political problems.

And suppose through all these races for centuries have surged the forces of nationalism, of imperialism, of religious conflict, memories of deep wrongs, of age-old hates, and bitter fears.

Suppose each had its own army and around each of these states was a periphery of mixed populations that made exact boundaries on racial lines hopeless. The outcries of separated minorities would be implacable and unceasing cause of war Suppose they all had different forms of government and even where it was a democratic form it was class government That would be Europe.

STRUGGLES OF EUROPE

The standards of living of these great masses of people in Europe are at the very base of the struggle for bare existence. Economic rivalry, setting up of barriers to trade, the desire for elbow room in growing nations, and the pressure of low living standards force quarrels and grabs for territory for exploitation of other parts of the earth.

And periodically there boils up among these people some Pied Piper with silver tongue calling some new Utopia. Or the new Man on Horseback calls his race to wars of aggression and ambition. Indeed, with a vicious rhythm these malign forces seem to drive nations, like the Gadarene swine, over the precipice of war.

In contrast, here in America during these 400 years since our beginnings we have grown steadily apart from the ideas of Europe. Every one of our ancestors came here to get away from this dread turmoil. Ours has been a continent of magnificent resources from which we have obtained a greater ease of life. Freed of European hates and fears of great armies on our borders, we have developed new concepts of liberty, of morals, and government.

Mr. Wilson's 14 points and supplementary provisions had before the armistice been formally accepted by both the Allies and the Germans as the basis of world peace. One of the most painful chapters in American history was the antagonism to these ideas by Allied statesmen the moment the war was won

NEW WORLD CONCEPTS

But the whole concepts which the New World brought to the Old were at conflict with the grim forces that faced European statesmanship.

The victorious Allies in Europe were impoverished. They had suffered dreadful butcheries and wrongs. They demanded revenge, punishment, colonies, and money. Their statesmen, representing their peoples, were not free agents to make peace upon President Wilson's basis.

A thousand years of history, fear, and hate demanded and obtained seats at that peace table. They will sit at the next peace table of Europe, and America will be just as foreign at that table again.

President Wilson made a valiant fight for his new order for mankind. But it was the collision of warm idealism born in a New World against the glacial forces of the Old World. The treaty would have been worse but for Wilson.

It was not the League of Nations which brought calamity in the world. It was the eternal malign forces of Europe.

Mr. Churchill himself had, with his usual bluntness, said 3 years ago, "Hitler's success, and, indeed, his survival as a political force, would not have been possible but for the lethargy and folly of the French and British Governments since the war."

AMERICAN IDEAS OF FREEDOM

American ideas of freedom and government are the result of slow growth in the hearts of people. It takes decades and centuries. They cannot be imposed by words, no matter how eloquent. They cannot be imposed by force. They cannot be imposed upon nations by treaties any more than they can be imposed by battle. We tried it once under the most perfect setting of triumphant victory over aggression, and with all the power and prestige of America.

The stern voice of experience says that America cannot impose its freedoms and ideals upon the 26 races of Europe or the world. We should not again sacrifice our sons for that proved will-o'-the-wisp.

Maintaining peace is a separate problem. While we cannot impose freedom, America can and must take part in maintaining peace in the world. We can contribute more to it if we are not exhausted morally, economically, and militarily by sending our boys into this war. I hope to discuss it at some future time.

The first trench in the battle for the four freedoms is to maintain them in America. That rests upon fidelity not only to the letter, but to the spirit, of constitutional government. Failure of Congress to assert its responsibilities or for the Executive to take warlike steps without the approval of the Congress is a direct destruction of the safeguards of freedom. We are on the way to weaken these freedoms in America—not to strengthen them.

Freedom of speech and expression are being stifled by war phobia right now in the United States.

FIFTH FREEDOM ECONOMIC

Incidentally, there is a fifth freedom. That is economic freedom. Freedom for men to

choose their own callings, to accumulate property in protection of their children and old age, freedom of private enterprise that does not injure others. The other four freedoms will not survive without this one.

A large number of the men administering our preparedness program do not believe in this freedom. With a long war—and it will be long if we put our boys into it—then their methods with the inevitable debt, inflation, unemployment, and demoralized agriculture will make us over into state socialism, probably under some other name.

And listen, my countrymen, to another voice of experience. Freedom from want was never won by a war.

The last World War cost us forty billions in debt and taxes in 3 years. Since then we have paid another forty billions in interest and in support of its disabled, its widows, orphans, and veterans. We may assume one-third of our people are today underhoused, underfed, underclothed, and undereducated.

And the last war was largely the cause of that poverty. These people have no freedom from want. But had we used those eighty billions for them instead of war we could have given every family of them a modern five-room house as a gift with all the gadgets. We could have given every person of them as a gift a whole outfit of new clothes once every year since that war. We could have given every family of them as a gift 7 pounds of meat and 7 pounds of bread every week ever since that war. We could have wiped out the one-room schoolhouses. We could have built a modern clinic in every backward county. And we would still have money left.

Freedom from want comes alone from keeping out of war. Underfed, underhoused, underclothed, undereducated people are the inevitable product of war.

POSITION OF RUSSIA

There are certain backgrounds upon which all freedom in America must rest.

Russia is rightly defending herself against aggression. But when it comes to sending our sons into this war we are confronted with something else. We need to take a long look. Russia is also an aggressor nation against democracy. And what happens to the millions of enslaved people of Russia and to all Europe and to our own freedoms if we send our sons to win this war for communism?

Twenty-five years ago and again today are not the only times we have been troubled by these eruptions of dictatorships in Europe.

Some Americans have perhaps forgotten that we had a vigorous interventionist movement in the United States urging us to join England in combat with Napoleon. That interventionist movement was led by Fisher Ames, a journalist of that day, one-time Member of Congress, and said to have been prevented only by illness from becoming president of Harvard University. The leader against joining in war was one Thomas Jefferson.

Fisher Ames thought Jefferson was reactionary and did not realize the modern forces. Ames insisted that Napoleon would dominate the world, including the United States. He was full of pungent phrases.

I give a collection of them: "I am sure we are to be subjugated by Bonaparte." "Let no man in America deceive themselves. If Bonaparte prevails (in Europe) we will be his vassals." "We shall be reduced to slavery." "In case Europe accepts peace and chains we of the United States are ripe and rotten for servitude and tribute." "Britain fights our battles." "One single hope of security is the British Navy." "If Russia is disarmed, how long will it be before England will be done for?" "We are infatuated enough to think America is a hiding place for liberty."

And Ames had some accomplishment in name calling. Generally, he felt Jefferson and Madison and Monroe were the fifth column of that day. He says of them, "Our noisy liberty men are eager for power and indifferent about the fall of our country."

And in those times ours was a puny nation of less people than New York City today. Except for the Fisher Ameses the Americans of that day were not scared.

PROGRAM OF ACTION

As the situation stands today, we can sum up certain bases upon which American policies should be predicated.

1. If we prepare we cannot be invaded nor our economic life be dangerously impaired.

2. England can prevent invasion of her shores if we give her the tools, and even warships, without our sending our boys to death, either on ships or land.

3. Hitler is on the way to be crushed by the vicious forces within his own regime.

4. We have proved by bitter experience that it is a futility for us to try to impose freedom and justice upon the world by war.

5. The ideas and ideals of the west can grow and spread abroad by our demonstration in our own country. They will die in the world if the freedoms shall become weakened or die in America.

6. To send our sons into this war must also be weighed in the scales of future America. Should we not weigh in this scale the dead and maimed? Should we not weigh the one-third of underfed, undernourished, underhoused, undereducated Americans for another generation that will be inevitable? Should we not weigh the loss of our own freedoms?

CONSTRUCTIVE POLICY IDEAS

And where do these facts, reasons, and conclusions point?

What is the constructive policy for America? Is it isolation? Is it intervention? Neither is possible. Neither is wisdom.

We must have impregnable defense. This defense must include the other 20 nations in the Western Hemisphere. That is not isolation.

We must give the tools of defense to the democracies. That is not isolation.

We should reserve our strength that unexhausted we may give real aid to reconstruction and stabilizing of peace when Hitler collapses of his own overreaching. That is neither isolation nor intervention.

We can do our greatest service to civilization by strengthening here in the Western Hemisphere free institutions and free men and women. That is not isolation. It is a service to all mankind.

But to send our boys out to kill. That is intervention.

We hear much urging to national unity. We could easily get unity—

If we stopped calling names.

If we directed our preparedness policies to the minimum interference with economic freedom.

If we gave aid to democracies alone of Europe and Asia, and gave it generously.

If we stopped provocative steps that may take our sons into war.

If no warlike step be taken and no agreement be made that is not submitted to the Congress. If the Congress decides for war, then we accept it.

I believe real unity can be had among the American people in these proposals.

Let us never forget we came over the ocean to the oasis of liberty. We extended this oasis greatly by mighty streams of freedom. They were dug and builded by the toil of our fathers and defended with their blood. Are we now to march out into the desert of European war and see the wells of freedom dried up behind us?

A Loathsome Weapon

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of Wednesday, September 17, 1941, entitled "A Loathsome Weapon":

[From the New York Herald Tribune of September 17, 1941]

A LOATHSOME WEAPON

Anti-Semitism was the most contemptible, as it was also the most dangerous, of all the weapons in the armory with which Hitler subverted Germany and set out to enslave the world. And from time immemorial the meanest, the most contemptible, as well as the safest and easiest, excuse of those who have spread this poison—whether Nazis or their sympathizers or their counterparts in other times and places—has been the pretense that the poisoner was really only a great-hearted friend of the Jews, trying to save them from the prejudices which their "unwisdom" or their "excesses" would otherwise arouse. One encountered it, ad nauseam, in the early days of the Hitler movement in Germany; one has met it over and over again elsewhere. Its viciousness is apparent; it is an obvious and despicable device for spreading the bigotry it pretends to combat. Yet this is the precise defense which Senator NYE has raised against the plain inference that the isolationists' precious "investigation" into the motion-picture industry is primarily an attempt to light the fires of Nazi anti-Semitism in aid of a cause already desperate.

Senator NYE, America First, and the other isolationist leaders alone know their own inner motives. Others, endeavoring to assess them, can only look at the evidence. They can only infer that the increasing persistence with which the anti-Semitic poison has appeared in isolationist pronouncements is not an accident. It was hardly an accidental choice of names when Senator WHEELER, in an isolationist speech as long ago as last February, was denouncing "political control by a financial oligarchy, whether it be the Thyssens and Krupps in Germany, the Rothschilds in England and France, the Sassoons in India and China, or the Morgans, the Warburgs, the Kuhn-Loebs, and other international bankers in the United States." One cannot forget Senator NYE's speech on August 1, in St. Louis:

"Who is pushing and hauling America to plunge us into this war? Who are the men? Who is putting up the money for all this propaganda? * * * I haven't the time to name all those contributing to our march to war, but I will tonight name some of them."

Out of thousands he might have selected, he actually gave 17 names of men prominent in the motion-picture industry, all Jewish sounding (that at least two are actually non-Jews was not explained) and carefully omitting the names of non-Jewish executives of

equal importance in some of the very companies to which he referred. The fact that the present "investigation" has been hastily broadened to bring in the names of a few non-Jewish motion-picture people does not remove the impression made by this speech.

One remembers America First's statement, appearing in the Daily News here on September 6, citing those who were attacking it. Among the thousands or hundreds of thousands of non-Jews who might have been used as examples, America First selected, in addition to British-born Dr. Frank Kingdon, three Jews and a speaker before the Jewish War Veterans. After this, Mr. Lindbergh's virtually unconcealed appeal to anti-Semitism 5 days later could not be regarded as an isolated episode; and the motion-picture investigation, beginning with Senator NYE's pronouncement that "four names, each that of one of the Jewish faith, each foreign-born" are "primarily responsible for propaganda in the motion-picture field" could take on, despite all the Senator's protestations, but one interpretation.

Many isolationists are not anti-Semitic, we are glad to concede. But the evidence that their leaders are deliberately taking up this despicable, disruptive, and profoundly inhuman and un-American weapon to bolster a lost cause is too strong to be disregarded; and there is no non-Jewish American deserving the name who will not turn from that business with loathing.

Labor Day Address

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

ADDRESS BY REV. JOHN C. FRIEDL, S. J.

Mr. SHANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a Labor Day address by Rev. John C. Friedl, S. J., director of the Institute for Social Reconstruction of Rockhurst College, Kansas City, Mo., before a meeting of the Omaha Central Labor Union, Omaha, Nebr., on September 1 of this year, as follows:

I believe we are all alike in this, that we share a certain uneasiness about our impending future. We are uneasy about our foreign affairs; we are uneasy about our domestic affairs. Though with something of a sigh of relief labor tells itself that it is now in the saddle, it, too, is uneasy about its own future because it is uneasy about the very soul of our national existence, our democracy, on which its continued well-being so urgently depends.

The note of emergency about our foreign affairs is but a momentary distraction from those greater long-range problems of our internal national life which clamor for solution. Put off as we may the day of reckoning, come it will. Our only hope is that we will meet it intellectually, spiritually, and psychologically prepared. It is this obligation of preparation for what is to come that I propose to discuss with you.

A NEW ERA FOR LABOR

Before all else we must recognize that we are entering a new era. Things will never again be just as they were. We are moving out of old conditions and old social and economic surroundings. I could cite hundreds of important men the world over who have said this very thing. But at the crossroads of the world, at the world's listening post, there is ever an observer whose vision is not cramped by international boundaries, racial groups, economic interests, and geographic hemispheres; one who surveys events as the world's most objective observer.

We have the late Pope Pius XI to thank for this rapid and very concise analysis of the contemporary scene. "There is no denying," he said 3 years ago, "that the world has entered upon one of those transition periods, of unrest, of questioning, of disorientation, and conflict which have been well described as turning points of history." Let us accept that as a fact, as simply and as categorically as he puts it there, and let labor build its house accordingly.

Does that mean that we must hold with the radicals that our traditional American way of life is on the way out; that our social, economic, and political democratic concepts must yield to some new form, say, of totalitarianism, whether of a class, or of so-called managers and economic coordinators, or of some one strong man speaking for an all-powerful state? Far from it.

We need to save the American way to the extent that it is worth saving. We want to save it as any alert businessman would want to save a going concern, prepared to sacrifice whatever does not contribute to its well-being. We want to save our American democracy not only from the threat of foreign domination but also from the danger of an internal break-up through lazy apathy and half-hearted concern over our domestic problems, and the jittery impulse that prompts so many unthinking people to grasp at any quack social formula that promises a general panacea.

Our problem is to restore human affairs in this country to a satisfactory state without sacrificing the essential framework of our democracy. To save what is good in our present economy of democratic enterprise based on a legitimate profit motive and the natural right of private ownership, we must first get to know and recognize entwining abuses, and then steel ourselves to be willing ruthlessly to cut these abuses away.

What is basically good in this going concern of ours must be thoughtfully and conscientiously preserved in the face of muddled, subversive, or revolutionary thinking. This takes study; and study takes time and sacrifice. Here, precisely, is where the obligation to prepare ourselves intellectually for our new era falls squarely on the employer and employee, on management, white-collar worker, or wage earner, on industry, commerce, and agriculture.

But were you to ask me on what one group falls the greatest responsibility, I would put my finger on him who works for a living in city, town, or village, because he is by far the most numerous, because the men and women, the sons and daughters of labor, have, up to this point, been the solid backbone of our traditional American democracy.

Whereas on Labor's leadership much depends, much more depends on its rank and file, it is an open secret that a local union usually gets only the leadership which it deserves. And if we insist that trade-unionism is good for democracy, that it is social and economic democracy in action, then if there is any democratic value in 10,000,000 trade-unionists standing shoulder to shoulder it is only to the extent that they (1) drop their lazy apathy in things which concern their own local first of all (2) measure carefully the national repercussions to any local action they may take, (3) seek the greater good of the greater number in the whole house of labor, rather in the whole house of democracy, which is substantially the same thing.

A TOWN HALL FOR LABOR

Need I say that this requires intelligent thought and planning? That is why a greater responsibility rests on those who are supposed democratically to elect and instruct their official spokesmen in the very field round which their daily lives revolve, namely, their job. Those who pay their union dues cannot let their obligations stop there. It was a sad commentary on the low ebb of dynamic unionism among the rank and file when local upon local had to inaugurate a system of fines in order to get the membership to attend what might well be labor's own town-hall meeting.

Today labor must sit down at the conference table and match wits and sagacity with the paid representative of its employers and with the spokesmen of its Government. The old hit-and-miss agreements and brass-knuckle decisions presumably are on their way out. The day of this heavy-handed business representative or bullying labor lawyer—old dogs who just won't learn new tricks—is over. The call is for a new type of leadership, highly intelligent, far-sighted and adept in the new approach to settling disputes and carrying on the legitimate business of the brotherhood. The presumption is that these will be younger men, though not necessarily so.

Many of the older leaders have gotten into a rut, or have entrenched themselves in self-perpetuating dynasties which have made truly democratic elections in the unions a farce. Many a local union, too, has sacrificed efficiency in the conduct of its official business and in the formulation of its policies by regarding many of its offices as good pastures in which to "farm out" its deserving old men. Don't misunderstand me: There is always room for fraternal charity among you, but where there is question of the good of the whole group I would much rather see you vote some of them an outright pension, than penalize yourselves by routine-like and inefficient administration.

NEW AND YOUNGER LEADERS

If, then, that leadership is to be new and younger, you, down there in the ranks, are eligible and you must make yourself eligible, for the voice of the future must be the real voice of American labor, intelligent, and trained to be guided by the demands of the common good of all.

If labor has grown in importance and prestige today, it also finds itself more often on the front pages of our newspapers. Although most of us can understand the sudden spotlighting of all and sundry labor disturbances and the superdiligence in reporting isolated instances of short-sighted, selfish, or dishonest policy, yet we would be blind and deaf were we not to realize that quite generally organized labor is losing the sympathetic confidence of the public. Because all of organized labor is blamed for the unthinking acts of one or a few, new notions of public relations must be learned and put into effect. And that takes study and demands time.

True it is that much social legislation of benefit to the mass of labor has been added to our statute books in the last decade, but I fear much of it became the wage earner himself has not kept up with it. There have been too many undemocratic short cuts to the attainment of material objectives without a corresponding understanding on the part of the rank and file.

If this whole thing is not to blow up in one gigantic muddle, the men and women of labor must be willing to go back to school again and put substance behind its temporary gains. There is much to be learned. And some means must be found to afford the wage earner a better opportunity for academic self-improvement.

A CRISIS FOR LABOR

There is no need for me to remind you that these are critical times, not only for the American idea and our existence as a free people, but also critical times for labor, especially organized labor. The small employer, caught between big business and the Nation-wide bargaining of some of the larger crafts, and faced with extinction in the relentless war game of defense priorities; the white-collar worker, envying the wages, hours, and conditions of labor, especially defense labor; people without vision, without insight, jittery and uncertain people, Cassandras and prophets of evil, all these see nothing but the end of things in this country unless some strong man comes along to silence and hogtie one of the parties to what they choose to call the labor combat. It is not hard to guess the identity of that party. It lives on the wrong side of the tracks.

Disheartening days lie ahead. In our history as a nation a war boom has always been the prelude to a seemingly inevitable crash. Must we face it again? With millions in the camps demobilized, the war industries in collapse, the Nation staggering under an immense debt, the nondefense industries unable to take up the slack of unemployment, what then?

Certainly now is the time for some long-range thinking on your part, because the future so intimately concerns you as an individual, let alone as a provider for dependents. Need we resign ourselves to the all too common assumption there must always be an unsolvable unemployment problem, constantly recurring crises, and the deadening fear that millions among us can never hope to be the complete human beings we were designed to be by our Creator, millions who can never for want of honest labor attain the ordinary completions of the good life: Food, home, clothing, medical care, security for old age? Can labor help with this problem in the spirit of citizens still free, or will it just drift into the position of being but voiceless wards of the State?

Now there is not one of us here who would not rise to the defense of the ideals behind craft unionism. But sometimes an uneducated hit-and-miss defense does more harm than good. Labor unions must learn to broaden their vision and extend their program of action. "We shall never solve the problem of industrial peace, justice, and good social order until labor unions assume a larger share of the responsibility for the welfare of the total community."

Far from being a subversive influence union organization can be the strong bulwark of the democracy which today we are being called upon to defend with our best efforts, with our experience and, if need be, with our lives. There is a call for every ounce of our patriotism. It is unlikely that the bulk of you here before me will be called to the camps for active service, but does that absolve you from giving your best in the one way that you can give it? This is not a time to make empty gestures and merely talk American democracy.

As never before, we are called upon to practice it in the only way that is here and now practical for us; not by letting George do it, not by making fancy speeches, or by being satisfied to have your international officers pledge your craft to the defense of our country. You have to begin right here, in your everyday living which revolves around your job and the craft you engage in, and more particularly right in your own local union which is supposed to be the democratic expression of the one common interest which unites you into a fraternal group rooted in justice and charity.

Recklessness of Defense Spending

EXTENSION OF REMARKS

OF

HON. CHARLES S. DEWEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

ARTICLE BY FRANK R. KENT

Mr. DEWEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Frank R. Kent, published in the Washington Evening Star of September 17, 1941:

[From the Washington Evening Star of September 17, 1941]

THE GREAT GAME OF POLITICS—RECKLESSNESS OF DEFENSE SPENDING IS DECLARED WITHOUT PARALLEL

(By Frank R. Kent)

In the early excitement of the "unlimited emergency" one of the ideas that got well established was that, no matter what else one did, it was unpatriotic or destructive, or anyhow something pretty terrible, to question any defense expenditure. It was all right to urge reduction in nondefense expenditures, but for defense there should be no limit and no criticism.

This was a perfectly sound conception—up to a point. Nothing could be sillier than to be niggardly in the business of national defense. Nothing could be more stupid than to endorse the necessity for arming the country and aiding England and then to haggle over the cost. Accordingly neither in Congress nor out was there any real opposition to granting the gigantic sums asked for by the President. They were given him without grumbling or delay. So, too, in all probability, will be given his next request to be made this week.

However, once granted, there would seem to be imposed upon the recipients a certain obligation to expend these huge grants of the people's money with a reasonable degree of responsibility and restraint. The truth is that they are not being expended in that way. They are being expended with a recklessness without parallel in public life. No one, not even the spenders themselves, is checking up or keeping tab. No one knows—and apparently no one cares—how huge the machine grows. Already it has become a swollen monstrosity. And it seems to be nobody's business.

UTTER HEEDLESSNESS

Those who still retain a measure of financial sanity insist it is essential that nondefense expenditures be cut to the bone. Those who have a reasonably realistic vision of what is happening under the screen of defense know that, no matter how deeply nondefense expenditures may be cut, unless someone somehow calls a halt on the utter heedlessness with which the defense organization is swelling the effort would be trivial so far as the restoration of financial equilibrium is concerned.

No reasonable person expects a job such as we have undertaken to be done without great waste of money. But the lack of restraint with which these funds are being dissipated, coupled with the wild rush from all parts of the country of the political, labor, and radical parasites to hook in with the defense machinery, is beyond all reason. The manner in which hordes of unnecessary people are being loaded on the bloated defense pay rolls is without precedent. It far exceeds anything that happened during the war 20 years ago. Washington is choked as it never was before. The pay rollers, with no available space left here, are spreading out into nearby cities and towns. And their number grows every week.

In another year there literally will be many thousands more job holders in defense work than there are today. And no one knows how many there are now. Naturally, the President cannot keep track of them or be concerned about them. But no one else is, either. It just isn't anybody's job to check up or say when the limit has been reached, or if there is a limit. There has never been anything quite like this. If the American people were not so dumb and inert; if the days were not so full of world-shaking events; if the Washington confusion were not so thick and the radio speeches so soothing, there might be a real popular protest over what is happening here.

IT JUST ISN'T DONE

As things are, the newspapers find it physically and intellectually impossible adequately to present situations such as this and at the same time even partially to cope with the job of presenting and commenting upon the other greatly accelerated and sensational news with which the" are daily overwhelmed. In addition, there is that idea that in the interests of defense all such things should be overlooked—that to point out these excesses might retard the program; that to stress them is "uncooperative"; even to mention them is in bad taste.

All of which is bosh. If somebody does not mention them—and continuously—our lost sense of proportion will never be regained. If, somehow, restraint is not imposed, this defense organization will be smothered under its own weight. It is rapidly reaching the swollen stage now when so many people are doing the same thing that often everybody has forgotten why and for whom or for what it is being done. Soon or late there will be a congressional investigation, and the resulting smell will be very bad indeed. The reasons there have been no move in this direction to date are: First, because the facts are just beginning to be realized; second, because so many Members of Congress have been busy placing their friends, relatives, and constituents on the defense pay rolls.

Celler Bill To Reduce Unemployment Tax

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

Mr. CELLER. Mr. Speaker, I am introducing today in the House a bill (H. R. 5640) to lower by one-third the pay-roll tax levied under the Social Security Act to raise money for unemployment-compensation benefits.

A study of the law's operation convinces me that the present rate is too high. It should be reduced at once.

It also is quite clear that benefits paid unemployed workers are too low in many States, and the period covered by such payments often is too short. In my judgment, these payments should be increased one-third. That, however, is up to the States themselves. If higher payments could be effected by congressional action, I should be happy to sponsor a measure to bring it about.

My bill concerns only the unemployment-compensation provisions of the act. It does not relate to old-age and survivors benefit payments. I am informed, however, that the Treasury Department is preparing to urge Congress to raise the present 2-percent pay-roll tax for such benefits to 5 percent.

Such a proposal, in my opinion, would be indefensible. If made, it should be voted down.

The claim that such a raise would be helpful in preventing inflation does not hold water. Inflation should not be prevented by juggling trust funds. If still higher taxes are necessary to prevent inflation, some other basis for taxation than trust funds should be found.

The old-age and survivors benefit provisions of the Social Security Act constitute a covenant between the Government and tens of millions of workers, the great majority of whom are wage earners. Millions of these workers are now confronted by new or much higher income taxes for defense. It certainly is not the time to change the covenant so that their tax burden will be made still heavier.

What seems more likely than a genuine desire to check inflation is the Treasury's unannounced hope of finding a ready market annually for another $2,000,000,000 to $3,000,000,000 of special bonds which need not be offered the public. That would be the precise result if the 2-percent rate were increased to 5 percent.

The bill I am offering today is based on analysis of the law's operation since it became effective on February 1, 1936. The basic pay-roll tax is 3 percent. It has been lowered in some States under certain circumstances. With those reductions in effect, however, the tax yielded a total of $3,621,358,523 through the end of the past fiscal year, June 30.

To that sum has been added a total derived from interest and other sources sufficient to swell the amount to nearly $4,000,000,000; to be exact, $3,986,871,081. Such is the amount that has been deposited in the Treasury's unemployed trust fund over the 5½-year period.

During the same period, unemployment compensation payments to covered workers totaled $1,549,975,841. Other charges against the fund have increased withdrawals to $1,703,213,385.

The balance in the fund June 30, 1941, was $2,283,657,696. That is nearly one and one-half times what was paid out in benefits. In other words, this pay-roll tax has yielded nearly 250 percent of actual payments to workers. The excess, now accelerating because of widespread employment under the defense program, is rising very rapidly.

There is no prophesying how large this gigantic fund will become under the present rate. Already it is far larger than necessary to meet any prospective need for many years.

Written in astronomical figures, the record shows more clearly than words that the present pay-roll tax is far too high. Under this showing, it seems to me, there is no justification whatever for continuing to pile up unneeded billions in Treasury vaults. The sensible thing is to reduce the rate and relieve business interests, the workers, and the public of the unnecessary part of this burden. In the long run the burden lies on the shoulders of the workers and the public as much as the employers.

Typical of the attitude of employers is the following excerpt from one letter of hundreds from representative business firms:

Business needs relief from payment of any tax where it can be shown that the rate is too high for actual needs. If the fund is allowed to accumulate beyond needs for benefit payments, means will be sought to divert a large part of it to other use. Ever since enactment of the social security law we have observed that a number of our customers are unable to meet their merchandise bills during the tax-payment periods. This is concrete evidence that many businesses are severely and unnecessarily punished by this tax.

A one-third reduction in the present rate is conservative. Returns then still would be sufficient to increase benefit payments one-third and leave a surplus every year. The bill which I have introduced reads as follows:

A bill to decrease the rate of tax imposed by the Federal Unemployment Tax Act

Be it enacted, etc., That section 1600 of the Federal Unemployment Tax Act (prescribing the rate of tax on employers of eight or more) is amended by striking out "3 percent" and inserting in lieu thereof "2 percent."

SEC. 2. The amendment made by this act shall take effect January 1, 1942.

Common sense calls for the passage of this bill and the proposed reduction.

The Supreme Court Fight and the Purges of 1938

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

LETTER FROM JOHN O'CONNOR

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, written by John O'Connor, former Member of this House, to the editor of Collier's magazine:

WASHINGTON, D. C., *September 10, 1941.*
EDITOR, COLLIER'S,
The Crowell-Collier Publishing Co.,
250 Park Avenue, New York, N. Y.

MY DEAR SIR: Like millions of other Collier's readers, I was shocked at President Roosevelt's rehash of his impudent Supreme Court fight of 1937, the first installment of which appeared in your issue of September 13, 1941.

The article, with its misstatements and piecemeal quotations has been sufficiently commented upon throughout the country by our editorial and other writers.

I join with the unanimous sentiment of those writers that it was most unfortunate for unity that this injudicious splurge should be put out at this time, under the President's name—even if he, instead of Sam Rosenman, did in fact write it.

At a more propitious time, statesmen, scholars, and historians will challenge most of the statements in the article and point out the evasions and twistings.

My prime purpose in writing you, however, is in reference to the coming "President's article on the 'purge' of 1938." Being the only victim of that "noble, democratic, American crusade," I naturally will await the article, or alibi, with a great deal of interest. It will probably be as inaccurate as the first Supreme Court article, and, of course, I shall know because "I was there." In addition to his "purge" of me, I had conversations with the President early in 1938 at which he hysterically stated what he "would do" to those "so and so" Senators George, McCarran, Wheeler, Burke, O'Mahoney, Byrd, etc.

I followed all the "purges" of 1938, including my own, and watched, and felt, the participation of Ickes, Hopkins, Corcoran, John L. Lewis, Earl Browder, LaGuardia, "Ben" Smith, Flynn, etc., etc.

In view of my close connection with the "historic purge," I feel I should be permitted to answer or comment upon the President's "purge" article.

Naturally, I am making the offer first to your magazine, and shall appreciate hearing from you promptly, so, if you decline it, I may make other arrangements.

May I suggest one way of handling it which should prove effective—that you send me the President's article, confidentially, sufficiently in advance of its publication, so my answer may be printed in the same issue as the original article.

Sincerely yours,

JOHN O'CONNOR,
Former Chairman of the Rules Committee of the United States House of Representatives.

Prevent Price Increases

EXTENSION OF REMARKS
OF
HON. OSCAR YOUNGDAHL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

RESOLUTION BY THE CITY COUNCIL OF THE CITY OF MINNEAPOLIS

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks, I include the following resolution passed by the Minneapolis City Council on September 12, 1941:

Resolution requesting our Representatives in Congress from Minnesota and the Price Control Administrator of the Federal Government to take such measures as will prevent and avoid an undue rise in the price of supplies, materials, apparatus, and equipment required in essential local governmental functions, more particularly those related to fire, police, water supply, public health, and public hospital services

Resolved by the City Council of the City of Minneapolis:

Whereas authorized spokesmen for the Federal Government have joined with others

in stressing the importance of reduction in State and local governmental expense as one of the measures necessary to assist in the program of financing Federal defense expenditures; and

Whereas a substantial part of the governmental expenses of the city of Minneapolis is incurred in connection with the purchase of materials, supplies, apparatus, and equipment required in essential local functions of government; and

Whereas experience of recent months indicates a sharp rise in the price the city is called upon to pay for such essential purchase requirements; and

Whereas the Federal Government has undertaken to regulate and restrict commodity prices: Now, therefore, be it

Resolved, That our Representatives in the Congress from Minnesota and the Price Control Administrator of the Federal Government be, and they are hereby, requested to take such measures as will prevent and avoid an undue rise in the price of supplies, materials, apparatus, and equipment required in essential local governmental functions, more particularly those related to fire, police, water supply, public health, and public hospital services.

Passed September 12, 1941.

W. GLEN WALLACE,
President of the Council.

Approved September 12, 1941.

MARVIN L. KLINE,
Mayor.

Attest:

CHAS. C. SWANSON,
City Clerk.

My Fight Before the Interstate Commerce Commission and the Courts of the Country for Equal Accommodations for Negro Passengers Traveling Interstate; a Brief History of the Case

---

EXTENSION OF REMARKS

OF

HON. ARTHUR W. MITCHELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

Mr. MITCHELL. Mr. Speaker, on April 19, 1937, I purchased a first-class round-trip railroad ticket from Chicago, Ill., to and from Hot Springs, Ark., over the Illinois Central and Rock Island Railroads via Memphis, Tenn. While traveling on this ticket between Memphis, Tenn., and Little Rock, Ark., on the morning of April 21, 1937, I was ejected from the first-class car by the conductor of the Rock Island passenger train on which I was then traveling. The reason for ejecting me was that I was riding in the body of a Pullman car in which there were riding several white passengers, the conductor claiming that the law of the State of Arkansas prohibited such an act by statute.

Suit was filed before the Interstate Commerce Commission asking for a cease and desist order, and a second suit was filed—which is now pending—in the civil courts of Illinois, asking damages in the amount of $50,000. Because of the thousands of inquiries which have come to me with reference to this matter, particularly the suit which has already been adjudicated upon the findings and judgment rendered by the Supreme Court of the United States, I am taking this opportunity to bring to the attention of the country at large the findings and judgment of the Interstate Commerce Commission, the United States District Court of the Northern District of Illinois, and the Supreme Court of the United States.

ACTION BEFORE INTERSTATE COMMERCE COMMISSION

Complaint filed September 2, 1937. Assigned for hearing December 4, 1937. Hearing held in Chicago, March 7, 1938. Report of Commissioner Disque May 5, 1938. Exception to report filed May 24, 1938. Oral argument before Commission, July 6, 1938. Report of Commission denying relief prayed for in petition November 7, 1938. Petition for rehearing filed January 21, 1939. Petition denied by Commission March 6, 1939.

ACTION BEFORE UNITED STATES DISTRICT COURT

Appeal to United States district court April 20, 1939. (Answers were duly filed by defendants.) Oral argument before United States district court, May 27, 1940. Order of United States district court denying relief, June 29, 1940.

ACTION BEFORE SUPREME COURT OF THE UNITED STATES

Notice of appeal to United States Supreme Court, August 23, 1940. Appeal to United States Supreme Court, November 18, 1940. Probable jurisdiction taken by United States Supreme Court, December 1940. Argument before United States Supreme Court, March 13, 1941. Decision handed down by Chief Justice Hughes—all Justices concurring—April 28, 1941.

[Supreme Court of the United States, No. 577. October term, 1940. Arthur W. Mitchell, appellant, against the United States of America, Interstate Commerce Commission, Frank O. Lowden, et al. Appeal from the District Court of the United States for the Northern District of Illinois. April 28, 1941]

Mr. Chief Justice Hughes delivered the opinion of the Court.

Appellant, Arthur W. Mitchell, filed a complaint with the Interstate Commerce Commission alleging an unjust discrimination in the furnishing of accommodations to colored passengers on the line of the Chicago, Rock Island & Pacific Railway Co. from Chicago to Hot Springs, Ark., in violation of the Interstate Commerce Act. The Commission dismissed the complaint (229 I. C. C. 703) and appellant brought this suit to set aside the Commission's order. Upon a hearing before three judges, the district court found the facts as stated in the Commission's findings and held that the latter were supported by substantial evidence and that the Commission's order was supported by its findings. The court then ruled that it was without jurisdiction, and its dismissal of the complaint was stated to be upon that ground. The case comes here on direct appeal (28 U. S. C. 47a).

The following facts were found by the Commission: Appellant, a Negro resident of Chicago, and a Member of the House of Representatives of the United States, left Chicago for Hot Springs on the evening of April 20, 1937, over the lines of the Illinois Central Railroad Co. to Memphis, Tenn., and the Rock Island beyond, traveling on a round-trip ticket he had purchased at 3 cents per mile. He had requested a bedroom on the Chicago-Hot Springs Pullman sleeping car but none being available he was provided with a compartment as far as Memphis in the sleeper destined to New Orleans. Just before the train reached Memphis, on the morning after leaving Chicago, he had a Pullman porter transfer him to the Chicago-Hot Springs sleeper on the same train. Space was there available and the porter assigned him a particular seat in that car for which he was to pay the established fare of 90 cents. Shortly after leaving Memphis and crossing the Mississippi River into Arkansas, the train conductor took up the Memphis-Hot Springs portion of his ticket but refused to accept payment for the Pullman seat from Memphis and, in accordance with custom, compelled him over his protest and finally under threat of arrest to move into the car provided for colored passengers. This was in purported compliance with an Arkansas statute requiring segregation of colored from white persons by the use of cars or partitioned sections providing "equal, but separate and sufficient accommodations" for both races. Later the conductor returned the portion of the ticket he had taken up and advised appellant that he could get a refund on the basis of the coach fare of 2 cents per mile from Memphis. That refund was not claimed from defendants and was not sought before the Commission, but it was found that the carriers stood ready to make it upon application. Appellant has an action at law pending against defendants in Cook County, Ill., for damages incident to his transfer.

The Commission further found that the Pullman car contained 10 sections of berths and 2 compartment drawing rooms; that the use of one of the drawing rooms would have amounted to segregation under the State law and ordinarily such combinations are available to colored passengers upon demand, the 90-cent fare being applicable. Occasionally they are used by colored passengers but in this instance both drawing rooms were already occupied by white passengers. The Pullman car was of modern design and had all the usual facilities and conveniences found in standard sleeping cars. It was air-conditioned, had hot and cold running water and separate flushable toilets for men and women. It was in excellent condition throughout. First-class white passengers had, in addition to the Pullman sleeper, the exclusive use of the train's only dining car and only observation-parlor car, the latter having somewhat the same accommodations for day use as the Pullman car.

The coach for colored passengers, though of standard size and steel construction, was "an old combination affair," not air-conditioned, divided by partitions into three main parts, one for colored smokers, one for white smokers and one in the center for colored men and women, known as the women's section, in which appellant sat. There was a toilet in each section but only the one in the women's section was equipped for flushing and it was for the exclusive use of colored women. The car was without wash basins, soap, towels, or running water, except in the women's section. The Commission stated that, according to appellant, the car was "filthy and foul smelling," but that the testimony of defendants' witnesses was to the contrary.

The Commission found that in July 1937, about 3 months after complainant's journey above mentioned, the old combination coach was replaced by a modern, all-steel, air-conditioned coach, which was divided by a partition into two sections, one for colored and the other for white passengers, and had comfortable seats. In each section there are wash basins, running hot and cold water, and separate flush toilets for men and women. This coach, the Commission said, was "as fully desirable in all its appointments as the coach used entirely by white passengers traveling at second-class fares."

The Commission also found that the demand of colored passengers for Pullman accommodations over the route in question was shown to have been negligible for many years; that "only about 1 Negro to 20 white passengers rides this train from and to points on the line between Memphis and Hot Springs," and there is hardly ever a demand from a colored passenger for Pullman accommodations. The conductor estimated that this demand did not amount to one per year. What demand there may have been at ticket offices did not appear.

The Commission's conclusion was thus stated: "The present coach properly takes care of colored second-class passengers, and the drawing rooms and compartments in the sleeper provide proper Pullman accommodations for colored first-class passengers, but there are no dining-car nor observation-parlor-car accommodations for the latter, and they cannot lawfully range through the train."

The Commission, though treating the enforcement of the State law as a matter for State authorities, thought that in deciding the case on the facts presented it must recognize that the State law required the defendants to segregate colored passengers; that in these circumstances the present colored-passenger coach and the Pullman drawing rooms met the requirements of the act; and that as there was comparatively little colored traffic and no indication that there was likely to be such demand for dining-car and observation-parlor-car accommodations by colored passangers as to warrant the running of any extra cars or the construction of partitions, the discrimination and prejudice was "plainly not unjust or undue." The Commission observed that it was only differences in treatment of the latter character that were "unlawful and within the power of this Commission to condemn, remove, and prevent."

From the dismissal of the complaint five Commissioners dissented.

The United States as a party to this suit to set aside the Commissioner's order, and one of the appellees, does not support the judgment of the court below and has filed a memorandum stating its reasons. The Government concludes that the Commission erroneously supposed that the Arkansas separate coach law applied to an interstate passenger and erroneously determined that the small number of colored passengers asking for first-class accommodations justified an occasional discrimination against them because of their race.

The other appellees—the Interstate Commerce Commission and the carriers—appear in support of the judgment.

First: The Commission challenges the standing of appellant to bring this suit. We find the objection untenable. This question does not touch the merits of the suit but merely the authority of the district court to entertain it. The fact that the Commission's order was one of dismissal of appellant's complaint did not foreclose the right of review. Appellant was an aggrieved party and the negative form of the order is not controlling (*Rochester Telephone Corporation* v. *United States*, 307 U. S. 125, 143).

Nor is it determinative that it does not appear that appellant intends to make a similar railroad journey. He is an American citizen free to travel, and he is entitled to go by this particular route whenever he chooses to take it, and in that event to have facilities for his journey without any discrimination against him which the Interstate Commerce Act forbids. He presents the question whether the act does forbid the conduct of which he complains.

The question of appellant's right to seek review of the Commission's order thus involves the primary question of administrative authority, that is, whether appellant took an appropriate course in seeking a ruling of the Commission. The established function of the Commission gives the answer. The determination whether a discrimination by an interstate carrier is unjust and unlawful necessitates an inquiry into particular facts and the practice of the carrier in a particular relation, and this underlying inquiry is precisely that which the Commission is authorized to make. As to the duty to seek a determination by the Commission in such a case, we do not see that a passenger would be in any better situation than a shipper (*Texas & Pacific Railway Co.* v. *Abilene Cotton Oil Co.*, 204 U. S. 426; *Robinson* v. *Baltimore & Ohio R. R. Co.*, 222 U. S. 506; *Mitchell Coal Co.* v. *Pennsylvania R. R. Co.*, 230 U. S. 247; *Morrisdale Coal Co.* v. *Pennsylvania R. R. Co.*, 230 U. S. 304; *General American Tank Car Co.* v. *El Dorado Terminal Co.*, 308 U. S. 422).

The District Court had jurisdiction to review the action of the Commission and the question on that review was whether that action was in accordance with the applicable law.

Second: The case was submitted to the district court upon the evidence taken before the Commission. The undisputed facts showed conclusively that, having paid a first-class fare for the entire journey from Chicago to Hot Springs, and having offered to pay the proper charge for a seat which was available in the Pullman car for the trip from Memphis to Hot Springs, he was compelled, in accordance with custom, to leave that car and to ride in a second-class car and was thus denied the standard conveniences and privileges afforded to first-class passengers. This was manifestly a discrimination against him in the course of his interstate journey and admittedly that discrimination was based solely upon the fact that he was a Negro. The question whether this was a discrimination forbidden by the Interstate Commerce Act is not a question of segregation but one of equality of treatment. The denial to appellant of equality of accommodations because of his race would be an invasion of a fundamental individual right which is guaranteed against State action by the fourteenth amendment (*McCabe* v. *Atchison, T. & S. F. Rwy. Co.*, 235 U. S. 151, 160–162; *Missouri ex rel. Gaines* v. *Canada*, 305 U. S. 337, 344, 345) and in view of the nature of the right and of our constitutional policy it cannot be maintained that the discrimination as it was alleged was not essentially unjust. In that aspect it could not be deemed to lie outside the purview of the sweeping prohibitions of the Interstate Commerce Act.

We have repeatedly said that it is apparent from the legislative history of the act that not only was the evil of discrimination the principal thing aimed at, but that there is no basis for the contention that Congress intended to exempt any discriminatory action or practice of interstate carriers affecting interstate commerce which it had authority to reach. *The Shreveport Case* (234 U. S. 342, 356); *Louisville & Nashville R. Co.* v. *United States* (282 U. S. 749, 750); *Merchants Warehouse Co.* v. *United States* (283 U. S. 501, 512, 513). Paragraph 1 of section 3 of the act says explicitly that it shall be unlawful for any common carrier subject to the act "to subject any particular person * * * to any undue or unreasonable prejudice or disadvantage in any respect whatsoever" (49 U. S. C. 3). From the inception of its administration the Interstate Commerce Commission has recognized the applicability of this provision to discrimination against colored passengers because of their race and the duty of carriers to provide equality of treatment with respect to transportation facilities; that is, that colored persons who buy first-class tickets must be furnished with accommodations equal in comforts and conveniences to those afforded to first-class white passengers. See *Councill* v. *Western & Atlantic R. R. Co.* (1 I. C. C. 339); *Heard* v. *Georgia R. R. Co.* (1 I. C. C. 428); *Heard* v. *Georgia R. R. Co.* (3 I. C. C. 111); *Edwards* v. *Nashville, C. & St. L. Rwy. Co.* (12 I. C. C. 247); *Cozart* v. *Southern Rwy. Co.* (16 I. C. C. 226); *Gaines* v. *Seaboard Air Line Rwy Co.* (16 I. C. C. 471); *Crosby* v. *St. Louis-San Francisco Rwy. Co.* (112 U. S. 239).[2]

Third. We find no sound reason for the failure to apply this principle by holding the discrimination from which the appellant suffered to be unlawful and by forbidding it in the future.

That there was but a single incident was not a justification of the treatment of the appellant. Moreover, the Commission thought it plain that "the incident was mentioned as representative of an alleged practice that was expected to continue." And the Commission found that the ejection of appellant from the Pullman car and the requirement that he should continue his journey in a second-class car was "in accordance with custom"—that is, as we understand it—according to the custom which obtained in similar circumstances.

Nor does the change in the carrier's practice avail. That did not alter the discrimination to which appellant had been subjected, and as to the future the change was not adequate. It appears that since July 1937 the carrier has put in service a coach for colored passengers which is of equal quality with that used by second-class white passengers. But, as the Government well observes, the question does not end with travel on second-class tickets. It does not appear that colored passengers who have bought first-class tickets for transportation by the carrier are given accommodations which are substantially equal to those afforded to white passengers. The Government puts the matter succinctly: "When a drawing room is available, the carrier practice of allowing colored passengers to use one at Pullman seat rates avoids inequality as between the accommodations specifically assigned to the passenger. But when none is available, as on the trip which occasioned this litigation, the discrimination and inequality of accommodation become self-evident. It is no answer to say that the colored passengers, if sufficiently diligent and forehanded, can make their reservations so far in advance as to be assured of first-class accommodations. So long as white passengers can secure first-class reservations on the day of travel and the colored passengers cannot, the latter are subjected to inequality and discrimination because of their race." And the Commission has recognized that inequality persists with respect to certain other facilities, such as dining-car and observation-parlor car accommodations.

We take it that the chief reason for the Commission's action was the "comparatively little colored traffic." But the comparative volume of traffic cannot justify the denial of a fundamental right of equality of treatment, a right specifically safeguarded by the provisions of the Interstate Commerce Act. We thought a similar argument with respect to volume of traffic to be untenable in the application of the fourteenth amendment. We said that it made the constitutional right

[1] In this view, we have no occasion to consider the questions discussed by the Attorneys General of several States in their briefs as amici curiae.

[2] In *Edwards* v. *Nashville, C. & St. L. Rwy. Co.* (12 I. C. C. 247, 249) the principle was thus stated: "If a railroad provides certain facilities and accommodations for first-class passengers of the white race, it is commanded by the law that like accommodations shall be provided for colored passengers of the same class. The principle that must govern is that carriers must serve equally well all passengers, whether white or colored, paying the same fare. Failure to do this is discrimination and subjects the passenger to 'undue and unreasonable prejudice and disadvantage.'"

depend upon the number of persons who may be discriminated against, whereas the essence of that right is that it is a personal one (*McCabe* v. *Atchison, Topeka & Santa Fe Rwy. Co.*, supra). While the supply of particular facilities may be conditioned upon there being a reasonable demand therefor, if facilities are provided, substantial equality of treatment of persons traveling under like conditions cannot be refused. It is the individual, we said, who is entitled to the equal protection of the laws, not merely a group of individuals or a body of persons according to their numbers (*Id.*). See also *Missouri ex rel. Gaines* v. *Canada* (pp. 350, 351.) And the Interstate Commerce Act expressly extends its prohibitions to the subjecting of "any particular person" to unreasonable discriminations.

On the facts here presented there is no room, as the Government properly says, for administrative or expert judgment with respect to practical difficulties. It is enough that the discrimination shown was palpably unjust and forbidden by the act.

The decree of the district court is reversed, and the cause is remanded with directions to set aside the order of the Commission and to remand the case to the Commission for further proceedings in conformity with this opinion.

It is so ordered.

[In the District Court of the United States for the Northern District of Illinois, Eastern Division. In equity, No. 500. Arthur W. Mitchell, petitioner-plaintiff, against United States of America et al., defendants]

DECREE

This cause, again coming on to be further heard at this term before Hon. William M. Sparks, circuit judge of the United States Circuit Court of Appeals for the Seventh Circuit, and the Honorable Charles E. Woodward and Honorable Michael L. Igoe, judges of the United States District Court for the Northern District of Illinois, Eastern Division, at Chicago, in accordance with the statutes in such case made and provided, upon the motion of the plaintiff herein for a decree in accordance with the mandate of the Supreme Court of the United States in the appeal prosecuted from the order and decree entered in the said United States district court, June 27 A. D. 1940, in this cause and recited in said mandate dated June 5 A. D. 1941, and filed herein on the 7th day of June A. D. 1941, due and timely notice of which hearing has been given to the defendant, United States of America, and to all of the defendants and interveners herein.

The court, after hearing evidence and arguments of counsel for the parties of record herein who have desired to be heard, upon consideration thereof and of the opinion and mandate of the United States Supreme Court herein being fully advised in the premises, finds, in accordance with said opinion and mandate of the Supreme Court, that the order and decree of this court entered herein on the 27th day of June A. D. 1940, dismissing this cause for lack of jurisdiction at the costs of the plaintiff, should be vacated, set aside, and annulled and that a decree should be entered herein setting aside the order of the Interstate Commerce Commission, remanding the case to the said Interstate Commerce Commission for further proceedings in conformity with the opinion of the Supreme Court of the United States rendered April 28 A. D. 1941.

The court further finds from inspection of the record in this cause that the plaintiff, ARTHUR W. MITCHELL, deposited as an appeal bond in this cause a sum of $300 in cash, and that said sum of $300, deposited with the clerk of this court by the said ARTHUR W. MITCHELL, plaintiff herein, should be forthwith returned to him by the clerk of this court.

The court further finds that the cost herein expended by the said ARTHUR W. MITCHELL, plaintiff, in the prosecution of this cause, and which are allowable by law should be taxed against the individual defendants in this case, in accordance with the statutes, in such case made and provided.

It is therefore ordered, adjudged, and decreed, as follows, viz:

1. That the order and decree of this court entered herein on the 27th day of June A. D. 1940 dismissing this cause for lack of jurisdiction at the costs of the plaintiff, ARTHUR W. MITCHELL, the plaintiff herein, be, and it is hereby, vacated, set aside, and annulled.

2. That the cause is hereby reinstated and the order of the Interstate Commerce Commission entered November 7 A. D. 1938 dismissing the complaint of ARTHUR W. MITCHELL filed with said Commission, as alleged in the petition of ARTHUR W. MITCHELL, plaintiff, filed in this cause April 20, 1939, be, and it is hereby, vacated, set aside, and annulled.

3. That this cause be, and is hereby, remanded to the Interstate Commerce Commission with directions for said Commission to reinstate the said complaint of ARTHUR W. MITCHELL, and the cause in which said complaint was filed and to the end that such other and further proceedings may be had and such other and further orders may be entered by said Commission in conformity with the opinion of the Supreme Court of the United States rendered April 28 A. D. 1941 on the appeal decided therein, and to enter any and all other proper orders as are according to right, justice, and the law of the United States.

4. That the clerk of this court is hereby ordered and directed to forthwith return to the said ARTHUR W. MITCHELL, plaintiff and petitioner herein the sum of $3,000 cash, which was deposited by the said ARTHUR W. MITCHELL, plaintiff, under the order of this court, herein entered as an appeal bond in this cause, that a copy of this order shall be sufficient authority for the said clerk to return the said money herein mentioned.

5. That the costs as allowed by law be, and the same are hereby, ordered to be taxed, in accordance with the statutes and laws, in such case made and provided, against the individual defendants in this cause; that said costs are to be pro rated and each of the three individual defendants, in this cause are to pay their proportioned share of said costs, when said costs have been taxed in accordance with the laws, in such case made and provided.

6. That the clerk of this court forthwith enter all orders necessary for the remanding of this cause to the Interstate Commerce Commission, in accordance with the statutes in such case made and provided.

Entered:

WILLIAM M. SPARKS,
Judge, United States Circuit Court of Appeals.
CHARLES E. WOODWARD,
Judge, United States District Court.
M. L. IGOE,
Judge, United States District Court.

Dated, JUNE 20 A. D. 1941.

ORDER

At a general session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 31st day of July A. D., 1941

No. 27844—ARTHUR W. MITCHELL against Chicago, Rock Island & Pacific Railway Co. et al.

The decree of the District Court of the United States for the Northern District of Illinois, eastern division, dated June 20, 1941, entered under mandate from the Supreme Court of the United States, vacates, sets aside, and annuls the decision and order of the Commission entered herein on November 7, 1938, and remands the case to the Commission with direction to reinstate the complaint to the end that such other and further proceedings may be had and such other and further orders may be entered in conformity with the opinion of the Supreme Court of the United States rendered April 28, 1941, on the appeal decided therein and according to right, justice, and law of the United States.

It is therefore ordered, That the decision and order of the Commission entered November 7, 1938, be, and the same is hereby, vacated, set aside, and annulled; that the complaint herein be, and it is hereby, reinstated, and that the case be, and it is hereby reopened for such other and further hearings and proceedings as may be hereafter determined and ordered by the Commission.

By the Commission.

W. P. BARTEL, *Secretary*

This decision of the Supreme Court is perhaps the most important and far-reaching that has been handed down in the interest of citizenship rights of Negroes during the existence of this Government. Among the thousands of congratulatory messages coming to me, the four following telegrams will tell the story of how this decision has been received by America's largest and most oppressed minority group:

COLUMBUS, OHIO, *May 2, 1941.*

Congressman MITCHELL,
House Office Building,
Washington, D. C.:

Lexington Conference Methodist Church now in session Columbus, Ohio, extend congratulations upon winning for the race the decision of the United States Supreme Court against the public carriers of our country in the practice of Jim Crowism and the unconstitutionality of these laws upon the statutes of the States wherever they exist.

Bishop R. E. JONES, *President.*
S. P. JENKINS, Secretary.

NEW YORK, N. Y., *April 20, 1941.*

Hon. ARTHUR W. MITCHELL,
Member of United States Congress,
House Office Building:

Congratulations to greatest Negro political leader of century and most practical legal mind today. Pullman porter told me of what he termed our victory early this morning and dining-car waiter handed me newspaper. I cannot resist impulse to wire you as only one of millions who are grateful to you.

Bishop R. R. WRIGHT, JR.

CLEVELAND, OHIO, *April 28, 1941.*

Congressman ARTHUR W. MITCHELL,
House of Representatives,
Washington, D. C.:

Accept my congratulations on the favorable outcome of your case. You have fought and won a great battle for human rights. More than 300,000 adherents of the Colored Methodist Episcopal Church felicitate you as the Abou Ben Adhem of a grateful and appreciative race.

C. H. PHILLIPS, Sr., *Bishop.*

WASHINGTON, D. C., *April 30, 1941.*

Congressman ARTHUR W. MITCHELL,
United States House of Representatives,
Washington, D. C.:

Please allow me to congratulate you on the highly significant victory which you have won in the Supreme Court. All thoughtful men and women in the Negro race and in the Nation will be deeply grateful to you.

MORDECAI W. JOHNSON,
President, Howard University.

This fight for the rights of the Negro has been a hard and expensive one, covering a period of more than 4 years. All the expenses incurred in this suit have been borne by me. I think it is well to

note that I, with a Negro lawyer, Richard E. Westbrooks, of Chicago, Ill., have fought the case through all of the courts. We conducted the hearing in Chicago, argued the case before the Interstate Commerce Commission and before the United States district court in Chicago. We also argued the case before the Supreme Court of the United States, this being the first and only instance where a member of our race has argued his own case before that high tribunal.

Attention should be called to the fact that the Interstate Commerce Commission divided in its opinion, six holding against me and five in very strong dissenting opinions holding for me. The appeal to the United States District Court of the Northern District of Illinois was heard by three judges sitting en banc. Their decision against me was unanimous. The case before the Supreme Court was heard by the full Court, and their decision was unanimous for me, setting aside in strong language the findings of the Interstate Commerce Commission and the decision of the United States District Court of the Northern District of Illinois.

I think I should also call attention to the fact that the Attorney General's Office, whose duty it was to appear before the Supreme Court in behalf of the Interstate Commerce Commission, not only refused to appear and argue in favor of the findings of that Commission, but through its then Solicitor General—now Attorney General—Francis Biddle, filed with the Supreme Court a very strong memorandum in March 1941, which might be summarized in these words:

> We therefore conclude that the Commission erroneously supposed that the Arkansas separate-coach law applied to an interstate passenger, and erroneously determined that the small number of colored passengers asking for first-class accommodations justified an occasional discrimination against them because of their color. If either of these conclusions is correct, the Commission should be directed to reinstate the appellant's complaint and to proceed in the light of the opinion of this Court.

I say again that the decision in this case is far reaching and should do much to break down the vicious wall of segregation which has been built around the Negro, denying him his citizenship rights in almost every phase and walk of life in this country.

American Participation in the War

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, September 18, 1941

ADDRESS BY WALTER E. COSGRIFF

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have inserted in the RECORD a very able address entitled "Shall the United States Enter the War?" delivered by Mr. Walter E. Cosgriff, vice president of the Continental National Bank, of Salt Lake City, Utah.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHALL THE UNITED STATES ENTER THE WAR?

Mr. Chairman, fellow Americans, I am very glad to have the opportunity to speak to you tonight on the subject, Shall the United States Enter the War? I am glad for two reasons: First, because I believe that if we do enter the war, which we may, the opportunity for free speech will be lost, and that, therefore, if anyone has any definite convictions on the subject, he had better present them now. My second reason arises from the fact that in normal times a number of people blame the bankers for starting wars and spreading wars, and I wish to be one banker to go on record publicly as solidly opposing my country's entrance into this or any other foreign war.

Tonight I particularly want to stress some historical and economic arguments against American participation. It is not my purpose to discuss the possibility of a German invasion of the United States in the event Great Britain is defeated. Mr. John T. Flynn in his pamphlet entitled "Can Hitler Invade America?" has analyzed this subject much more capably and thoroughly than I could ever hope to. If you have not read this, I think you would find it very interesting and informative. The committee will be glad to give you a copy if you wish.

I would, however, like to remark in passing that it seems to me to be a shameful thing that so many Americans are openly admitting that they are afraid of Germany, a country which, after all, is less than two-thirds our size in population, less than one-fifth our size in land and natural resources, and is over 3,000 miles away from us. And it is equally disgraceful to say that our safety is dependent on Great Britain, an island not as large as the State of Utah and with only about 40,000,000 people. Certainly George Washington, Benjamin Franklin, and Thomas Jefferson, and those other early patriots who led the fight against a nation infinitely larger, richer, and more powerful than theirs until they won a complete victory, would not be proud of such remarks.

But, the interventionists say, "What about the spies, saboteurs, and 'fifth columnists' over here?" "If Germany wins, they will take over this country." Granted that they are a menace, certainly we have means of controlling them. After all, if we can't or won't control the German agents in our own country, we certainly couldn't expect to win a war in order to control the Germans in Germany. It just doesn't make sense.

Now as to the economics of the situation we are told by those in favor of going to war that if the Axis Powers win, our foreign trade will completely disappear, because it will simply be impossible to do business with Hitler or any of his allies because their philosophy of government is different from ours. Can this be true?

When you go down town to do your shopping and you go into a store, you do not stop to inquire whether the owner of the store is a Democrat, Republican, Communist, Fascist, or Nazi. You trade on the basis "the best goods for the lowest price" and political philosophy does not enter into the picture at all. Now this is exactly what happens in international trade. If one country has goods that another country needs and the price is competitive, trade will develop between them. If one country does not have anything another country wants, or if the price is higher than the price quoted elsewhere, no trade can develop. And this is true whether both countries have democratic governments or whether one country is democratic and the other totalitarian.

Let me pursue this subject further. About 4 or 5 months ago the present administration "discovered" that totalitarian Japan was actually too good a customer. She had bought so much (and paid in hard cash, incidentally) that the President became alarmed lest there would be nothing left for American customers. So he promptly told the Japanese they could buy no more steel or scrap iron. Later on the embargo was extended to include practically all oil and metal products as well as many other articles. If further proof is required to prove that trade can and will go on between countries with different political philosophies, then I don't know what it would be. However, there is other proof. Take the case of England and Germany between 1933 and August 1939. I do not intend to bore you with long columns of figures. You can look them up if you care to. It is sufficient to say that with the possible exception of America, the German Government and the British Empire were each other's best customers practically until the day war was declared. Many, many prominent Englishmen—leaders of the democratic cause, including even Chamberlain himself—had invested large sums of money in Germany and Germans had also invested money in England. And yet, Dorothy Thompson and many other so-called economists tell us that trade between a democratic country and Hitler's government is absolutely impossible.

But I'm not through yet. Let's assume that these same economists are right and that if Hitler wins we shall lose all our foreign trade, and see what it would mean. Our foreign trade amounts to about 8 percent of our total trade, both foreign and domestic. Conceivably we would lose that. But if we go to war, certainly a great, great deal more than 8 percent of our total trade is going to have to be used building war machines, and thus will be lost so far as beneficial use is concerned. But, say the interventionists, what about certain essential materials which we shall not be able to obtain? It is true that our chief source of supply of rubber, tin, and various vegetable oils might be cut off, but after all this would not be fatal. Synthetic rubber can be manufactured and has proved very practical, and we can also get rubber from South America and even from our own weed, the goldenrod. It would cost more, it is true, but not nearly so much as a war would cost. The same is true as to tin. There are immense undeveloped deposits of it in Bolivia, and, if necessary, both steel and aluminum can be processed until they have all the qualities of tin. Inconvenient, perhaps, but better than war.

Of course, there are other things we would have to do without if our foreign trade were cut off. We could not get Dresden china or Russian caviar or Irish linen or French champagne. But, after all, my friends, are these things worth the lives of a million men, or a thousand? Are they worth even one human life?

Aside from the matter of human life, is it not true that war would lower our standard of living a great deal, more than would the loss of our foreign trade? Think of the condition of the German people. They have no automobiles, very limited amusement, meat once a week, milk only for the sick and the very young. That's what happens to a nation's standard of living when it goes to war. And if we go to war with Germany we must expect to give up at least many of the things the German people have given up, otherwise we could not expect to win. I leave it up to you. Is it better to go to war with all its loss of life, all its untold suffering and all its dreadful uncertainty than to run the risk of losing our foreign trade?

Now let us consider some of the historic aspects of this war. History teaches us many things. One of them is that nothing is final. Another is that in the long run war does not settle anything.

We who are living at this time, especially when sufficiently influenced by hysteria and

propaganda, believe that the outcome of the present struggle is final and that this war will decide everything. But believe me, my friends, no matter how terrible the Axis Powers may seem to us now, we must remember that scattered throughout the pages of history there are hundreds of Mussolinis and scores of Emperor Hirohitos, and dozens of Hitlers, and every one of them had essentially the same theory of government and they differed from each other only in the degree of their respective abilities. Every one of them seemed as terrible to his contemporaries as his present-day prototype seems to us. Yet none of these dictators was ever able to stamp out democracy for very long. But on the other hand, the armed forces of democracy for the past 2,300 years—at Marathon, at the Metaurus, at Tours, at Orleans, at Waterloo, and at the Marne, have scored stunning military victories over the forces of totalitarianism. Yet today there is more totalitarianism in the world than there has been for centuries. Why? Because the simple truth is that you cannot destroy an idea or a philosophy of government by making war on it, whether you win the war or not.

Many deluded persons believe that by wiping out Adolf Hitler and the German Government we could insure ourselves that democracy would be safe for ever and a day. The Greeks, resting after the Battle of Marathon in 490 B. C., thought they had made the world safe for democracy by turning back the Persian hordes of the East, and Woodrow Wilson thought the same thing on November 11, 1918, except that in this case it was the Kaiser's army that had been vanquished.

Yet here we are today, all ready to begin sacrificing countless thousands of lives and wasting billions of dollars in another futile effort to destroy dictatorship by making war on it. Little do we realize that 2,000 years of warfare in Europe over every imaginable religious, economic, and moral issue have completely failed to settle anything. But at the exhortation of the propagandist we rush blindly along the path that must surely lead us into this war, naively believing that it will settle everything. "What fools these mortals be."

Before concluding this address I should like to take a few moments to discuss the wave of propaganda that is now sweeping the country. We are all conscious of the fact that during the past 6 months public opinion has been changing rapidly, favoring more and more the idea that the United States should guarantee a British victory, even though it is necessary to go to war to do it. Why has sentiment changed? Germany certainly hasn't done anything to us. Germany hasn't won any important victory. We are led to believe that Britain's chances of winning are growing brighter. And yet war sentiment is increasing. The answer is to be found in the ever-increasing waves of propaganda that are sweeping this country. It comes to us on the street, in the newspapers, on the radio, and in moving pictures. Most of this propaganda is so clever and so subtle that we don't recognize it. Perhaps if we did, it would not be so effective.

Let me illustrate. A prominent newspaper columnist has the following sentence in his daily column: "Remember, Colonel Lindbergh, the Atlantic isn't nearly so wide today as it was when you crossed it in 1927." That is all it says, but that is enough. No further explanation is given, no conclusions are drawn. A sentence like this is just enough to arouse fear in the reader, but not enough to induce logical thought. And yet, just such a sentence is apt to make far more converts than a complete and well-worked-out article like that of Mr. John T. Flynn, to which I referred earlier in the evening. As another example, I refer to the recent motion picture Come Live With Me, starring Hedy Lamarr and James Stewart, which just completed a run at the Center Theater. In this picture we see a beautiful immigrant girl, who the story tells us is an orphan. Of course, we soon hear that her father was shot down in cold blood because "he dared tell the truth." Later on it develops that this lovely girl has to be deported to "what used to be Austria." Only two or three lines in a movie, yet, perhaps, more convincing than reams of the most logical argument ever written.

What happens in our minds when we see this picture? We say to ourselves, "Why Hitler killed that girl's father for daring to tell the truth and now he's going to send the girl to a concentration camp. Let's wipe him off the earth and rescue this girl and everyone else who is suffering under his iron heel." After all, who wouldn't like to rescue Hedy Lamarr?

Now, there is no logic to this propaganda. Usually the propagandists are anything but logical. Take the case of Dorothy Thompson, that great example of clear thinking. About 2 weeks ago she wrote a series of articles proving beyond any question of a doubt to herself, at least, that the United States was in mortal danger, both militarily and economically, at the hands of Nazi Germany. Following this she commenced a series of articles proving equally conclusive to herself that Hitler was already beaten and knew it. And last Sunday she returned to the first theme of German world domination. So, from the pen of Dorothy Thompson, we have the ridiculous picture of Hitler, defeated by England, simultaneously invading the United States.

One thing to remember is this: Many persons change their minds. There is nothing wrong about it. You would not expect a child to develop one set of ideas and carry them exactly the same way all through life. But if we do change our minds, we should know the reasons for it and be sure the change came about as a result of facts and logic and not because of lies, innuendo, hysteria, and propaganda. I very much fear, however, that about 99.44 percent of the recent change in public sentiment is due to other causes than truth and clear thinking. All people should learn to recognize propaganda wherever it may appear; otherwise they are bound to fall victims to it.

In conclusion I want to make these points clear:

1. America has nothing to fear from any European power or a group of powers, regardless of the outcome of this war, if we give any reasonable care to our own national defense.

2. Our foreign trade probably would not be seriously menaced by an Axis victory, but at any rate it would be better to lose all of it than to go to war.

3. European warfare is interminable and has never settled anything. It is folly to believe that anything will be settled this time, whether America participates or not.

4. The recent rise in interventionist sentiment is a result of hysteria and propaganda, rather than of clear thinking.

5. America's interests are best served by remaining at peace. Any proposed aid given to Britain should be carefully examined to ascertain whether or not it is likely to involve us and if such aid leads us materially closer to war, then that proposed aid should not be given.

These points sum up my argument. I am fully aware that the majority will not agree with me at this time. I have every confidence, however, that 5 years after the war is over, regardless of the result, the American people will come to understand the fundamental correctness of these principles just as they did after the first World War. And so I rest my case with you, with the public and with the future.

Thank you.

War Propaganda

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

ARTICLE FROM THE MAGAZINE AMERICA

Mr. THILL. Mr. Speaker, the American people have been subjected to a veritable barrage of war propaganda in one form or another. The Roosevelt administration has been the guiding light in the dissemination of much pro-war material. In spite of all the efforts of the warmongers, in spite of the millions of dollars spent in propagandizing the people for war, the American public is still steadfast in its opposition to our entrance into this war.

The following article discusses the question of war propaganda and its effect upon the Nation today:

[From the magazine America of August 23, 1941]

WE ARE NOT SWAYED BY WAR PROPAGANDA

(By John A. Toomey)

One bright morning in the peaceful 1920's two men, seated on a fast-moving train, were discussing a book on war propaganda.

"Propaganda will never be able to do the trick again," one of the men remarked. "The American people won't forget the lesson they have just learned. No more foreign wars for them."

The other gentleman was dubious. "I can't quite agree. When the next world war breaks, I think the propogandists will manage to stir up a war fever here just as they did before. People quickly forget."

The first speaker shook his head. "I don't believe it. At any rate, we'll never know which of us is right. There won't be another world war in our time."

Conversations on this topic were quite common during the 1920's. The period was one of disillusion. The printing presses were pouring forth magazine articles and books which made amazing revelations concerning the misleading nature of the 1915–16 war propaganda. The disclosures startled the American people and set off numerous informal arguments on the question: Will war propaganda ever again produce in the United States the same effects it achieved in the World War days?

The twenties, the thirties could not lift the debate out of the purely speculative realm. But the early forties could because the early forties had World War No. 2 on their hands, the only event capable of vindicating one side or the other in the dispute.

Which side diagnosed the future correctly? Have the American people reacted to the 1939–41 war drive the way they did to the 1915–16 drive, or have they this time presented a totally different phenomenon in mass psychology?

From the evidence at hand thus far, and it is evidence accumulated after 2 years of widespread and systematic attempts at war incitement, it appears that the "propaganda cannot repeat" group was right. In the days of World War No. 1 propaganda itself, on its own power, achieved dynamic, even hysterical, results. By the beginning of 1917, after 2 years of verbal and printed bombardments of

the American people, a war fever had appeared and reached a high pitch. There was no deluge of protests against war entry descending on Congress. There were no national committees staging mass meetings all over the Nation and voicing opposition to war involvement. There was no militant majority against intervention. The great bulk of the people were either for intervention or resigned to it.

Nothing like that meets the eye in the year 1941. Just the opposite, indeed, emerges. No high war fever has been manipulated into being. War paint, war dances, hysteria are minority manifestations. An ocean of antiwar mail flows into Congress. After 2 years of exposure to ceaseless barrages of propaganda, a majority of the American people, a very huge majority, is vehemently opposed to participation in the current foreign war. The mass reaction to war propaganda in 1941 has been altogether dissimilar to the reaction in 1916.

Reference to just a few of the recent public-opinion samplings will furnish some idea of the strenuous opposition to war that is felt by the American public. One poll, the results of which were announced by Robert M. Hutchins, president of the University of Chicago, registered 79.7 percent of the voters against war entry. Another staged by the New York News showed 69.8 percent of New York City, 70.5 percent of the entire State voting "No" to the question, Shall the United States enter the war to help Britain defeat Hitler? Employing the same question, the Chicago Tribune sampled Illinois opinion, announced that 80 79 percent of the voters were opposed to war involvement. The Cantril opinion research project registered 90 percent lined up against intervention. A national Gallup poll taken after the outbreak of the Nazi-Soviet war revealed an increase of antiwar sentiment from 76 percent in June to 79 percent in July. A survey of the Women's National Committee to Keep the United States Out of War reported that 94.9 percent of the Nation's women were opposed to war entry. When Congressman FISH requested his constituents to give him their views on the question, 27,423 voted to stay out of war, 3,038 to go in.

A recent check-up of mail forwarded by the people to Congress supports the results furnished by the opinion samplings. A few examples will suffice to give the general picture. Most of Senator CONNALLY's correspondents urged him "to keep us out of war." Of some 400 letters a day reaching Senator REYNOLDS, only about 10 were prowar. Eighty percent of the mail reaching Senator GILLETTE was antiwar. Ninety-nine and nine-tenths percent of Congressman LUDLOW's correspondence was against "any step that will lead us to war." Of Senator BROOK's mail, "better than 90 percent" was antiwar.

There can be no doubt that in this month of August 1941 a very substantial majority of the American people is strenuously opposed to war entry. Significant in this connection is the fact that the war party has never claimed a majority. The constantly reiterated assertions of the antiwar people that they have the majority, and a big one, have never been seriously disputed. The ceaseless drip, drip, drip of war incitement during the last 2 years from the printed page, the lecture platform, the screen, and radio has not produced results.

The 1939-41 mass resistance to war propaganda is all the more remarkable because the instruments of popaganda today are much more formidable than they were in 1916. In that year the movies and news reels had not commenced to talk or to realize fully their tremendous propagandistic powers. There were no radios in American homes, no commentator voices penetrating to the American mind. Without the aid of movies, news reels, radio, the 1916 propagandists induced the American people to put on the national war paint. With newspapers, magazines, war books, lecture platforms; with movies and news reels that reach 80,000,000 people weekly; with radio commenator voices that enter daily into millions of homes; with all these, the 1939-41 propagandists have not been able to duplicate the 1916 performance.

The fact that not as many newspapers are beating the war drums today as was the case in 1916 does not explain the phenomenon. The defection of some newspapers from the war ranks is more than offset by the addition of movies, news reels, and radio to these ranks.

The movies and news reels have been powerful instruments in the 1939-41 drive. Out of Hollywood has come a succession of feature pictures designed to provoke the hysteria of hatred that leads to war. According to Senator NYE, a Wall Street investment house recently made a study of movie industries and reported that if Britain loses seven of the eight leading companies will be wiped out. He asked the parents of America: "Are you ready to send your boys to bleed and die in Europe to make the world safe for the movie industry and its financial backers?" The 20,000 movie houses in the Nation have been characterized as 20,000 buildings in which, under the guise of entertainment, rallies for war are being frequently held, rallies to which admission is charged. Senator NYE declared he was informed that the movie industry has orders from somewhere requiring the news reels to have a minimum of 70 percent devoted to war pictures. Whether this is true or not, it must be admitted that the news reels have gone in strong for war pictures. A recent survey conducted by the college of men for defense first of New York revealed that of 1,100 stories presented by the 5 American news-reel companies over a 3-month period, 500 were about war, and that of these 1,100 exhibits only 7 showed the existence in the Nation of a public opinion opposed to intervention. That many of the radio commentators have striven to build up the war spirit is undeniable.

And yet, despite the persistent efforts of numerous influential newspapers and of swarms of lecturers; despite the efforts of Hollywood, of many radio commentators, of groups of high-placed officials; despite all these prodigious and well-planned efforts, no war spirit has arisen among the American people. The majority against war is today as large as it was in September 1939. It may, indeed, be even larger. The informal debaters of the 1920's who contended that propaganda for war could not produce again in the United States the same effect it achieved in 1915-16 appear to have been prophets. If the United States enters the war, it will not be because the people have succumbed to war propaganda. The reason will lie elsewhere.

The Hidden Purpose

EXTENSION OF REMARKS

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. HOFFMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am inserting herein an editorial from the Chicago Tribune of September 13, 1941:

[From the Chicago Tribune of September 13, 1941]

THE HIDDEN PURPOSE

Mr. Roosevelt's violent pronouncement of Thursday evening must have been intended deliberately to arouse passion. The voice was excited. The words were chosen for their inflammatory values. The speaker, with ulterior purposes in mind, was seeking to create an emotional setting in which half-truths, twisted truths, and untruths would be accepted as the reasoned and reasonable thought of a responsible public official.

Before examining the unspoken motives, a few examples of the method may be cited. In an atmosphere of calm the American people would not today get very much excited over the power of Germany to interrupt ocean commerce. The submarine campaign in recent months has been pretty much of a flop. The British have announced with pride that they are sinking three times as much German shipping as the Germans are sinking of theirs. According to a recent British official statement, new methods of combating submarines have been developed, and are proving moderately successful, yet to hear Mr. Roosevelt tell it, this country, as well as Britain, is in danger of succumbing to the submarine attack. The two greatest navies in the world, he asks us to believe, are barely holding their own against a handful of submarines. With the shipping of almost the whole world in her possession, Britain is yet in danger of being cut off, etc.

This is nonsense when viewed in the light of known facts. So is Mr. Roosevelt's assumption that there is likelihood that Germany's 80,000,000 people can conquer and dominate not only Europe and the British Empire but the rest of the world besides. Against the 80,000,000 are now arrayed Russia's 180,000,000. The British Empire's population is greater than 400,000,000. No matter how well organized for war the 80,000,000 may be, they cannot be expected to overcome such stupendous odds, and the progress of the war in recent weeks only serves to emphasize this fundamental truth.

The inflammatory technique was used again in the reference to the freedom of the seas. Mr. Roosevelt could have used the high-sounding phrase only to gain respectability for a course of action which he could not justify by simple reason and argument. "Freedom of the seas" makes no sense in the context in which he used it. Germany is interfering little with our freedom to carry on peaceful commerce with the world. Britain is interfering every moment of every day in every port and in every ocean. Our farmers and manufacturers cannot export their products to Norway, France, Poland, Belgium, Holland, and a great many other countries for lack of British consent. To talk in the face of these facts of Germany's threat to our freedom of the seas is to talk glib nonsense.

At another point Mr. Roosevelt intimated that we must take our place in the battle of the Atlantic to assure that our supplies reach the British Isles. To hear him tell it, the British Navy is incapable of performing this task. The evidence doesn't show that. There are some British warships undergoing repairs in our navy yards, but few if any of them took their battering in the North Atlantic. They got into trouble in very different waters—in the eastern Mediterranean, for example, where they were engaged in defending not Britain but the British imperial holdings in the Near East. Britain has lost few naval vessels in her own waters.

There was scarcely a point made by Mr. Roosevelt which will stand calm examination. Not even his list of atrocities was impressive. The *Steel Seafarer* was sunk in the Red Sea in an area of danger which,

under the cash-and-carry law, Mr. Roosevelt was required to declare out of bounds to American shipping. He didn't do his duty, but instead, contrary to the law's intent, sent this ship and many others like it into the war zone to carry war supplies for the conquest of peaceful Iran. Likewise the *Sessa* was commandeered from Denmark by Mr. Roosevelt and was sent into the zone of danger under the flag of Panama. The *Robin Moor* was carrying contraband to South Africa—a belligerent. The *Greer* would not have been in Icelandic waters if Mr. Roosevelt had not violated his pledge to the American people to keep our soldiers at home. The other incident, which occurred last July, consisted of nothing more menacing than the chance meeting of an unidentified submarine and an American warship somewhere on the high seas. They looked at each other and that was that.

Mr. Roosevelt put all the high-powered fervor he could command into the telling of these atrocity stories. He may have succeeded in frightening some people, but they may be expected to recover their mental equilibrium before long and to inquire why he made so much of so little, why he twisted so many truths, why he said so many things which obviously aren't so.

The answer is not particularly obscure. His purpose is to confuse and frighten the American people into the belief that they are confronted by stupendous dangers. He will make this artificial crisis serve like all his previous crises as an excuse to impose new totalitarian restraints upon the American people. His aim is a dictatorship which will mean the destruction of the Republic.

Constitutional restraints stand in his way. Only Congress can lawfully declare war. Only Congress can lawfully increase the President's discretionary powers and even Congress has limited powers in this direction. It is Mr. Roosevelt's purpose to create such a hysteria in the country that he can ignore Congress if it doesn't surrender abjectly to his will.

We believe the American people will see through the scheme and thwart it.

Modern War College

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

ARTICLE BY HON. FRANK C. OSMERS, JR., OF NEW JERSEY

Mr. OSMERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article written by me which appeared in the October issue of Flying and Popular Aviation on the subject of modernizing our present Army War College.

The article follows:

[From Flying and Popular Aviation]

At this moment of world crisis it is disturbing that the Nation must rely almost solely upon land, sea, and air commanders who, by training and experience, presumably are capable enough in their respective branches, but they remain essentially specialists.

Virtually every venture which it is conceivable we might have to undertake for hemisphere defense would demand the close cooperation of every element of American striking power. As never before, this country's future depends on the readiness of the Navy, the air forces, and the Army to operate as a powerful, unified team. How many officers are qualified to call signals for that defense team—or any substantial element of it?

Before it is too late it would seem imperative to take prompt steps to remedy a weakness which is glaring in the light of the portentous Nazi conquest of Europe.

As much as 6 years ago there was clear recognition in Germany that the war, whose clouds even then were beginning to lower, would be a conflict of three dimensions—land, sea, and air. It could not be fought victoriously by commanders who had no more than a bowing acquaintance with arms other than their own; who thought largely in terms of cavalry, artillery, bombers, or submarines and were inclined to professional jealousy of each other.

In 1935 some 30 or more officers of proven capacity were transferred from the German Army into the Luftwaffe, it is reported, with Adolf Hitler's approval, despite some internal professional grumbling. They were taught to fly all types of planes and grappled with the problems of bombing, parachute attack, and moving large bodies of troops by air transport. Three years later the same group was shifted into the navy to study tactics of sea warfare at first-hand.

They are key generals now—and others are undergoing the same fitting process to fill commands in a fighting team which has overrun Europe and now has the rest of the world at bay.

The results of this scheme of coordination first appeared in the conquest of Poland, where ground and air forces fought as an invincible team. The invasion of Norway brought the third dimension—the navy—into action with the other two elements of striking force, in a dramatization of perfect timing such as never before had been seen.

The quick conquest of the Low Countries and France, the invasion of the Balkans, the aerial capture of Crete, and, most recently, the onslaught on Russia have piled up further frightful evidence of the effectiveness of officers schooled and experienced in unified command.

Meanwhile, in this country, one is made uneasy by the tart testimony of such veterans as Maj. Gen. Johnson Hagood, retired, who complained that "the best trained man in the American Army is the private soldier and the worst trained is the general." Only now has the War Department been able to tackle the vital but unpleasant task of weeding out officers.

There is no intention to assert here that the Nazi lesson has been completely lost on the War and Navy Departments. But in the existing state of urgency American measures to achieve such vital coordination of all arms appear timid, indeed, even though the Army particularly has not been loath to borrow other German ideas.

Army officers at the Command and General Staff School and in the specialized training schools of the various branches of the service, devote study to the "combined arms." There have been efforts along the same line in the air forces. A relative handful of Army officers have attended the Naval War College in past years and some sea officers have been admitted to the Army War College. A few Navy and Marine officers too are enrolled in the Army Industrial College, to learn methods of mobilizing industry for the production of munitions.

There is a measure of coordination of Army and Navy affairs through the joint board. Gen. George C. Marshall, chief of staff, said this agency now is in almost continuous operation through its expert committees, whereas until recently it held sessions only about every 6 weeks.

In the hard school of experience, under difficulties attending the mushroom growth of the defense establishment, a Marine Corps general has been widening his outlook as commander of the first amphibious joint Army-Navy task force to be formed on the east coast. In Newfoundland the Army upset tradition by putting Col. Henry W. Harms of the air forces in command of land troops as well as aerial forces and another veteran flyer, Maj. Gen. Frank M. Andrews, was chosen to head up all defenses of Panama.

But there has been no sign of a move toward such an interchange of able officers such as Germany has carried out with significant advantage. If the exchange arrangement were advisable for Nazi Germany, whose war operations have been confined largely to the European Continent, its prompt adoption would appear nothing less than imperative for the United States. We are building a two-ocean navy, a formidable Army, an air force which may ultimately be the world's most powerful, with the proclaimed intention of safeguarding the entire Western Hemisphere and, in conjunction with Great Britain, sweeping both the Atlantic and Pacific of enemies.

Directing the vast operations of the combined German land, air, and naval forces, it should be noted, is the great general staff, which was revived after its enforced abolition following the first World War. Eventually, in the inevitable general overhauling of our own defense establishment, the creation of such an American high command will come.

Just now, in the midst of the hurried national effort to build up all defenses, it might be contended that a sweeping reorganization would be confusing and demoralizing and cause delays which cannot be risked. No such contention would hold against the creation of a general war college as a training school for the high-ranking officers of all three branches. It would be even less valid against a simple interchange of officers.

Out of a corps of more than 100,000 officers on active duty, the War Department certainly can spare 250 or so for service of a year with the Navy, to be preceded or followed by duty with the air forces. A like number from the Navy should be given the same opportunities for training in all phases of defense teamwork, along with a similar group of air force flyers of command caliber.

This is the logical and simple means to provide the commanders for the combined air, sea, and land operations which hemisphere defense demands, and to create as well the nucleus for an eventual American supreme general staff. Both objectives call for action without delay.

The Power of Democracy

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

RADIO ADDRESS OF THE HONORABLE FRANCIS BIDDLE, ATTORNEY GENERAL OF THE UNITED STATES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following address by the Honorable Francis Biddle, Attorney General of the United States, before the annual convention of the California State Bar Association, Yosemite National Park, Calif., Thursday, September 18, 1941, on the subject The Power of Democracy:

The pleasure which I experience in being able to meet with my brethren of the bar of the great State of California in this superb place and upon so important an occasion cannot be expressed in the common clichés of the visiting speaker. Will you, Mr. President, and your board of governors and, indeed, your entire membership accept my most sincere thanks for this opportunity. Permit me, as well, to express my enthusiasm for the splendid program of expanded public service which the State bar of California is inaugurating in this hour of grave national emergency "Making democracy work" is indeed a well-chosen theme for this convention, and one which may be said to epitomize the confidence and the determination which we as lawyers share.

As you well know, there have always been timid souls who doubted that democracy could be made to work when disaster threatened. Their voices have been heard in every great crisis, domestic or international, through which this country has passed during more than 150 years of national life. History has been kind to them and most of their gloomy forecasts have been soon forgotten. At this moment their voices are raised again to express the familiar fear that the very measures essential to defend democracy may in the end prove to be democracy's undoing. If there are those among them who do not believe sincerely in democratic processes, I can only regret that they are not placed elsewhere in associations more congenial to the political paganism which they profess.

My present concern is for the sincere believers who are troubled by the discordant counsels of these tumultuous times. Without minimizing our dangers, I would seek to fortify their faith, for ultimately the vitality of democracy must depend upon the faith of those who would conserve and strengthen its essential principles. For myself I hold firmly to that faith in free institutions which is implicit in the theme of this convention. I am confident that the same vitality of free government which has brought our Nation through 150 years to its present stature will enable it in the future as in the past to

"Meet with Triumph and Disaster
"And treat those two imposters just the same."

It will come as no surprise to this audience that my first article of faith is in the Constitution of the United States. Among their many virtues the draftsmen of this great instrument were masters of a brevity which could be embracing without dissipation in vague generality. The word "emergency" is nowhere used in the Constitution, yet it is elemental law that there are ample powers in the several departments of our National Government to cope with any crisis. As former Chief Justice Hughes observed when addressing the American Bar Association in 1917, "the framers of the Constitution did not contrive an imposing spectacle of impotency. * * * Self-preservation is the first law of national life and the Constitution itself provides the necessary powers in order to defend and preserve the United States." [1]

Whatever doubts may have emerged at one time or another in our history, no lawyer today questions the adequacy of the national legislative power. It is significant that the enumeration of legislative powers granted to the Congress begins with the power "to lay and collect taxes, to pay the debts and provide for the common defense and general welfare of the United States." [2] The enumeration includes the power to declare war, to raise and support armies, to provide and maintain a navy, and to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions. Speaking through the late Mr. Justice Cardozo, the Supreme Court has reminded us that the concept of the general welfare is not static but is equal to any emergency. In Justice Cardozo's own words: "Needs that were narrow or parochial a century ago may be interwoven in our day with the well-being of the Nation. What is critical or urgent changes with the times." [3]

It has never been seriously questioned that the efficacy of emergency legislative power depends upon an assurance of prompt and vigorous execution. In recognition of this elemental principle, the Congress throughout our history has repeatedly delegated broad emergency powers to the Executive. Thus, in the first volume of our national statutes we find the President authorized to call forth the militia whenever the United States shall be invaded or in imminent danger of invasion.[4] In sustaining this statute and holding that the President's decision as to the existence of an emergency must be conclusive, the Supreme Court stated tersely some elemental principles concerning free government and its defense. Mr. Justice Story said: "It is no answer that such a power may be abused, for there is no power which is not susceptible of abuse. The remedy for this, if it should occur, is to be found in the Constitution itself." [5] And again: "One of the best means to repel invasions is to provide the requisite force for action before the invader himself has reached the soil." [6]

Having in mind the part which the Executive must always be called upon to take in time of crisis, it is further tribute to the wisdom of those who framed our Constitution that there need never be serious doubt as to the adequacy of national executive power.

Article II begins with the terse statement that "the executive power shall be vested in a President of the United States of America." [7] It requires an oath or affirmation that he will "faithfully execute the office" and that he will, to the best of his ability, "preserve, protect, and defend the Constitution of the United States." [8] It provides that he shall be Commander in Chief of the armed forces of the United States.[9] It makes of the President, as Marshall declared in his famous argument in the House of Representatives on March 7, 1800,[10] "the sole organ of the Nation in its external relations." [11] And finally, in the same terse but dynamic style, it admonishes the President to "take care that the laws be faithfully executed." [12] I am here speaking of powers which stem directly from the Constitution, without benefit of legislative interposition, and which constitute the basic charter of the President's responsibility for the defense of the Nation in time of grave national peril. In what is undoubtedly one of the major crises of our history, when the pressure of events must force many vital decisions and when charges of usurpation or dictatorial action are too lightly made, it is essential that we return from time to time to the fundamental charter of our liberties.

My second article of faith is in the constitutional history of the United States. The record of great issues met and resolved by democratic processes is one which inspires an enduring confidence. If those timid Americans who are now saying that it cannot be done, or that if it is done it will prove our undoing, will only look at the record with an open mind, their misgivings may be speedily dissipated. How, or why, or under what tragic circumstances, other less-fortunate peoples may have surrendered to cruel tyranny while still in the kindergarten of democratic experience is of no immediate relevance. Vitally relevant are the venerable roots of our own sacred liberties, the soil in which they have been traditionally nurtured, and the toughness which they have developed in resisting adversity. In the cavalcade of our 150 years we may observe in the sequence of minor and major crises the response of democratic statesmanship to each succeeding challenge. We may witness the tempo of national decision accelerated to cope with situations which have not permitted delay, and retarded to restore the utmost of patience in deliberation when storm clouds passed. Who has read American history and doubted that the passion for liberty under law has emerged more insistent after each period of stress? Who has really shared the American way of life, yet denied the conviction that the ultimate responses of a free people are wiser and more humane than the dictates of a despot, benevolent or otherwise?

In noting the adequacy of national legislative powers and reminding you of the necessity for assurance of prompt and vigorous execution of all emergency laws, I have already called attention to the legislative practice of making broad grants of power to the President to meet emergencies. The necessity for this practice is sufficiently confirmed by its consistent use throughout our national history and its wisdom is demonstrated in our long and varied experience with administration under such legislative grants. Contrary to the somewhat naive assumption which seems to prevail in some quarters, this is neither a new nor a dangerous practice. From the very beginning, Congress has repeatedly granted the President extraordinary powers with which to meet extraordinary situations. In some instances the grant of power has been ephemeral, designed to meet an immediate but temporary need. In others it has passed into the body of our national jurisprudence where it constitutes a reserve of legislative preparedness for the emergencies of national defense.

Among emergencies arising from crises primarily internal or domestic, the Pennsylvania rebellion of 1792 was one of the earliest occasions for resort to this type of legislation. On that occasion Congress promptly empowered the President to call out the militia of the States to enforce the laws "whenever the laws of the United States shall be opposed or the execution thereof obstructed." [13] In 1861, as is well known, new precedents were established for similar delegations of broad emergency powers.[14] Included among our national statutes in force at the present time are many such laws, deriving from different periods in our history, conceived to safeguard against emergencies of various kinds, and granting powers in the broadest terms.[15] With your indulgence, I propose to refer to a few examples, quoting briefly from the statutory definition of executive discretion in each instance.

The Executive may waive or modify the monthly apportionment of appropriations for governmental departments "upon the happening of some extraordinary emergency or unusual circumstance which could not be anticipated at the time of making such

apportionment";[16] may take action with respect to credit expansion when "an economic emergency requires an expansion of credit";[17] may regulate or prohibit certain transactions in foreign exchange or with respect to the currency "during time of war or during any other period of national emergency";[18] may regulate the transaction of business by the Federal Reserve banks "during such emergency period as the President * * * by proclamation may prescribe";[19] and may suspend trading in securities when "the public interest so requires."[20] By proclaiming an emergency, the President may make it unlawful to transfer American ships to foreign ownership[21] and authorize the Maritime Commission to requisition American ships.[22] In time of war or threatened war the President's broad powers over transportation,[23] industry,[24] and communication[25] are writ large in our national legislation and are well understood among members of our profession.

In emergencies arising from crises primarily external or international, Congress has always met or anticipated the event with the broadest grants of power and with few departures from an approved pattern of legislative action. Since the President, as the Senate Committee on Foreign Relations long ago observed, is "the constitutional representative of the United States with regard to foreign nations,"[26] the implementing of a foreign policy, whether in emergency or in due course, could hardly be accomplished otherwise. From the earliest enactments concerned with our foreign relations, in the turbulent years which followed the French Revolution[27] to the recent lend-lease statute, there has been an uninterrupted progress of consistent practice. Under the terms of the Lend-Lease Act "the President may, when he deems it in the interest of national defense," authorize the manufacture or procurement of any defense article "for the government of any country whose defense the President deems vital to the defense of the United States." The terms and conditions of aid are to be "those which the President deems satisfactory," and the benefit to the United States may be payment, repayment in kind, "or any other direct or indirect benefit which the President deems satisfactory."[28] I refrain from burdening you with samplings from the years intervening between 1789 and 1941.[29]

The wisdom of such action may always be debated when the occasion arises, but its propriety and validity under our form of government is no longer doubted. In 1936, in sustaining a criminal prosecution for violation of the joint resolution of Congress authorizing the President to embargo the sale of arms to belligerents in the Chaco war, the Supreme Court reviewed the practice at length and affirmed its constitutional validity in the case presented in no uncertain terms. Speaking for the Court, Mr Justice Sutherland said: "As a member of the family of nations, the right and power of the United States in that field are equal to the right and power of the other members of the international family. In this vast external realm, with its important, complicated, delicate, and manifold problems, the President alone has the power to speak or listen as a representative of the Nation The principles which justify such legislation find overwhelming support in the unbroken legislative practice which has prevailed almost from the inception of the National Government to the present day."[30]

Needless to say, the summation of all grants of emergency power, both internal and external, occurs in wartime, for modern war is an economic and social struggle as well as a conflict of arms, and the concentration of responsibility must perforce be correspondingly extended. Before the World War ended, our Executive was exercising, among other powers, the power to take over manufacturing plants, to operate transportation systems, to fix charter rates for shipping, to license the distribution of food and fuel, to fix the prices of coal and coke, to control imports and exports, and to redistribute the functions of the executive departments of government as circumstances might require. In the light of World War experience, our legislative preparedness for war has been supplemented and strengthened. The power to apprehend and detain alien enemies derives from legislation first enacted in 1798,[31] the power to control transportation priorities from an enactment of 1920,[32] the power to commandeer manufacturing plants from a statute of 1916 as well as from a statute of 1940,[33] the power to suspend trading in securities from a statute of 1934.[34] More recently our legislative preparedness has been supplemented at vital points.[35] Today, insofar as legislation can effectively anticipate the requirements of a wartime emergency, the Nation is better prepared than ever before in its history.

In reviewing some aspects of our constitutional history, I have dwelt chiefly, up to this point, upon legislative practice in meeting or anticipating emergencies. It remains to say something of the Executive powers which stem directly from the Constitution. I have reminded you that executive power is vested in the President; that he is sworn to preserve, protect, and defend the Constitution; that he is made Commander in Chief of the armed forces and our sole spokesman in foreign relations; and that he is responsible for the faithful execution of the laws. Traditionally every President of the United States, from the first to the present, has preferred to discharge his constitutional duties within a pattern formulated in appropriate legislative action. Traditionally every President of the United States, from the first to the present, has been prepared to use his constitutional powers when the Nation or its citizens were endangered in circumstances requiring prompt and vigorous action. There have been differences of opinion with respect to action taken, both before and after the event; but over the years the wisdom of the framers of our organic law has been repeatedly confirmed. If you were to press me for a distillation of principle from the full harvest of our national experience, I would suggest that the magnitude of the threatened disaster is the measure of the President's power and duty to take steps necessary to avert it.

When Abraham Lincoln took the oath of office, the Congress was not in session and rebellion was spreading swiftly throughout the Southern States. The measures which he took to preserve, protect, and defend the Constitution in that critical hour are familiar history. I need hardly remind you that it was as Chief Executive and Commander in Chief of the armed forces that President Lincoln, among other emergency measures, called out the militia, issued a call for volunteers, increased the Army and Navy, ordered the blockade of southern ports, and proclaimed the emancipation of the slaves.[36] When strikes flamed into mob violence threatening paralysis of railroad traffic in Chicago in 1894, President Cleveland sent troops to restore order.[37] To the contention that the measures taken were beyond the scope of Executive power, the Supreme Court later replied: "There is no such impotency in the National Government. The entire strength of the Nation may be used to enforce in any part of the land the full and free exercise of all national powers and the security of all rights entrusted by the Constitution to its care. The strong arm of the National Government may be put forth to brush away all obstructions to the freedom of interstate commerce or the transportation of the mails. If the emergency arises, the Army of the Nation, and all its militia, are at the service of the Nation to compel obedience to its laws."[38] Within recent months, here in this State and on the Atlantic seaboard, the same fundamental powers have been invoked to restore strike-bound plants to their necessary place in the program of national defense.[39]

Throughout our history these great reserves of constitutional authority have been drawn upon with courage and vigor in the protection of American lives and property abroad. In 1798 President Adams authorized the arming of American merchantmen to resist the attacks which were being made upon our commerce by the French.[40] In 1801 President Jefferson sent a squadron of frigates into the Mediterranean to protect our commerce against the Barbary raiders.[41] In 1853 one Koszta, a Hungarian who had declared his intention to become a citizen of the United States, was seized in Smyrna by Austrian forces and confined on an Austrian vessel. The commander of an American warship in those waters demanded his release and enforced compliance by training his guns on the Austrian vessel. The commander was voted a gold medal by Congress; and the Supreme Court, in the case of Neagle, which I believe is regarded as a leading case in

California, referred approvingly to the episode as "an attractive historical incident." [42]

In the following year the United States consul at Greytown, Nicaragua, was attacked by a local mob. When appropriate reparation was not forthcoming the commander of a United States warship bombarded the town. President Pierce referred to the action taken as the only alternative to "submissive acquiescence in national indignity"; [43] and later, when the commander was sued for the value of property destroyed, Associate Justice Nelson, sitting on circuit, upheld what had been done in vigorous language. The duty to act, he declared, "must, of necessity, rest in the discretion of the President." "The great object and duty of government," he concluded, "is the protection of the lives, liberty, and property of the people composing it, whether abroad or at home; and any government failing in the accomplishment of the object, or the performance of the duty, is not worth preserving." [44]

The significance of the record appears in the consistent pattern of national action. Bold Executives and cautious Executives, Presidents avowedly sympathetic with the Hamiltonian philosophy, and Presidents professing a more guarded conception of their powers, have kept the oath as the ever-changing stream of circumstance has challenged them to add present decision to the unfolding page of history. Within the memory of many here present, President McKinley sent naval vessels and a military force of 5,000 men to the Far East to cooperate with other powers in suppressing disorders which had resulted from the Boxer Rebellion.[45] It was nearly a half century earlier that President Buchanan, one of the most cautious of our Executives, when the right was asserted to search American vessels in the Gulf of Mexico, had ordered the dispatch of a naval force with instructions "to protect all vessels of the United States on the high seas from search or detention by the vessels of any other nation." [46] In the same consistent determination to safeguard our heritage, we are today cooperating with friendly powers in the Pacific, and are fortifying new bases and reinforcing the far-flung patrol which guards the vital highways of the Atlantic. Long experience in the democratic way of life has taught us patience; but neither contriving faction within nor hostile force without should ever mistake patience for impotence. In all earnestness, to those here or abroad who may be confused by the swift march of events, I commend the revealing record of our constitutional experience.

My third article of faith is in liberty under law as it has come down to us, conserved and strengthened through a thousand years of Anglo-American institutional history. I need hardly remind this audience of the unique vitality of the rule of law wherever the common law has become firmly established. Nor is it necessary to stress the well-known circumstance that our civil liberties have their roots in and are part and parcel of this venerable heritage. As the Supreme Court has observed, our Bill of Rights was "not intended to lay down any novel principle of government, but simply to embody certain guaranties and immunities which we had inherited from our English ancestors." [47]

Our heritage of liberty under law is guaranteed in terms in our Constitution. It has acquired a richer meaning and a more enduring substance in our constitutional experience. We should remember, however, that all this was possible because we were coheirs to the common-law inheritance; and faint hearts may be fortified once more in recalling the turbulent centuries in which that heritage has been formed and toughened. It is no made-to-order credo of the passing moment which attaches our people so firmly to freedom of religion when such freedom is brutally denied in many lands; to freedom of speech and the press when elsewhere terror stifles utterance and the press has survived only as a servile agent of unscrupulous power; to freedom from unreasonable searches and seizures when a continent languishes under the dread hand of the secret police; to trial by jury, with its ancient safeguards, when uncounted thousands are rushed to the concentration camp or the firing squad after proceedings which make a mockery of justice; or to due process of law when the ideas and the ideals of justice which are implicit in that phrase have been violently repudiated over wide reaches of the earth. These things are a part of us, they belong to our way of life, and they will endure so long as we continue to believe in them and have the will to defend them.

A government with ample power to defend the liberties of its people is a strong government. A government dedicated to the protection of those liberties is a just government. In asserting that our American form of government has traditionally been both strong and just, I would neither minimize the difficulties which confront us nor ignore the dangers to which we are peculiarly vulnerable. When revolutionary forces sweep over the earth, sparing no means and knowing no honor; when there can be no true peace for peoples selected for the sinister softening which precedes destruction; when those who wage total war take pride in the repudiation of conventional restraints upon the brutal incidents of armed conflict, the way of the strong and the just government is a hard one. Abroad it must resist every aggression, however subtle or insidious, while continuing to deserve the confidence and friendship of the distracted peoples of less fortunate countries. At home it must deal firmly yet fairly with those miserable saboteurs who make a mask of the very liberties which they are seeking to destroy. That America will achieve these things in ample measure, with whatever strength the emergency may require and without impairment of our essential liberties I have no doubt.

In support of this confidence I invite you to recall for the moment something of our experience with liberty under law in wartime. It is, of course, axiomatic that no liberty can be absolute. Some things permissible in ordinary times cannot be safely tolerated in a time of grave peril. Thus Mr. Justice Holmes reminded us, in one of the cases arising under the first amendment during the World War, that "when a nation is at war many things that might be said in time of peace are such a hindrance to its effort that their utterance will not be endured so long as men fight and that no court could regard them as protected by any constitutional right." [48] Yet in another of the cases in this group the same great Justice declared that "we do not lose our right to condemn either measures or men because the country is at war." [49]

In other cases arising out of the same wartime emergency, the Supreme Court returned frequently to the theme that "the war power of the United States, like its other powers * * * is subject to applicable constitutional limitations"; [50] and, in denouncing an indictment under one of the wartime statutes as violative of the fifth and sixth amendments, the Court gave emphatic approval to the proposition that "the mere status of war did not of its own force suspend or limit the effect of the Constitution, but only caused limitations, which the Constitution made applicable as the necessary and appropriate result of the status of war, to become operative." [51] It was in the midst of the World War that Attorney General Gregory reported that the Department of Justice was proceeding upon "the general principle that the constitutional right of free speech, free assembly, and petition exist in wartimes as in peacetime and that the right of discussion of governmental policy and the right of political agitation are most fundamental rights in a democracy." [52]

Whatever contempt we may feel for the misguided malcontents who assert liberties only to destroy them, we need have no fear that government founded upon the processes and principles of our common law will cease to be just because the emergency compels it to be strong. I commend to you the homely wisdom of President Lincoln, who wrote on June 12, 1863: "I can no more be persuaded that the Government can constitutionally take no strong measures in time of rebellion, because it could be shown that the same could not be lawfully taken in time of peace than I can be persuaded that a particular drug is not good medicine for a sick man, because it can be shown to not be good for a well one. Nor am I quite able to appreciate the danger, apprehended by the meeting, that the American people will by means of military arrests during the rebellion lose the right of public discussion, the liberty of speech and the press, the law of evidence, trial by jury, and habeas corpus throughout the indefinite peaceful future which I trust lies before them, any more than I am able to believe that a man could contract so strong an appetite for emetics during temporary illness as to persist in feeding upon them during the remainder of his healthful life." [53]

In a more tranquil future, students of government will spell out the contrast between the functioning of free government in time of peril and the techniques which enabled Europe's dictators to strut their little hour. There are obvious differences of underlying principle which they will surely stress. They will have something to say, certainly, of the toughness which free institutions had developed in centuries of sacrifice and struggle. They will point out how free peoples achieved essential unity under constitutional government rather than personal dictate. They will see significance in the rugged persistence of orderly legal processes in democratic countries, as contrasted with the procedures of hypnosis or terror. They will emphasize the innate vitality of governments conceived in a passion for human liberty, yet strong enough to defend their heritage, as distinguished from regimes born in liberty's negation. They will recall a period in which two philosophies of life were in irreconcilable conflict, one exalting the dignity and worth of the human individual, another concerned only with the all-powerful state. Finally, they will record free government triumphant because it was founded ultimately upon the consent of the governed, because of its vast reserves of strength and its immeasurable capacities for self-renewal, and because its legions wore the uniform of the common man.

Improvement at Fort Devens

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

ARTICLE BY BILL CUNNINGHAM

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the permission granted me to extend my remarks, I present an article from the Boston Herald of September 7, 1941, written by the well-known and able commentator, Bill Cunningham. He writes of conditions at Fort Devens, which is in my congressional district, and which I was instrumental in having made a fort. I, too, knew Devens in the early days when it was only a camp, and today when I visit the fort and see the tremendous improvements that have been made I am very proud of it. In the past few years, under the able supervision of Col. William A. Smith, commander of the fort, I have seen it grow from a post of 4,000 men to a fort of 26,000 men. Recently 43,000 men were stationed there, many, to be sure, in tents. I want to thank the Members of this House who helped me secure the very fine development of Fort Devens. The morale there is excellent; in fact, District Attorney Thomas E. Dewey, after visiting there recently, remarked that the morale was the highest of any place he had visited. Mr. Cunningham's article follows:

[From the Boston Herald of September 7, 1941]

DEVENS MEN HAPPY, WELL EQUIPPED, BUSY—ROOKIE OF 25 YEARS AGO FINDS CHANGE FROM SHEETLESS, HEATLESS ARMY

(By Bill Cunningham)

They called it Camp Devens, not Fort Devens, in my time, and my time was the origin of the place. I was part of the origin, being amongst the first of the gangling, gander-eyed recruits hauled in from the Ayer depot in a big Army truck and told to line up and listen to the sergeant. That was, in round numbers, 25 years ago, after President Wilson's celebrated notes hadn't done any good, the *Lusitania* had been sunk, and Congress, in a solemn midnight session, had declared us in.

I was halfway through my sophomore year in college at the time, working my way with everything from playing piano in the movies to changing tires on the professorial young while the mothers were playing bridge on the cook's night out. I was almost 2,000 miles from home, knew no more of New England than that precious portion of it included within the borders of the Hanover Township, but I figured I had jobs and things enough lined up to go the 4-year distance if the world would only hold together—which it didn't.

FEELS KINSHIP WITH SOLDIERS

Because of all that and the detail is unimportant now, I have felt a definite kinship with these soldiers of the present crisis who have seen their little private worlds tumble, their plans and prospects swept aside by a mighty unseen hand over which they have no control, and who've even gone so far as to curse the luck in public, to question the justice and to threaten to quit at the end of their original years, come what may. I don't think they'll do that latter when the showdown comes, even if they honestly think so now. But I think I can understand them better than some. No kid ever worked harder, prayed harder, and sacrificed personal good times more than I with the definite goal of college education in mind, and none ever saw it all knocked for a more complete loop.

I know what it means to stand in the middle of beautiful dreams wrecked and smashed so completely that the pile isn't ankle high, just a soldier, another guy with a rifle, two blankets and a shelter half to place on the ground, a tin dish to eat from, one possible death to die, and no future worth trying to calculate beyond the grisly job of killing more of the other side than they can kill of yours.

I had never been back to Devens until this past week. There's no particular reason. I've just never had any business of any sort in the place. I've been through Ayer and the surrounding towns any number of times, but nothing ever pulled me off the main highways that mile and a half to the site of my original soldiering.

The memory of the days there aren't bitter. In fact, some of them are friendly and even funny. Some of them are indelibly etched, as, for instance, the night when, without warning or preparation, we were suddenly ordered overseas. Even that didn't mean to me what it meant to some. My mother, who was all the family I had, was across all those unreachable miles down in Texas. I'd already told her good-bye at the steps of a train weeks before and had seen her stagger to the wall of the little depot and lean there sobbing as the train pulled away and she figured I couldn't see. And I was sorry I did see, for there'd been none of that. Her smile had been so brave and true and unflinching.

But I was a maverick—a stray—with this New England unit. Their loved ones were here. They had mothers and fathers, wives, children, sweethearts right here in the neighborhood. They had that hard good-bye ahead of them. This was it. This was war. We were going over into it. * * * As I was saying, there are things I remember about Devens, but none of them, somehow, ever pulled me back on a pilgrimage.

There's nothing in that mighty place now an original tenant can remember. There are not even any officers around who remember what the original place looked like. Those old tar-paper shacks we lived in are gone. Most of our type of soldiering has long since gone with them.

If I hadn't seen Edwards and Benning and Blanding and the rest, the shock would have been almost too much to take. Service clubs, sheets, air-conditioned barracks, paved roads, magnificent brick buildings, impressive quarters for the officers and their families, red leather upholstered cocktail lounges in the officers' clubs, radios, motor transportation, ice-cream cones, private telephone booths, and all the long list of the modern rest, including practically unlimited passes for week ends are something my Devens had next to nothing of.

I don't want to be one of those "now in my time" guys, for nothing is more boring and the retort-crippling is obvious, but I'd like to toss this one item in for the benefit of any modern Devensite who figures the present up there isn't as comfortable, perhaps, as the Waldorf-Astoria.

We originals were forced to get along in that place without any heat until, to the best of my memory, well after Thanksgiving Day. Maybe you don't know how close to elementals life can get when just one such item is missing. The camp was new. They were still building it. In fact, great crews of civilians were still stripping those hills and lining the level places with the countless rows of those unpainted plank barracks. In order even to walk in much of the place we soldiers cobbled duckboards together from the planking left over. But there wasn't even a stove in those big draughty squad rooms.

The heat was to be by steam pipes from a central plant in each barracks unit. They couldn't get them built and didn't get them built until well after hard freezes had locked that entire country in. We slept, whole regiments of us, in our full uniforms plus our overcoats, with the blankets on top. We washed up and shaved in cold water.

HEAT BROUGHT THRILL

Despite all the years that have intervened and of all those that went before, one of my most thrilling of all life's memories concerns the hour the heat was turned on in our part of Camp Devens. It was at exactly 11 o'clock of a cold, windless, thinly sun-shot late November morning. I think our lives as soldiers really began from that hour. I've been trying to remember back about the matter of morale.

Of course, the situation was altogether different. We were officially at war. The declaration had been made. I was only a kid and had no comprehensive grasp of international matters, but, as I remember it, and as I since have checked back over it, our entire Nation was pretty well unified on the subject. Contrary to the present situation wherein the President has bottled up all information, made all the moves in secret and has expected the Nation to be just as excited about the matter as he is, President Wilson had proceeded so cautiously and so openly that most of the Nation was urging him to slip the leash and let us go along before he actually did.

The general impression was that he wasn't deliberately and perhaps ill-advisedly throwing us into it so much as holding back overlong after our duty was plain. There were then, as now, some articulate isolationists, but then, unlike now, they received scant public encouragement. There was no "80 percent" in those times, unless it was an 80 percent that wanted to see the Kaiser and his ways blasted forever from the path of mankind.

It's a little ironic now to look back on the public hates of that era.

SITUATION DIFFERENT

Compared to Hitler, Goering, Goebbels, and the rest of those glorified guttersnipes, the poor old Kaiser, with his withered arm, his patent leather helmet, and his "Me und Gott" was practically a gentleman.

But, anyway, the public of that era was not so much behind as ahead of the President, compared to the present situation where much of it is behind and so far behind that it's being dragged against bitterly braced heels.

The issue was clearly defined, the gauntlet had been formally flung, the program was fight it out to a victorious finish, or fail, and surrender to tyranny.

There was at that time none of the current labor situation to form a strangling background. There were a few strikes and arguments, but they were speedily settled. There was no jurisdictional civil war between two armies of labor, complicating the age-old struggle between the workers and the companies. There was no situation such as the current one where the Federal Government had more or less turned industry over to labor, and to a labor strongly flavored with a cancerous thing such as communism openly consecrated to tearing apart the very form of government and way of life we were asked then and are asked now to form ranks to defend.

There had been no depression, comparable to the one of the 1930's. There had been no relief. We had had no Ku Klux Klan and Father Coughlin and John L. Lewis and General Pelley. We had had no 20 years of colleges teaching youth to look at all matters objectively. We had had no writers, publicists, and parsons denouncing sundry phases of what turned out to be a magnificent but futile sacrifice.

We'd had no war debts repudiated, no British journalists boasting how beautifully we took the bait of deliberately flavored propaganda; we hadn't been called Uncle Shylock by the French and English cartoonists, our tourists hadn't been stoned as yet in the streets of Paris for the high crime of being Americans. We had no American Legion as yet to be called a lot of drunken clowns, and no college kids who'd gone "like dumb, driven cattle."

SIDE LIGHT ON MORALE

Maybe morale, under those circumstances, wasn't much of a problem.

Yet I seem to remember that it all wasn't one vast symphony of sweetness and light. I remember a draftee in my own battery who came back from a furlough 3 days late, drunk, ugly, and obviously a murderer at heart. In fact, it later developed that he'd served time for murder and he was dishonorably discharged in view of his criminal record. But he made plenty of trouble this particular night, after giving an oration in no uncertain terms concerning what he thought of the Army and all its ways.

I myself—and I mean the writer—being the top sergeant of this particular outfit by now, finally cracked his skull with a home-made potato masher as big as a baseball bat. He had just lunged at the mess sergeant with a wicked-looking butcher knife in an argument over the food. He said he was speaking for the entire battery. So we had squawking over the chow in that Army, too. I saw it reach a definite attempt to commit murder in that other war. I haven't heard of it's reaching that pass anywhere yet in this one.

In fact, despite all the unity and the solidity of purpose behind that other Army, there were times and places when spirits drooped so low that only the most intelligent officers, resorting to something drastic, almost to the point of brutality, could pull them out of it and get them back on their toes.

I haven't got around to writing it, but it's been my private conviction all along in all the present discussion pro and con concerning this modern army's morale, that, if the football coaches of the Nation were commissioned en masse and turned loose among these soldiers, you'd have a different psychological complexion inside a month. Here are men who're accustomed to prescribing for just that particular ailment.

The greatest morale story I know or ever heard concerns the time the late Maj. Frank Cavanaugh took command of a certain surly outfit in France. I lack the space to tell it in detail here. But, briefly, the famous football coach was sent up into the lines to take over an outfit long overdue for relief, one that had been hammered pretty badly, had been living in the hell of rain, mud, and murder until it had lost all enthusiasm and much of its hope.

Previous officers had commiserated with it.

CAVANAUGH TELLS 'EM

Cav looked it over and started to browbeat it.

"You guys think you've had it tough," he said; "you don't know what tough is. Instead of getting out of here, I'm going to take you in there further. If you think you've been shot at before, you're going to get some real going over now. We're not over here to sit down and feel sorry for ourselves. We're here to fight a war. Some of us have got to get killed. We've got to move up there and knock those Germans loose. Don't tell me how sore your feet are nor how lousy you are. I don't care. We've got a job to do. Get those packs on and those guns in shape to go. We're moving in an hour, and I'm going to show you how tough an officer can be. You guys have really had it too soft.

Cav was promptly written down as "the most-hated man in the Army." Those soldiers cursed his everlasting soul, and some of them even said they hoped to God he got it first. But up they went, and into position they went. Shelter was scarce. In fact, it consisted of abandoned shelters, some of which had been built by the Germans in some previous and more successful phase of that sector's campaign, and which therefore faced the wrong way so far as current protection went.

The soldiers were so blindly angry for awhile that they failed to notice that Cav had assigned them all the best of the shelters and had taken the worst of the lot for himself—one of those open toward the fire of the enemy. It wasn't for some while that they noticed that when a number of their command were asked to expose themselves Cav was always out there with them. It took some time to figure that welcome, heart-warming, and fatigue-chasing rations of brandy coming up somehow from some French origin, since the Americans didn't issue any, had to be paid for by somebody, and that that somebody was unquestionably their hard-boiled major, "the most hated man in the Army," buying it out of his own pay as an officer.

Finally their dread mission was over. They'd done their job faithfully and brilliantly, and were pulled back to a rest area. But they went without Cav. For at last he got it, as some of them originally prayed he would. He got it right out in danger's path where somebody had to go, and he accepted the assignment himself.

BELATED CHEERS

They never saw the major as a unit again until years later here in Boston when they were holding a convention, but they'd had lots of time to think things over and to check up on certain things—those mysterious rations of brandy, for instance.

The indomitable major, wearing in his gruffly handsome face the scars of the shrapnel which eventually killed him, strode into the hall that day amidst an ovation that all but loosened the rafters. The thunder of it grew the closer they pushed him toward the stage.

At last he stood there facing the men who'd been the soldiers of that other bitter hour.

"If you think it made me happy," he said, "to act like a boor and a brute to a bunch of great soldiers up there in that l[illegible], you've got something to learn about what I carry in here," and he touched the jacket over his heart.

"You were sick. You were tired. You were wet. You were cold. You'd done your job like true men and true Americans. It wasn't your fault, nor mine, that the overdue relief hadn't been sent up to take over. You were rightfully angry over the entire situation. Nothing was right. Nothing could be right. And now they were asking you to go farther and do more.

"I felt that the best way to handle the situation was to give you something definite, finite and personal to center your hatred upon. If you could hate some one thing more, I felt you'd hate the whole job less. So I deliberately tried to pull your hatred loose from everything else and concentrate it upon myself.

"It seemed to work. For that I was and am thankful. But I want you to know that even as I abused and bullied, in my heart I saluted you as the heroes you already were and continued to be, and I so doubly salute you now."

That they literally swept the old football coach off the stage and on to their shoulders belongs in the story, perhaps, as part of the story, but the main message is that there were problems of morale that had to be met in that war as well, and that there occasionally was some genius with what it took to give them grace.

So far as this new journey back to Devens is concerned, I seemed to find vindication of a very real sort for what has been said in previous articles in this space concerning morale. My thesis has been that most of the trouble to date has been caused by the positive boredom of pointless camp life. Either because industry, has not been producing, or because what it has been producing has been diverted to foreign hands, our soldiers have been without equipment and our alleged Army without any real training, with the result that the pointlessness of the entire program has caused unrest and even mental rebellion.

From all parts of the country, corroborative letters came in a flood.

But the clinching proof seems to be currently upon display in Fort Devens. There the better part of some 40,000 troops are currently engaging in field maneuvers that come as close to simulating actual war as can be done without shooting and killing. The troops involved, chancing to be high on the Army priority list, are almost completely equipped.

The Twenty-sixth Division, now completely armed except for one type of weapon, is one of the units. The First Division is fully equipped. Others moving in from other camps for the games are outfitted with the type of gear they would use in actual warfare. In these games, they are actually using this equipment. They're studying something, experiencing something, learning something, accomplishing something.

The report from all quarters is that their morale is high, not only that but that it's higher than it's been.

I believe it's high, because I talked with a lot of the young men and watched plenty of others. They seemed to be keen, alert, interested, and in the best of spirits. It's a new experience, for the Twenty-sixth, say, to be living in tents. It breaks the monotony of barracks life. They're getting a kick out of it.

THRILL IN GAMES

It's a new experience to pull out in the middle of the night, to have breakfast at 3:30 a. m., and go stealing through the woods, as they would in a surprise attack, to try to catch a command post or a company of infantry asleep. There's something to do, working those short wave radio sets, camouflaging a gun from the planes overhead, bridging a river, or racing machine gun equipment across some farmer's field to command a road down which some company of "the enemy" is sure to pass.

Naturally, they can't shoot and kill anybody, and umpires have to figure out which side seems to have outsmarted the other, but that's about as close as we can come to training in this country, where we haven't a Spanish revolution convenient enough actually to try the real McCoy.

But here's a bunch of soldiers who really seem to be interested. The guardhouses aren't bulging with prisoners. Nobody's talking about deserting. Every officer from General Truesdell down to the lowliest lieutenant said morale was of the best, and everyone had some incident or incidents to prove it.

They told, for instance, how a detachment of the One Hundred and Eighty-first Cavalry was told by an officer, "We can either make camp here for the night, or we can hitch up and make a flanking attack, away up around this way," and he showed them on the map.

"Let's go," said the soldiers, "we'd rather ride than sit around."

So they hitched up their trucks, loaded their weapons, and made an 80-mile swing around up through the southern edge of New Hampshire that took them most of the night, and they wound up by theoretically capturing a general.

I saw a lot of all branches freshly back in camp or just arriving in camp from 3 and 4 days in the field. They looked hard, lean, healthy, and sunburned. Some were shaving, bathing, even washing their clothes. Others were grabbing an hour's sleep under canvas. Nobody looked mad, nor exhausted, nor down in the dumps.

General Eckfeldt said, so far as he knew, nobody in his outfit ever heard of that alleged organization of 1-year-and-no-more troopers whose slogan and high sign is "Ohio," meaning over the hill in October, until it was written up in that picture magazine.

"OHIO" A GOOD GAG

Now, he said, the word has become slang in the outfit, or possibly a replacement for profanity. If a soldier's girl doesn't write him, his tent falls down, he drops a rock on his toe, or if he just wants to yell something, he lets go with "Ohio." Maybe some brother in distress will answer his yodel from the other end of the camp. But it's handled in the manner of a gag.

Countering "Ohio," however, the One Hundred and First Infantry has come up with the battle cry "Iowa." Iowa is supposed to mean "In October we attack."

General Truesdell told me the Negro troops engaged in the current games at Devens pitched in with such enthusiasm that they had to be piped down a little. It seems part of their chore at one stage was felling trees and dropping them in such a way that the progress of tanks would be blocked. They fell to with such a will and were dropping such whoppers that civilian traffic bade fair to be tied up as far as Quebec. They had to be asked to take it a little easier.

The problem of morale is far from settled. The public has little awareness of any war crisis yet, and General Lear, of yoo-hoo fame, was right when he said the soldier only reflects the morale of the civilian home and group he comes from. But a look at Devens in these times seems to prove that a busy soldier is an interested soldier. Give him something to do and a feeling that he really belongs in a pattern and isn't just a glorified loafer and he'll get in and pitch.

So the cry still is, "Arm this Army."

Give 'em guns or let 'em go.

They're worse than useless doing nothing; they're a pretty handsome looking crowd when they're interested in something.

The Devens of my day is gone with the years, but the Devens of the present hour holds a message for all America. It's too bad that those with the job of trying to get us prepared can't spend even a brief visit with both types of soldiers. The one doing nothing is the Ohio bait.

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 17, 1941

Mr. LAMBERTSON. Mr. Speaker, the other time the British forces invaded our Capitol they burned it.

Strutting with chips on our shoulders near other lands is dangerous, and certainly un-American.

The little business man is looking reverently to W. P. A. as priorities bear down upon him.

The fact that defensive waters is not specific helps prove that we want to run the world.

It is my judgment we are only bluffing yet, and that the Navy has not been ordered to shoot.

The people of my district seriously fear a military dictatorship here more than an invasion by Hitler.

Churchill has been satisfied with half the earth, but there are two others who would each like to rule it all.

Those agreeing with our present foreign policy should be jailed if they complain or flinch at any tax bill.

The lay mind of America knows that freedom of the seas never meant the carrying of contraband to a belligerent.

We actually heard an officer in Quartermasters at Fort Leavenworth reduce a flower bill from $17.50 to $5.

The Supreme Court is a political confession and the Congress a studied avoidance in the plea of a one-man preservation of democracy.

We need a Newell Dwight Hillis depicting Belgian atrocities to make the people really war crazy. Navy paid ads, aluminum piles left in the street, and "rattlesnakes" have not done the job.

The Legion Speaks

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

EDITORIAL FROM THE NEW YORK TIMES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Friday, September 19, 1941, entitled "The Legion Speaks":

[From the New York Times of September 19, 1941]

THE LEGION SPEAKS

The American Legion's 1,000,000 members have not been noted for grinding any ax but their own. Drawn impartially from all the various social and economic strata of the Nation, they are representative of no particular section, political party, or special interest. One thing they have in common—that nearly a quarter of a century ago they all wore their country's uniform. Otherwise the Legion is about as good a cross-section of American opinion, with all its confusion, contradictions, and paradoxes, as can be found. These are facts which should be noted by Axis statesmen trying to weigh from afar the temper of the people of the United States.

Meeting in Chicago in 1939, soon after the present war began, a Legion convention favored strict neutrality but left it to the President and Congress to decide whether the arms embargo should be repealed. That was in the days before the Nazis had shown their contempt for neutral rights. A year later, by the time the second wartime convention of the Legion met at Boston, the neutrality of Denmark, Norway, Holland, and Belgium had been violated; France had fallen before the Nazi onslaught, and Great Britain, fighting alone, was reeling under the brutal blows of Goering's Luftwaffe. To the delegates at Boston it was so clear that neutrality was in itself no guaranty against attack that they declared themselves wholeheartedly in favor of giving Great Britain all possible aid against the aggressor nations, which they outspokenly condemned.

In convention at Milwaukee in this third year of the war the Legion has gone further. Endorsing President Roosevelt's foreign policy, the Legion's delegates declare that the defeat of Adolf Hitler and all he stands for is the primary national objective. In addition, they call for immediate repeal of the outworn but hampering Neutrality Act and the removal of all geographical limitations on the movement of United States troops.

These are old soldiers speaking. They know from first-hand experience the horror and suffering that war brings in its wake. None has greater cause than they to be disillusioned with the victory and the peace they won. Yet they have demonstrated once more their ability to see the issue clearly and unflinchingly. They insist that the country be strong enough, and its President, as Commander in Chief of the Army and Navy, free enough to "meet any possible attack before it arrives and turn the enemy back so that our homes remain intact and our families secure." That is realistic thinking, and it reflects the growing conviction of people everywhere in this broad land that active rather than passive defense is essential to our national safety and well-being.

Are Citizens for Economy?

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

EDITORIAL FROM THE JANESVILLE (WIS.) GAZETTE

Mr. JOHNS. Mr. Speaker, the most important thing before the American people at the present time is the subject of taxation and the most important subject before Congress is to cut down the appropriations for nondefense spending in the United States. One of the daily newspapers in Wisconsin, the Janesville Gazette, in its issue of September 17, carried an editorial entitled "Are Citizens for Economy?" Under leave to extend my remarks I include it, as follows:

[From the Janesville (Wis.) Gazette of September 17, 1941]

ARE CITIZENS FOR ECONOMY?

Senator BYRD's resolution calling for submission by the Bureau of the Budget of revised estimates calling for savings of (a) $1,000,000,000; (b) one and one-half billion dollars; and (c) $2,000,000,000, in nondefense expenditures, has won widespread public acclaim.

Thus far, however, the economy movement is only a noble gesture. Whether it will become anything more depends entirely upon citizens, and this means the citizens of Janesville and southern Wisconsin as well as those elsewhere.

Congress will not economize unless or until there is a public demand for economy, voiced loudly and vigorously.

What is the next step? And what can you do?

Here is the answer: Tell your Congressman you want him to support the tax-bill amendment proposing appointment of a committee of 14 members from House and

Senate standing committees, calling for an investigation of public expenditures.

Experience warns that Congress is wary of Budget probes. The House blocked an exploratory proposal in January 1940, after it had been approved by the Senate, arguing that it infringed constitutional rights of House Members. Some similar subterfuge can be expected to block the economy group this session unless public demand shows Congress the wisdom of digging deeply and sincerely in the field of economies.

The most skillful, determined management of Federal finances is as essential as price fixing, consumer credit control, and priorities regulation, to check inflation. Only by effecting every possible economy in public expenditures can Congress do its full part. A thorough investigation of Federal expenditures is the necessary first step.

Resolution of Kiwanis District of Minnesota and the Dakotas

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

LETTER FROM SECRETARY OF THE KIWANIS DISTRICT OF MINNESOTA AND THE DAKOTAS

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

DULUTH, MINN., *September 5, 1941.*

To the Members of Congress representing the States of Minnesota, North Dakota, and South Dakota.

HONORED SIRS: As secretary of the Kiwanis District of Minnesota and the Dakotas, Kiwanis International, I have been instructed to forward to you the following resolution approved and adopted by the delegates of Kiwanis Clubs in the above-named States in convention assembled at Mitchell, S. Dak., August 19, 1941:

RESOLUTION

"This highly instructive, entertaining, and inspiring convention—the twenty-fourth annual convention of the Minnesota-Dakotas district of Kiwanis International—has been held during a great national emergency, in the midst of a world torn with the chaos of war, the repercussions of which have shaken the earth and threatened the peace, security, and freedom of every land. In this dangerous and tragic period our convention theme has been, 'Citizenship responsibility and international understanding,' two fundamentals of Kiwanis International, and our entire program has been wisely attuned to these basic Kiwanis principles.

"Keenly aware that the needs of the times present a stern challenge to the loyalty, usefulness, and patriotism of our citizens, and to the capacity of our democracy to successfully meet and overthrow those forces of destruction which strike at its foundations it is resolved that as Kiwanians we have a solemn obligation to actively, aggressively, and effectively support and assist our Government in providing an adequate national defense, in protecting and securing our constitutional processes and in guaranteeing the safety of the North American Continent, and we appeal to our fellow Americans everywhere to place service to our country above every other consideration in order that this patriotic objective may be accomplished.

"As a primary aspect of our citizenship responsibility we recognize the growing importance of a broader understanding of our international relations and of the grave responsibility which result from these relationships in this world crisis. Realizing that fateful decisions are impending, which will profoundly affect our country's relations with other nations—decisions which may mean war or peace—we urge our citizens to take an increased interest in and develop a deeper understanding of those problems which arise from and are involved in our international relations—that through a correct and sympathetic understanding of such problems we may aid our Government in adopting and carrying out sound and constructive policies in the field of international relations.

"Kiwanis International is a form of international citizenship, a fraternal union of American and Canadian citizenship, conceived in a spirit of international friendship and mutual understanding and dedicated to the protection and advancement of those ideals of human liberty common to Americans and Canadians alike. Conscious as we are of the great burdens which have been placed on our Canadian brothers through the exigencies of war and of the gallant effort daily being made by them to sustain their national ideals and to preserve their free institution, we welcome this opportunity to renew our expressions of friendship for them and extend to them our sincere and cordial greetings.

"In this connection we have observed with satisfaction the policy of our Government to make its plans for defense on a continental rather than on a national scale, and to cooperate with the Dominion of Canada in the joint defense of the North American Continent. We note with approval that the President of the United States has recently made an agreement with Canada, subject to the ratification of Congress, for the joint development of the Great Lakes-St. Lawrence seaway—a great navigation and power project, which, for more than 20 years, has had the unwavering support of the people of Minnesota and the Dakotas. We recognize that the early completion of this great navigation and power project will not only bring ocean commerce to the Northwest, make the city of Duluth an ocean port, open the Great Lakes area to shipbuilding and other essential defense industries, but it will also add immeasurably to the economic strength of the entire continent and will produce a spirit of unity between the United States and Canada heretofore unattainable: Now, therefore, be it

"*Resolved*, That we recommend the early adoption by Congress of the necessary enabling legislation to carry this international project to completion, and that the secretary transmit copies of this resolution to the Members of Congress and Senators in this Kiwanis district."

Very truly yours,

R. ARMISTEAD GRADY,
Secretary, District of Minnesota and the Dakotas Kiwanis International.

What of the Future?

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 18, 1941

LETTER FROM A CONSTITUENT

Mr. KNUTSON. Mr. Speaker, in order that Members of Congress may be informed as to how the priorities program is affecting small business, I desire to submit for the RECORD a communication recently received from a prominent small business man in Minneapolis. The experience of this gentleman has been the experience of many other American small businessmen. Those who have not already been put out of business are apprehensive over what the immediate future may have in store for them.

Is the Government requisitioning material in larger quantities than is actually needed for defense purposes? It is daily being charged that such is the case, hence it would seem that the time is opportune for the appointment of a congressional fact-finding committee.

The communication above referred to follows:

AUGUST 26, 1941.

Hon. HAROLD KNUTSON,
House of Representatives,
Washington, D. C.

SIR: I have just returned from a trip through the East, visiting several of the manufacturers who supply us with the office and school furniture and equipment that we sell. The purpose of my trip was to obtain merchandise in order that we may continue in business and make it possible for our salesmen to have something to sell next year and our customers to be able to operate their businesses and their schools efficiently.

You know the conditions that I found in practically every factory I called on, particularly those who use steel and other metals in the fabrication of their products.

Personally, I am very much in sympathy with any reasonable plan to render all of the support in the way of materials and supplies that are needed to help England and her allies come out of this war victorious. On the other hand, who is going to pay these expenses if it isn't the businessmen of the country, whether they are operating large, medium, or small businesses? We can't make any money with which to pay our taxes if our source of supply shuts down on us because the Government selfishly controls the raw-materials markets. It is just as important that our people remain employed by a stable, going business as it is that England and Russia get our machinery and materials along with the requirements of our own Navy and War Departments in such exclusive amounts.

I am of that group that believes that there are sufficient raw materials and resources in this country to take care of defense demands and the demands of private industry as well, if the proper allocations are made. I also believe that it is quite as important to have somebody in Washington with the knowledge and ability to check up on the requisitions made by the Navy and War Departments and to determine their actual needs as to have a lot of our best-informed businessmen making use of their experience in aiding the Government to obtain these things through the O. P. M. I have never felt that the demands made by the various governmental departments in time of war were soundly estimated and I don't believe that any businessman could afford to allow his purchasing department to spend his money without having a much more accurate check on the requirements than I have seen evidenced by the Government.

After all, we are not at war, nevertheless, we are spending many times what we did when we were at war the last time and we didn't experience the trouble that we are already up against now even though we were confronted with the matter of sending an expeditionary force out of the country.

Why can't Congress be sane about this situation and look at it through the eyes of the people who have to pay the bills and of the businessmen who have to keep the country on a going basis? It would seem to

me that it is pretty sound reasoning to give consideration to those people who you know pay their bills rather than these foreign purchasing commissions who look down their noses at America with little or no prospect of paying their old accounts or their new ones either.

The all-determining factor as to whether you can get products made from metals seems to be that you have a defense contract. Only a limited number of businesses can qualify and under this plan a much larger number of persons will be injured than aided.

I should be very glad to have an expression as to your attitude on the subject of allocation of the materials used in the defense program.

Yours very truly.

The Legion Speaks

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of Friday, September 19, 1941, entitled "The Legion Speaks":

[From the New York Herald Tribune of September 19, 1941]

THE LEGION SPEAKS

The American Legion's unequivocal declaration for the defeat of Hitler, its endorsement of present foreign policy, its call for the repeal of the Neutrality Act and the puerile geographical restrictions upon the employment of the armed forces, and its rejection of a report opposing lend-lease aid to Russia are strikingly indicative not of any change of heart among Americans but of the new conclusions to which they are being driven by the inescapable impact of events.

The Legionnaires' memories of the last war had given a great many of them, through the peacetime years, a strongly isolationist attitude toward any new one. At the annual convention 2 years ago, held just after the outbreak of the new struggle and while Congress was debating the repeal of the Neutrality Act arms embargo, there was so strong a sentiment against repeal of the embargo that the Legion sidestepped the question altogether. It gave thunderous cheers to a rip-roaring speech from Gen. Hugh Johnson on the "never again" theme and voted a resolution calling for a strict neutrality.

General Johnson is still ringing the changes on the same theme. But even a year ago the Legion was already realizing its inadequacy to the realities of the times, and the 1940 convention went on record as believing that sound national defense demanded the giving of "all practicable aid to Great Britain and those allied with her in their fight for freedom." Today the Legion fully recognizes the logic both of facts and of its own position. Between the call for strict neutrality in 1939 and the demand in 1941 for the repeal of the Neutrality Act and the defeat of Hitler there yawns a wide chasm. But it is not a chasm of principle, purpose, or patriotic devotion; in these things the Legion remains constant. It is the irrefutable evidence of events which has changed the application of the principles and made policies which could seem appropriate in 1939 no longer tenable. The Legion is to be congratulated on the realism with which it has met the actual facts of 1941.

We Defend Our Security

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

ADDRESS OF HON. JOSIAH W. BAILEY, OF NORTH CAROLINA

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able and patriotic address delivered by the senior Senator from North Carolina [Mr. BAILEY] on September 20, before the convention of North Carolina Young Democratic Clubs at Winston-Salem, N. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two years ago, at the instance of the President, the Congress was setting about to define the position of our country in view of the war in Europe. We did not then consider that it was a world war. We determined upon a position of absolute neutrality. We demanded that such munitions of war as should be bought here for account of nations at war should be paid for in cash, that title be vested here in the purchasers, and we should assume no risk of delivery; that no ship of our registry or flag should enter any belligerent port, or even any zone of combat or danger, to be defined by the President. Taking our lesson from the events that involved us in the World War, we solemnly resolved upon a course calculated to save us from a second such experience.

In June 1940—10 months after the war began—the President solemnly warned the Congress and the country that the security of the New World, of this country and its people, was in peril, and we began with all possible haste the preparation of our defenses upon the greatest scale in our history—the building of a two-ocean navy, the acquisition and fortification of island and coastal ramparts, the conversion of our industrial institutions into munitions factories, the training of armed forces, and the building of merchant ships. This was the second phase of our reaction to Hitler's proposed world revolution, and to the amazing progress he had made.

Sixteen months after the war began, that is, in March 1941, we authorized, again under the President's leadership, and instituted the program of all-out aid to Britain and other nations resisting the Axis Powers, under the Lease-Lend Act, a plain policy of intervention, but not war.

Altogether we have set up a program calling for the expenditure of $50,000,000,000—about one-seventh of the total wealth of this country—for home defense and foreign aid.

And now, just 2 years after the war began, the President has announced his orders to the Navy to fire upon craft of the Axis Powers operating in waters considered strategic to our defense, not a shooting war if the Axis keeps off, but a shooting war otherwise. This he solemnly declares to be necessary to the defense of the security of our country.

Our policy of October 1939 was a policy of strict neutrality. Our policy of 1940 was strictly a home-defense preparation policy. Our policy of March 1941 was a policy of intervention for defense. Our policy of September 1941 is a policy of conditional action on our own part as necessary to our defense, let the consequences be whatever the Axis Powers by action may determine.

A review of the facts of the history of these 2 years is necessary to explain, first, the reversal of the policy of neutrality, then the adoption of the policy of intense preparation for defense, thereafter intervention for defense, and now active shooting defense in strategic zones—four progressive phases of one policy—the policy of preserving the security of the American people, their homes, their personal safety, their Republic, their standards of life.

There was excellent prospect that the United States would be able to escape responsibility in the war until the German Army overran Norway, Denmark, and Holland, took control of the Baltic Sea, conquered Belgium, and occupied the eastern coasts of the English Channel, less than 30 miles from the ports of England, took the Maginot line, and crushed France and her great army. But those events not only gave the Axis, at that time in league with Russia, the control of Europe; they not only placed the Axis in position to conquer England and control the Atlantic and Mediterranean Sea; they also placed the Germans in position to take over Africa and to enable Japan to take China and southern Asia and the Pacific Ocean from Hawaii west. There was at the same time amazing demonstration of the might of the German armies. All that stood between the Germans and this conquest without parallel in human history was the British Isles, the British Commonwealth of Nations, and the British Fleet. And Britain was in no condition to defend or prolong the war without material aid from us. Hitler had declared that such conquest was his purpose; he aimed at nothing less than world dominion; and under world dominion, a world slavery under the German conception of the state as everything, the individual nothing, and amongst states the German state over all by force.

The United States could not take the risk of such circumstances. The odds were that without our aid Hitler would triumph over Britain within 5 months, and that we would be left to resist him and his allies alone, unready and probably unable to resist.

It may be granted for the argument's sake that we could even under the circumstances of a year ago, have successfully resisted invasion; but it cannot be argued that without Britain and the British Fleet we could have prevented Germany and Japan from taking over all the world other than our North American Continent. Nor may it be contended that in this event the security of the United States and every man and women here would not be gravely involved. For neither the United States nor its people could hope to exist encircled by the totalitarian powers. Under such conditions national disintegration would be inevitable, and the threat of invasion would hang over us day and night, not for months, but for unnumbered decades. We would deal with the rest of the world on Axis terms. We would inevitably become a subordinate nation. Nor may it be contended, that any sort of peace could be made;

for both Germany and Japan had not only given notice of their design to divide the world between themselves but had demonstrated that their treaties mean nothing to them, and that the only power they recognize is the power of superior force.

It was necessary, therefore, not only that the United States should arm and prepare her defenses but also that she should intervene with material aid before it was too late—that she should arm and intervene even though the Axis Powers should make war upon us. The new policy was nothing more nor less than the policy of prudence, of necessity, of defending and preserving the security of our country and its people, dictated by events. Critics of the President have not deterred him, and notwithstanding a general American aversion to war and love of peace, he has the support and gratitude of the vast majority of the people—and richly does he deserve it. A weaker leadership would have put this Republic in jeopardy in the gravest degree.

We have come in recent weeks to a new phase of the war and a new stage in our policy. Since Hitler has invaded Russia there is new hope that he may be defeated on the continent, for to avoid defeat he must crush the great Russian Army within a year. For him a stalemate is defeat. That Russia may have every encouragement and every advantage we may give ought to go without question. The Russian resistance is a deterrent to Japan and an encouragement to the invaded peoples. It holds the possibility of ending the menace of our involvement as a belligerent, for unless Hitler shall destroy the Russian Army there will be no need of armed intervention by the United States; there will be no chance of an invasion of England—he will have either on his front or at his back the innumerable army of a great continental country. Assistance to Russia with planes, guns, tanks, and explosives is likely to be worth 10 times all it may cost, whatever the price.

In this aid we will not be condoning communism but defending the security of the democracy of our Republic. We aid Britain, we aid China, we aid Russia, not on their account but as the means of keeping war out of the New World, if possible, as the means of gaining time for our defenses, when and if necessary, in building a two-ocean Navy, of fortifying our island ramparts, of expanding our Army and increasing our productive power as the means of breaking down the Axis scheme of world-wide totalitarian dominion, and as the means of victory if in the will of God we must undergo the ordeal of battle.

We must suppress the Communist in our land, but we have no concern as to the character of the Russian Government. When I see a Russian shooting a mad dog I raise no question as to his culture or his politics. I wish him to kill the mad dog and am glad to give him a gun.

We have reached the stage in which we must, in the interest of our own security, not only freely supply the means of resistance to the nations resisting Hitler and his allies, but also must see to it that that aid reaches its destination. There are open to us yet ways and means of doing this without inviting attack upon us as a belligerent. But if the Axis threatens us with war on this account, the threat, or its execution, will not deter us; and we will then not stop short until the submarines of the Axis are all rotting on the ocean floor, and all the seas are free for the flag of our country and the forces of civilization. If the Axis shall invite this, then this is what the Axis will get. For the United States will defend her people in her own way, as necessity may demand, let the consequences be whatever they may.

It was an ancient Roman who gave the watchword to his people, Carthago delenda est—Carthage must be destroyed. Two thousand years later we have a similar watchword, given to us by our President—Hitler must be destroyed. There can be no security, there can be no peace, there can be no treaties, there can be no progress, there can be no civilization, there can be no democracy, so long as he is at large in the earth. Germany may have him; but when Germany is led by him to attack all that is dear to mankind, and to jeopardize the security of our Republic, then Germany must pay the price of the civilized world's resistance, including our Republic, to the uttermost.

At the moment, we may say that the Axis has received solemn warning to keep out of all waters and air from Greenland and Iceland to the South Arctic—all waters and air on the western side of the Atlantic Ocean; and it has received notice that if it fails to heed this warning there will be shooting, and shooting to kill with all its implications. At the same time it has received notice of the purpose of the United States to aid to the extent of its power with arms, explosives, ships, guns, food, tanks, and planes the nations attacked by and resisting the Axis, with the avowed purpose of defeating its leader, destroying his power, and ending the menace of his proposed world order to ourselves and all nations.

The theory of our course is simply stated. We regard Hitler and the totalitarian Axis as a threat to the security of the people of the United States. We propose, therefore, two courses, one to prepare to defend at home, the other to help, with all material means, other nations to defeat and destroy Germany and her allies wherever there may be opportunity We deliverately calculate that should Hitler win in Europe, this country would be next. And therefore, while preparing against that event, we propose to do all we can to delay and, if possible, to stop him where he is. To those who advise that we prepare and do no more until we have to resist him alone, we answer that we shall not only prepare but will help prepare any other who stands in Hitler's way—that this is the only safe policy to pursue; that this policy, risky as it is, is far more calculated to preserve peace than any other, and if it shall fail to preserve peace it is the only policy that will make possible our victory in war, if and when war shall come. We are taking two chances instead of one—the first, the chance of stopping him where he is, the second, the chance of finishing him when and if he shall come this way.

Before the President announced the new policy September 11, Hitler might have brought on a state of war any time by attacking ships under our flag. He had attacked two—one a merchantman in the South Atlantic, the other a naval destroyer. Such attacks must, he knew, lead to open hostilities. The difference now is only that he has formal notice—a broad and general line is drawn, and if beyond that line an Axis war vessel or plane shall be seen by a United States Navy vessel or bomber, it will at once be attacked. But if the Axis shall confine its operations to other portions of the seas, there is at least negative assurance that immediate attack will not be made. It is notice to Hitler to stay out of the orbit of our Republic's necessray defense. What he shall do is for him to decide. He knows precisely what we will do. He must stay out of our yard—front and back.

Such is the situation. But it may be asked, if the Axis is induced by this necessary course for the defense of our security to declare war or to proceed to disregard this warning, will not our young men have to go? Millions of Americans are willing to give material aid, millions are willing to support measures necessary to deliver that aid in the ports of the resisting powers, some are willing even now that our Navy shall make war, but none of us can look with less than horror upon the possibility of sending our young men into foreign lands as soldiers in battle line.

I must resist the temptation to say that this is not within the possibilities. I must frankly concede that war is not an engagement of limited liability. I must concede that once in a war, we must do whatever may be necessary to win it, and that the counsels of the military authorities will outweigh civilian preferences. For defeat in war is worse than war. But I do not think that it is likely, if we shall do our duty by way of delivering all necessary material aid to nations resisting the Axis Powers, that we will be called upon to send forth expeditionary armies to the Old World. We have engaged in the Selective Service Act that those trained under it shall not be sent beyond the Western Hemisphere. The Congress will not lightly repeal that provision. It is not likely that ships sufficient to send a million men abroad will be available within 18 months, if then. It is far more reasonable to assume that every ton of cargo space will be needed for food and arms. It is well within the possibilities that the great supplies we are soon to have ready will be needed far more than our soldiers, and it is not beyond possibility that within 18 months the Germans will realize that Hitler's ambitious designs were beyond him and them, and that his sun will set in some abandoned isle, if not in a fate far worse. Sooner or later morale will crack somewhere—and it must not be in Britain, nor shall it be in the United States of America.

I know that eminent British generals have said that our young men are needed in Europe, Asia, and Africa; that the Prime Minister of England has recently said that the United States ought to come into the war in all fields. I do not question their judgment or their right to speak to their peoples; but I do question their right to say what the policy of our country should be. American citizens must frame and determine the American policy, and in the interest of America that policy must derive from the plain necessities of our own security. We will not encourage Japan or Germany with assurances that once in the war we will not fight with all we have and never cease until the victory is ours. For so to encourage them is only to invite them to proceed to war on us. Nor would I encourage British, Chinese, or Russians to think that our policy is more for their interest than it is for ours, or that they have the right directly or indirectly to affect our policy. Our Republic acts solely for its people, in their interest and by their will.

Let us hope that we may yet escape the ordeal of war, that at worst we shall not send our sons beyond our New World. And in the interest of this hope let us see to it that the nations under the attack of the Axis and at war shall receive al ithe aid in guns, tanks, planes, explosives, and food of which we are capable, cost what it may. Until this policy shall have been proved insufficient, we can well afford to defer further alteration until we have the light of events yet to come. Germany and Japan desire to keep our Republic out of the war as long as possible. Britain and Russia would, it sometimes seems, have us in at once. Let us give notice to all concerned, to friends and enemies, that our Republic will act solely in its own interest and of its own counsel, and further that when we act it will be the act of a great united people, sure of their cause and of themselves—ready to pay the price of victory, whatsoever it may be.

To those who may inquire as to the reason for our policy, now or in the future, the answer is that the course our Government has pursued was and is necessary to the

preservation of the security of the people of the United States.

To those who complain of the cost of this policy, of the hardship and impoverishment it implies, the answer is, "Security comes before prosperity."

To those who complain that this policy may mean war we answer, "Security comes before peace."

To those who suggest that we are giving too much power to our Government, we reply, "It is better to give power to our own Republic than to yield to the power of a foreign nation and an alien dictator."

To those who are fearful that we may surrender our liberties, we answer, "It is better to waive for a season our liberties to our own Government than to risk the permanent loss of them to foreign powers."

The safety of the people is the supreme law. That safety we have preserved, and we will preserve it by means of our own Government, in our own hands, and responsible to us. It is strong, thank God, and we will make it stronger as necessity may demand. We propose to take every step necessary to the safety of our Republic, of constitutional democracy, and the 140,000,000 people in whom and for whom and by whose will it exists.

We may safely say that our policy has so far been fully justified and is approved by the vast majority of our people. We have been spared for 2 years the ordeal of war. We have prepared our defenses to an extent sufficient greatly to increase our assurances of security. We have prevented the crushing of Great Britain, and we may argue that our course has been calculated to turn Hitler eastward, where now winter and snow and a great army await him, and destruction may overtake him. We have done much to improve the solidarity of the New World opposition to the Axis. And there is evidence that Japan is reconsidering her course, and the theatening situation in the Far East is visibly improved. Altogether we may give the President what he deserves—full credit for a wise, an alert, a bold, and a successful leadership and conduct of our affairs through one of the most difficult situations in our history.

As for those who have opposed this program, we may suggest that they consider what would have been our country's plight, had we yielded to their demands and declined to build up our defenses, declined to assure Britain when her funds were exhausted and her back to the wall, declined to notify the Axis that we were resisting and would resist to the uttermost. Men do not aprpeciate what they escape, but it is not saying too much to suggest that if the pacifists and isolationists could have had their way, this Republic might have been in war months ago, and at this moment struggling desperately and against terrible odds with the Axis Powers, and struggling singlehanded and alone, unready and unarmed.

We are far more prepared now than when we entered the World War, and our preparations are only at the end of the introductory stage. From now on equipment of all sorts will be produced at an amazing rate. Plants, machines, and workers are ready to go forward in intense production. We needed time, and time has been gained. Britain needed time, and time has been provided. Hitler had no time to lose, but he has lost a year in time and at least 2 years in men and arms. These facts further attest the wisdom of the American policy, for the time lost by Hitler and gained by Britain and the United States may be attributed in no small degree to the American policy as led by the President.

We have had our divisions and discussions, as well becomes a Republic of free men. We have had our confusions and delays, which are necessary manifestations of governments in the democratic form. We are yet to have similar manifestations.

The interruptions of necessary defense production by strikes notwithstanding sound provisions made for just arbitration has discouraged us. But over against this the general rank and file of the workers has made a record worthy of their country. The misguided leaders responsible for strikes against the defense of the country and its workers will yet realize that their stake and labor's stake in this historic world revolution is greater than that of any others. Let them but consider that Hitler recently put an end to a strike in Norway by standing the labor leaders before a firing squad.

We may be well assured that as the tests come, the American Republic, its institutions and its people, will meet those tests. We are here to prove to all men everywhere that freedom is better than slavery; that our constitutional democracy is stronger than any sort of totalitarianism; that men live better, behave better and fight better under liberty than under force; and when we shall have finished we will have demonstrated to mankind our worthiness to lead the race for 1,000 years to come—not after the manner of the dictators, but after the manner of and by reason of the inspiration of a republic of free men working out their destiny under constitutional democracy. The light of our liberty will be brighter than ever, and the place of our Republic amongst the nations will be higher than that of any nation in all the story of mankind.

Addresses Fifty-fifth Annual Convention of Iowa Bankers' Association

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, several days ago I had the privilege and pleasure and honor of delivering an address before the fifty-fifth annual convention of the Iowa Bankers' Association. It was a great pleasure and a great privilege to find myself in the State which gave birth to one of our great Americans, the Vice President of the United States, Mr. HENRY A. WALLACE. I ask unanimous consent to have this address published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Iowa Bankers' Association, honored guests, ladies and gentlemen, I am indeed delighted to be afforded the opportunity of appearing before your organization this morning on the occasion of your fifty-fifth annual convention. I am always happy when I am permitted to visit that section of our great country which we in the South refer to as the West because I feel that the people of the West and those of the South have more in common, in all probability, than other sections of the United States. The South is noted for its hospitality. I have always found that hospitality as warm and as genuine in the West as it is in the South.

Yours is a great State. I have visited it before. Fact is, I spoke in Des Moines several years ago before the Moose, of which organization I was national commander of the Legion. I was tremendously impressed with your Commonwealth. I am told that you breed here more Belgian horses than are bred in Belgium, and more percheron horses than are raised in France; that you produce more poultry than any other State, and that pork is one of your main products, in fact, that you lead in its production. But, above all, you have the highest percentage of literacy attained by any State of the Union.

Iowa is fortunate in being so ably represented in the Government of this country. I speak particularly of my intimates, your very fine senior Senator GUY GILLETTE, and that excellent gentleman, CLYDE HERRING. Both are unusually fine men. Both are popular in the upper House of the Congress of the United States. Then there is your own HENRY WALLACE, our smiling Vice President. He is indeed, with the Members of the United States Senate, a most popular individual. Everybody likes him. He is making an unusually fine President of the Senate. In WALLACE, GILLETTE, and HERRING you have three men of outstanding character and of whom, I am sure, you are proud. I like them all immensely, and am deeply appreciative of their friendship.

There are times when we differ, but we respect one another's difference of opinion, and may I add that we should hope for a continuation of these clashings of ideas, based upon sincere convictions, because debates pertaining to national questions really go to strengthen a democracy rather than to weaken it. There is just one thing in reference to this that I should like to mention, and that is the suggestion that we should, as American citizens, all interested in the same final objectives, learn to differ in a more friendly and tolerant manner.

I am indeed glad to be here this morning and to have the opportunity to address this distinguished gathering on the question, What is going to happen to business at the end of the war?

This is indeed a momentous question and I only wish I had the psychic power to be able to foretell today as to just what is in store for business at the end of the war, in fact, for our country at the conclusion of this World War No. 2, in which I pray we shall not become physically involved.

While I am not possessed of any psychic powers, I do feel that we are in a position to make certain statements and predictions as to what the future holds in store for us, basing the same on events, situations, and circumstances surrounding us today.

Any discussion of a subject or subjects having to do with the future of our Government or the future of business, our future, the future of the American people, would have to be approached from the angle of national debt, taxation, and unemployment; and for the present at least, in speaking of national debt and taxes, one must also refer to our national-defense program.

First, as to our national debt and taxes. At this time our national debt has passed the $50,000,000,000 mark of actual expenditures, while vast sums in addition have been appropriated, to be paid out of the Treasury later as defense work is completed.

Recent figures show that the lend-lease cost, plus other appropriations and authorizations, will raise the expenditure for national

defense alone to $53,000,000,000 in round numbers.

The major part of this fifty-three billions must be added to the existing national debt of $50,000,000,000. Thus very shortly, if the war goes on another year without our becoming physically involved, we will be confronted with a national debt of approximately $100,000,000,000. In addition to this national debt, the people must pay the State debts, county and city debts, debts of other political subdivisions, as well as their own personal obligations.

This $100,000,000,000 national debt means a first mortgage of around $3,000 against every family in America, or approximately $700 for every man, woman, and child in the United States. To show the enormity of this national debt, let me illustrate. There is deposited by all our people in the 15,000 banks of the United States, both State and national, $76,000,000,000. Thus the national debt alone will be about $25,000,000,000 more than all the money of all the people in all the banks of the entire United States.

Already the Federal Government has borrowed nearly 30 percent of the deposits in all these banks, and, of course, it is borrowing more and more every day from the banks and the investors of the Nation.

The Census Bureau reports that in 1938 the assessed value of all real estate in the United States was $110,000,000,000. Thus the national debt alone, when the authorizations now made are expended, will practically equal the value of all the land with improvements in this country.

When the debt stands at the $100,000,000,000 mark it will be two and a half times as great as the value of all the stocks listed on the New York Stock Exchange. This shows the burden of Federal taxes which soon must fall on all the people of this country if national solvency is to be retained.

Part of this condition is due to the fact that since June 30, 1930, the United States Government has been spending more than it took in. It has averaged an expenditure of $2,800,000,000 a year greater than its receipts for every year since 1930. Now you gentlemen, as bankers, know what it means to spend more than you receive, to put out more than you take in. It's not a pleasant or comfortable experience to observe your "incomings" to be less than your "outgoings."

In other words, even before the preparedness program began for this country, the national debt had been increased $28,000,000,000, commencing with the year 1930 and down to the middle of 1940.

This debt of twenty-eight billions was incurred, not because of national defense, but was due largely to expenditures made for other things, quite apart from the Army and Navy.

For these 10 years, 1930 to 1940, the Army and Navy together cost an average of one billion, one hundred million a year. But the Government was spending $2,800,000,000 a year more than it had. It borrowed the remainder. So you can see, my friends, that the Government has been spending each year, from 1930 to 1940, without counting anything for the Army and Navy, $1,700,000,000 more than it took in. This in a large measure explains how the national debt has been increasing yearly without counting any expenditures for national defense at all.

The Senate on last Friday passed by almost a unanimous vote the $3,580,000,000 tax bill, and this bill will become a law within the next few days. This indeed is a tremendous tax bill and may have a tendency to slow down the speed with which the national debt is pyramiding. It will, however, be but a drop in the bucket.

We have for the past 10 years been following in this country a policy of unlimited spending, with very little thought being given to the day when the debt must be paid by the American taxpayers. The American people, in my opinion, will find for the first time, when the new tax bill becomes effective, that pay day has finally arrived. Perhaps then they will wake up and realize just what is happening to them and what is going to happen to their children and their children's children. This bill will compel millions upon millions of persons to pay income taxes next year who have until this time never paid a single dollar of income tax. This has been brought about by the lowering of personal exemptions. The income-tax schedule has been raised until in the highest brackets it will tax a man up to 75 percent, or three-quarters of his income, and will catch those whose income are as low as $750 per year for individuals and $1,500 for married couples.

The American people are going to be made more tax conscious than ever before. On every hand they will be confronted with the proposition of taxes, taxes, taxes, and more taxes. There will be taxes on box seats, taxes on tickets sold outside the box office, more taxes on cigarettes, pistols and revolvers, malt liquors, breweries, gasoline, lubricating oils, safe deposit boxes, playing cards, wines, tires and tubes, admissions to all kinds of amusements, trucks, busses and parts, radios, phonographs and all types of musical instruments, refrigerators, matches, telephone, telegraph, sporting goods, traveling bags, and in fact almost every article that is used in the pursuit of everyday life. These taxes will touch the very bread and butter of every person in the country, and will eliminate a lot of butter from some bread. They will be severe, but, mind you, they will not be as severe as those that must eventually be inflicted if our national debt keeps on soaring.

And this is only the beginning. Next year there will be another tax bill. Some say there will be another tax bill this year. These heavy taxes will have to continue through the present generation, for the next generation, and even for children yet unborn.

Yes; that is indeed a dark picture, but that picture is painted from facts that are indisputable.

What is going to happen to business at the end of the war? Many businesses that are now flourishing will cease to exist overnight. The depression of the early thirties will be but a mere dull period in business as compared to what the depression will be when the present ghastly conflict ceases and the representatives of the warring powers find themselves once more seated around the peace table.

At the height of the depression of 1932 I think the peak of the unemployed amounted to between twelve and thirteen millions. We are now told that the unemployed in this country is somewhere in the neighborhood of 6,000,000, but that this figure is being somewhat reduced as the national-defense program constantly expands and the unemployed are being assimilated in defense industry and lend-lease products to make our country more and more the world's arsenal of democracy.

What about this? Have we only 6,000,000 unemployed? One labor union asserts there are more than 9,000,000 out of employment now; a rival union says 7,000,000. The Department of Commerce recently stated that at this hour we have in this country 6,305,000 out of work. For argument let's take their figures, the minimum, as a basis.

Today we have under way the largest defense program ever undertaken by any nation upon the face of the earth, costing more money and employing more people than ever before in the history of the world in an instance of this sort. Bear that in mind.

We have 1,000,000 on the W. P. A. rolls today; we have 169,000 in the C. C. C. camps; we have 1,580,000 men in our Army now and 340,000 in our Navy. It is estimated that we have in the service of the Federal Government, the 48 State governments, the District of Columbia, county governments, municipal governments, and the governments of various political subdivisions about 4,000,000 civilian employees. Think of it.

Now today, despite our great national-defense program, the personnel of our armed forces, Army and Navy, the W. P. A., the C. C. C., and the millions on the pay rolls of our regular peacetime administrative forces, we still have today more than 6,000,000 people out of work.

But wait a minute. Now comes the O. P. M., an abbreviation for Office of Production Management. This branch of your Government only a few weeks ago issued a statement to the effect that between now and the 1st of January between five and six thousand additional plants and factories would be closed for one reason or another, and that 1,000,000 employees would be thrown out of employment.

Think of it. Seven million out of employment between now and January 1, despite the millions employed by the Government in various capacities and the billions upon billions being spent by the Federal Government alone.

What will happen when the thousands upon thousands of plants that are now employing hundreds of thousands, millions of men and women in the manufacture of national-defense products and products under the Lend-Lease Act, find that they are no longer receiving governmental orders, and that there is no longer the need for the market for the products which are now so imperative and for which billions of dollars are being paid to these industrial plants in the form of Government contracts. Will these employers be willing or be able to continue the employment of the millions of people that are now working for them 24 hours per day, in the filling of national-defense orders and the production of lend-lease orders paid for by the taxpayers of America? Of course they won't. The law of supply and demand will take care of that and these workers will find themselves overnight without jobs, and I say to you gentlemen that the great danger to our country today is not only our becoming involved in the present conflict in Europe and Asia, but the real test of our democratic form of government will come when this war ends, when once again we find millions of homeless, unemployed men and women tramping the streets of our great metropolitan areas, seeking work and food. Then, I say to you, the real test will come as to unemployment after the war.

Many persons here at home, and doubtless those of other countries, are also doing a lot of serious thinking about what will happen after the war. What will happen to business after the war? Will there be jobs? What kind of jobs? And how soon? These latter questions are important ones, serious ones because business depends upon the purchasing power of the people. When all are employed business is good. When millions are unemployed, millions are supported by the Government at the expense of others, there is no real health in business.

The subject is truly a grave one. Those who are now devoting their thoughts to the subject are not all bankers like yourselves, social planners, or professors of economics. Many of them are our young men now in uniform, homemakers, wage earners, teachers, and farmers, those very people who will be most intimately affected by the answer to your question.

Those who are thinking in terms of the future estimate that if the war should end

in 1944 industry in America would be called upon then to demobilize 23,000,000 workers in addition to about 3,500,000 of the armed forces, and, to transfer such a vast number to normal living production will require a lot of advance thinking and planning.

To properly accomplish the change-over from military to peacetime production will certainly require financial reserves which some firms may not be able to accumulate under present rates of taxation.

Certainly the whole subject deserves the utmost possible study. Many say a vast reservoir of public works is an undoubted element in the necessary plans, but this would be only a temporary solution rather than a final one. Witness 10 years of public works, and where are we now?

Further, with plants closed, business idle, millions unemployed, tax sources destroyed, just where will your Government secure its funds with which to continue to carry on its present W. P. A., C. C. C., and other employment agencies, with additional burdens?

In 1933 we did not find ourselves saddled with a $100,000,000,000 national debt. We were then able to call upon the credit of our country and were able to provide employment for these destitute and unemployed people through our great relief programs. Will we be able to do this in 1942, 1943, 1944, 1945, or 1946? You men who have made a study, many of you a life study, of finance and financial solvency, know only too well that there is a limit to credit. Will our Government be able at that critical time to take care of its citizens, and will it be able to provide them with gainful occupation so that they will be able to furnish their families with the necessities of life? I hope it will, but the outlook is not very encouraging. Unquestionably, we will go through a tremendous period of readjustment, and business will have to play its part during that pericd.

There are many who believe that even after the war is over the United States will maintain a tremendous army and navy, and that this in itself will permit of the continuation of a great deal of the defense work which is now taking place. Of course, as to just what our naval and military policy will be after World War No. 2, no one can tell. The American people have always been a peace-loving people, and it may never be possible to satisfy them with any such military program as is now discussed from time to time with respect to the future.

What is going to happen to business after the war? The answer to that question is going to depend largely upon your answer to these questions. Will we become involved in a shooting war?

How long will that war last, and at what expense to you, the American taxpayers?

What will be the national debt? Will it be one hundred billion, one hundred and fifty billion, or two hundred billion?

After having converted our Nation into an arsenal for the world, will we be able to reconstruct it into peacetime industry so that business can contribute sufficiently to the income of the Government to conduct great public-works agencies to provide employment for its unemployed?

Shall we continue to hold ourselves out as the asylum of the oppressed of the peoples of the world, thus permitting our shores to be flooded with immigrants to compete with our own native-born or naturalized?

Shall we continue to welcome by boatloads the intellectuals of the earth with their foreign isms and ideologies?

Shall we continue to permit aliens, noncitizens, Nazis, Communists, and Fascists to hold key positions in our great labor organizations, in which alien-minded agitators are constantly creating strife between capital and labor?

Shall we become more centralized, more governmentalized, more alienized, and more internationalized, or shall we focus our attention upon our needs and our people here at home?

These are some of the questions to be assumed and answered by the whole American people.

I can well appreciate that every single businessman in America today, regardless of the profit he is making in his business or how successful he is, must from time to time ask himself the question, "What is going to happen to me or to my business when this war is over?"

I cannot answer this question any more than can you. I have endeavored in a short period of time to give you the facts, the barefaced facts as they exist today. You must draw your own conclusions as to what the future holds in store, not only for business, but for our working men, professional men, farmers, merchants, men and women of America, native-born and naturalized, the more than 130,000,000 citizens of the United States of America. What is going to happen to all of us? What is going to happen to America, our country?

Will our American way of life survive? Can we meet the test? Will we meet the test?

My answer is "Yes."

Nevada's Contribution to National Defense

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

RADIO ADDRESS OF HON. BERKELEY L. BUNKER, OF NEVADA

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address delivered on August 19 by the junior Senator from Nevada [Mr. BUNKER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since 1864 when Nevada's stores of silver and gold helped to save the Union, Nevada has borne her share in every crisis that has confronted the United States.

When our national unity was in grave danger, with brother pitted against brother in the blackest chapter of American history, when materials were so badly needed to end the sectional strife, Nevada came into the Union, bringing her vast reserves of metals and thus helping to put an end to the bitter conflict that might have made us two weak countries rather than one nation, indivisible, undefeatable, the strongest in the world.

Again when our Nation was at war, Nevada gave unstintingly of her resources. Her men, though few, were brave, and many of them saw active service in the range of enemy guns. But in materials she was rich and she gave freely. Lead, zinc, copper—these she poured into the factories that in turn cast them into defense weapons.

And today again Nevada answers the call to serve her country. In this great national emergency she stands ready to do her part.

We of Nevada have a right to be proud of our contributions and our potential contributions to the defense program. We are a wealthy State, sound in financial structure and rich in natural resources.

In the chaos in which the world has been plunged, the United States plays a definite role. She has set out on a very well defined course, the course of national defense. By an overwhelming vote of their representatives in Congress the American people have decreed that this shall be a twofold course, the first step is defense by preparing ourselves with defense arms and munitions and trained men to guard us against invasion. And secondly, to aid our friends in their fight to vanquish our enemies.

The latter of these two steps is an outgrowth of the first, for our only aim is defense of the United States first, last, and always. I have every sympathy for the cause of England and the ideals which she is so valiantly upholding. But I favor our foreign policy not because of my sympathy for Britain but rather because of love for my country. This is a policy built on absolute realism. It is a policy most pragmatic and practical—that of defending the United States of America, not with manpower—we do not want to send American boys to fight abroad—but with planes and munitions, every implement of warfare, that we can spare without endangering our own national defense. For our own defense is our single objective.

Thus our position in the present war is to serve as an arsenal—an arsenal for Britain and an arsenal for America. Our job is to supply the Allies and to supply our own defense warehouses with guns, ships, planes, and munitions.

We are doing a fine job of producing. As for actual production records, we are now producing some 1,600 planes per month—double the number produced last November. We now have reached in the production of shells and powder twice the capacity developed during the last war. The machine-tool industry has expanded production from $200,000,000 in 1939 to $450,000,000 last year, and an estimated $750,000,000 this year. We are engaged in the biggest and costliest shipbuilding program ever undertaken, a program that calls for the building of 4,000,000 tons of ships a year.

And what of Nevada's part in our vast production program? It is Nevada's purpose to pour out the minerals from which are manufactured these planes, shells, power, tools, and ships. Since our defense program began the production of Nevada's mines has increased by leaps and bounds. In 1940 the total value and the total quantity of her five leading metals was greater than any year since 1918, and her 1941 production promises to exceed even that year. She produced almost 15,000,000 pounds of lead, 24,000,000 pounds of zinc; 157,000,000 pounds of copper went from Nevada mines into ammunition, into our shipbuilding program, and other defense industries. She poured greatly increased quantities of other strategic minerals such as tungsten, mercury, and antimony into the defense factories of the United States.

Magnesium is now one of the most vital of the defense metals because of the requirements in the aircraft industry for structural materials of high strength and low-weight characteristics. About 30 percent of all airplane engines are now made of magnesium. This metal is the most important ingredient in incendiary bombing and is needed for flares, night air photography, and tracer bullets. A few days ago contracts were signed to build in Nevada three magnesium plants. When in full capacity these plants will produce some 112,000,000 pounds of this precious defense metal.

Another vital strategic mineral is manganese, and the Government has recently contracted to purchase 150,000 long tons from Nevada mines.

Nevada's recent industrial development is partially possible because of the great quan-

tities of power she has available—power to turn the wheels of industry that will pour out defense weapons.

Then, too, Nevada's vast expanses of land are valuable for military purposes. There was recently established in Nevada a bombing range, a gunnery school, an antiaircraft artillery unit; we have a naval ammunition depot. We have new airports, and I am in hopes that more will be built. More and more of our capacities and capabilities will be made use of.

The Nation now has some 700,000 men in training, besides the Reserves, the National Guard, and our regular military and naval forces. These men must be fed and Nevada is doing her share to give them subsistence. Cattle and sheep graze our mountain districts from the tip of southeastern Nevada to the most northwestern boundary. Our livestock together with our wheat, our truck-garden products, and our dairy products go into the food stores from which our fighting forces gain strength and sustenance.

Thus Nevada is patriotically participating in the emergency with which we are now confronted. As in other States in the Nation, Nevada's slogan is "produce for defense"—production for the defense of our country, for the defense of our freedom, and the institutions placed in sacred trust by our forefathers who have given their lives to defend them.

Our Nation has come far in the defense program. Our production record is one of which we can well be proud. But we are yet far from our objectives. So far we have just begun. Given time, however, given unity of purpose and the spirit of sacrifice the job ahead can be done—and Nevada will continue to pour into the defense factories of America her raw materials to the limits of her capacity. Nevada will continue to go "all-out" for defense.

Chief of Staff of United States Army Addresses American Legion Convention

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

ADDRESS OF GEN. GEORGE C. MARSHALL

Mr. LUCAS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a most remarkable address delivered at the American Legion convention on September 15 by Gen. George C. Marshall, Chief of Staff of the United States Army.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This national convention of the Legion finds our country in the midst of a tremendous defense effort. It finds the Army at a momentary climax of the most extensive and strenuous peacetime training program in the history of this or, possibly, any other country.

A great deal of water has gone over the dam since your first convention in 1919. Unfortunately it carried with it, by way of erosion, most of the military power created by your youthful vigor and your willingness to serve the country in those other critical days. Obsolescence had a similar effect on matériel.

Since the transition of you men from the ranks of the Army to the ranks of the Legion, your organization has fathered and has urged, year after year, military policies and appropriations which if they had been accepted by the people and Congress, would have found us in 1938 so strong in being and so powerful in immediate prospect, that the influence of this country might have given a different turn to the tragic history of the past 2 years.

No other group of men and women in this country can render such powerful support to the War Department as yours, and at no other time has this support been so necessary as it is today. In the past you have urged adequate appropriations for defense. Today money is not the acute problem—the Congress has been ready to provide the desired appropriations. What we lack and what we must have is an understanding by every family in America of the gravity of our situation. They should understand what it takes in discipline, in training, and in time to make a dependable army, and they must realize what infinite harm can be done through ignorance of military requirements and unwitting cooperation with agencies working in the interest of potentional enemies.

The problems of preparing our present military forces are quite different from those with which you men were familiar in 1917. In those days the matter of equipment was solved by the tremendous productive capacity which had been developed in England and France after 3 years' concentrated military effort. Our troops were sent overseas barehanded, versed only in the basic training of the soldier. Divisions were equipped in the field, trained within sound of the guns along the lines held by our Allies. Corps and armies were actually organized on the battlefield. Units were placed in the line at our convenience. Tactical errors, the results of faulty leadership, were not fatal, although unnecessary losses resulted, since they were localized by the very nature of the sector warfare of that period.

The technique of 1917 is outmoded today. The specialized training for a particular type of operation gives way to the necessity for perfect teamwork in fast-moving operations over any type of terrain. A high degree of technical and tactical knowledge is necessary, from the individual soldier to the commanders of the highest units. Skilled initiative is a mandatory requirement. The complicated coordination of fire-power, ground and air, must be managed at top speed, and for a surprising variety of weapons, with little or no opportunity to rehearse the procedure or to gain familiarity with the ground.

The training of this modern Army has been steadily progressive in nature. The soldier is given 13 weeks of basic military education, including specialized training for his branch of the service. He is then assigned to a tactical unit where he passes through a period of unit training. The man who entered the Army last fall is now engaged in a final phase of training—that is, field service as a member of large military units. These maneuvers have been in progress all summer, with constantly increasing forces until they are now culminating in the operations of three field armies, involving three-quarters of a million men.

It is difficult to overemphasize the importance of the maneuvers. You veterans who served in France will recall the fog of battle and the utter confusion which often prevails when large military forces come to grips; you probably remember the tremendous difficulties of ammunition and food supply; the great strain placed on field communications and the difficulty of their maintenance; I know you realize the stern necessity of willing obedience and firm discipline. In actual battle these matters are of decisive importance and they cannot be simulated on the parade ground. The present maneuvers are the closest peacetime approximation to actual fighting conditions that has ever been undertaken in this country. But what is of the greatest importance, the mistakes and failures will not imperil the Nation or cost the lives of men. In the past we have jeopardized our future, penalized our leaders, and sacrificed our men by training untrained troops on the battlefield.

The maneuvers also constitute a field laboratory, to accept or discard new methods of applying fundamental tactical principles. They enable us to perfect close liaison between combat aviation and ground units. They permit of test of a possible solution to the secret of defense against tanks. By actual field operations we are determining the proper tactics for the employment of armored units. The development of our mechanized reconnaissance units is being accelerated by experience with the difficulties and uncertainties created by masses of troops operating over wide distances. Opposing divisions are kept in the dark as to the size, equipment, and other capabilities of their immediate opponents.

The results at times have been startling. In some cases divisions would have been annihilated; in others they would have been captured. On the field of battle such events would be tragic. Today they are merely mistakes. We can correct them, replace the ineffective leaders, and go ahead. As an insurance policy against whatever operations our troops might be called upon to perform, the cost of these maneuvers represents a trifling premium to pay. Tremendous sums of money have been spent on our national-defense effort, but I know of no single investment which will give this country a greater return in security and in the saving of lives than the present maneuvers.

Although we have streamlined the Army, blistered feet and aching bones are still the lot of the recruit, and heavy burdens and long marches the role of the majority of the soldiers. Tank and truck travel may be fast but it is far from luxurious, really a severe hardship, which the men must be trained to endure.

Strenuous as the past year has been on the troops, we find that all but a few have gained weight, and that despite the tremendous increase in the size of the Army during the past year, the death rate has actually decreased from three per thousand to two per thousand. Although we moved hundreds of thousands of men from all parts of the United States into tent camps in the middle of winter, the sickness rate in our Army camps was and is generally below that of the average civilian community. Our soldiers probably constitute the healthiest group of individuals in the world today.

Along with the progress of the past year we have encountered problems that have taxed our ingenuity to the extreme, and there is one in particular which I wish to discuss tonight. It is a very serious matter, for it strikes at the tap root of military efficiency.

Although the President has proclaimed a state of emergency, the Army for all practical purposes is still operating under peacetime conditions. Perhaps it is this unusual, unprecedented situation which has resulted in a lack of understanding by the public as well as parents of soldiers and the soldiers themselves regarding fundamental military requirements. The power of an army cannot be measured in mere numbers. It is based on a high state of discipline and training; on a readiness to carry out its mission wherever and whenever the Commander in Chief and Congress decide. Any compromise with those requirements and that purpose not only minimizes our efforts but largely vitiates our development of military power.

This Army belongs to the American people; it is their Army, your Army. What it does, what it is are naturally matters of personal interest to all of our people, not only to those who have relatives in uniform but to every citizen depending on the Army for security. Despite the pros and cons which have attended every issue debated during the past year, whether on the floors of Congress, in the press, or over the radio, I am certain that everyone is in agreement on one point—that is, this country must have the best army in the world.

Now, as veteran soldiers, I submit to you men of the Legion the impossibility of developing an efficient army if decisions which are purely military in nature are continuously subjected to investigation, cross-examination, debate, ridicule, and public discussion by pressure groups or by individuals with only a superficial knowledge of military matters or of the actual facts in the particular case. I submit that there is a clear line of demarcation between the democratic freedom of discussion which we are determined to preserve and a destructive procedure which promotes discontent and destroys confidence in the Army.

As Chief of Staff I am largely responsible for the military program and for the decisions of subordinates. Mistakes have been made, and it is to be expected that more will be made. However, I am certain that we in the Army are the most severe critics and, also, we can best detect deficiencies, and we are better prepared to determine the method for their correction.

Please have these considerations in mind. A sane, a wonderful step has been taken by this country in adopting a policy of preparing its military forces in time of peace as the wisest of precautionary measures in the face of a world crisis. The very fact that we have shown such unprecedented wisdom in the military way presents the most serious difficulty for those responsible for the development of the Army. With a clear-cut task before us well known to the troops, the development of the Army would be comparatively a simple matter. But must we declare war in order to facilitate training and morale; must you burn down the building in order to justify the fire department?

The local posts of the Legion can do much to bring the people at home to a better understanding of the requirements of the situation. Even you veterans probably do not realize the result of appeals of the young man angling for a home-made cake or bragging to his parents or his girl of the hardships he endures, or grousing over the failure of his leaders to recognize his particular ability by immediate promotion. The War Department at times receives a veritable avalanche of criticisms or pressures resulting from such ordinary soldier reactions as these. The incidents in themselves are often amusing, as in the case of the mother who complained that her son wasn't getting enough to eat, and we found her boy had gained 16 pounds in 20 days. But the total effect is really serious. As I read confidential reports from abroad, there is a startling similarity between our present situation in this respect and that which affected the late-lamented Army of France. Criticism, justified or otherwise, is to be expected. In fact, it is as inevitable as a congressional investigation; but when its nature or purpose is to cause disunity within the Army, I say, direct such criticisms at me personally, but leave the Army alone. Don't tear down what you are striving so hard to build up.

Let me cite an example of what I mean. Take the matter of a separate air force. Because we are convinced that the establishment of a separate air force would not only be a grave error, but would completely disrupt the splendid organization now in process of building, we are accused of being unprogressive, jealous of prerogatives, and incredibly short-sighted.

On the basis of a cold-blooded analysis of facts, the matter has been studied in great detail by the War Department during the operations in which foreign nations are now involved. I can assure you that nothing has developed as a result of the present war which indicates that a change should be made in the present set-up in the United States. Comparisons are drawn that two nations whose air forces have attained the greatest success have so-called separate air forces. Here again we encounter a confusion of facts. Consider, for instance, the case of our friends, the British. Except for the gallant and truly remarkable defense of the British Isles, which is a special problem having little application to our problem of hemisphere defense, the lack of unity of command between the air and ground forces has courted disaster in virtually every operation they have undertaken. In the operations in Belgium and France, in Norway, in Greece, in Crete, and in the Middle East this lack of unity of command has remained a continuous, unsolved problem. In fact, the British have found it necessary to modify the separate air arm idea with respect to naval aviation. More recently they have been improvising special groups to operate more closely with ground troops.

The ex-democracy of France had a separate air force which operated on a basis similar to that which some individuals are now proposing that we adopt. France was defeated and reduced to a state of vassalage in a 5-week campaign. The Italian air force, which nurtures the theory of total war from the air and which has so-called independent control, has yet to be effective in the present war. Contrary to popular belief, the German Air Force is not independent of the ground arms in the generally conceived sense, but is closely coordinated by means of a system of command and staff over and above all civil departments, which would not be acceptable to a democracy such as the United States. The German Government is geared throughout for the primary purpose of making war through a superlatively centralized form of control. Hitler is commander in chief, but he operates through a chief of staff of a supreme staff, which plans, directs, and controls the operations of the Army, Navy, and air force, and is responsible only to the head of the Government. Through this machinery a campaign is planned, the organizations—air, ground, and naval—are allotted, and a commander is designated. He organizes and trains this task force and at the appointed time carries out the campaign, with every available resource of Germany in support. He may be a ground officer, an air or a naval officer. But he is in sole charge of every phase of the operation.

It is needless to say that the American people are not likely to establish a military oligarchy for this country. Lacking such an organization, the German system would be ineffective. As a matter of fact, we have adapted to our own use a set-up that approximates that of Germany as closely as is possible under our system of government.

Just a year ago the President gave final approval to the Selective Training and Service Act and to legislation authorizing reserve components to be called into Federal service. The importance of these two measures for the national defense was tremendous. They constituted a reversal of the historic and almost tragic policy that the United States would prepare for war only after becoming involved in war. Our peacetime military force was maintained for minor transactions, not to meet a first-class foe—a perilous policy, and one of extreme extravagance in men and money when the emergency arose. The greatest security which this Nation can possess is a powerful navy, backed by a well-trained army, together so strong that no foreign nation will dare to provoke a war. The Army is now in the making, but it must go through another winter of training under field conditions before it is fully prepared, and it must have the understanding and support of the people at home.

You gentlemen are practical soldiers. You can understand the difficulty of handling large masses of men under conditions of warfare. You recognize the meaning and importance of discipline. You realize how easy it is to tear down and how difficult it is to build it up. During this emergency the sound policies of the Legion have been a tower of strength to the War Department and to commanders in the field, and it is to you that I look for the support necessary to the accomplishment of our objective.

The spirit and determination that were yours 23 years ago, in the Meuse-Argonne, at St. Mihiel, or in a training camp at home, must be instilled in the men of this new Army. You can understand this and I know you will help. There is a further responsibility which I place on you. I look to you to educate the people at home as to the necessities of the times. Without a united country it will be impossible to build the type of army we must have. We cannot build the best army in the world unless the people of this country are behind it.

I am a soldier and I have spoken to you as one soldier to another. I have but one purpose, one mission, and that is to produce the most efficient army in the world. Given the American type of soldier and our war industries operating at top speed, given your aggressive support on the home front, and it can be done, and it will be done in time.

Electric Power on Farms

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

ARTICLE BY HARRY SLATTERY

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the subject Electric Power on the Farm Aids National Defense, written by Hon. Harry Slattery and published in the Public Utilities Fortnightly of August 14, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Public Utilities Fortnightly of August 14, 1941]

ELECTRIC POWER ON THE FARMS AIDS NATIONAL DEFENSE—HOW RURAL ELECTRIFICATION INCREASES FARM PRODUCTION WITH LESS LABOR, AND OTHERWISE DIRECTLY SERVES DEFENSE PROJECTS—IMPORTANCE FIRST OBSERVED IN FOREIGN COUNTRIES—PRESENT NEEDS

(By Harry Slattery)

The widespread availability of electric power in rural areas has long been a primary objective of farm organizations and of farm and other national leaders in the United States. Looking toward the long pull for a more stable agriculture and a better balance in the income and welfare of agriculture, industry, finance, and business, they perceived that electric power was no longer a luxury but a necessity to twentieth century needs of living and production for rural as well as urban people.

In advocating the adoption of a Federal rural electrification program—under which already nearly 325,000 miles of line have been constructed—these leaders foresaw that the benefits of rural electrification extended far beyond the farms alone and would have a marked influence in rural life generally, including the revitalizing of rural industry and processing, trade, churches, schools, and other community and village activities. Experience of R. E. A. and the 718 operating power systems which it has financed reveals the basic soundness of this approach.

The adoption of the Federal rural electrification program was, therefore, advocated by farm and public leaders on the basis of peacetime pursuits in order to improve the status and welfare of the rural community; but they builded better than they knew. For with the development of the grave international situation and the outbreak of war abroad, rural electrification took on a new aspect as a real factor in our national-defense program. It came to be recognized that the defense program, particularly total defense, required many varied types of activities throughout the entire Nation in both rural and urban areas, and that electric power was an essential factor to the successful prosecution of many of them. As a consequence, R. E. A. financed rural power systems, located in over 2,300 counties, are today making electric service available not only to defense projects as such but also to many equally essential collateral activities involved in a total preparedness program.

For defense and military purposes the importance of rural electrification was perhaps first observed in the major European countries where the percentage of farms electrified in 1935 was far ahead of this country, ranging from 50 to almost 100 in contrast to about 10 in the United States. The Proceedings of the Third World Power Conference in 1936 indicated that the widespread electrification in some of those countries was due in part to recognition of the importance of rural electrification as a tool of "total war" or "total defense" and therefore was included as a part of the planned program of preparation for defense or war. It has been reported that in Germany the government provided many farms with considerable electrically driven equipment in order to maintain or increase production and thereby release many farm men for military service and factory work. A rather vivid example of how rural electrification has made possible a high degree of decentralization of industry and farming out in Germany was described by Morris L. Cooke, first administrator of R. E. A. and at present consultant on management engineering on the staff of the associate director general of the Office of Production Management, in the following words:

"In 1937 sealed crates were delivered to electrified farms all over the nation. Instructions were given out not to open these crates until further notice. They were said to contain special machinery with which the farmers of Germany would, in their spare time, capture the toy market of the world. The day Nazi legions crossed the border of Poland, word was sent out to open the crates. They turned out to contain not toy machinery but equipment with which to make the thousands of little parts which go into the production of modern weapons of war. The parts made by these machines went into the tanks, guns, and planes which, the following spring, rolled back the armies of Belgium, the Netherlands, and France."

Likewise, in England, one aspect of the importance of rural electrification to defense is indicated by the following quotation from the Electrical Review (London):

"Home food production is very much in the news at the moment, and the nation may well thank those electricity supply authorities which, by their enterprise in providing supplies to sparsely populated and barely remunerative rural areas, are now making it possible for farmers to employ electrical methods to aid food production and storage."

One of the most important contributions that rural electrification offers to our growing national-defense program and to fulfilling our promise of all-out aid to nations fighting for our safety is in supplying power to help American agriculture meet its problems of labor supply and of increased demand for protein and other critical foods essential for proper nutrition. As a result of accelerated industrial production and the requirements of the armed forces, there is developing, particularly in specialized areas producing dairy, poultry, and truck crops, a serious shortage of farm labor. The general index of farm-labor supply declined from 100 in April 1940 to 82.2 in April 1941. As preparedness activities continue to become more widespread and intensified, and the demands of the armed forces continue to increase, it is apparent that more labor will be drained away from farms. The Bureau of Labor Statistics estimates that defense industries will require nearly one and a half million more workers by April 1942 than there were in May 1941. As a consequence, already there is an increasing demand for labor-saving farm equipment, much of it requiring electric power for its operation, such as milking machines, pumps, ensilage cutters, brooders, and other power equipment. Where electricity is available, many farms will be able not only to maintain their production of vital foods with less manpower but many will materially increase their output. It has been estimated that the application of electric power to the activities of an average farm will provide the equivalent of one farm hand at an investment of less than the annual wages of a farm laborer. It is unfortunate indeed that, notwithstanding the substantial progress made during the past 6 years, in this time of national emergency not more than 30 percent of our farms have central-station service.

Without consideration of its labor-saving significance, electricity has become an essential technical factor in the production of many forms of protein foods of which there is a shortage and of which increased production is imperative if the nutritional needs of our people and the requirements of the lend-lease arrangement are to be met. Because of its efficiency as a source of light, heat, and cold as well as of power, electricity has been applied widely to the production of protein foods of which there is immediate need for more production. Electric hatching and brooding produce a larger output of poultry per unit of effort and of expense; lighted poultry houses mean that poultry feed longer, grow faster, and produce more eggs; poultry, milk, and milk products are processed, handled, and marketed with less wastage when electricity is available; a plentiful and automatic water supply for the dairy, poultry yard, stock tank, and irrigation increases production; electric milking machines, cream separators, coolers, and other dairy equipment improve efficiency and maintain quality; electric refrigerators provide proper storage of perishable products, including eggs, milk, and vegetables; and the preparation of feeds for animals is promoted by electrically driven equipment.

The migration of workers from some rural areas to urban defense industries, and the increasing needs for protein foods to meet the nutritional requirements of both our own people and those of foreign countries that we have promised to aid, present growing critical problems to the Nation and agriculture. The alleviation of these problems is dependent primarily on a substantial increase in the use of modern labor-saving equipment. It is, therefore, important that we make every effort to extend electric service into the critical production areas as rapidly as possible.

In addition to its importance in alleviating the problem of farm-labor shortage in critical areas and in promoting the production of certain critical protein foods, rural electric service has been of immediate importance to defense and related projects that have been located in rural areas.

Availability of electric service from rural power systems in areas where many of the new defense projects have been located has proved to be of substantial benefit both to the projects themselves and to the surrounding countryside which has been called on to render many collateral services incident to their construction and operation. R. E. A. financed systems have been called on to serve a great variety of defense projects, including camps, bases, forts, munition depots, and dumps, housing projects, air field beacons, radio beam stations, and many lesser loads related directly to the defense program. As a consequence, defense projects served by the cooperative power systems are enabled to obtain their power at low rates.

In a number of instances, such as at Camp Shelby, Miss., Fort Leonard Wood in Missouri, and Camp Forrest, Tenn., R. E. A. financed cooperatives have been in a position to make service available to Army camps promptly and at low cost. In making service available to Camp Shelby, for instance, the line and substation for the construction load were completed 24 hours after receipt of the order from the War Department; and the large substation and 7½ miles of 110,000-volt transmission line from the power source to the camp were completed within 52 days. Inasmuch as the cooperatives are nonprofit organizations they provide the defense projects with service at cost. Further, they do not require cash contributions toward construction costs inasmuch as the facilities will continue to be used to serve farms and other consumers after the emergency period has passed.

Because of their wide coverage, the cooperative rural power systems are receiving increasing requests to furnish electric service to farms and others located in the vicinity of major defense projects. The location of some of these projects in rural areas of relatively sparse population and limited agricultural productivity has resulted in a tremendous step-up in the demand for perishable foodstuffs With electric power available, nearby farmers are enabled to increase the production of eggs, milk, and other perishables and have refrigeration for proper storage.

The systems also have been called on to meet the power requirements of many collateral activities in the vicinity of defense projects such as for additional housing, commercial establishments, and recreational facilities. In the vicinity of Camp Blanding, Fla., the Clay County Electric Cooperative has constructed numerous short extensions to serve attendant defense loads with a consequent multiplying of its defense load by four times.

In some areas, because of the shortage of firm power, the cooperatives have found it necessary to provide additional generating capacity to meet defense requirements. In order to supply the new marine base at Jacksonville, N. C., for example, the Jones-Onslow Electric Cooperative has started construction of two generating plants and 50 miles of transmission line with an installed capacity of 13,000 kilowatt-amperes. After the emergency this capacity will be available to serve farms and other enterprises in the area at rates somewhat lower than those now in effect.

One of the significant effects of the extension of electric service into rural areas has been the development of a large number and variety of small decentralized industrial enterprises. For normal peacetime operations the value of decentralized industries has long been recognized because of their contribution to the income and stability of rural communities; for defense purposes, such industries make possible the full utilization of facilities and manpower through

"farming out" with the least possible migration of workers. Among the industries served by R. E. A. financed systems at the present time there is a number that are making a direct contribution to the defense program through the production of strategic materials and the processing of farm products of which there is a shortage.

In addition, there are many more of these systems capable of making a valuable contribution if and when it is deemed essential to distribute the production of military material among innumerable small units widely scattered throughout the country. Many of these enterprises sprang up after electric power was made available by the cooperatives and surveys show that the number and variety are increasing rapidly. During 1940 there was a 20-percent increase in the types of industries on R. E. A. financed lines, a 53-percent increase in the number of plants, and an 86-percent increase in the kilowatt demand of such industries. During the first 6 months of 1941 the systems received requests for service each month on the average from 50 additional enterprises with demands exceeding 3,000 kilowatts. Among the industries that are contributing to the total defense program are: Cold-storage plants, hatcheries, dairies, food-processing plants of many types, mines, oil wells, and pipe lines, building-supply plants, machine shops, aluminum plants, textile mills, and chemical industries.

A number of the mines served by the rural power systems are producing extremely important raw materials having direct military significance, and of which there is a scarcity. These include vanadium, cinnabar, lead and zinc, copper, and manganese. The presence of a nearby rural power system played an important part in the opening of certain cinnabar mines in Arkansas. These are marginal mines, closed under normal conditions because not profitable. Military requirements for mercury made it important that these mines be brought back into maximum production, and the increase in price of mercury made this possible, provided relatively cheap power were available. The construction of a tie-in line from a neighboring R. E. A. financed system solved the problem of availability of power at low cost.

It has been highly gratifying to observe the active participation of the rural electric cooperatives in furthering the national-defense program in their communities. Their efforts show a desire to be of the greatest possible service in time of national emergency. The work of the Shenandoah Valley (Va.) Electric Cooperative has attracted Nation-wide attention in this regard. This cooperative sponsored a survey of the resources of the area served by it and was instrumental in the establishment of the Shenandoah Valley Defense Council, which was organized as a cooperative to enable the small industrial plants in the area to assist in the national-defense program.

In the predominantly rural area served by the rural systems the cooperative discovered that there were 375 machine tools adequate for use in the production of defense materials and enough skilled labor to operate these tools for 16 hours per day. These skilled workmen for the most part were not registered with any State or Federal employment agency, and the small industries had not been included in any defense-production plans.

R. E. A. and R. E. A. financed systems are working to alleviate power shortages at critical points in the defense program. As has already been indicated, some of the rural power systems are providing for additional capacity in their areas where there is a shortage of firm power. For emergency purposes some of the systems have organized power reserve cooperatives to own and operate mobile Diesel generating plants that are mounted on trailers for rapid transportation to points where the regular power supply has been disrupted. A number of these units are now in successful operation on R. E. A. financed systems and additional units are on order.

There is accumulating evidence, however, that the increasing demand for power being placed on the systems as a result of both the preparedness program and the normal growth in loads may have to be met with additional generating capacity. If it is found necessary, a large capacity in small generating units can be built on a mass-production basis; and these units could be made to provide a flexible source of power that could be adjusted easily to meet the needs of the systems.

Any capacity added at the present time to meet defense requirements would not constitute surplus capacity after the emergency because it would soon be absorbed by the systems in rendering normal service to an increasing number of farms and other rural users. This indicates that any expenditures made today by the cooperatives for additional generating capacity to alleviate power shortages occasioned by defense requirements would have a 100-percent post-emergency value.

Annual Meeting of American Federation of Teachers

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

ADDRESS BY GEORGE S. COUNTS, PRESIDENT

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the address delivered at the annual meeting of the American Federation of Teachers in Detroit, Mich., on August 22, by the president of the federation, George S. Counts.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A year ago world democracy stood in the shadow of utter catastrophe. The free nations on the continent of Europe had been either destroyed or encircled by the Nazi armies. As we met in Buffalo many of us feared, and with good reason, that within 12 months the islands of Britain would lose their independence and become a part of Hitler's "new order." Indeed, in those days we dreaded to open the morning newspaper lest we read in stark headlines of the cracking of the morale of the British people under the merciless bombing of the Luftwaffe.

I

The year has been kinder to the cause of human freedom than we feared. Although there have been many dark and bitter days, England still stands, a living monument to the courage and heroism of a free people. Although there has been a terrifying succession of disasters and retreats, there have been some magnificent victories. As we look to the future, even though we know that the entire weight of Vichy France and Japan may at any moment be thrown into the balance on the side of the Axis, we have solid grounds for hope. We see the fighting potential of the democracies steadily rising. Our own matchless productive system is rapidly converting America into that "arsenal of democracy" of which the President has spoken. During the coming year the tide of armament production should turn decisively against Hitler and his friends.

A major source of hope derives from a realinement of political and military forces. For reasons not altogether clear Hitler saw fit to break his devil's pact with Stalin—the move which launched the second World War and sealed the fate of the French Republic. For this new act of Nazi aggression the friends of human freedom throughout the world should be profoundly grateful. It means that the vast resources of the Soviet Union, contrary to Stalin's hope and will, are now ranged on the side of the democracies. And in spite of the opinions of practically all the experts, the Soviet soldiers and officers have fought and are fighting with magnificent skill, tenacity, and valor.

II

Some among us perhaps find the thought of cooperating in any way with the Stalin dictatorship deeply repugnant. Such an attitude is easy to understand. This dictatorship is no less a dictatorship merely because the Nazi armies have been turned against it. Yet we must realize that in struggles of this character free peoples cannot always choose their associates. In our own War of Independence we did not hesitate to accept assistance from Bourbon France.

We must realize also that the great threat to the establishment of a regime of peace and freedom on the earth comes at this time from Hitler and his armies. Even though the dictatorship of Stalin may be as ruthless and savage in certain respects as that of his partner in the pact of 1939, it seems not to be equally bent on or capable of conquest and world domination by force of arms. Moreover, we may be justified in hoping that the exigencies of the conflict and the association with the democracies may revive the spirit of freedom which marked the Russian revolution in its early days.

We must realize further that the fortunes of the American people are irrevocably involved in the struggle which is now being waged on the vast plains of western Russia. If the Nazi armies should triumph decisively in this struggle, the course of our history might well be radically changed. Hitler would then bring quickly within the orbit of his rule the whole of Europe, Asia, and Africa. Then with the resources of three continents at his disposal his position would be impregnable. It was doubtless some such grand conception which led him to violate his pact with Stalin and launch his attack upon the Soviet Union.

Victory in Russia, even if not followed by a successful invasion of Britain, would lead to the imposition of the Nazi pattern of life and society upon more than three-fifths of the earth. And that pattern carries with it, as we all know, the destruction not only of the free-labor movement, but also of the great heritage out of which the free-labor movement has come. It would literally involve in destruction all that is best in western culture—the Judaic-Christian doctrine of the brotherhood of man, the humanistic faith in the liberation of the mind, the democratic affirmation that ordinary men and women can and should rule themselves. The Nazi movement is an unexampled effort to arm the ethics of a primitive and pagan tribalism with the might of modern science and technology. It is reaction in the deepest moral sense.

The fate of the people immediately under the Nazi rule is already written plainly on the map of Europe. Wherever Hitler's armies march, human freedom is outlawed and mercy forgotten. If any nations or peoples within the range of his power are permitted to retain their independence, that independence is entirely spurious in character—an independence fully subservient to the Nazi

will. And it should not be forgotten that technology has equipped despotism with the means of ruling continents as easily as it ruled a small state a few generations ago. If conquered peoples should strive to rise against their oppressors in this age of machine guns, tanks, and airplanes, they would rise only to be mowed and blasted down. Let the nations of the old world come fully under the Nazi yoke, and men who love freedom will know despair as they have rarely known it in history. The darkest of all ages will then descend upon mankind.

But we are interested primarily in the impact of a Hitler triumph on American democracy. Even if such a triumph should not lead to a direct military attack upon the United States and the loss of national independence—a concession that no one who loves his country should risk making—the result would be disastrous. Even if Hitler should remain on the other side of the Atlantic, the course of American history would be radically altered. Even if we should continue to cherish ideals of human liberty and equality, we would be compelled to become a great military nation or perish. We would have to arm to the teeth and, in the face of superior natural, technical, and human resources in the possession of the enemy, strive to build unrivaled naval and air fleets. Into the maintenance of the Military Establishment from year to year we would be compelled to pour one-quarter to one-half of our income. The consequence would be a progressive degradation of the standard of living of our entire people. In addition we would be forced to adopt military conscription as a permanent practice and turn schools and all the agencies of education and opinion to the cultivation of the military mind and virtues. The triumph of the Nazi armies, moreover, would place the stamp of success on Nazi ideas. This would give these ideas immeasurably greater prestige and authority than they possess today and would stimulate powerfully the growth of some form of American nazi-ism. Our democracy could not long survive these several conditions and tendencies. Such issues, in my judgment, are being decided on the battlefields of Russia as we sit here in convention. Our people, therefore, if they are to view the present world situation with realism, should give the fullest support to the peoples and armies of the Soviet Union, as well as to those of Britain and China, in their struggle against the Axis. This is only common sense.

III

The year has been a difficult but, I think, a successful year for the American Federation of Teachers. By a vote of the entire membership of the federation we have revoked the charters of three locals. This has been a painful experience to all of us. The executive council took the action it did only after fullest consideration of all sides of the question and only for the purpose of actually saving the union. In no other way could the federation relieve itself of a species of political intrigue and conspiracy that for almost a quarter of a century has bedeviled democracies and democratic organizations on six continents and the islands of the sea—a species of political intrigue and conspiracy that has bedeviled the union, and particularly certain of its locals, for many years. We have had the courage to remove from our ranks the organized influence of the Communist Party.

The revocation of the charters of three locals, however, does not build the American Federation of Teachers. Necessary though this action was, it is negative in character. Though it has literally saved the union, it does not build the union. It has merely cleared the way for positive and constructive work.

A splendid beginning for the job that lies ahead has been made during the past year by the committee on the emergency in education of which Vice President George Axtelle was the chairman. In close collaboration with the executive council this committee prepared a report on education, democracy, and defense which was published in full in the March issue of the American Teacher. In my opinion this report is the most fundamental and comprehensive attack upon the problem of our responsibilities and opportunities ever made by the federation. It begins with a fresh analysis of the social situation and points out clearly both the weaknesses and the promises of our democracy. Repudiating without equivocation the sophistry that America must choose between communism and fascism, it insists that democracy, both as social ends and social means, constitutes the only tolerable road to the future. The report then proceeds to outline a total program for the defense and advance of American democracy during the period ahead. It outlines the role of the school and the teacher, of our federation, and of the various forces which may be counted upon to cooperate in the struggle for human freedom. This report is to be studied, discussed, and criticized at this convention. It should be revised and strengthened in accordance with our best thought and then made the basis for the work of the union.

As we look to the future I see five great tasks confronting the American Federation of Teachers. We must, first, defend public education in the United States; second, continue to fight for the ever more complete democratization of public education; third, prepare for the impact of the return of peace on public education; fourth, develop a positive educational program for the post-war world; and fifth, work for the defense and advance of democracy here at home in the United States.

The defense of public education is our first responsibility. This responsibility assumes two forms. On the one hand, we must conduct a continuous fight to maintain school budgets in the face of powerful and sustained pressures emanating from those who are opposed to expenditures for public education, either because they dislike paying taxes or because they fear a thoroughly enlightened people. On the other hand, we must resist all efforts, from whatever source, to impose a narrow orthodoxy upon the schools. We must oppose not only all totalitarian movements from abroad but also guard against the abuses of legislative committees and the attacks of a National Association of Manufacturers or a Governor Talmadge.

The fight to democratize public education and the public-school system is likewise always before us. We must continue the fight to place on boards of education representatives of organized labor and of the working people generally; to bring equality of opportunity to all of our children regardless of race, nationality, religion, or family circumstance; to lift the status of the profession, to improve and make secure working conditions, to encourage teachers to participate actively in the life of both school and community, to collaborate as equals in the framing of both educational and social policy. Also we must give vigorous and sustained attention to the problem of developing an educational program that is truly and positively democratic, an educational program designed to give to the young the knowledge, the loyalties, the discipline of free men.

At some time, whether early or late we do not know, peace will return to the world. The economic and social dislocations that will attend the closing down of war industries are certain to be great and pervasive. The American Federation of Labor and other forward-looking bodies of citizens are insisting that comprehensive plans be formulated to ease the transition to a peacetime economy. In the formulation of such plans our federation should have a voice. More particularly we should be prepared for a general expansion of educational facilities which should be an integral part of the post-war program of the American people. The full use of our productive energies will require the development and extension of various social services. One of these services must and will be public education.

The post-war world will also place upon the American people heavy international responsibilities. After Hitler and all he represents have been destroyed, the task of building a world order based upon the principles of peace, justice, and mercy for all races and peoples will remain. Our experience during the period between the two great wars has demonstrated fully that as a people we cannot withdraw from the world. The effort to do so has led us to the brink of disaster. We shall participate in the settlement following the conclusion of the struggle. We must also be prepared to bear responsibilities in the process of world reconstruction commensurate with our great power. In order that that power may be wisely used and directed, through cooperation with the teachers of other nations, we should proceed to prepare ourselves and our people to build a world to which no Hitler can return.

Our fifth great task is to work in every possible way for the defense and advance of democracy here in America. We must remember that the threat to human freedom comes today from at home as well as from abroad. We must therefore be prepared to oppose not only the despotism which comes from beyond the seas but also the despotism which grows out of our own soil. In fact, the surest way to build that morale and unity so necessary to meet the threat of foreign aggression is to put our democratic professions to work in the United States, in guarding the democratic process, in achieving a general condition of economic security and abundance, in making all of our institutions serve more fully the interests of all our people.

IV

All of this means a strong American Federation of Teachers—a federation enrolling at least 10 percent of the teachers of the country, a federation enjoying the confidence and respect of the American Federation of Labor, and the entire labor movement, a federation known to the American community for its integrity, courage, and vision. I hope that the year ahead will see us advance noticeably toward each of these goals. In the words of John Dewey, addressed to this convention, I trust that we shall not "be modest in our hopes and ambitions," but, rather, that we shall fit our energies to the bold dreams of the founders of the federation 25 years ago. When we or our successors assemble again a quarter century hence I trust that the American Federation of Teachers will be playing the central role in the organization and conduct of public education in the United States and that it will rank among the first of those forces which will have sustained and advanced the cause of democracy during the intervening years.

A Wyoming Referendum

EXTENSION OF REMARKS

OF

HON. JOHN J. McINTYRE

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

Mr. McINTYRE. Mr. Speaker, in a sincere effort to learn the views of my

friends and fellow citizens in Wyoming relative to the efforts that are being made and should be made to defeat Hitler, I propose to send a copy of this statement to each post office and rural box holder in Wyoming, with a card upon which to register his or her opinion by checking the proper squares.

This information will be invaluable to me and other Members of Congress, and I am sure that nearly every person who receives one of these cards will be sufficiently concerned to mark it, place a 1-cent stamp upon it, and return it to my office.

America at the Crossroads

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

RADIO ADDRESS OF REV. JOHN A. O'BRIEN, PH. D., OF THE UNIVERSITY OF NOTRE DAME

Mr. LUDLOW. Mr. Speaker, while interventionists, who comprise a minor but very vocal fraction of our people, are trying by every hook and crook to get us into foreign wars, there occasionally arises some great apostle of peace who has the vision and the courage to stand up and urge that now is the time when America should take the lead in proposing mediation to stop the age of butchery and to lift human relations to a plane of sanity and reason.

Rev. John A. O'Brien, Ph. D., of the University of Notre Dame, is such an apostle. He is a real leader in the cause of peace whose eloquent appeals, reflecting sound Americanism and Christian philosophy applied to present-day world problems, are penetrating the homes and firesides of America and making a profound impression.

Dr. O'Brien is a supporter of House Concurrent Resolution No. 20, which I have introduced, and which proposes that the President shall be requested to take the initiative in offering the services of the Western Hemisphere as a mediator, to the end that the blessings of peace may be brought to a distraught world.

I present for printing in the RECORD an address entitled "America at the Crossroads," recently delivered by Dr. O'Brien over the coast-to-coast network of the National Broadcasting Co., as follows:

I propose to discuss the subject America at the Crossroads, calmly, dispassionately, with no indulgence in personalities and no appeal to racial animosities. I shall appeal only to the fair-mindedness, to the reason, and to the patriotism of the American people.

I should like to make it clear that I am speaking neither for Notre Dame nor for the Catholic Church, but in my own name as an American citizen. I have abhorrence for Hitlerism, loathing for Stalinism, sympathy for the valiant people of Britain, and for the victims of aggression everywhere. I have sympathy likewise for the common masses in every land, including those of Germany, Italy, and Soviet Russia, because they are the helpless victims of the tragedy of war. But I have devotion to American and to our own people first of all. I believe that patriotism, like charity, begins at home.

America stands today at the crossroads, facing the road to war and the road to peace. Which will she choose? Upon that choice hinge the welfare of our country, the civilization built up by our fathers over two centuries of toil, and the lives of millions of American boys.

CHOOSE PEACE

I am asking my fellow countrymen to build an impregnable defense for America and to choose the road to peace. For it is only by walking along that road that we can effectively assist the distressed peoples of the Old World and preserve our freedom and democracy. The path to war means not only national impoverishment but the loss of our freedom and democracy. It is the unfailing pathway to destruction, agony, and death.

I spent the first year of the war at Oxford University, England. There I heard the British labor leader, Arthur Greenwood, declare: "If this war is fought to mutual exhaustion, the British Empire will experience a degree of impoverishment the like of which we have never known. And at the end of the road of all our bloodshed and sacrifice we shall find not a democracy but an authoritarian regime of the right or of the left."

Uttered during the early months of the war, these words should be placed before the people of America that we, too, might see what awaits us at the end if we take the road to war.

ACCOMPLISHED WHAT?

Now that the nations have been engaged in the titanic struggle for 2 years, let us ask, What have they accomplished? Have the Germans proved by their conquest of Poland that they were right and Poland was wrong? Who can remember precisely what the German-Polish dispute was about? There was something about Danzig, the free state, the corridor, and East Prussia. But does not the original point at issue, whatever it was, seem microscopic in comparison with the enormous expenditures in money and in human lives already made by both sides?

Have the Allies proven nazi-ism and fascism to be wrong? Have the Axis Powers disproven the democratic theory by their conquest of France and their overrunning of the other countries of Europe? If Soviet Russia, with the help of Britain and the United States, should triumph over Germany, would that demonstrate that communism is the better way of life and that Europe and America should, therefore, be bolshevized? What single good result has emerged from these 2 years of bloodshed, slaughter, and unparalleled destruction?

THE REAL VICTORS

If we look at the matter calmly, dispassionately, not through the eyes of emotion but through the eyes of reason, we shall be obliged to say all this orgy of killing and destroying has yielded not one single good result. It has accomplished nothing. It has decided no question of justice or right. It has decided merely which side has the more effective military machine and more human fodder to feed it.

Hundreds of cities have been laid waste. Thousands of works of art, culture, and civilization have been destroyed. Hundreds of thousands of families have been uprooted and their members scattered far and wide. Millions of men, women, and children have been slaughtered like cattle. A whole civilization is in flames.

Who are the victors? Lunacy, destruction, death. The whole stupid, brutal business of seeing which side could destroy the most property and kill the largest number of human beings has pulled Europe back into the caveman stage where might is right.

Stripped of all rhetoric, emotionalism, chauvinism, cant, this is the plain, unvarnished statement of the ugly realities.

EUROPE A DESERT

If America should enter the fray, and the war should last for 5 or 10 years, what would the result be? Even if we sent ten or twelve million men the conquest of an Axis-dominated Europe would be problematic. Let us suppose, however, that by some circumstances, not immediately apparent, we should succeed after 10 years in eking out a military victory. What would we have gained?

Europe would be a desert. Ten to twenty million men would be killed. Centuries of civilization would be in ruins. Disease, famine, and death would stalk the land. Our country would be bankrupt. A debt would weigh like a millstone on the neck of generations yet unborn. A military bureaucracy would regiment our every act. The flower of our manhood would be slain. Every home would be in mourning. Who would the victors be? Once again—lunacy, destruction, death.

A FALLACY

What good would we have achieved? Absolutely none. Would we not, however, have crushed Hitlerism, nazi-ism, fascism? We might have slaughtered millions of Germans and millions of Italians, but we would not have crushed these ideologies. As these are ideas, they are impervious to destruction by tanks, guns, and bombs. They can be conquered only by other ideas assimilated through the free play of the mind. Reason, education, and discussion are the only means by which we can purge the human mind of falsehood and secure the entrance of truth.

The whole argument calling for America to enter the European strife to crush nazi-ism and fascism is vitiated, therefore, by a fundamental fallacy—the naive assumption that ideas can be destroyed by arms and warfare. Instead of dislodging these ideas, force will only drive them deeper. External assault will rally even the foes of Hitlerism to the defense of the fatherland. Peace and the capacity to think dispassionately, which peace affords, offer the best means of enabling persons to free themselves from false ideas and vicious philosophies. Only by the sword of the mind functioning freely in peace can we slay the dragon of totalitarian ideology.

WAR'S FUTILITY

War never decides a moral question, a question of right or wrong, over which it is always allegedly fought. It merely decides which side has more guns, more bombing planes, more instruments of death, more cannon fodder. The common masses in all the war-torn countries are the tragic victims. After millions of human beings are slaughtered like cattle, after cities are destroyed and civilizations laid waste, and both sides are exhausted, a conference is held.

Diplomats wearing spats and boutonnieres and generals and admirals with gold braid assemble. "You take this territory and you take that," they say. Then, putting their papers back into their portmanteaus, they go home. But there are some things they do not put back. Among them are the precious lives of the millions of poor human beings who were butchered to decide a question of right which can be decided only by the reason and the conscience of man. Herein lie the folly and the tragedy of war—it is meaningless, completely, utterly, abysmally meaningless.

Before the outbreak of the war Hitler and Daladier warned each other that the only victors would be destruction and death. President Roosevelt had previously reminded both Hitler and Mussolini that the World War proved that military victory was sterile, that it solved nothing and accomplished nothing.

"Nothing," declares the Holy Father, Pope Pius XII, "is gained by war that cannot be

achieved by peace; in war all is lost." Time after time His Holiness has set forth the ideals of peace which we all cherish. "I shall not relax either my efforts or my prayers," he declares, "for the cause of peace." Every day he is praying and struggling to bring peace to a war-torn world.

MORAL LOSSES

I have spoken of the stupendous losses in property and in human lives which modern war entails. The losses in the moral and spiritual spheres are, however, not less appalling. Mercy, kindliness, justice, truth, patience, humility, meekness, tolerance, and Christ's all-embracing law of love are among the first casualties. War declares a moratorium on morality and prostitutes the findings of science to the dirty business of mass slaughter.

Flouting Christ's teaching concerning the dignity of the human personality, the sanctity of human life, and the law of universal love, which teaches us to regard all men as our brothers, children of the same Father, war converts men into cannon fodder and uses as its explosive the dynamite of hatred. Trampling upon the deepest teachings of religion, which proclaims "Love and save," war sings but one refrain—"Hate and destroy, hate and kill, hate and annihilate." Even in America, at peace, 3,000 miles from Europe's flaming feuds, we feel the repercussions of the fear, hysteria, and hatred disseminated by the party clamoring for war.

While religion and ethics justify a nation in defending itself against unjust attack, let it be remembered that America, in spite of her repeated violations of neutrality, has not been attacked. Before a war can be justified ethics demands that, in addition to a just cause, there must be the exhaustion of all pacific means of settling the dispute, and that the good effects outweigh the evil effects. What have we done to exhaust the possibilities of bringing the warring leaders to the peace table? Precisely nothing. Who would maintain that the good effect, if any at all can be found, will outweigh the monstrous and incalculable evils of modern total war?

NO JUSTIFICATION

Reason compels us to say, therefore, that there is not a shred of ethical justification for America entering the European conflict. The moral obligation not to enter that blitzkrieg of destruction is further deepened by the solemn promises, made time and again, by the President during the election campaign. Thus in Boston on October 30, 1940, speaking with a great depth of feeling, the President said: "And while I am talking to you, mothers and fathers, I give you one more assurance. I have said this before, but I shall say it again and again. Your boys are not going to be sent into any foreign wars."

No President in all history has given to the American people a more unequivocal, a more deliberate, a more solemn and sacred promise. The violation of that solemn pact between the President and the people would be not merely a grievous breach of fundamental morality but it would blast more effectively than all the armies of Hitler, Stalin, and Mussolini all faith, both at home and abroad, in democratic government as well. It would break the heart of the American people and the heart of democracy as well.

I have faith in the President. I am supremely confident that, in spite of the war advocates who seem to surround him on every side, he will keep faith with the American people, who have trusted and honored him as they have honored no other man in all our history. Let us help the President to keep that promise by writing to him and to the Congress each day to keep our American boys out of the raging holocaust now devouring the manhood and the civilization of Europe.

LAUNCH PEACE OFFENSIVE

We must not be content, however, with mere opposition to war. The time has come when we must render an historic contribution to world peace. To continue the present orgy of destruction until Europe is in ruins and mankind is liquidated spells not merely the bankruptcy of statesmanship but stark madness as well. What the people of America want, what the people of all the European countries want is a cessation of the stupid and brutal strife now consuming them.

I join my voice with the noble voice of the venerable dean of the American hierarchy, Cardinal O'Connell, of former Ambassador John Cudahy, of Congressman LOUIS LUDLOW, and of mankind the world over in pleading: "Now is the time, Mr. President, to summon the warring leaders to the conference table to lay the foundations for a just and a lasting peace. That must be done eventually, why not, then, before more millions of people are killed instead of afterward?"

No government will turn a deaf ear to an invitation coming in a spirit of fairness and good will from the greatest moral power in the world. It is not on the battlefield but only at the conference table that fair peace terms can be worked out. For that can be achieved, not by violence, but only by the reason and the conscience of man.

If it be said that Hitler can't be trusted, then let an association of nations establish effective, international sanctions. Ultimately the present anarchy among nations, the worst menace to enduring peace, must be supplanted with judicial machinery to settle disputes and with a world sheriff to enforce the decisions of such an international tribunal. That development is as inescapable as the swing of the stars in their courses, if we are to halt the endless competition in armaments and the ever-erupting flames of war.

ROLE OF PEACEMAKER

If you will take the lead now, Mr. President, and throw all your magnificent talents and the power of your mighty office, with the cooperation of Congress into the Christ-like work of halting the brutal European strife, mankind will acclaim you above all the generals that ever lived. Better than a battle won is a battle prevented. Better than a war won, is a war halted. You will be the benefactor, Mr. President, not only of the valiant people of Britain but of the inarticulate masses in all the war-torn countries as well, not excluding Italy, Germany, and Russia.

You will be putting into practice at the greatest crisis in the world's history the deathless truth voiced by the Prince of Peace when He said: "Blessed are the peacemakers; for they shall be called the children of God." I ask all my readers to write a letter immediately—and to continue to do so each week—to the President, to your Congressman and Senators, to your newspaper editors, radio stations, news columnists, and radio commentators pleading for the launching of a vigorous and incessant peace offensive not after Europe is in ruins but Now! Now! Now!

America Proud of Her Men in Uniform

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

ARTICLE FROM THE NATIONAL TRIBUNE

Mr. ANGELL. Mr. Speaker, during the recent recesses of the House I crossed continental United States in going to and from my home in Oregon. I took occasion to see and interview many of our men who have been called to the service. I do not share the view held by some that the young men of America today are soft and do not measure up in caliber to the young men of other periods in our history. They are indeed the flower of the youth of our country and they may be depended upon to serve their country well, if occasion arises for them to do so. I predict they will give a fine account of themselves and will equal in morale, effectiveness, and patriotism the men who wore our uniform from the days of 1776 down through the first World War of 1917 and 1918.

Under leave to extend my remarks, I include an article appearing in the National Tribune of September 18, 1941, paying a timely and just tribute to our men in uniform and calling attention to some additional provisions that might be made for their welfare in keeping their service effective. The article is as follows:

[From the National Tribune of September 18, 1941]

THEY PRIZE THEIR HERITAGE

An idea seems to be spreading throughout this country that our youth is growing soft. We pick up the CONGRESSIONAL RECORD and the daily newspapers and read matter which greatly disturbs us. Some of our columnists and commentators are getting off on the wrong foot. A few of our legislators are feeding on the wrong kind of meat. All of this tends to enhance an untruth.

When anyone refers sneeringly to the youth of the land, he is slamming at our boys in uniform. The National Tribune does not like that. We think that the boys now in service and those about to be called to duty come very close to being the salt of the earth. They have their faults, but who hasn't?

A great deal of loose talk is being thrown around to the effect that the morale of the service is low. If it is, there is a definite reason for it. A prominent legislator recently poked fun at the uniform being worn by the new Army. There is a reason for that, too. Only a few days ago a department commander of a great veterans' organization called our selectees "a bunch of spoiled boys." We shall also have something to say about that.

The service men are no different today than they ever were. They are the sons of our World War veterans. They are the same kind of timber that volunteered for service in the Spanish-American War. They are of the same make-up as the men who made the plains safe for the white man. They have not changed a bit from the boys who marched away in the early sixties to preserve our Union of States. They come from the same kind of stock which made possible our "four freedoms" back in early history.

Certainly there is some griping in the ranks. Why not? We who have already done ours know from experience and from history that there will be found in any group of men some few who will bellyache. They were probably nurtured on sour milk.

Thomas Paine at Valley Forge wrote: "The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country, but he who serves it now deserves the love and thanks of man and woman." Despite some griping, the great mass of Revolutionary soldiers freed us from tyranny.

During our Civil War there were thin-skinned men who "bought out" and hired others to do their job. In spite of such faithlessness, this Nation remained a united whole. Savage tribes in the western prairies were

tamed and this Nation's development moved to new horizons.

Forty-three years ago there were some who did not believe their country's troubles were their own, but a wholly volunteer army defeated a ruthless Spanish dictator. Many of those men had real reason to gripe then, and still have. There was griping during the World War, too. Those protests are still fresh in memory and need no discussion here. Suffice it to say that loyal service men turned the tide against the Kaiser's legions.

There is reason for protest by our boys in service today. They have had to give up good jobs in exchange for $21 a month. They despair because nobody has had the courage to tell them exactly why they are in uniform and let them squarely face the issues. Some elements are taking advantage of an uncertain future and are getting theirs while the getting is good. The folks at home are doing too much mollycoddling, because we are not actually at war. There is too much ill-founded newspaper talk. Radio addresses make the boys wonder. The Congress itself interferes too much with service discipline.

Those slacks the boys wear are purposed to give them more freedom of movement, if one desires the truth. The boys are "spoiled," if any, only because the relations between enlisted and officer personnel, an internal affair of our services and the very essence of military discipline, is being interfered with.

Social workers with no military experience insist upon show girls displaying their legs to the boys instead of permitting the lads to develop their own. Other new types of recreation are the vogue Experienced soldiers from the "horse and buggy" age have no time for them, but they are outvoted.

If discipline is lacking, it is the fault of the peopole, of the legislators, of the national administration—not of the boys themselves. The morale of our Army can be restored to its customary vigor, but it must be done by old-fashioned methods.

Our boys in uniform do not want to be sissies. They do not want ruffles on their pants. They have the same sentiments as men who have seen service in prior times of distress. They know that if war comes, this country must not wait to have its own lands laid waste and its womenfolk ravaged. They are ready to carry the trouble to any potential enemy. They want to be left alone and not lulled into a sense of false security.

Like other American boys now grown up, they know that this country can knock the tar out of any nation on the face of the earth—or any combination of nations. They have studied history and ingrained in them is the knowledge that when Uncle Sam gets mad the rest of the world had better watch out. These boys know all about patriotism with a capital P, and they like it. They are Americans with a capital A. Our boys have no notion whatever that they or their comrades are softies and they are proceeding to get tough.

There is no pessimism in this group of young men. They know that we are not yet prepared for war, and they also know that we never have been until after an extreme emergency has arisen. They know that this is because we do not like war—we hate it.

But these fellows are the flower of our youth. The time has come to stop all of this fool talk and let the boys and their superiors work out their own means of getting ready for what confronts them. That business is a soldier's occupation. The Army should be permitted to use its own experienced means of creating an army. Discipline will not be lacking. The Navy can handle its own affairs. Keep civilian ideas out and they will get along all right.

Why not be honest? Let us place the blame where it belongs and clean up. The veterans know that, given a real chance, these new young men in uniform will be all ready when the time comes to stick out their chins, and they will be able to take it.

There will always be a few gripers; yes. But the vast numbers of patriotic boys who make up the new services will have a chip on their shoulders like the fighting men of old. They will be daring all comers to knock it off. If the time should come for demonstration, they will have the stuff all right.

Let us give the boys a real chance. Let us leave them alone. They prize their heritage.

Stifling Business Means Unemployment

REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

Mr. McGREGOR. Mr. Speaker, factories all over the country are being shut down because the Government refuses to permit them to have materials out of which to make goods for their customers.

Seemingly, the most important material of which small concerns are being deprived is steel. For months the steel companies have been filling orders at Washington direction, and a few weeks ago all steel was placed under priority. Taking into consideration the amount of steel used in our defense program, which is at the most 14,000,000 tons, and taking into consideration the fact that 90,000,000 tons of steel is being produced, we wonder what is happening to the other 76,000,000 tons.

There is something very queer about all this priority. All the materials produced and procurable in this country are not by any means needed by the current manufacture of war implements. I am fearful that what is being turned away from manufactures is being piled up in storerooms somewhere and this artificial shortage will some day strike us in the face and have to be destroyed or cause us to shut down again because of oversupply. I fully believe that there is enough material in the United States that if properly allocated every business would be sufficiently supplied and could continue operation and give all employment.

As an example of what is taking place in my district, I am including a letter from one of my constituents:

MANSFIELD, OHIO, *Sepember 18, 1941.*

Hon. J. HARRY MCGREGOR,
House of Representatives,
Washington, D. C.

DEAR SIR: This week 700 employees at the Westinghouse plant here in Mansfield, Ohio, were given 3-days notice that they would be laid off. This is due to the curtailment that has been put into effect in the refrigeration industry.

The Richland County Industrial Union Council, representing over 9,000 workers in the city has these workers interest at stake, and is desirous of seeing some program planned whereby we can handle this unnecessary unemployment.

Although only 700 have been affected at the present time, the future points to many times this number being laid off in the weeks to come. This will cause a serious hardship upon the community and its citizens.

Therefore this council urges that immediate steps be taken to provide employment for these people in Mansfield or the surrounding vicinity. We are aware that many more defense orders could be easily handled here, and urge that they be granted to employers in the Mansfield area.

Hoping to receive your cooperation concerning this matter, I am,

Sincerely yours,

FRED SIMON,
Recording Secretary, R. I. U. C.

I certainly feel that something should be done, and at an early date, before we have "starvation in the land of plenty."

The National Defense

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

RADIO ADDRESS OF HON. THOMAS E. MARTIN, OF IOWA

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on September 21:

The subject of my discussion tonight is the present status of our national-defense effort. With more than one and one-half million of our sons in uniform, this question stands uppermost in our thoughts, both from the national interest and from our direct personal interest in behalf of those serving in the armed forces.

I have recently spent several days traveling about the maneuver area in Louisiana and talked with boys in every type of service, and grade within that service, and I am very greatly pleased and reassured that the American soldiers of today are doing a magnificent job, and I am sure also that they will be fully prepared and fully equal to any task assigned to them, provided we furnish them with adequate armament and ammunition whenever needed.

It has been my good fortune to serve as a member of the Committee on Military Affairs of the House of Representatives from January 1939 to date, and this period of service more than covers the entire augmentation program in our national-defense effort. It is wellnigh impossible now to carry ourselves back to January 1939 and picture the almost total helplessness of our Nation, defensively speaking, as at that time existed. It is also difficult to realize how completely oblivious our governmental officials then were to the need for bringing our training and armament up to date. Europe was then engaged in a mad race in armament production and extensive military training, but America was sleeping all too soundly in the matter of national defense. Our own Nation was deeply engrossed in far-reaching experiments in social reform and the weakness of our defense bore mute evidence of long neglect.

For 20 years defense appropriations had been cut drastically in the name of economy, notwithstanding the fact that almost every leading ex-service man throughout that 20-year period had cried out in vain against such a drastic policy of neglect. These same ex-service men decried the prevailing policy as

a false effort at economy and large numbers of them vigorously predicted that such neglect would eventually lead to undreamed-of wastefulness through bringing on an excited, inefficient, and hysterical effort to arm overnight. Their predictions have been borne out far more realistically than even predicted by the ex-service men.

But that is now all water over the dam, and we must view the situation as it faces us today. Our Nation slept all too soundly, notwithstanding vigorous individual efforts to arouse her. In fact, no substantial awakening became manifest until the invasion of the Low Countries in the middle of June 1940. Then our national administration became excited almost overnight A fast and far-reaching program was launched and when our Nation reached for its weapons the weapons literally were not there.

Those of us who have given some thought to the problem of rearmament knew full well that in our very weak status it would require at least 2 years to rearm America from the time legislation authorizing the program was enacted into law and appropriations made thereon. We also knew that no program could be launched before it was properly authorized by legislation and that no law could even be considered by Congress until recommended by the Committees on Military Affairs.

When war broke out in Europe September 3, 1939, our Congress was called into special session to consider neutrality legislation and the lifting of the arms embargo. It will no doubt be amazing to many of you that the Committee on Military Affairs was not permitted to meet once all during that session of Congress in the fall of 1939, and consequently no legislation was considered in the field of national defense. That now is also water over the dam, but it served to illustrate very vividly the sound slumber in which America was indulging.

If our defense effort is found to be too little and too late, the real cause therefore can very logically be charged to the time lost in those precious months of 1939 and 1940. Up to June 1940 it was discouraging indeed to witness the lifting of the arms embargo, the very obvious trend toward unneutrality, and the realization that nations can be plunged into armed conflict almost over night, whereas armament and adequate training cannot be acquired in much less than 2 years of extreme effort.

One of the bright rays of hope in our own national picture came with the passage of Public Law No. 117, which was approved and became law June 7, 1939, and which had for its purpose the authorization of the accumulation of reserve supplies of strategic and critical materials. I made a rather extensive study of that legislation while it was under consideration by the Committee on Military Affairs, and I found that its author, Congressman FADDIS, of Pennsylvania, had been struggling for many years to secure its passage. Congressman FADDIS was one of the few leaders in American public life who realized years ahead of the emergency that the 2-year period needed for the acquisition of adequate armament and training must be preceded by some systematic effort to secure adequate stock piles of strategic and critical materials.

Perhaps I should define what is meant by strategic materials. A strategic material is one that is absolutely necessary in our defense program and which is not produced within our own Nation in sufficient quantities, so that we become dependent upon long and dangerous trade routes for our supply thereof. There are only 15 strategic materials in our national-defense program, and we are indeed the most-favored Nation on this earth in that respect, because every other nation is dependent upon dangerous trade routes for far more materials than are we. After our stock-pile program was authorized by Public Law 117 of the Seventy-sixth Congress, it was necessary to follow the usual procedure in securing the appropriations to put the program into effect. The authorization law provided for $100,000,000 over a period of 4 years of time. But appropriations under this law were cut to $10,000,000 until late in the winter of 1939 and 1940 when an additional sixty million was appropriated.

Those of us on the Committee on Military Affairs who were vitally interested in this beginning of our preparedness program watched with even greater interest the progress, or lack of progress, in administering the program. We were not only disappointed but somewhat alarmed at the lack of progress of acquiring adequate stock piles of strategic materials, and our alarm gave rise to a special investigation by a subcommittee of the House Military Affairs Committee, starting in May 1941. This subcommittee consisted of Mr. FADDIS, of Pennsylvania, who was named chairman; Mr. SMITH of Connecticut; Mr. KILDAY, of Texas; Mr. DURHAM, of North Carolina; Mr. PAGÁN, of Puerto Rico; the late Mr. RUTHERFORD, of Pennsylvania; Mr. THOMAS of New Jersey; and myself. After a long and exhausting investigation and study in this field a report was made to the full Committee on Military Affairs, and this report was duly approved by the full committee and submitted to the House of Representatives on July 21, 1941. The report is No. 982 of the House of Representatives, Seventy-seventh Congress, first session.

I regret that I do not have time on this program to cover this report in detail, but those of you who are interested in reading what I consider a comprehensive and informative discussion of our problem in regard to strategic materials, should secure a copy of House Report No. 982 for your study of this most important matter. The 15 strategic materials are antimony, chromium, coconut shell char, industrial diamonds, manganese, ferrograde, manila fiber, mercury, mica, nickel, quartz crystal, quinine, rubber, silk, tin, tungsten.

If any of you are embarrassed or inconvenienced through priorities of one kind or another due to shortage in these important materials you will join with me, I am sure, in hoping that this committee has effectively pointed out the need for increased efforts in building our stock piles of these materials before it is too late. I, myself, only regret that Mr. FADDIS' bill did not receive congressional approval some few years earlier than it did, but we can now only look ahead hopefully to maintaining a more vigorous effort to secure adequate stock piles of these materials. If we had adequate stock piles of each of these materials to tide over an emergency period of not less than 2 years of time, we would be far safer today, not only in our defense effort, but also in our domestic economy. We have been increasing our stock piles to some extent during recent months, but we are still far short of our desired 2-year supply in almost every strategic material. We have given much attention to the matter of development of substitutes and to the development of our own production, but in most cases, we cannot count on adequate supplies from our own production in time to relieve us of our anxiety in event we plunge into a shooting war within the next several months.

Now let us turn to the matter of armament production. I have stated before that the production of adequate armament will require approximately 2 years from the time legislation and appropriations were first made available, and we have had a little more than 1 year of time since our first serious effort at preparedness. We have heard much discussion in that time of strikes and of the refusal of labor, capital, and industry to cooperate and coordinate their efforts. But it is to the everlasting credit of the American people that, notwithstanding the slow and cumbersome approach of the Government to the matter of our preparedness, and notwithstanding these various distractions that have claimed so much publicity in the course of our defense effort, our Nation has made more progress in defense preparedness during the past year than any other nation has ever done in all history in a like period of time. Notwithstanding that record, we must remember that we cannot expect in 1 year the full accomplishment of other nations that have devoted as much as 8 years to their armament program. So we must look hopefully ahead to continue the superlative effort by all until we have completed our defense effort and brought our armament up to our needs for whatever dangerous possibility lies in waiting for us. It will require approximately 1 more year to do this, but, of course, we will soon attain a fair degree of defense security if we continue our present progress. If we continue our efforts without interruption for another year, I predict you will not recognize this Nation as the same Nation it is today, defensively speaking, and in my opinion it is very sensible and logical to continue our all-out effort in the production of armament and training and at the same time to work as diligently and as vigorously as we can to avoid plunging headlong into armed conflict.

It may be that we are too late in our defense effort to completely arm and train our forces by the time we are plunged into armed conflict, but every month that we devote our energies to our defense effort is bringing closer the achievement of our maximum defense strength. It may be possible for America to successfully engage in a shooting war, using the Navy as a first line of defense until we have completed our armament and training program; but my own opinion is that America can strengthen her position through the completion of her armament and training program before plunging into armed conflict, and that America may by her very strength avoid war through the respect other nations will have for a powerful America. The dyed-in-the-wool warmongers in our land number somewhat less than 1 percent of our population, but they are a noisy lot and they are intent upon our plunging into armed conflict as a means to silence our overwhelming opposition to war. Armed conflict will silence the opposition to war, but it will not enhance our own international prestige, and it will endanger our national security if it comes before we are adequately prepared. No man can tell at what precise date we will be adequately prepared for whatever need we may have, and no one can predict the full extent of the needs that confront us; but we do know one thing, and that is that we should continue to exert every effort to the limit of our ability to complete our armament and training program as quickly as possible, and we know also that this challenge supersedes every other factor in our Nation's life until we have achieved maximum preparedness.

I predict that our armament will be sufficiently complete by January 1 to make us relatively safe from attack, and I predict that by next July 1 we will be almost completely armed and safe from aggression from without, provided we do not become aggressor-minded ourselves in the meantime. At the time we become adequately armed for our defense it will be necessary for us to guard against becoming an international bully ourselves. When we become strong we have, through our greater productive capacity and our aggressive American spirit, the factors that appeal so strongly to the vanity of mankind in its lust for power. We must then resolutely determine to limit the use of our power to avoid armed conflict, or we may travel the same road that all great nations have traveled before us, to our own destruction through our effort to police and dominate and subjugate all the nations of this earth. In other words,

we may face disaster today because of unpreparedness and we may face disaster tomorrow through misuse of the strength that will be ours when our armament and training program has caught up with the other nations.

We can be a united and powerful nation so long as we work harmoniously and efficiently and energetically together in building our defense and at the same time avoid armed conflict.

Conclusions on St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

LETTER OF TOM J. McGRATH, EXECUTIVE DIRECTOR, NATIONAL ST. LAWRENCE PROJECT CONFERENCE, REPLY THERETO BY HON. COMPTON I. WHITE, OF IDAHO

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a letter which was received by me from Mr. Tom J. McGrath, executive director, National St. Lawrence Project Conference, and my reply thereto:

NATIONAL ST. LAWRENCE
PROJECT CONFERENCE,
Washington, D. C., September 15, 1941.

Hon. COMPTON I. WHITE,
Member of Congress, Washington, D. C.

MY DEAR CONGRESSMAN: The National St. Lawrence Project Conference is a voluntary association of organizations, the members of which believe that their own and the interests of the country will be adversely affected if the St. Lawrence waterway and power project should be completed.

As of this date the conference has a membership of 210 organizations which in turn represent thousands of business institutions throughout the country. It is quite probable that many of them are your constituents. Our latest published list of members consisting of 183 names, is to be found on the opposite side of this letterhead.

Prior to its inclusion in the omnibus rivers and harbors bill, a great many Members of Congress had publicly voiced their convictions with respect to the matter, others had informed their constituents of their intentions regarding support or opposition to the measure.

When it became clear that the project would not be approved by the House if considered solely on its individual merits, the expediency of having it incorporated in the rivers and harbors bill was adopted.

Obviously, this was done with the hope of attracting support that the project otherwise would not have received. The universal condemnation which this method of procedure has provoked, persuades us to the belief that the course pursued will not produce the results its sponsors seek. A somewhat limited survey of the situation indicates that but few Members of Congress have changed their views since the action referred to was taken.

We conceive it to be our function to advise our members of the names of Congressmen whom we know have expressed doubt as to the proper position to take so that information concerning the probable effect of the project on their businesses and their communities may be given to their representatives by constituents.

Believing that many Members of Congress will wish to be relieved of the burden of answering unnecessary correspondence, we are writing to ask if you care to indicate your position regarding the St. Lawrence project to us at this time. If you wish it, we shall be glad to advise our members in your district of your views.

Respectfully yours,
TOM J. McGRATH,
Executive Director.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON IRRIGATION
AND RECLAMATION,
Washington, D. C., September 18, 1941.

Mr. TOM J. McGRATH,
Executive Director, National
St. Lawrence Project Committee,
Washington, D. C.

DEAR MR. McGRATH: In response to your letter of September 15, in which you state:

"We conceive it to be our function to advise our members of the names of Congressmen whom we know have expressed doubt as to the proper position to take * * *."

I have taken no definite position for or against the St. Lawrence waterway and power project, but it would appear that the benefits and advantages of opening the shore line of the Great Lakes bordering the United States to deep-sea transportation would be a great forward step in the industrial development of our country, particularly in making available resources and sites for shipyards and industries connected with the shipbuilding industry.

In addition to affording an avenue for ocean-borne transportation to this vast area, it would seem to me the effect of this development on our national economy would outweigh any adverse effect on certain utilities and the rail transportation systems. I am convinced that a review of the industrial and commercial development throughout the world will sustain this conclusion. I shall be pleased to consider any presentation at variance with this idea.

Sincerely yours,
COMPTON I. WHITE,
Member of Congress.

Rehoboth Bay to Delaware Bay, Del., Inland Waterway, and Broadkill, Del.

EXTENSION OF REMARKS
OF
HON. BERNARD J. GEHRMANN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

EXTRACT FROM HEARINGS BEFORE RIVERS AND HARBORS COMMITTEE

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from recent hearings before the Rivers and Harbors Committee:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RIVERS AND HARBORS,
Washington, D. C., September 18, 1941.

The committee met at 10:30 a. m., Hon. JOSEPH J. MANSFIELD (chairman) presiding.

The CHAIRMAN. Colonel, the first project this morning is for the inland waterway between Rehoboth Bay and Delaware Bay, Del., and Broadkill River, Del.

REHOBOTH BAY TO DELAWARE BAY, DEL., INLAND WATERWAY, AND BROADKILL RIVER, DEL. (H. DOC. 340, 77TH CONG., 1ST SESS.)

(Here follows testimony of Colonel North relating to this project:)

Mr. PITTENGER. I would like to ask you a question or two. What is the cost of this improvement recommended by the Department?

Colonel NORTH. It is $224,900.

Mr. PITTENGER. As testified to here yesterday, some of the projects are substantially large, but a lot of them are rather small ones. This is a comparatively small project.

Most of these projects have been pending for a number of years, have they not?

Colonel NORTH. Yes.

Mr. PITTENGER. All of which leads me to make this comment for the record, that it would appear from the testimony given here that a lot of these projects probably would have been just as desirable 8 or 10 years ago as they are at this time, and that the development of our harbors and our shipping facilities in these rivers, comparatively speaking, has been rather neglected; is that correct?

Colonel NORTH. I think that is correct; yes, sir. These resolutions were adopted in 1939.

Mr. PITTENGER. And the situation in 1939 was not much different from the situation in 1929.

Colonel NORTH. That is right.

Mr. PITTENGER. And if it was desirable in 1939 and to the advantage of the United States and its people to make these improvements at that time, it was desirable years before. In the development of our inland waterways and rivers and harbors and water transportation, is it not a fact that the United States is way behind compared to the development of similar facilities by the people in European countries in past years?

Colonel NORTH. That is my understanding.

Mr. SMITH. Is it not a fact, in line with what the gentleman from Minnesota [Mr. PITTENGER] has said, that probably every one of these projects is necessitated by the growth and increase in commerce in those areas?

Colonel NORTH. Yes, sir.

Mr. PITTENGER. That is all the more reason why we should undertake them without delay.

Mr. SMITH. Furthermore, it seems to me that while we are appropriating these vast sums for aid to Britain and aid to the democracies on the theory—which is probably correct—that it is in the interest of our own national defense—while we are doing that, we should not neglect internal improvements in our own country, because the interests of the American people still ought to come first.

Mr. PITTENGER. I agree with you on that.

Mr. SMITH. And we should not curtail expenditures for legitimate flood control, highway and river and harbor projects while we are making these vast donations to foreign countries.

Mr. PITTENGER. I agree with everything the gentleman has said; his argument is a strong argument for the development of the St. Lawrence waterway project.

Mr. ANGELL. I would like to say in connection with this matter, that it seems to me it is a matter of sound judgment and wise statesmanship to provide for carrying forward our internal improvements at this time, making these authorizations for improvements which should be carried on after investigation and report by the Corps of Engineers. These improvements, the construction of them, will be carried on under the supervision of the engineers, which means that we will get a dollar's worth of value for every dollar of expenditure and at the same time afford some relief to the unemployed laboring people in our country.

In my judgment, we are on sound ground when we approve projects of the type now under consideration.

Mr. SMITH. Also, we should not defer actual construction a long time in the future because we are progressing, and this work should not be deferred.

Mr. PITTENGER. I want to make a further comment for the record which has to do with these hearings, and that is this: I do not think the American people realize, or have the information which they should have, which will show them the tremendous importance of the development of these projects which have been under consideration by the War Department engineers. The Corps of Engineers of the Army is a disinterested body of men, highly trained, skilled, and expert, with the welfare of the American people as their only consideration. I think that Congress should give more heed to their suggestions, and that these problems and projects should come before the individual Members of Congress, as well as before the members of the Committee on Rivers and Harbors, so that they may be able to combat this broadcasting of propaganda going around against what these propagandists call pork-barrel bills because this omnibus bill is not a pork-barrel bill.

Mr. SMITH. Is it not a fact that for many years, during the time when the distinguished chairman of this committee has been a member of the committee, and particularly since he has been chairman of the committee, that it could never be truthfully argued or contended, based upon any facts, that any of these rivers and harbors projects are "pork." in the sense that they might have been 30 or 40 years ago before the present system was adopted in reference to passing on river and harbor projects?

Mr. PITTENGER. That is true. That charge of "pork" is absolutely unjustified.

Mr. SMITH. Yes; it is unjustified.

Mr. PITTENGER. It is false and malicious, circulated by selfish interests, by the railroads, and other people who do not want these improvements.

Mr. SMITH. There is no class of projects authorized by Congress that is subjected to such scrutiny and investigation as river and harbor projects. There is no single type of projects of the Federal Government that receives as thorough consideration and study as river and harbor projects.

The CHAIRMAN. I think sometime I would like to get permission to extend my remarks in the RECORD and reprint a speech I heard James R. Mann make 20 or 25 years ago on the floor of the House in reference to this matter. As you know, he was the majority leader of the House at that time, and he gave the whole history of the method of procedure in adopting river and harbor projects, and showed that no other type of legislation was so thoroughly guarded and protected as river and harbor legislation under the present system. The people making these charges know that they are not true; they are deceiving the people who are not familiar with the facts.

Mr. RODGERS. Mr. Chairman, we have had a precedent established in the consideration of the Florida ship canal and the St. Lawrence seaway, considered as separate projects, and after they have been rejected as separate projects they are put into an omnibus bill, they are getting away with it.

Mr. SMITH. Not entirely. It is still in the bill as a separate project, but it will come up under an open rule.

Mr. RODGERS. It is in the bill, and it was put in the bill before——

Mr. SMITH. Any Member could offer an amendment striking out that project, and it can be voted upon separately. That is one reason why this propaganda is entirely misleading. We can get a separate vote on the St. Lawrence project.

Mr. RODGERS. It is in the omnibus bill, but it was not in the omnibus bill when it was put in before.

Mr. PITTENGER. The St. Lawrence project, as such, has never come before this committee on any other occasion except in this Congress. It was before the Senate as a treaty proposition. That project has as much right to a place in this omnibus bill as any other item in the bill. It has never been before this committee at any other time before in the history of the country.

Mr. ANGELL. Every President has recommended it before.

Oregon Among Leaders in Civilian Defense

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

ARTICLE FROM THE PORTLAND OREGONIAN

Mr. ANGELL. Mr. Speaker, I am happy to note from a news item appearing under date of August 17, 1941, from Milwaukee, Wis., during the session of the national convention of the American Legion, that Fiorello H. LaGuardia, Director of the Office of Civilian Defense, stated that the State of Oregon is among the leaders of civilian defense in the West. I have recently returned from my native State of Oregon and had occasion while there to interview many leaders and workers having to do with our national-defense program, and am happy to confirm from information received on the ground the statement of our national Director of Civilian Defense.

The people of Oregon are 100 percent behind our program to make America impregnable and to leave no stone unturned to perfect our defense at the very earliest possible date. There is unity in our State behind the administration's effort to complete our defense program and to lend all aid possible to Great Britain.

Under leave heretofore granted, I include as a part of my remarks the news item to which I refer:

[From the Portland Oregonian of August 18, 1941]

STATE LAUDED BY LAGUARDIA—OREGON'S DEFENSE EFFORTS APPROVED

MILWAUKEE, WIS., August 17.—The State of Oregon is among the leaders in civilian defense in the West, Fiorello H. LaGuardia, Director of the Office of Civilian Defense, told Joseph K. Carson, Jr., inspector general of civil defense ar Oregon department commander of the American Legion, and Jerrold Owen, Oregon defense coordinator, at a conference in this city, where the mayor of New York was a speaker on the program of the national convention of the Legion.

LaGuardia met with his regional chiefs and also conferred with numerous heads of State civil-defense groups.

Charles R. Page, of San Francisco, regional coordinator, advised LaGuardia that splendid progress had been made in Oregon in its preparatory program and in the actual training of units in first-aid, fire fighting, police technique, and air-raid precautions.

OREGON DELEGATES CAUCUS

To Owen, LaGuardia expressed himself as well pleased with the cooperation being received by his office from Gov. Charles A. Sprague, State director of civilian defense, and declared that the growing pains inevitable in the speedy organization of so vast a program fast were being eliminated, and that there would be no occasion in the future for lack of liaison between the national office and State defense councils.

A final caucus of Oregon delegates to the American Legion convention was held Wednesday night. With more than 900 votes pledged to Lynn Stambaugh, of Fargo, N. Dak., choice of Oregon for national commander, his election Thursday seems assured. Ben F. Dorris, of Springfield, Oreg., is one of his managers.

Andrew Furuseth

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

ADDRESS BY HON. RICHARD J. WELCH, OF CALIFORNIA

Mr. WELCH. Mr. Speaker, under leave granted me to extend my remarks, the following is an address made by me at the unveiling of a monument erected to honor the memory of the late Andrew Furuseth, in San Francisco, on Labor Day, September 1, 1941:

It is eminently fitting that there should be here on the embarcadero in this great city of San Francisco on the Pacific Ocean a monument to commemorate the memory of the late Andrew Furuseth, who devoted his life to relieve from abject slavery the toilers of the sea.

To dedicate the monument would be an empty and idle thing, if we accompanied it by the abandonment of the patriotic and humanitarian principles for which Andrew Furuseth fought for to the very last. Many of us still live to tell the terrible story of crimping, shanghaiing, the sailor boarding-house runners, and the filthy fo'castles of yesteryears.

Andrew Furuseth was born in Norway in 1854 and died in Washington, D. C., in 1938. He went to sea at a very early age and sailed successively under the flags of nearly all the maritime nations. He came to the United States in 1880 and landed in San Francisco, where he soon became a familiar figure along the water front, starting his long, uphill fight here to secure better living conditions and freedom for seamen.

To the men who bucked the gales of Cape Hatteras or dared dread typhoons in the mid-Pacific, the name of Andrew Furuseth is honored and almost sainted. In Washington he lived in one small, inexpensive room and patiently fought for 20 years in collaboration with the late Senator La Follette to secure the passage of the Seamen's Act, which finally became a law in 1915. It was there that he was often likened to Abraham Lincoln, who freed the black slaves in this country, even as Andrew Furuseth was instrumental in removing the shackles from the white slaves of the seven seas.

I am glad to be home and to be accorded the privilege of participating in the unveiling of a monument erected by the sailors

of the Pacific in honor of a man whose honesty, simplicity, and perseverence brought to him the respect of people in all stations of life.

Long may the statue of Andrew Furuseth stand as a symbol of patriotism and sincerity, to be followed out alike by owners, masters, and the men who man our merchant marine.

"Simple in greatness through the years you've stood,
Great in tasks done in stern simplicity,
High in your unswerving record for good—
Of devotion, sacrifice, integrity."

Merrily We Go Boondoggling Along

EXTENSION OF REMARKS

OF

HON. WILLIAM T. PHEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

EDITORIAL FROM THE VALPARAISO (IND.) VIDETTE-MESSENGER

Mr. WILLIAM T. PHEIFFER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the August 14, 1941, issue of the Valparaiso (Ind.) Vidette-Messenger:

WHAT SACRIFICES?

One treads on dangerous ground in criticizing projects involving the cultural progress of man, for we have been taught that the better and happier life is possible only through fulfillment of our esthetic and spiritual natures. Just now, however, there seems to be a bigger task facing America, a task that is going to take all the energy and worldly wealth we can scrape together. That, our leaders have assured us, is the situation we face. We must meet force with force, if necessary, and to this end a great preparedness program is now under way. No one knows, of course, how great our sacrifices must be in the days to come. But indications are that life in this country may well be reduced to bare essentials before the issues of war and peace are finally resolved. So far none of us has experienced any great hardship as a result of our defense program. As a matter of fact the opposite has been true. Many of us have found life more pleasant and simple by virtue of increased wages which have enabled us to enjoy worldly possessions long denied because of economic hardships. In other words, we are now in the midst of a boom and thoughts of sacrifice are farthest from our minds.

But warnings have been sounded of darker days to come. We think of this darkness in terms of our pocketbooks, since the dollar, as our medium of exchange, is the greatest symbol of the health our national life is enjoying. We have looked with awe upon the enormous national Budget and the resultant tax bills, greater than ever in history. We know that a day of reckoning is ahead and we have been exhorted to prepare ourselves for the shocks that are bound to come. There have been pleas that in view of the terrific expenditures made necessary by the defense effort, other nonessential spending be curtailed. In all forms of national activity, we have been told, cutting to the bone is necessary. These are not normal times and we have no right to expect normal functioning of our economic system. In the light of such conditions, a recent speech in the House of Representatives by Representative WILLIAM T. PHEIFFER, a New York Republican, is significant. It reveals, in a small measure, how poorly the Government itself is practicing what its administrators have been preaching.

Representative PHEIFFER offered for the thoughtful consideration of his colleagues three projects approved by the W. P. A. The first was a matter of $1,903,927 and here is what it was for, in the words of the Congressman:

"That money is to be expended to assist in organizing and operating library services for public libraries and to assist public museums. The work includes creating, restoring, installing, and controlling museum exhibits; extending educational facilities by conducting research work in connection with the preparation of exhibits and dioramas, and assisting in the care and propagation of experimental plants and cultures; preparing bibliographies in connection with museum activities, and so forth."

Another project, approved June 22, 1941, appropriated $367,942 "to prepare, compute, transcribe, check, and reproduce a series of mathematical tables necessary in various branches of astronomy, mathematics, physics, and engineering." A third, involving $374,000, would provide for inventories of books, pamphlets, and broadsides printed in the United States and its territorial possessions prior to January 1, 1891.

The total represented by these three projects is $2,646,868, and it represents only random examples of W. P. A. projects in a single State. Multiply this by a hundred and one gets a rough idea of the amount of money, all of which must be paid by taxpayers already facing a staggering war preparedness burden, that is going into nondefense coffers.

Of this disclosure, the Congressman from New York says, "It is startling proof of the fact that a great deal of the money which we appropriated for the use of the Office for Emergency Management and the War Department for the building of an unassailable defense for our country is being used to pay for frills and furbelows that have not the slightest relation to national defense."

Americans have never been a penny-pinching people. Rather they have been guilty of spendthrift tendencies, sometimes to their grave detriment. Now one hears little criticism of the spending necessary to build tanks and guns for America and the announcement of the great tax measures now being considered by Congress has been greeted with surprisingly little opposition or resentment. But it does seem that taxpayers have some justification for demanding that Washington go easy on the items that might well be postponed "for the duration." First things should be put first.

Butter or Oleomargarine

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

EDITORIAL FROM THE NEW REPUBLIC AND REPLY OF WILLIAM KIRSCH

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Republic of August 11, 1941, and reply thereto by William Kirsch, principal statistician of the Wisconsin State Department of Agriculture:

[From the New Republic of August 11, 1941]

BUTTER OR OLEOMARGARINE?

A long-continued American battle flared up in Congress the other day—the one between spokesmen for producers of butter and those who are friendly to manufacturers of oleomargarine. The occasion for the revival of the historic quarrel was a recent radio broadcast by the Consumers' Counsel of the Department of Agriculture. This program told the American people that oleomargarine is not only very much cheaper than butter, but that it is an important food on its own account. By law, butter and oleomargaine are both required to be at least 80 percent fat, are equally digestible and equally rich in fuel value. Under the new standards of the Food and Drug Administration, margarine is now reinforced with vitamin A and therefore equal to butter in nutritive content.

That the Government should point this out caused Representative AUGUST H. ANDRESEN a mild case of hysterics. Representative ANDRESEN comes from a dairy State, and naturally wants everybody in the country to eat butter despite the fact that we don't produce enough to give everyone the necessary quantity for health, and that a large part of the population could not afford it at last year's prices, to say nothing of this year's that are one-third higher. He objected also to the fact that the Government radio program told the listener that dairy interests in many States have succeeded in jamming through outrageous taxes on oleomargarine in order to force people to eat butter whether they can afford it or not. In this battle we are all on the side of the Department of Agriculture. We hope it will continue to speak out in the interest of the consuming public.

REPLY TO THE EDITORIAL WHICH APPEARED IN THE NEW REPUBLIC, AUGUST 11, 1941

1. The radio broadcast of the Consumers' Counsel Division of the United States Department of Agriculture mentioned in your editorial of August 11, 1941, failed to state that even fortified oleomargarine when made of vegetable oils does not contain certain fatty saturated acids. These acids, according to Prof. C. A. Elvehjem of the University of Wisconsin, one of the outstanding biochemists in the United States, are important to growing individuals. How important they are to children is being tested now. Failure to mention this constitutes a very serious and fundamental omission from the point of view of the problem of food standards.

The primary object of food standardization and government regulation of standards is to give the consuming public accurate information as to a given food product with regard to ingredients contained therein. It would not do, for instance, to say that in case a young child needs certain fatty saturated acids absent in oleomargarine it can obtain them from other foods. If there is no mention of an ingredient absent in a food article, even if the problem is only in an experimental stage, and this is sanctioned by a government agency, then the way is open to similar encroachments in the practice of food standardization with regard to other food products.

The latest available figures on materials used in the manufacture of oleomargarine in the United States show that for the year 1939 there were 172,424,000 pounds of domestic vegetable oils. That means a total of 225,359,000 pounds of vegetable oils used. On the other hand, animal fats used amounted to only 17,399,000 pounds (Agricultural Statistics, 1940. U. S. Department of Agriculture).

In this connection let me point out that the claim of the nutritive value of oleo-

margarine as compared with butter has a peculiar history.

As early as 1881, Prof. C. F. Chandler, of the department of chemistry, Columbia University, was directed by the Board of Health of New York City "to investigate the subject of oleomargarine" (W. T. Mickle's margarine legislation, Journal of Farm Economics, August 1941).

In his report Professor Chandler said, in part:

"I regard it (oleomargarine) as a most valuable article of food and consider it entirely unexceptional in every respect. In this opinion I am supported by the best scientific authorities in the country. * * * I would further say that this question is one on which there is no difference of opinion among scientific investigators familiar with the chemistry of dairy products and fats. I have never seen a statement emanating from any person having any standing among scientific men in which a contrary opinion is advanced." This took place in 1881. Then, decades later, within recent years came the discovery of vitamins, "the agencies in our food which, although they exist in extremely minute quantities—and most of them have been identified only within the past few years—are absolutely essential to the well-being of every living organism, plant and animal, including man." (Quoted from Bruce Bliven's article in the August 18, 1941, issue of the New Republic.) When this was discovered, another fact was also discovered, namely, that oleomargarine lacks the vitamins essential to growth.

Then the oleo interests got out from under the difficulty by fortifying their oleomargarine with vitamins and claiming that oleo is now just as good as butter. But now another fact begins to loom uncomfortably over the horizon, namely, that the vegetable oils even in fortified oleomargarine lack certain elements important to growth.

The comparatively recent research with regard to vitamins as an essential factor in nutrition, and the absence of vitamins in oleomargarine before it began to be fortified shows that "the scientific investigators (of 1881) familiar with the chemistry of dairy products and fats" were not as familiar with this chemistry as they thought, and it also shows that the science of nutrition is not a static but a dynamic subject, and that therefore it is possible that new discoveries will be made which may detect some other deficiency in oleomargarine as compared with butter. So why not rely on a natural product, the usefulness of which to health and growth was proven beyond a shadow of doubt by hundreds of years of experience.

2. The endorsement by the editor of the New Republic of the crusade conducted in behalf of oleomargarine is an expression of an ultrareactionary economic philosophy for the following reasons:

It sidesteps the question of monopoly in food distribution. The reason for the high prices of food products lies primarily in certain defects of our system of distribution, which exact a toll both from the farmer and the consumer. It is true that, so far as butter is concerned, the farmer receives more of the consumers' dollar than in the case of many other food products. If, however, certain defects of our system of food distribution were eliminated, the average consumer's budget would allow for an ample use of a healthy natural product, making it unnecessary to advocate the use of a synthetic substitute which still lacks in elements important to growth, even if it is fortified by vitamins.

I wish to call your attention to the splendid work which is being undertaken by the Antitrust Division of the United States Department of Justice under Thurman Arnold, looking towards the breaking up of monopolistic practices in the food trade. Government agencies anxious to provide the American consumer with cheaper food should, in my opinion, actively cooperate with the Antitrust Division of the United States Department of Justice in its efforts to eliminate certain fundamental defects of our system of distribution.

In this connection let me state that I am rather astonished that the New Republic has not taken this stand on the problem of butter versus oleomargarine in view of its well-known progressive economic philosophy.

There still remains the pressing question of that group of the lowest-income consumers who cannot afford to buy butter. What should be done in their case is what is being done with many families who cannot afford to buy milk for their children or whose youngsters have to be provided with school lunches. Let a public agency, the Federal Government for instance, buy butter and dispense it to the children of these families. This would certainly be justified by considerations of public policy as conducive to the building up of the health of the Nation. As it is now, the plight of the lowest income group of our consumers is used to spread far and wide the gospel of oleomargarine.

Following the adoption of the Federal oleomargarine standards, one of the two most powerful dairy distributing and processing concerns is getting ready to spend $275,000 on a single radio program to advertise its brand of oleomargarine. The industry is about to spend $1,500,000 for oleo advertising. With the help of modern type advertising, backed by financial resources, oleomargarine will eventually replace butter to the same extent that process cheese has replaced natural cheese.

3. The reactionary outlook of the advocates of oleomargarine is further corroborated by the fact that such advocacy works to the detriment of the producers and to the benefit of the oleo interests, and that it renders more expensive the already burdensome food-distribution system. As was noted above, the farmer receives more of the consumer's dollar in the case of butter than in the case of many other food articles. The cotton and soybean producers receive very little for their product; rather a large part of the consumer's dollar goes to the oleo interests.

Proof of this is contained in the following figures furnished by the National Cooperative Milk Producers' Federation. According to the estimates of this organization, the cash income farmers received per pound for the principal fats in 1940 was:

	Cents per pound
Butter	22.6
Lard	5.2
Vegetable shortening	3.1
Oleomargarine	2.5

These figures show that farmers receive less money per pound from oleomargarine than from any other fat. They contradict the claim of the oleomargarine interests who have been shouting for years about the importance of their product as a source of farm cash income and who have been stressing particularly the income farmers receive from cottonseed and soybean oil used in oleomargarine.

4. This leads to another consideration which brings out prominently the reactionary economic philosophy underlying the crusade in behalf of oleomargarine.

The substance of a progressive economic philosophy lies in the concept of the economic interdependence between farmers and industrial workers, as determined by their respective purchasing power. It is clear that the more money the farmer has, the higher will be his demand for industrial products and vice versa.

There are in the United States over 750,000 farmers producing milk for creamery butter, besides many others who produce butter on the farm for sale. Creamery-butter production in the United States for 1939 amounted to 1,782,000,000 pounds; butter made on the farms in that year amounted to 486,000,000 pounds. There is a tremendous purchasing power embodied in these 750,000 farmers. If their business is ruined, there will be, sooner or later, repercussions on other dairy farmers, with the result that the purchasing power of all the dairy farmers will be decreased. The consequent decrease in demand for manufactured commodities will be detrimental to our working industrial population. Moreover—and this is important—the purchasing power of the dairy farmer is higher than that of farmers engaged in many other branches of American agriculture.

This does not mean, however, that the farmer producing milk for butter is well off. On the contrary, if the farmer's labor is taken into consideration, butter prices as well as prices of other farm products are continually below cost of production. In Wisconsin the prices for 100 pounds of milk that went into butter were as follows: In 1935, $1.23; in 1936, $1.45; in 1937, $1.51; in 1938, $1.21; in 1939, $1.13; in 1940, $1.31. The cost of production per 100 pounds of milk during this period was $1.72; therefore, if his labor is taken into consideration, the butter farmer was receiving prices below cost of operation to the extent of the difference between $1.72 and the prices for the respective years, and that in the admittedly most efficient and foremost dairy State in the Union. Even at that the purchasing power of the butter farmer is normally higher than that of the cotton grower or soybean grower, and his potential purchasing power, provided the industry is not threatened with permanent ruin, is of considerable significance to the national economy.

The facts and figures cited above refer to the so-called normal times. They apply to the butter industry and the dairy industry in general during the entire period between 1930 and up to the present "boom" period. What is happening now is of peculiar significance. In July 1940 Wisconsin farmers received $1.23 for 100 pounds of milk that went into butter; in July of this year these farmers received $1.67. In July 1940 the Wisconsin farmers received $1.21 for 100 pounds of milk that went into cheese; in July 1941 they received $1.82 for such milk. Thus the farmers whose milk goes into cheese received in July 1941, 61 cents more for 100 pounds of milk than last year; while the farmers whose milk goes into butter received only 44 cents more than last year. Recent increases in retail prices do not reflect the fluctuations in prices paid to farmers. It is possible that advantage is being taken of the exceptional conditions connected with the present boom. Would it not be more rational to approach the problem from that point of view rather than attempting to convince the consumer to go over to a lower standard by substituting a synthetic article for the natural product?

It is difficult for an outsider to realize the tremendous purchasing power that is potent in that most diversified of our agricultural industries—dairy farming. Make the dairy farmer prosperous and his purchasing power will be of tremendous significance to industry. It will be important also to the cotton producer of the South because of the demand a prosperous dairy industry can make on southern products for ingredients needed in the feeding of cattle and other items. In the year 1934, for instance, Wisconsin paid $6,396,340 for cottonseed oil, and $1,460,800 for cottonseed meal and cake. This was bought mostly by farmers who are also using more and more cottonseed oil. All this is in addition to the money spent by Wisconsin for cotton goods, which in that year amounted to $23,832,000. Since then these purchases have undoubtedly been on the increase. This offsets easily the illusory benefits which the South would get from selling some of its

products for the manufacture of oleomargarine; illusory because of the fact stated above that the actual cotton producer in the South gets considerably less for his work than the farmer in the most important dairy State in the Union—Wisconsin.

For this very reason the consumption of oleomargine will not be of much benefit to the actual working cotton farmer. The improvement in his economic position depends to a large extent upon the elimination of monopolistic practices in the processing and marketing of his product, and of the forces which affect adversely the city consumer's demand for his crop as well as for farm products in general.

The prosperity of the dairy industry, which builds up the soil, which through its manifold and diversified functions presents the possibility of high purchasing power for industrial products, will be a potent factor in fostering our national economy. On the other hand, the oleomargarine industry with its low returns to farmers for their oil and vegetable and animal fats, and with the consequence of the ruin of the dairy industry, will be a factor in the deterioration of our national economy.

As to the legislation directed against oleomargarine—let me state this: That in view of the powerful financial position of the oleo interests and the indifference exhibited by certain Government authorities toward the problem of the dairy farmer as exemplified by the recent oleomargarine broadcast, what else can the farmer do except use the most accessible weapon at hand, State legislation, to protect his industry from ruin.

As to the supply situation—cold storage holdings of butter in the United States on August 1 of this year amounted to 178,526,000 pounds, or 55,000,000 pounds more than on the same date last year, and 41,000,000 pounds more than for the 5-year average 1936–40. Production for the first 7 months of this year was 76,000,000 pounds higher than for the corresponding period last year, an increase of 6.5 percent. Production of dairy products could still be increased. This would be especially true if the demand and price outlook were favorable for a considerable length of time.

WILLIAM KIRSCH,
Principal Statistician,
Wisconsin State Department of Agriculture.

The American Legion and the War

EXTENSION OF REMARKS
OF
HON. JOSHUA L. JOHNS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

EDITORIAL FROM THE GREEN BAY (WIS.) PRESS-GAZETTE

Mr. JOHNS. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following editorial from the Green Bay Press-Gazette, of Green Bay, Wis., entitled "The American Legion and the War." It is one of the best editorials that I have read on this subject, and I have been particularly impressed with the similarity of phrases that were used 130 years ago to get us involved in foreign war to those that are being used today for the same purpose.

[From the Green Bay (Wis.) Press-Gazette of September 19, 1941]

THE AMERICAN LEGION AND THE WAR

A man arouses himself after a deep debauch.

His head throbs, his muscles ache, his nerves are racked with pain.

His judgment of heavy indulgence in alcohol at that moment is perfect. He swears, "Never again."

That is a fair statement of the American Legion meeting some twenty-odd years ago when it adopted a policy opposed to American participation in European conflicts. The policy thus formed has been consistently maintained until the Milwaukee convention. That policy was created largely by the efforts of men who were among the 2,000,000 in the American Expeditionary Force and saw service on the bloody fields of France and the cold stretches of northern Russia. To these men had come the great opportunity of studying the European situation personally, both before the armistice and for months thereafter, in France, in Germany, in England, and in Belgium and Italy.

The policy adopted was a deliberate, cool, and sober one. When it was adopted the veterans had learned how empty and shallow were the slogans that led them to battle, how barren was the victory, and how deceitful had been much of the "information" upon which they had formulated their convictions.

The reversal by Legion delegates of this carefully considered program furnishes us with one of the principal reasons why people go to war. They forget. They are misled. On the hot spur of the moment they abandon a course of conduct that all their reflective and considered thoughts over a long period of years, and watered by grim experiences at the front, have shown them to be right.

Supposing that yesterday was 1918, could you ever get the American Legion to talk about another American Expeditionary Force? And supposing that day before yesterday found us at the conclusion of the Napoleonic wars, could we ever find anyone to criticize Washington, Jefferson, or Madison, the Presidents who, in turn, steered away from the conflict and thus not only benefited America but Europe as well?

Today America is back in 1917 and it is back in 1810. Our lands, our mountains, our rivers are the same. Different people walk the earth but they are still Americans. The structures that have been erected are more numerous but, after all, they are but man-made structures.

In 1810, as well as 1917, we had presented exactly the question that confronts us today. We even used the same language.

Mr. Hoover dug up the debates of the earlier period recently to show us how twin it was to today. Fisher Ames, a Member of Congress, and who was only prevented from heading Harvard University by illness, was the leader for participation. He proposed the first American Expeditionary Force. Here are some of the phrases he flung at the people:

"I am sure we are about to be subjugated by Bonaparte.

"Let no man in America decieve himself; if Bonaparte prevails in Europe we will be his vassals.

"We shall be reduced to slavery.

"In case Europe accepts peace and chains we of the United States are ripe and rotten for servitude and tribute.

"Britain fights our battles.

"One single hope of security is the British Navy.

"If Russia is disarmed, how long will it be before England will be done for?

"We are infatuated enough to think America is a hiding place for liberty."

But America stood firm. Its public men resisted the intemperate cup offered to their lips.

England then, as now, used every persuasion, and even added threats, to induce our participation. We were not very great or strong. Indeed, we were small and weak. But English policy has always been built upon securing help of every sort from every corner by reason of every argument that can be produced.

It was a blessing to Europe that we stayed out. For finally that warlike continent adjusted its own ills.

And it was a crime against Europe when we participated in 1917, for by so doing we hatched the rotten eggs of fascism.

One of the singular causes of war has been presented to the people by the about-face of the American Legion. People are persuaded to their disadvantage when their anger is up at some detestable thing, however far away.

But when this war is over and we count our dead and appraise the devastation, and on the profit side see nothing but zeros coupled with the sneers of those we fought to save, we won't mention anything about the human faults that got us into it, but we will begin to talk about the cursed munition makers.

There will be those, we hope, who see clearly enough to understand that with leaders like Jefferson we would have gone straight.

Mrs. Sara Delano Roosevelt

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

EDITORIAL FROM THE IRONWOOD TIMES

Mr. HOOK. Mr. Speaker, in these stirring times of unrest and with the world conditions in a turmoil, it is refreshing to know that real Americans rally in a neighborly fashion and with a true sense of real Christian spirit. It was a shock, not only to President Roosevelt and his immediate family but to all Americans, to be informed of the death of the President's mother. I would be truly ungrateful if I did not call to the attention of the Congress and the Nation an editorial written by Mr. H. O. Sonnesyn, editor of the Ironwood Times, a newspaper published in my home town. It shows a true liberal spirit:

I appreciate the permission of this Congress in granting unanimous consent to insert in the CONGRESSIONAL RECORD the following editorial:

In common with other Americans, the Ironwood Times joins the Nation in mourning the death of President Franklin Delano Roosevelt's mother, Mrs. Sara Delano Roosevelt.

Mrs. Roosevelt died at the family home in Hyde Park Sunday. Her death was due to her advanced age.

Mrs. Roosevelt's death postponed the important radio address which President Roosevelt was scheduled to have made last Mon-

day. The address will be delivered Thursday night.

The death of the President's mother brings sorrow to every son and daughter in America. All reports indicate she was a wonderful mother. The success attained by her son was slightly greater than that attained by some of the sons of other mothers in this Nation.

Mrs. Roosevelt took that honor as a typical American. There can be no denying that she, in the same manner as other mothers would have been, was proud of "My son, the President."

Yet the honors bestowed on her son did not affect Mrs. Roosevelt. Her old friends remained her friends until her death last Sunday. She lived her own life. That is the way of America.

The Nation in its grief finds comfort in the thought death was kind to her in that she was not forced to suffer, but slept peacefully away.

The United States of America salutes its Commander in Chief in his day of sorrow, and as one nation says, "You have our sympathies, Skipper. Is there anything we can do, neighbor?"

New United States Bureau Created To Lead "War of Words"

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. MICHENER. Mr. Speaker, in recent weeks I have received inquiries from constituents as to the duties to be performed by Col. William J. Donovan, recently appointed Coordinator of Information by President Roosevelt.

The Washington press advises the country that at least 35,000 additional persons are to be brought to Washington during the coming year to work in the war program—this in addition to the many thousands who have been brought to Washington during the last 2 years to work in national-defense activities.

It is difficult for those not familiar with the situation in Washington to realize just what is going on here so far as preparation for war is concerned. Many new bureaus, commissions, and agencies have recently been created and everyone of these activities requires personnel. For instance, when Colonel Donovan was appointed Coordinator of Information, no thought was given by the public to the fact that a bureau would be created and additional persons employed by the Government. When it is known that Colonel Donovan already has a staff of more than 180 persons, and can hardly be said to have started, one can understand how these bureaus grow and how a large number of Federal employees find their way to the National Capital.

The Times-Herald of Washington, in its issue of September 20, 1941, carried an article by the writer, Guy Richards, which contains much interesting and accurate information concerning the Coordinator of Information. Therefore, pursuant to permission granted to me, I quote that article which is as follows:

[From the Washington Times-Herald of September 20, 1941]

C. O. I., the mysterious new bureau of Coordinator of Information, Col. William J. "Wild Bill" Donovan, completed a 6-week preparation period yesterday and emerged for the first time from the fogs of rumor that have tagged it all the way from a Yankee gestapo to an international spy service.

It's neither. There are no secret police in C. O. I. and no network of espionage agents.

TO SPEED DECISIONS

According to the operating plans which were learned yesterday, C. O. I. stands revealed as a tonic for the Government brain, a mixture of hypo and highball for quickening the reflexes of a dozen departments that sometimes for weeks haven't known what the others knew about mighty atoms of information that later spread into wars, insurrections, and triple alliances.

Every day C. O. I. will tell the executive brain centers in Washington everything considered important by the other brain centers. Where a new development calls for instant action, C. O. I. will provide the means for instant response—over the air waves or through the State Department, F. B. I., Army, Navy, Maritime Commission, police, and various intelligence services.

Six short-wave radio listening posts spreading from coast to coast; a newsroom at 270 Madison Avenue, New York City; and a headquarters here in the marble-lined Apex Building on Pennsylvania Avenue comprise the physical weapons with which C. O. I. is now ready to swing into action.

ERUDITE STAFF

But the mental weapons are the most formidable. They consist of a staff of more than 180 scholars, linguists, economists, broadcasters, newspapermen, and military, naval, marine, and aeronautical experts, and their secretaries.

The inflow of information streams into the Apex Building headquarters from the radio listening posts and from the confidential files of the Government departments. It is carried by special messengers. It must be accounted for day and night. Because of this heavy concentration of secret data in the building, no one is admitted until they have first obtained a badge from a C. O. I. authority. All the corridors of the building are flanked by guards. No one, without a badge, is allowed to walk out of any door or move a foot down the corridors.

The job of the staff is to prepare full-sized pictures from the fragments of paint and canvas that come in. The completed pictures are rushed to all departments, the fragments returned to the department that sent them in.

BREVITY STRESSED

The pictures prepared by C. O. I. may take the form of written reports or graphs alone or pictures with tabloid captions. Colonel Donovan has tried to imbue his staff with his own passion for combining brevity and comprehensiveness.

"Remember the weariness that comes from reading long, windy, typewritten pages," he has repeatedly told his subordinates. "Picture it, condense it, sum it up."

The genesis of C. O. I., it was learned reliably yesterday, sprang from Donovan's long belief in the importance of psychological matters, and trivial irritations, in shaping the affairs of nations. In C. O. I., Donovan has prepared to make a painstaking observation of these factors in other nations of the world through a 24-hour-a-day study; and simultaneously has planned to correct what he believes to be the three major weaknesses of past American governmental machinery:

1. The tendency of departments to collect volumes of specialized information without synthesizing it for the benefit of other departments.

ANSWERING THE NAZIS

2. Their tendency to find out too late what should be acted on instantly.

3. Their tendency to be unable to respond effectively in the modern war of words.

From now on, for example, if a broadcaster in Nazi-run Bucharest makes a striking statement at 4:30 a. m., New York time, which requires an American rebuttal, C. O. I. is equipped to have that rebuttal delivered the same day by an American broadcaster. That is just one of a hundred lines of action now ready.

The 58-year-old colonel has abandoned his Wall Street law practice to boss C. O. I. on an unsalaried basis. A World War hero, Donovan has since made a specialty of armies, visiting the battles in Ethiopia, Spain, and Europe as one followed the other. He has come to the conclusion that an army is only the result of a philosophy, and to fathom one, you have to fathom the other.

NEWSPAPERMEN ASSISTANTS

On his return from his world-wide junket last March, the Presidential advisers had him slated for heading up a super F. B. I., with the problem of national morale thrown in. He held out for the type of outfit he is now running—and he got it.

Among his assistants are Robert E. Sherwood, playwright, who is in charge of the New York office; Nelson P. Poynter, editor of the St. Petersburg (Fla.) Times; Dr. James P. Baxter, president of Williams College, who is on leave to head C. O. I.'s research department; Irving Pflamm, radio commissioner; and Wallace Deuel, Edmund Taylor, and Lawrence Beller, all former newspapermen.

PEARSON REVEALS CLASH OVER PROPAGANDA POLICY

Details of the three-cornered fight between Col. William Donovan, the State Department, and the Rockefeller office was revealed last night by Leon Pearson, newspaper correspondent and columnist, in his regular weekly broadcast over station WOL.

The fight concerned which office would have control over dissemination of propaganda for foreign consumption to offset the propaganda of Germany and Italy.

Secret conference

First concrete evidence of Colonel Donovan's plans to control United States propaganda came, Pearson said, when the Coordinator of Information summoned the short-wave broadcasters to Washington for a secret conference.

Donovan explained his plan to them and asked not only for full cooperation but expansion of their facilities. The plan, he said, is to counteract Nazi propaganda by putting out United States propaganda to the contrary effect and doing it right away.

Pearson added that some people in the Government are worried about it.

"They point out that if Colonel Donovan sends out his replies so soon, he puts himself in the position of shaping the policy of the United States single-handedly. He doesn't want to wait for consultation with the White House or the State Department. He wants to get his answer out right away. This means that Colonel Donovan and his brilliant assistants in the C. O. I. will have to determine for themselves what United States policy is."

Donovan lost out

The clash between Donovan's office, the State Department, and the Rockefeller office, Pearson continued, began when the Coordinator said his office would take over short-wave broadcasting to South America.

Heretofore the State Department, cooperating with the Rockefeller office, had been covering the field by short wave, and flatly refused to silence its short-wave activities when a "certain gentleman in the Donovan office called the State Department and said they were taking over," Pearson said.

"The State Department declined to be silenced, however, and pointed out that the President himself had designated Latin America as their field, and they didn't intend to retreat. In the end it was the Donovan boys who retreated."

Catholics and the Nazis

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, September 22, 1941

ARTICLE BY PROFESSOR MAYNARD

Mr. MURRAY. Mr. President, I ask to have printed in the RECORD an article by Prof. Theodore Maynard, one of America's most erudite writers on Catholic themes. In this article, which appears in the October issue of the American Mercury, Professor Maynard analyzes the activities of certain noisy pro-Nazi agitators among Catholics and undertakes to point out the correct position of American Catholics in regard to the Nazi menace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Mercury of October 1941]

CATHOLICS AND THE NAZIS

(By Theodore Maynard)

I write as an American Catholic. This does not mean that I have any commission to speak for those of my faith; they are divided on the political issues of this war. My purpose is to indicate some of the factors which may account for that division. There I may be challenged and there I may be wrong, but at the same time, I challenge anyone to prove me wrong in my statement of principles.

The impression prevails in certain circles in this country that the Catholic Church sympathizes with fascism. Such an impression is no doubt partly due to the circumstance that Rome is the center of both Italian fascism and Catholicism. The impression may have been confirmed in the support given by many (though by no means all) Catholics here and abroad to Franco in the Spanish war. It is further confirmed for some minds by the tinge of anti-Semitism found in Father Coughlin's utterances.

Nevertheless, these impressions are erroneous. While there are Catholics who, like other people, appear eccentric or stupid or inconsistent or illogical, and though they may be (again like other people) swayed unduly by personal or political or nationalistic passions, they do not represent the mind of the church. Fascist Catholics are far more often to be found in Europe than in America. Hitler has his little group of Catholic stooges. But the Belgian Rexists are refused the sacraments when they appear in uniform, and similar ecclesiastical action is taken in Holland. In any case they are only a handful. The European Catholic view was expressed by Monsignor Jan Sramek, a Czech refugee, in the London Tablet:

"We are fighting for the very existence of Christianity. It is the duty of every Catholic in the whole world, whatever nation he belongs to, to realize that nowadays there is no such thing as neutrality. All Catholics must participate in the fight for the preservation of Christian morals. The chief task of Christianity, to be undertaken once the battle is won, is the building up of a lasting peace based on Christian principles and the real ideology of European civilization, national freedom, and economic justice."

Hitler recognizes clearly, as does the church, that Catholicism and totalitarianism are absolutely irreconcilable. American Catholics, with very few exceptions, also recognize this fact. The only real disagreement among them is over what measures may be politically expedient and strategically advisable. Though this disagreement is profound and often bitter, there is, as there must always be, unanimity in opposition to nazi-ism.

The antagonism between communism and catholicism is too well known to need further discussion here. It might, however, be pointed out that the church never issues a "blanket" condemnation; only specific propositions are dealt with. Consequently, the church must condemn the avowed Godlessness and materialism of bolshevism, but it must equally reprobate the unavowed Godlessness and materialism so often prevalent among the defenders of capitalism and it is far from completely identifying the rights of property with our present economic system. Even under present conditions, the Holy See has several times attempted to arrange a concordat, a modus vivendi, with the Kremlin, as it has made concordats with Hitler and Mussolini and Franco. For the church is always ready to make what terms it can with any government. It is not committed to this or that particular political mode, though modern democracy (which is derived from scholastic philosophy) appears to be the system most consonant with its own constitution and the one under which it enjoys most freedom of action.

The mode of operating under concordats therefore does not imply any approval of the political system with which the concordat is made. It is merely the best—sometimes the only—method possible in certain circumstances. This is true of Italy, Germany, and the recent arrangement with Spain. But the church has no illusions—it knows that the concordat will be observed only insofar as it suits the convenience of the state. It also knows that a concordat is better than nothing; at least for a time it may result in peace and a measure of ecclesiastical freedom. In no sense is it an alliance with the state or an imprimatur upon its ideology.

The policy of the church is decided by one man, the Pope, though of course he works in consultation with his advisers. No infallibility attaches to his political decisions, which may be reversed by his successors. Yet, as a matter of practical necessity, his policy has to be accepted by loyal Catholics. Still more—and in this case as a matter of absolute necessity—the principles he lays down have to be accepted. With regard to nazi-ism and fascism (as well as bolshevism), the reigning Pope and his predecessor have spoken in unequivocal language. They have made working arrangements with totalitarian governments for the safeguarding of Catholic interests. At the same time, they have made it plain that it is impossible to reconcile totalitarianism with Catholicism.

Pius XII took his stand on the matter little more than a month after the war. In the only encyclical he has yet issued, titled "The Function of the State in the Modern World," he decried the kind of civil authority which "puts itself in the place of the Almighty and elevates the state or group into the last end of life, the supreme criterion of the moral and juridical order, and therefore forbids every appeal to the principles of natural reason and of the Christian conscience." He went on to declare that the success of such systems could be only material and transitory, and he added: "To consider the state as something ultimate to which everything else should be subordinated and directed, cannot fail to harm the true and lasting prosperity of nations."

Mussolini has been willing to suffer the church in order not to increase his difficulties, as Franco is now trying to use it for his own ends. But Hitler, like Stalin, looks upon it as the enemy to be destroyed. If Hitler has been a shade less murderous than Stalin, his methods are likely in the long run to be more successful because the Nazi program calls for the eradication of Christianity by a process of education which is intended to change the shape of man's mind. If Hitler triumphs, Christianity will virtually disappear in Europe by degrees.

Hitler would, of course, welcome the cooperation of the church, on his own terms. That is, he would be very glad to have the Catholic organization—for which, as an organization, he has often expressed the highest regard—put at his disposal. He has succeeded in deluding a small minority, but even in Germany the Catholic body as a whole has stood out against him. A year ago he produced what purported to be a pronouncement of the German hierarchy in his favor. Possibly his doctoring of documents succeeded in hoodwinking some people, though it was conclusively shown, both by the Roman authorities and by the secular news agencies, that Dr. Goebbels' manipulation of this matter amounted to forgery.

The true attitude of the German hierarchy was expressed this spring by Archbishop Groeber of Friburg, in a pastoral printed in the Osservatore Romano, in which he described the present situation in the Reich as going "beyond the religious ruin of the sixteenth century." As a good German, he protested: "Not only is our faith belittled as a thing of the past but we are rebuked as being anti-German. * * * It is now absolutely certain that the future of the people is being built on an anti-Christian foundation."

The facts are that, despite the concordat, everything possible is done to make the practice of Catholicism as difficult as possible. Mass is permitted at hours allowed by the Gestapo, when its attendance is inconvenient for all and out of the question for many. Sermons are censored. But worst of all, the religious orders suffer wholesale suppression, the monasteries and convents are often taken over for the use of the secret police and Catholic schools and youth organizations are verboten. Instead, the young are indoctrinated from childhood in the pagan German myth. Already, perhaps, the greater part of young men and women are lost to the church because of this propaganda. It might almost be said that the only ones able to resist it are those of mature mind and the little children still too small to be clutched by the Nazi machine, who are sometimes taught in secret by their parents.

What has happened in Poland seems to have surpassed the imagination for horror. We do not need to go to British propaganda for this; it was Cardinal Hlond who gave out the facts about wholesale massacre and of

clerics in concentration camps being obliged to clean the latrines, and of bishops forced to sweep the streets in front of their own cathedrals. But nobody is allowed into Poland to see what is going on. Even the Papal Nuncio has been excluded.

II

Hitler and his Italian gauleiter have given the world a rosy picture. It was announced that the Holy See had recognized the new Croation government, though nothing of the kind happened. The new puppet king was received before and not after his appointment and the murderous Dr. Pavelich was given an audience, which could not be refused, as a private person instead of premier. The so-called apostolic delegate has no diplomatic status. He is an "apostolic visitor," with functions limited to that of an observer for the Holy See. Difficult as the Pope's position has been in Rome, he has been careful to guard against even the appearance of recognizing the conquests of Hitler. The Nazis find it inadvisable to direct their rage openly against the Pope, so they turn it without restraint against the local ecclesiastical authorities.

We come around again to the Nazi concept of peace with the church—or, for that matter, of peace with any nation. It is the peace in which the lion lies down with the lamb, with the lamb inside the lion. Even while trying to extract a momentary advantage by minor concessions to such little Fascist groups so foolish as to trust him, Hitler has no illusions at all as to the irreconcilable nature of Caholicism and his own ideas. The moment these groups have served their purpose—in which so far they have been of very slight and constantly diminishing use—the Nazis intend to absorb them into an absolute uniformity with their own system. It cannot be otherwise. While the church exists, the triumph of totalitarianism remains incomplete. More surely than any other of national socialism's intended victims, Catholicism can never be national socialism's agent.

It might even be argued that Hitlerism is a more dangerous enemy to the church than Stalinism. Only by a historical accident or series of accidents is irreligion tied to bolshevism, and it may conceivably be discarded in time. On the other hand, national socialism is inextricably rooted in the myth of the sacred German blood, which has created a new religion that is perhaps all the more powerful because it is so preposterous. No kind of ascent is possible under the Nazi system. You are either an Aryan or you are not, and all the lesser breeds without the law are disdained in varying degrees. Hitler starts with a comprehensive denial of human equality. As there is only an Aryan God, who is no more than a concept of composite Germanity, there can be no universal fatherhood of God any more than there can be any brotherhood of man. To say that God does not exist, as the Bolshevists do, is bad enough, but it is a proposition that can be met by argument; whereas the Nazi doctrine, being irrational and mystical, cannot be met at all except by a rejection as resolute as its own affirmation.

But the Catholic Church must not necessarily reject a dictatorship considered in its strictly political aspect. Dollfuss attempted a mild Catholic dictatorship in Austria; Salazar is now attempting one in Portugal. Kept within due bounds, a dictatorship of this kind is not oppressive, either to society or the church. But we know from experience how easily it may be transformed into an instrument for oppression. We know that it is, of its very nature, likely to become aggressive. If Hitler had confined himself to Germany with his purges and persecution and the horrors of the Gestapo, we, as Americans, would have no right to interfere, however much we loathed his proceedings. Even then, however, the church would have had to speak, and it did speak while nazi-ism was so confined. As things stand, civil liberties and religion everywhere are threatened and we have reached the point where we must be prepared to die if we wish to live. It is a situation with which the church has often been familiar in the course of its history; for America it is without precedent or parallel.

It is somewhat surprising, therefore, that American Catholics should be infected with isolationism. On the principle of opposition to totalitarianism they are virtually unanimous, but on the question of political action there are factors that tend to confuse them.

Like so many other Americans, they are not always free from that ancestral animosity toward England which still smolders sullenly and which was fanned by the question of war debts. Certain Irish elements, unable to forget Oliver Cromwell, have their ancient grudge. Then, too, there is the German "hybris," which has been stimulated by the German victories and by propaganda. Finally, nearly all are at least to some extent affected by their memories of the last war. They believe they were dragged by British cunning into something which was no concern of theirs; now they like to think they are too cagey to be caught a second time. Above all, because they do not want to fight, they keep telling themselves that what is going on is a European war between rival imperialisms.

This is the stock in trade of all isolationists. Catholic isolationists do no more than repeat the arguments of Senator WHEELER and Mr. Lindbergh. Even Ireland is no longer much of a stick with which to belabor Britain. The original Catholic contribution to the discussion—it is not very original and monstrously un-Catholic—is anti-Semitism. The moronic mob following Father Coughlin has come to think of communism as a Jewish affair, and, of course, the "international bankers" are Jewish. Father Coughlin has been repudiated time after time by responsible Catholic leaders, and Social Justice is not classed as a Catholic magazine. It makes no difference—millions of Americans still believe that Father Coughlin speaks for the church. These people should be reminded of the unequivocal words of Pope Pius XI, who, speaking to a group of Belgian pilgrims on September 6, 1938, said: "Anti-Semitism is inadmissible. We are spiritually Semites."

To make matters worse, Archbishop Beckman, of Dubuque, speaking over the radio last July 28, gave strong anti-Semitic implications to his speech, implications that were made all the more emphatic by the inflection of his voice. Time after time he said he was addressing "American Catholics and Christians in general" or "American Christians", pointedly excluding his Jewish fellowcitizens. He declared the war to be "not a holy war, or a just war, but a conflict of imperialisms to restore the shattered boundaries of international finance." He did not mention Father Coughlin, though his argument was largely Coughlinite, but quoted instead from Father Coughlin's enemy, Cardinal O'Connell, who has been an isolationist of a different stripe. His Grace of Dubuque took the precaution of admitting that he did not speak for the Catholic Church. His obvious purpose was to counteract the radio speeches delivered on April 30 and July 7 by Bishop Hurley, of St. Augustine, who was obliquely referred to as "a cleric recently returned from abroad." The reference might have been more definite: Bishop Hurley had been attached to the Papal Secretariat of State.

The first of Bishop Hurley's speeches (delivered before the Russo-German war) was an attack on the isolationists, "those dyspeptic moralists [who] are the dupes of a few men who have no interest whatever in morals, but who are seeking to divide and discourage us in America." In his second speech, delivered early in July after Hitler had invaded Russia, Bishop Hurley pointed out that though the Holy See and our Government have pursued independent policies, "he who runs may read, nevertheless, a striking parallelism between their attitudes where moral questions were at issue." He urged that "since our problem is primarily a strategic one, it should be left to the Commander in Chief" and then proceeded to castigate Catholic isolationists in particular where previously he had attacked isolationists in the lump:

"Among them is a small but noisy group of Catholics. We have suffered long from their tantrums. We have blushed with shame when they acted up before company as tantrum children will do in every family. Years ago they established the crank school of economics; latterly they have founded the tirade school of journalism; they are now engaged in popularizing the ostrich school of strategy."

III

The question arises as to which of these two eminent ecclesiastics comes nearest to expressing the Catholic point of view. The Bishop's political opinions I leave out of the discussion, as about these there may be legitimate disagreement. But what of his basic

Here there is no room for doubt. Pius XI in a single month (March 1937) published three encyclicals. The first, the Divini Redemptoris, condemned atheistic communism but at the same time advocated the rebuilding of the world of labor on Christian instead of capitalistic foundations. The second, Mit brennender Sorge, protested against the persecution of the church in Germany and condemned Nazi racial theories, as well as the Fascist doctrines that would deify the state. The third, Nos es muy, was addressed to the bishops of Mexico on the rights of Christians as citizens. Together, they covered the ground completely—and this before the war broke out.

The isolationists, and especially some of the Catholic isolationists, took fresh heart with the invasion of Russia. Whatever Hitler's past offenses, was he not now the champion of Christian civilization against atheistic communism? Surely now the Pope would bless the crusade! But on that subject the Pope maintained an eloquent silence. His radio speech to the world, delivered on June 29, was a lofty and moving exposition of the ways of divine providence. "God's hour will come—the hour of liberation" was the burden of his address. To the whole world, the Holy Father gave his blessing.

Now let us consider the attitude of the Catholic press, as expressed by its three chief organs of opinion.

The editors of the Commonweal differ about the war, and have sometimes indicated their differences by signing their editorials. Michael Williams, now only a weekly contributor to its pages, has always been strongly interventionist. Philip Burnham, on the other hand, is somewhat pacifist in his political philosophy. Yet he has admitted into his paper views that are at variance with his own.

Perhaps more representative of general Catholic opinion is the Jesuit review, America. It has been, and still is, moderately isolationist, though one may notice in it, as in other Catholic papers, a gradual change in policy. The Catholic World, while definitely anti-Roosevelt and more belligerently isolationist in policy than either America or the Commonweal, has been equally as definite in its condemnation of all brands of totalitarianism. Father Gillis is by all odds the ablest Catholic editor of our time. I prophesy that he will be the last isolationist die-hard.

Not in these periodicals but in some of the diocesan weeklies one encounters what Bishop Hurley calls "the tirade school of journalism." Though these papers have condemned totalitarianism—and they could not very well do otherwise in view of the Papal pronouncements—I have often had the feeling creep

into my mind that some of them are rather perfunctory in their attacks on nazi-ism and fascism, and it is only when, like Archbishop Beckman, they get on the subject of Britain and bolshevism that they are really able to put heart and soul into it. Of one thing, however, we may be perfectly sure: The moment America gets into the war openly nobody will be more vociferously patriotic than these writers.

Meanwhile, the official attitude of the American hierarchy is explicit in its condemnation of nazi-ism and one may safely assume that this is the attitude of almost all American Catholics. Even Father Coughlin is not a Nazi, although he sometimes sounds like one and he is certainly anti-Semitic. But he represents only himself and his group—a rude minority voice which proves, if it proves anything, the length of the church's forbearance.

When Hitler invaded Russia, a distinguished group of Catholics issued a manifesto as a full-page advertisement in many of the diocesan papers, indicating full approval of Bishop Hurley's speeches. A majority of the names on the list were Irish. Their statement blended sound Catholic principles with political wisdom. It reaffirmed that communism is the enemy of religion, but concluded:

"At present the Nazis alone possess the physical strength necessary to implement their war upon the church and upon every other spiritual aspect of human nature. They must be destroyed if we hope to save Christianity. The murderer of priests, ministers, and Jews does not become the defender of religion just because he attacks another gangster who happens to be an atheist. Hitler's attack on Russia must not be allowed to confuse us. Hitler is still our greatest enemy and he must be stopped even if that means that we and the Soviet are temporarily on one side in the effort to resist a common enemy."

I do not know precisely what proportion of American Catholics would subscribe to all of the unmistakable implications of that statement, nor does anybody else know just how many isolationists there are among them. Even as to how the country as a whole is divided on the question of entering the war we have only the polls to guide us. There is no reason to suppose, however, that American Catholics hold opinions very different from their fellow citizens. It is possible that there may be a somewhat higher percentage of isolationists among them, but, if so, it can be only a slight difference. If you call a man a Fascist because he supported Franco, then there are many American Catholic Fascists. But that would not be just, and I say it as one who did not support Franco. In the Spanish war the issues were clouded; they are now crystal clear. American Catholic Fascists are neither American nor Catholic.

No two ways of thought can be more opposed than Catholicism and totalitarianism.

Address of I. W. Duggan, Director, Southern Division, Agricultural Adjustment Administration—Agricultural Problems

REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

Mr. FULMER. Mr. Speaker, I have requested this time for the purpose of calling the attention of the Members of the House to an address delivered by I. W. Duggan, Director, Southern Division of the Agricultural Adjustment Administration, before the Farm Bureau Training School, Hot Springs, Ark., August 22, 1941.

I am hoping that this address will be read by every Member of the House, as well as by thousands of readers of the CONGRESSIONAL RECORD.

This address is frank and constructive, dealing with the problems of agriculture.

Mr. Duggan, an outstanding employee of the Department of Agriculture, is well posted on agricultural matters. He is deeply interested in actually doing things which would definitely solve our agricultural problems.

It is refreshing to me, and it should be to you, to have someone connected with the great Department of Agriculture, which is supposed to represent the farmers of the United States, speak out honestly and frankly, letting the chips fall where they may.

Here is a department loaded with numerous bureaus, divisions, thousands of employees, spending millions of dollars annually from hunting bugs of all types to running a consumers' bureau, but how seldom do we hear of anyone connected with this Department standing up and defending farmers against the open and well-known destruction of farmers by practically every other group?

As the years go by I have had the privilege of observing how the Tariff Commission is taking care of industry, how the Interstate Commerce Commission has requested and secured from time to time legislation placing under their supervision not only the railroads, which they represent, but bus lines, truck and water transportation.

What is happening?

Because of their deep concern in behalf of the railroad interests of the country, the railroads are taking over these lines. They are permitted to operate parallel truck lines to their railroads, and they will now hook up with water lines of shipping.

Bus, truck, and water rates will be so fixed and regulated that the railroads will have a real monopoly at the expense of the shippers of farm products and the traveling public.

Take a look at the Coal Commission in fixing prices under legislation passed by the Congress of the United States.

How about the Wage and Hour Board?

Why, they are daily on their toes demanding that which belongs to labor.

Farmers are being robbed out of their forest products—pulpwood. Everybody, except farmers, are marketing farm products. Many of these middlemen operating between farmers and the legitimate retailer are nothing but parasites, sapping the very lifeblood out of farmers and consumers.

How about the discriminatory freight rates?

Compare freight rates on farm products, which, naturally, are bulky and heavy, with freight rates on manufactured goods.

I can ship a $50 suit of clothes or a pair of shoes which sell for $13.50 a certain distance at a cost of 10 cents each, while a bushel of corn or wheat, which sells for 75 cents and $1.25 per bushel, will cost 30 cents.

I am beginning to wonder if the time has not arrived when we should pass legislation creating an Agricultural Commission, with the hope that this Commission will stand up and defend agriculture, seeing to it that these monopolistic groups are prevented from grazing upon agriculture and that other departments, which, apparently, represent everybody else except agriculture, are not able to intrude on the agricultural interests of this country.

Mr. Duggan's address follows:

It is a pleasure for me to be here this morning as your training school enters the second day of its sessions.

So far we have heard reports of farmers' problems from many parts of the country. We have been told of some of the definite proposals the American Farm Bureau Federation is offering for the solution of these problems.

The total effect of all these discussions should be to enlarge our vision and to broaden our perspective. Certainly we need the larger view of things today. In the brief lifetime of your national organization—21 years—think what has happened to us:

The dizzy tailspin we took in the months following World War No. 1—the quick recovery of industry and labor—the long and painful struggle of agriculture at the bottom of the pit.

Later, the fantastic boom days for city folks—the chicken in every pot, two cars in every garage—with the farmer looking on in wonder, wonder that the more he produced, the poorer he became.

Then, the collapse of the whole business in the early 1930's. Stock and bond holders, factory workers, and white-collar clerks finally joined the farmers as a common calamity struck at the foundation of our whole economic order.

Together we began climbing out of the wreckage, only to run head-on into World War No. 2. The impact of this tragedy is still too close upon us for any intelligent appraisal of the consequences.

One thing is sure: We must keep our heads however rough the going becomes. We must learn to think and plan and act not in terms of this year or next alone but far into the future. We must continue to view our situation not as southerners alone, or even as Americans alone, but as citizens of the world. We must try to see clearly the road over which we have come. We must try to agree among ourselves as to the direction we are to take for years to come, no matter what the fortunes of war may do to us.

We cannot understand the present plight of American agriculture or its future possibilities without reference to certain forces in the past that gave definite character to life on the farm. In the early days of our country agriculture dominated the whole scene—political, social, and economic. More than nine-tenths of our people lived on the land or in small towns. Over 90 percent of the gainfully employed were engaged in agriculture. In those years agricultural products formed the main stream of our commerce.

Beginning in the middle 1820's, and ending with the inauguration of the A. A. A. program in 1933, the story of American agriculture was one of slow but irresistible decline. The industrial revolution was in the air. Powerful new forces were being unloosed. But we cannot say that the decline of agriculture from its high estate was due in any great measure to the operation of natural economic laws. Certain very definite man-made laws were factors in this decline.

Under the heading of such man-made laws, I mention first of all the high protective tariff. This policy has consistently operated against the farmer and to the definite ad-

vantage of industrial groups. The principles involved go to the roots of our whole social order. They are so important that I wish to recall for your special attention and, I hope, for your careful study the long and brilliant struggle John C. Calhoun waged against subsidizing domestic manufactures at the expense of the farmers.

You may detect the ring of the Calhoun style and the power of the Calhoun logic in this extract from a resolution passed by the South Carolina Legislature in December 1828. I quote:

"We are the serfs of the system, out of whose labor is raised not only the money paid into the treasury but the funds out of which are drawn the rich rewards of the manufacturer and his associates in interest. Their encouragement is our discouragement. The duty on imports, which is daily paid out of our labor, gives them the means of selling to us at a higher price; while we cannot, to compensate the loss, dispose of our products at the least advance. It is then, indeed, not a subject of wonder, when understood, that our section of the country, though helped by a kind Providence with a genial sun and prolific soil, from which spring the richest products, should languish in poverty and sink into decay, while the rest of the Union, though less fortunate in natural advantages, is flourishing in unexampled prosperity."

I need not remind you that the passage, written more than 100 years ago, is thoroughly modern in its application. It was true then, it is true today, and it will be true tomorrow, that no democracy can be strong and enduring that does not extend all its advantages equally to all sections and to all vocations.

I have no pet proposal for eliminating the abuses that followed in the train of the protective-tariff system. I do say, however, that the burdens of this system alone outweigh all the advantages put together which government has extended to the farmers from the beginning of our national life down to the present day. The evils of the system are not self-limiting. They cannot be mitigated by turning our eyes away from them. No new order, worthy of the name, can meet the challenge of the future without drastically altering a system that tends to reduce agriculture to the position of a poor relation in the American economic family.

The tariff was not the only factor in the gradual decline of farming life in this country. The domination of large sections of industry by monopolies has also borne heavily on agriculture.

As late as 1933 American farmers were the sole surviving "rugged individualists." There were 6,000,000 of them, each working in competition with the other. They planted as much or as little of what they wanted to plant, brought their produce to market, and took whatever price they could get.

In contrast to these 6,000,000 individual farmers stood a handful of influential men controlling the industrial machine. Again the favored position of industry was due to no sweep of natural forces alone, but to a long series of man-made laws as well. The corporation charter, by virtue of special legislation and favorable court decisions, became the basis of industrial power, both political and economic. A small private group of men in key positions of influence dictated the terms on which the consuming public, including the farmers, might have access to the products of factories and the agencies of credit, of transportation, and of distribution.

Such a concentration of power is a denial of all free enterprise and an artificial damming up of natural economic processes.

What actual bearing does this set-up have on the farm problem today? A few facts will clarify the question. Even in predepression days the behavior of prices went against the farmer. From 1913 to 1929 the prices of farm implements and machines advanced 58.8 percent while farm prices rose only 44.5 percent.

During the depression years, from 1929 to 1933, only slight reductions were made in farm equipment prices. Few items were reduced more than 10 percent. The majority of the reductions ranged from 8 down to less than 1 percent.

During the same depression years you will recall that the price of cotton slumped 67 percent. It may be noted here that cotton growers produced 88 percent as much cotton in 1932 as in 1929. However, the output of cultivators in 1932 was only 10 percent of the production in 1929. You see, cotton brought only one-third as much as in 1929, but the price of cultivators was 97 percent of the 1929 level.

These are only a few out of many examples of the disabilities under which agriculture labors alongside modern industrial organization.

In the field of production and price control industrial monopoly is bound to outdistance the unorganized farmers. The monopolist is in a position to fix the price of his product just as arbitrarily as any totalitarian government. The price is not geared to the needs of the consuming public. It is fixed only with the aim of assuring the greatest volume of profits to the owners of industry.

Along with monopoly practices, corporation legislation, and tariff policy, we must not forget the importance of such factors as the banking system, the freight-rate structure, and the control of patents in the growth of the present-day political and economic power of American industry.

In the framework of this system industrial workers for years suffered the same disadvantages that farmers did. Recently, however, labor has greatly improved its position in relation to management and industry.

For the first time in the Nation's history all three branches of Government are lending a sympathetic ear to the demands of labor. Membership in the ranks of organized labor has more than trebled since the low point of the depression. Hand in hand with striking gains in employment and income have gone the series of permanent remedial measures, dealing with the problems of labor—unemployment compensation, old-age insurance, the Social Security Act, the Wages and Hours Act, placing a floor under wages, a ceiling over hours, and outlawing child labor, the Public Contracts Act, and many other similar measures with which you are familiar.

Farmers have no quarrel with labor as a result of these impressive gains. Nor do farmers have a quarrel with industry for the material rewards that have followed as a result of intelligent planning and management.

In a well-balanced economy the prosperity of each group should contribute to the welfare of every other group. There is a serious question in the minds of many people today whether we have yet achieved such a balance. Tariffs, monopolies, and patent privileges are still operative. The industrial worker continues to narrow the gap between his position and the position of his employer through mass organization, political pressure, far-reaching legal sanctions, and the accustomed weapons of the strike and the boycott.

The farmer is still lagging behind in his race for equality with industry and labor. This is clearly demonstrated by the following fact:

According to the latest available figures supplied by the Bureau of Agricultural Economics, industrial profits have advanced 76 percent over the level recorded for August 1939, just 1 month before the outbreak of World War No. 2. During this same period factory pay rolls have advanced 65 percent and the income from farm marketing only 43 percent. The official score, therefore, shows the farmer trailing the factory worker by 23 points and the corporation stockholder by 34 points.

It is well for us at this grave moment in our history to resist the temptation to overplay our hand in pleading the special cause of agriculture. The crisis calls supremely for national unity. Our national existence is endangered. Our basic institutions on which farming, labor, and industry alike depend for their very life are hanging in the balance. This is no time for agriculture, or for industry, or for labor to play class politics and to strive for special advantage. It is a time for economic statesmanship of the highest order.

The American farmers are prepared to go all out for national defense. Their farm program served them and the Nation as a whole during days of business recovery. These programs are just as well adapted to meet the emergency of national defense. Under the ever-normal granary provisions of the program we have already accumulated vast reserves of grains. These grains are being converted into livestock and poultry products to serve our own needs and the needs of nations now resisting aggression.

Farmers may well be proud of their record so far in response to the call for more food and feed production. Our total pig crop for 1941 will be larger than the 1940 crop, instead of much smaller, as seemed likely last winter. The total milk production on July 1 was the largest on record for that date. Our June production of eggs was more than 4,000,000,000, the largest for any month since 1930. The acres planted to the principal vegetable crops, grown for canning and processing, appear to be nearly 20 percent higher than a year ago. This increase in production is going forward at the same time that farmer boys are serving in the Army or entering defense industries.

This splendid record would not have been possible without national programs for agriculture. It is because of these programs, worked out since 1933, that producers were able to build up their soil fertility and to have the organization and resources to step up production quickly when the need came.

Our farm programs are standing up admirably under the stress of the defense emergency. Let us hope that the collective intelligence of the farmers stands up as well. We must be alert to avoid the mistakes of the first World War. We must do all in our power to head off inflation and its attendant disasters. I doubt very much that our democratic form of government can survive another crack-up such as the one we suffered in the 1920's, when inflation swept us to the brink of ruin. Farmers are just as interested as any other group in keeping our price system on an even keel. Farmers have just as big a stake in the national economy as any other workman or businessman. Agriculture is set against run-away prices.

In the effort to avoid inflation, however, the farmer feels that his sacrifices should be no greater than those of other groups. Just now he is being represented in some quarters as "grabbing" for all he can get at a time of national crisis. The farmers are familiar with this type of criticism. They are not disposed to answer their critics in kind. The facts of the farming situation speak for themselves.

In this connection let us take a brief glance at the price situation. The purchasing power of farm products as a whole continues below pre-war parity, despite some sharp rise in recent months. The explanation is that the prices paid out by farmers for the things they buy average 33 percent above pre-war, whereas prices received by farmers for the things they sell average only 25 percent higher than during the 1910–14 base period.

True enough, farmers this year will receive the largest cash income since 1929. Their total for marketing and Government payments will be somewhere around $10,700,000,000. Even so, bear this fact in mind: Their share this year of the national income will be about 9 percent of the total. In 1910 to 1914 their share averaged 12 percent of the total.

The price situation points up even more sharply when we consider the case of the cotton grower. One-half the proceeds from a bale of cotton goes to the person furnishing the labor. Out of this return he must pay for his fertilizer and certain other production costs. It takes on the average about 220 man-hours to produce a bale of cotton. Last year, with cotton selling around 10 cents a pound or $50 a bale, cotton farmers received less than 11½ cents an hour for producing the 1940 crop.

Today cotton is selling much nearer to parity, somewhere around $80 per bale. If this level holds, the cotton farmer will receive about 18 cents per hour for producing the 1941 crop. And he gets no time and a half for overtime. Eighteen cents per hour is about one-half the lowest minimum wage in industry. The southern coal miner today is getting five times the wages the cotton grower receives.

This does not seem like much of "a grab" to me. I can see no peril of inflation arising from the meager income of cotton farmers. Before the present emergency all that agriculture sought was equality with labor and industry. This equality continues to be the goal of American farmers. More than equality farmers have never asked. Less than equality no genuine democracy can withhold.

Cotton farmers today are nearer to equality of price than they have been for a decade. You know today, before the first lock of cotton is picked, what the minimum price will be for this year's crop, and that this price will be the best received since 1929. How often in the past have you known, before you took a bale of cotton to market, even approximately what that bale of cotton would be worth and that its price would be a fair one?

I am sure that you all know full well that the loan at 85 percent of parity is responsible for the present cotton-price level. I know also you realize that because of the large carry-over of American cotton in this country at the present time and the large stocks of cotton in the outside world, the price of American cotton would be exceedingly low in the absence of the A. A. A. program—if there were any market at all.

While we may all rejoice over the present price of cotton and the assurance of conservation and parity payments, there are some dark spots in the cotton picture and we must give consideration to these. Domestic consumption of American cotton is, of course, running at record levels. We consumed approximately nine and three-fourths million bales in this country last season, and world consumption of American cotton amounted to about twelve and four-tenths million bales, or roughly the equivalent of last year's crop. However, because of the war, exports for the crop year just ended did not amount to much more than a million bales, and the prospects for this year and for the duration of the war are not at all encouraging.

Although the passage of the bill providing for loans at 85 percent of parity on cotton and other products has given much needed immediate relief, it has not of itself permanently assured cotton farmers of prosperity. The income from cotton is not determined by the price of cotton alone. This income is determined by multiplying the price by the volume of production—a fact which cotton producers must never lose sight of. This fact is being brought home forcefully just now to cotton farmers in Georgia, South Carolina, Alabama, and other States where the boll weevil and other factors have seriously cut the crop.

As long as we are embarked on an all-out defense program, we may be reasonably sure that domestic consumption of cotton will remain at a high level. But it is also probable that production of rayon and other synthetic fibers and competing products will expand to a high degree, and while we have not been aware of the competition from rayon and other substitutes for cotton this year because of the strong domestic demand for cotton products, the competition, nevertheless, exists. Increasing the price of cotton to a fair level may further encourage competition from substitutes unless some action is taken to offset this increase in the price of cotton. Cotton farmers should think about this. In general, they realize that the cost of the raw cotton is a very small percentage of the cost of the finished product. Many are aware, in fact, that there is an average of only about 12 cents worth of raw cotton in the cotton articles costing a dollar which consumers purchase. For that matter the laundryman who launders the shirt you wear receives twice as much each time he launders that shirt as the farmer received for the cotton in the shirt.

Yet we must not forget that the cost of the raw material in many articles is still an important item in the cost of the finished product and may encourage competition from commodities whose prices have not advanced as much as has the price of cotton. Once the war is over and we reach more normal times, we may expect increased competition from factories currently being expanded for the production of rayon and other synthetic products which may be substituted for cotton. At present cotton farmers are enjoying relatively favorable prices—prices which are not out of line with other commodity prices, since the parity principle is aimed at fairness to all. But they should not be lulled into a false sense of security or assume that the cotton problem has been solved.

The loss of export markets because of the war would have been disastrous for the one-third of the farm population which lives on cotton farms, had it not been for the increase in domestic consumption, the cotton-loan program, and the assurance of soil-building and parity payments. In normal times we exported about one-half of the annual cotton crop. In fact, over a 10-year period we exported more than 6,000,000 bales annually, and in 1 year, 1926, we exported almost 11,000,000 bales. Therefore cotton farmers must cooperate in making sure that they have the type of program which will enable them to compete successfully in world cotton markets when the war is over, and during the war they should sell every bale they can in those foreign markets still available to them. They should discuss in groups such as yours the problem of competition from synthetic and other competing fibers as well as the problem of loss of export markets. It is in discussions such as these that programs are developed. Programs are neither developed nor executed in Washington. We in Washington merely represent and express the combined thoughts and desires of the people at home.

No one can say with any degree of certainty just what we must do to maintain our position in world markets after the war, because we don't know in just what condition our former customers will be. It may be that we will have an international agreement between the cotton-producing countries of the world. I think this would be very desirable. It is almost certain that we will have to accept goods in exchange for our cotton to a greater degree than in the past. If so, it may even be necessary for the Government to take a far larger part in the actual bartering and handling of our export trade in order to increase the bargaining power of the American farmer. Our Government might also be forced to renew export subsidies on raw cotton and to take additional steps to increase the relative quality and appearance of American cotton intended for export. And, of course, we must continue and even increase our present efforts to stimulate the domestic consumption of American cotton.

We should be thinking about these things and charting the course we expect to follow. It is only through the concerted action of a well-informed people that we can develop a sound and workable program.

For the solution of problems ahead farmers of the United States are better organized today than ever before. Group organizations are natural and healthy products of democratic society. Just recently Secretary Wickard has selected your own national president, Ed O'Neal, to serve with other farm organization heads on a committee on agricultural production for national defense and related matters. The suggestion for this committee came from President Roosevelt himself. It is a tribute to the value and effectiveness of farm organizations.

Your own Farm Bureau Federation has from its earliest days faced the problems of agriculture in a wholly realistic fashion. You have worked for concrete results to advance the cause of economic justice for the American farmer. Your leaders have been in the forefront of every crucial fight for the advancement of the farmers' interest.

The challenge today that faces your group as well as other farm groups—in fact, all groups—whether of farmers, workers, or industrialists, is whether these groups can subordinate their own special interests to the general welfare. When any special group becomes coercive and selfish it defeats its own purpose.

If you can always stand squarely for the interest of the farmer without forgetting that the consumer, too, has his rights; if you can continue the fight for permanent parity for agriculture and at the same time support the legitimate claims of labor and industry; if you can hold out for a decent American standard of living and security on every American farm and at the same time not begrudge the city worker the privilege of seeking such security and such a standard of living, then you will deserve to become, and I believe you will become, a stronger and a greater organization.

The 1941 Tax Bill

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 19, 1941

Mr. LUDLOW. Mr. Speaker, I did not vote for the tax bill of 1941 on the final vote on the adoption of the conference report, which completed the action of Congress on the measure.

On that vote we had before us the finished work of many months of consideration by Congress of tax legislation, and we were asked to pass judgment on the final product.

I wish to make it clear that I am in favor of a revision of our tax legislation. We must raise enormous sums in taxes to keep our national finances in safe and sound order. In the present state of our colossal national deficit and our prodigious and continuous spending for national defense, the danger is not that we shall raise too much money but too little money by taxes. It is elemental that there must be a certain relation between revenues and outgo to keep our national financial position in the safety zone; that the Nation cannot forever pile up obligations without substantial revenue to meet them and still remain solvent.

But as I surveyed the final product of the tax bill it seemed to me that it had been very much worsened by the treatment that it had received in the Senate, and that if it were rejected and a fresh start were made it would be possible to write a bill that would bear much more justly and equitably on all of our citizens. As the tax collection under this measure will not begin in any event until next March and as Congress is certain to be in continuous session, perhaps with nothing to do, it seemed to me there was both time and opportunity to write a better tax bill.

I did not like the Senate provision which lowered the income subject to taxation down to $1,500 in the case of a married person and $750 in case of a single person. It seemed to me that with costs of living mounting skyward these earners of low incomes are staggering under as heavy a load as they can reasonably be expected to stand. It seemed to me that heads of families making as low as $1,500 a year, facing mounting costs and wondering where they will ever get money to pay the doctor, the butcher, the baker, and how they will ever get the means to raise and educate their children, might well be exempted from income taxation in this great, rich country of ours.

My chief objection to the bill, briefly stated, was that in my opinion it is not a properly balanced measure. It bears too heavily on those who are least able to pay and not heavily enough on those who are most able to pay. In the latter category of individuals who will escape the taxes which I think they should pay, I refer especially to those who will reap rich profits out of the war emergency. The bill, in my opinion, does not provide a sufficient levy on the profits incident to and tied in with the war situation.

Those profits will be enormous, and I think a way should have been found to plow back a larger percentage of such profits into the revenues necessary to run the Government. To have done this, with a commensurate lightening of the tax burden on the little fellow, would have been, in my judgment, good legislation and good public policy.

To tax heavily the extraordinary and unusual profits of a war situation such as we are now facing is a sound principle of taxation. It is sound because it leaves capital unimpaired and does not in any way affect the income of the same individuals when the emergency which produces such swollen profits is over. On the other hand, when structural changes are made in the tax base affecting small income earners, those earners do not recover their former status when the emergency is over, but they go on paying the heavy rates they paid during the emergency.

I might discuss the conference report in a more detailed, analytical way, but the above statement presents my principal objections. Summarizing my views, I repeat that, in my considered judgment, the bill bears too harshly on those who are least able to pay and not heavily enough on those who are able to pay. Congress should have taken time to write a more equitable bill.

Freedom of the Seas

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio speech delivered by me over the American Radio Forum of the Air program, Mutual Broadcasting System network, Sunday evening, September 21, 1941:

President Roosevelt, on his own responsibility and without requesting any authority from the Congress, ordered an expeditionary force to Iceland, which was and still is occupied by the British Army. The responsibility for sending an expeditionary force to Iceland, within 800 miles of Europe and within the war zone, rests squarely with the President. If we are involved in war as the result of incidents arising on the high seas in the war zones around Iceland, it will be a war for which President Roosevelt will be solely responsible, in spite of all the promises and pledges he gave the American people that our Army, Navy, and air force would not participate in war outside the Americas.

Iceland is 2,800 miles outside the Americas. Now that we are there, I understand the logic and the need of keeping the sea lanes open to supply our troops while they are in Iceland. However, that does not mean having our warships wandering around the seven seas, looking for Nazi submarines or raiders, in order to bring on a shooting, fighting war. If the statement by Secretary Knox that our Navy is convoying merchant ships is restricted to Iceland, I anticipate that Congress will accept the situation as an accomplished fact. Clearing waters necessary for our own use and defense is one thing, but if it develops that the convoy system goes beyond that and our warships start shooting at German or Italian ships in other waters, that would be an act of war on our part, or, rather, Mr. Roosevelt's.

We must not get into an offensive war of our own making. The whole issue of the freedom of the seas is filled with the rankest kind of hypocrisy, quibbling, and hair splitting. It is enough to make the angels weep.

We are now talking about freedom of the seas and the sacred principles of international law for ourselves, yet we have repeatedly disregarded and violated the rights and privileges of neutrality, upon which the freedom of the seas is anchored.

If the American people want to get into the war, let us say so honestly and in a democratic and American way by a majority vote in Congress. But, for heaven's sake, let us stop being contemptible hypocrites about it. I anticipate some warmaker in the Cabinet, possible one of the warmaking twins—Messrs. Stimson or Knox—will issue a new statement from now on that the Red Sea is an American lake and that Moscow is part of Alaska. Let us be honest with ourselves and stop trying to befuddle, deceive, and hoodwink the American people.

I accuse President Roosevelt in his speech last Thursday of trying to build up a phoney, false, and fraudulent war issue by attempting to make out that we are responsible for the safety of ships flying the Panamanian flag. These ships were put under the Panamanian flag as a subterfuge to get around our own laws, and our Government is in no way responsible—legally or under international law—for them.

I accuse President Roosevelt of having sent American merchant ships into the war zone in the Red Sea, 10,000 miles away, and contrary to the spirit of the Neutrality Act.

I challenge President Roosevelt to state on what occasion, outside of the *Robin Moor*, which was held up by a submarine and the crew and passengers given time to get off, that a single American ship has been torpedoed or a single American life has been lost, and when and where a German raider, as distinguished from a submarine, has ever attacked an American ship.

The fact is that we have scores of times violated the principles of international law and the customs and usages connected with the freedom of the seas. We have seized belligerent ships in our ports and turned them over to enemy nations. We have repaired and outfitted belligerent warships in our own harbors.

We as a government and with governmental funds have built ships and furnished war materials for belligerents. We have transferred 50 destroyers and other naval units to a belligerent nation. We have committed innumerable unneutral acts. In fact we do not claim to be neutral but have assumed a status of nonbelligerency.

I am merely relating a few facts and asking for an end to the pious and hypocritical pronouncements about international law and the freedom of the seas. We have been a party to undermining, if not destroying both, and we do not appear with clean hands when we now talk of insisting on our neutral rights on the high seas. Let us stop looking for an excuse to enter the war through repealing the Neutrality Act or chatter about nonexisting freedom of the seas. If we are to enter the war let us do so with our head up, and for the best interest of the American people and not by subterfuge or through fake issues.

I denounce as utterly untenable and un-American the argument that Congress turn over to one voice and one man the formation of our foreign policies even to involvement in war. If that were true, it would mean that the end of constitutional government in America and the substitution of the very essence of nazi-ism and dictatorship in its place.

Americans are united in support of war in defense of the United States and the American Continent but only a small minority favor putting this country into an offensive war and very few into an undeclared war in defiance of the Constitution, the Congress, and 80 percent or more of the American people.

Patterns for Tomorrow

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ADDRESS OF W. ARTHUR SIMPSON, OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable W. Arthur

Simpson, of Vermont, which address deserves and should have the careful attention of the largest possible number of people that may be reached by means of the insertion in the RECORD.

"Patterns for Tomorrow" it is entitled, and whether one agrees in entirety with the suggestions contained therein, it must be agreed by all that this speech stands out beaconlike among the clouds of empty words that have come from so many lips, befogging and beclouding a situation that needs to be lighted instead of darkened.

The address follows:

In the city of Philadelphia stands a shrine to the principles of democracy and the freedom born out of the achievements of our forebears who bequeathed us a priceless heritage. Here Washington became the commander in chief of the American Army; here Benjamin Franklin brought wise experience and council to a group of earnest patriots, and here in Independence Hall, Thomas Jefferson uttered those immortal words which have been a beacon light to liberty-loving people in all lands for more than 150 years. On the walls of this plain colonial room is this sign, "Americans walk proudly here." We have a right to be proud of American philosophies and proud of Americans who gave them expression and validity. We are proud of those whose blood was shed that liberty and justice might live and grow and that freedom might not perish from the earth. Enjoying as we do the highest standards of living in the world and a form of government more calculated to preserve them, freedom more tangible than any existing elsewhere, and the precious right to transmit it to our posterity, it is not too much to ask that we take time from our business and pleasure to soberly consider the matter of national defense and national unity.

The historian will find in those things happening in the world today a familiar pattern to what has heretofore happened, but the implications and impact of this conflict are the greatest in the history of civilization because the world has grown very small. What happened in the days of Old World conquerors like Alexander the Great, Genghis Khan and Tamerlane were terrible enough, but they had little effect in the world at large.

Even Napoleon's conquest held little menace for the New World democracy because Napoleon rose out of revolution stimulated by the philosophies of Jefferson and the achievements of Washington.

This is not just "another war." This is a world revolution swept by forces and philosophies of terrible portent because they will determine whether force or reason shall rule the world. Hitler gave the situation proper clarification when he announced that events would determine the destiny of the German people for a thousand years. Unfortunately, the destinies of the German people are not the only ones at stake; they involve all the people of all the earth. We shall either be slaves or remain free. The world cannot be half slave and half free. It is not written in the book of destiny that America will be able to escape the tests which in these days are coming to the nations of the earth.

The terrible experience of other nations who did not desire war offer these inescapable facts for the guidance of the American people, appeasement will not help us, isolation will not save us. The rich and comfortable New World must make a real contribution to the salvation of civilization and we are not going to be very proud of ourselves, highly regarded by the rest of the world or build a strong nation, if we buy ourselves out of the difficulties which have engulfed the world.

To be an isolationist is the easy way of life. Of course, we do not want to shed American blood. All the sympathy is on the side of America first. None of the little nations of Europe wanted war but today they are chained to the chariot of the conqueror. They hung separately because they would not hang together.

With the fall of Denmark, Norway, and Holland, and the encirclement of Sweden there perished the finest cooperative society in the world, the finest forms of social security, the finest types of health insurance, and the ideals of great peace-loving peoples. Finland has no heart in the struggle except to regain and preserve its own territories. Rumania does not want to fight for Nazi overlords and the good Italian peasants have no desire to perish on the steppes or in the marshes of Russia.

A lot of very nice people want to emulate the early martyrs and delude themselves into thinking that love will stop the German wave of conquest. Of course, few of them really expect to be thrown to the lions or to perish under the wheels of the modern juggernaut. The wishful thinking of really sincere men and women and the skillful maneuvering of politicians who are afraid to face facts or fear loss of votes have little validity in the face of grim realities which must be faced without soft concealment. Liberty is fighting for its life. Only by heroic and self-sacrificing exertions can we hope to save ourselves. It will require of us such fortitude and self-denial as we have almost forgotten. We must arm for a generation not only to protect ourselves but to police the world. Such a course—and we seem to have no alternative—will be hard and expensive. The maintenance of a great standing army, a two-ocean navy, and a great air and tank fleet will tremendously change the social and economic fabric of the Nation. It will lower our high standard of living. It may shatter some of our preconceived notions of the inherent strength of our country. Liberty cannot be saved in its holiday clothes.

We must put iron into our democracy. Democracy creating its own world was hard and grim and poor. Democracy in a year of national peril is rich and soft and quarrelsome. Our output of planes and tanks and munitions has been disappointingly inadequate. Had it not been for the respite afforded by the heroic exertions of the Red Army of the United Soviet Republic our efforts might have been too late. Instead of a spirit of unity and sacrifice each group in our country is seeking greater self-advantage. Can we build morale in a great American army when the boys in training see the stay at homes living in luxury and blocking the wheels of industry to obtain greater privileges and pay? Organized labor has secured tremendous advantages in better wages, shorter hours, better working conditions, unemployment compensation, and a guaranty against the hazards and vicissitudes of old age. No other group has a greater stake in the preservation of democracy. Labor should not allow selfishness and greed to sabotage national defense.

The American farmer should be satisfied with a parity price for his products. He is entitled to that fair return. Hundreds of millions are being paid from the Federal Treasury in subsidies to these producers. Extravagant farm prices in the first World War put the farmer on the road to economic bankruptcy in the post-war period.

During a time of national peril the Government has appeared unwilling to strengthen its credit or husband its resources. Sound democratic government is in danger unless its liberal and essential social programs are kept practical, soundly financed, and economically administered. We have cultivated and indulged the easy way of life. We are selfish, undisciplined, and terribly extravagant. We owe billions for things we did not need and could not afford.

Our financial fantasy has permeated the whole body politic of our country. With a colossal and ever-increasing national debt we continue to indulge our extravagant notions, and we do this because, as we say, if we did not someone else would get the money.

From the expenditure of billions of dollars for national defense and as a gift to other nations there is again arising the delusions of prosperity. Inflation is a grave and imminent danger. Our Government, which seeks to curtail installment buying, has been the most prodigal installment buyer the world has ever known.

We need to be on guard as never before to protect our rights to free speech and a free press. Bureaucratic centralized authority and government by decree is growing by leaps and bounds. The citadel of liberty is threatened from within as well as from without.

We need a revival of religion and religious impulse. People should live simply, humbly, and resolutely. Religion first kindled the fires of political freedom and made vital man's dignity and kinship with his Creator. When this is destroyed we extinguish the light of liberty in the earth.

We need to catch some of the spark and spiritual unity of the first World War. It may be that participation in this war is the only means to make us a strong, resolute, and united people.

Woodrow Wilson led this country to war in 1917 because he had reached the conclusion that participation in the war was justifiable and might lead to the creation of safeguards against a repetition of the disaster.

It was Woodrow Wilson who first saw and predicted that if dictators were not stopped early by the combined powers of free nations they would eventually imperil, if they did not completely wreck, civilization. He it was who declared, "The day has come when America is privileged to spend her blood and her might for the principles which gave her birth and happiness and the peace which she has treasured." We failed to understand his gift of prophecy when he said, "I am seeking only to face realities and face them without soft concealment." His League of Nations might have averted this life-and-death struggle for the survival of civilization.

A world system of international police, a world league dominated by no single nation, "not a balance of power but a community of power, not organized rivalries but an organized common peace" is the single hopeful pattern of the shape of things to come.

It is given to any individual to participate only the tiniest fraction in the great upward struggle of the human race, but we have each a responsibility as a part of that generation which, if it is to survive, must be the greatest generation that ever stood on this earth, because its difficulties are greatest. We have before us the tragic example of conquered people who were once free and are now slaves because they did not recognize their dangers, because they were unwilling to change their accustomed mode of living, because they would not give up their luxuries, and because they preferred the soft and easy life to that of sacrifice and self-denial.

In America, the greatest of all democracies, we must demonstrate that a democracy can be efficient and effective, that a democracy can be strong and hard, if need be and can act firmly, wisely, and expeditiously. This is our obligation—yours and mine—God helping us we can do no less.

"To what new fates my country, far
And unforseen of foe or friend
Beneath what unexpected star
Compelled to what unchosen end.

"Across the sea that has no beach
The Admiral of Nations guides
Thy blind obedient keels to reach
The harbor where thy future rides.

"I do not know beneath what sky
Or on what seas shall be thy fate
I only know it shall be high
I only know it shall be great."

The Power To Declare War

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

TELEGRAM FROM GEORGE N. PEEK

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram:

RANCHO SANTA FE, CALIF.,
September 13, 1941.

Hon. ROY O. WOODRUFF,
Member of Congress, Washington, D. C.:

People are confused over the discussion arising out of the word "authority" in connection with the President's activities in his dual position of President and Commander in Chief. Does the President assume that there is no law governing his actions? If so, is he not assuming dictatorial powers, thus openly and flagrantly brushing aside the Congress, the Constitution, the people, and international law? Under our form of government, is not the Congress alone, representing the people and responsible to them, the only authority empowered to declare war? A policeman may have authority to shoot to kill but he may not have that right. Members of Congress can clarify this point by discussion.

GEORGE N. PEEK.

A Survey of the National and Local Scene

EXTENSION OF REMARKS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

RADIO ADDRESS OF HON. MARTIN F. SMITH, OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, by unanimous consent granted by my colleagues, I insert the radio address delivered by me on August 17, 1941, over radio stations KGY, Olympia, Wash.; KELA, Centralia, Wash.; KWLK, Longview, Wash.; and KXRO, Aberdeen, Wash.

The radio address referred to reads as follows:

My friends in southwest Washington, I am very glad to have this opportunity of talking to you and deeply appreciate the privilege accorded me by station KGY to participate in the ceremony celebrating the inauguration of its increased broadcasting facilities, particularly marking its first Sunday on the air. Through the magic of radio we are entertained and instructed, and we are kept informed as to the swiftly moving events in the great drama of life and history which is now being enacted in the world. Radio has become an essential part of our daily lives and through its added facilities station KGY will more than ever play an important role in the community life and affairs of southwest Washington. We are fortunate and exceptionally favored in our section of the State in having five radio-broadcasting stations which are splendidly serving our citizens. I wish them all continued success and still further progress.

The Seventy-sixth and Seventy-seventh Congresses are setting a new record for duration of continuous sessions. The Seventy-seventh Congress has now completed over 7 months of steady and arduous labor since we convened on January 3. Congress has been in constant session now for 592 days, 566 days remaining of the Seventy-sixth Congress last year, the longest continuous session in our history and 226 days of the Seventy-seventh Congress this year. The physical and mental strain is proving too much for many of our colleagues who are dying heroically at their post of duty in the most crucial period of our national history, perhaps the most crucial period in the world's history. The number of deaths has been the highest in the history of Congress.

My friends, world events of the past 2 years have compelled us to undertake the greatest and most costly national-defense program in our entire history. We have had to look some very grim facts in the face and become realistic in regard to the menace which threatens our own future as a democracy and a free people. We have come to realize that aid to Britain and the other democracies is an insurance policy to insure our own safety and security and, if possible, to keep war away from the shores of America.

The Axis dictators' plans, blueprints, and timetables are being rapidly, relentlessly, and ruthlessly translated into actuality. They have proclaimed that the world cannot exist part totalitarian and part democratic and that they intend to make it all totalitarian. It remains to be seen how long Russia can withstand the onslaught of the Nazi war machine.

President Roosevelt and Congress have put forth every possible effort to keep our country out of war and how well we have succeeded is proven by the fact that we are practically the only nation in the world which has not suffered any loss of life or property. In view of all the threats and dangers to which we have been exposed, and the difficulties with which we have had to contend, this is a remarkable achievement. How thoughtless and unreasonable are those who, in the face of this record, can find it in their minds and hearts to accuse President Roosevelt and those who have supported our national-defense program of seeking to thrust us into war. President Roosevelt and Congress have shown more patience and toleration and submitted to greater threats and danger to our safety and future as a free nation than all the war administrations in our history combined, including those of Washington, Lincoln, McKinley, Woodrow Wilson. Let us re-read our histories.

I have supported every national-defense measure and aid to Britain, because, as I have stated, that is aid to America. My mail, which has been unusually heavy this session, indicates that my course in so doing is approved by an overwhelming majority of the citizens of our district.

While I favor aid to Britain, I also favor aid to our own people and communities. I cannot agree with those who favor huge appropriations for foreign defense and then want to cut and curtail our appropriations and expenditures for domestic defense. I have opposed reducing our expenditures for the Civilian Conservation Corps, National Youth Administration, Soil Conservation, Federal aid to roads, rivers and harbors, and flood control, rural rehabilitation, food-stamp plan, Work Projects Administration, and farm relief. I have voted against reducing expenditures for these worthy purposes and shall continue to favor liberal appropriations for each and every one of these programs, as I consider them to be essential and desirable to our national defense.

During this national emergency, I consider it unpatriotic and thoroughly unwise for us to adopt a policy of indifference to the social and economic welfare of our people. Instead let us continue our program of social justice and economic security and thereby strengthen our national defense by increasing the stake which our people have in the preservation of our democracy. Our people then will again prove their loyalty, devotion, and sacrifice as they have always done in the past.

I therefore recently opposed and voted against the antilabor legislation which came before Congress and which would have deprived our workers of their hard-won right to bargain collectively in regard to wages, hours, and working conditions, protection to which they are entitled in a period of rising living costs, in order that they may live decently and purchase the products of the farm and the factory.

For the same reasons, we have acted in the House of Representatives upon legislation in the interests of the widows and orphans of the veterans of the World War. The House also passed early this month four important bills reported out by the Committee on Pensions, of which I have the honor to be the chairman, providing benefits to the veterans of the Spanish-American War, their widows and children. Now, more than ever, we should by our deeds prove that we are grateful to those who have served our country in its hours of greatest need.

We also passed in the House longevity-pay legislation for the postal employees, which I vigorously supported. This will result in a larger measure of justice to the employees of this great branch of the Federal Government who serve all of us so faithfully and efficiently.

We are making real progress with the Townsend plan in this Congress, with our discharge petition pending in the House and hearings being held in the Senate. We hope to demonstrate to the American people that we favor providing food, clothing, and shelter for our senior citizens, which would be a credit to them and to our country, which they have helped to build.

As usual, I have been active in this session in behalf of the Bonneville project which is constantly requiring a great deal of my time and effort. Its benefits are flowing out to the people in all the nine counties of my congressional district. Our P. U. D. districts are being enabled to reduce the electric light and power rates to all our people, and our rural-electrification projects are bringing these benefits to our farmers and inhabitants of the outlying communities. The savings to our citizens have already been considerable and will continue to grow. The Bonneville project has caused substantial industrial development and created new employment and new pay rolls in our district which no one would have thought to be possible a few years ago. This industrial development has just started and will gradually increase. It is certain to result in more prosperity and happiness for all our citizens and to have had an important part in this beneficial

program gives me more personal satisfaction than I can express.

I enjoy my work in Congress, for which I have been preparing all my life. I am now attaining the rank and seniority on committees and official contacts which can come only after years of service and experience, and which make it possible for me to serve you more efficiently and effectively.

It is gratifying these days to read the mail from home and to note the activity and steady employment at the highest wages ever received in the lumber, pulp and paper, plywood, fishing, and the new aluminum industries in our congressional district and the development of our electric-power utilities due to Bonneville. Also to observe that our municipal, school district, port district, and county governments are in the best financial condition in their history. According to my official mail, mercantile and retail business is flourishing and business conditions generally are the best they have ever been in all the communities. Farm prices have also risen, and consequently our dairy, poultry, cranberry, fruit, and grain farmers are sharing in our present prosperity. We must, however, realize that post-war problems will confront us, and for that reason I appeared before the Labor Committee of the House recently and strongly urged the appointment of a congressional committee or commission to study these problems and make plans for their solution.

This program is being broadcast on the Sabbath, and I would not be speaking what is uppermost in my mind and heart if I did not say that my experience in public life, my observations, and my reading have convinced me that we need, more than anything else, a moral and spiritual rearmament in our country. We need to return to the Christian faith of our fathers and to the teachings and precepts of the Christian religion in order to solve the social, economic, and political problems of this crucial period in human history.

With this thought I conclude, and wish to again thank my friends of KGY for making this broadcast possible, and I thank you for listening.

Attack on Our Butter?

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

Mr. STEFAN. Mr. Speaker, I have recently returned from my district in Nebraska where farmers who milk cows are worried over recent radio statements from one branch of our Government extolling the virtues of a butter substitute. The cow and the hen mean much to our farming population. The cream check has kept the wolf from many a farm door in the past. Our farmers want the same consideration which is being given to labor and industry, so far as living income is concerned. We know that we cannot solve our domestic economy unless we solve our farm problem. The farmer is entitled to the cost of production and he is also entitled to the American market. The farmers to whom I talked about this broadcast advertising a butter substitute fear that it is a direct attempt to put foreign farm products into competition with American farm products right here in the American market. I hope the Congress can clarify this situation and give the farmers who milk cows a chance to at least get cost of producing this milk and cream.

To give you an idea of the resentment in my State regarding this situation, I include with my remarks a letter recently written to the Nebraska Union Farmer by Mr. James C. Norgaard, general manager of the Farmers Union Cooperative Creamery Co.:

It looks as though war hysteria or something has taken the place of common sense among some of the officials in high Government positions.

For example, McNutt, of the Federal Securities Administration is advocating that Americans use oleo so that we may save our good butter for the British. Are the blue-bloods of Britain that much better than we Americans?

This same McNutt is spending the money farmers earn by milking cows to advertise oleo from Coco "Nutts," and has the unmitigated gall to say it is as good as butter. If he thinks it is, why not send it to the English?

NO SCARCITY OF BUTTER

There is no scarcity of butter. On August 1, 1940, we had 123,000,000 pounds of butter on hand in the United States. This year on August 1, we had 178,000,000 pounds of butter on hand, or 55,000,000 pounds more than a year ago. There is plenty of good butter in the United States to take care of both Britain and this country.

With our Secretary of Agriculture out urging more production of dairy products, it seems to me that dairy farmers should be encouraged, instead of hampered, in developing better markets for their products.

IS PEASANTRY THE AIM?

If the new oleo standards are allowed to go into effect, and the Government sponsors advertising and propaganda campaigns fostering the use of oleo, there is a real danger that the price of butter will drop to the price of oleo, and make dairying very unprofitable.

We sometimes wonder if there is a deliberate attempt in certain quarters to make peasants of American farmers. If not, why all this propaganda for "Cuban sugar," "Argentine beef," and Coco "Nutts" oleo?

Your Army

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

RADIO ADDRESS OF HON. ALBERT L. VREELAND, OF NEW JERSEY

Mr. VREELAND. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio broadcast by me over the red network of the National Broadcasting Co., Monday, September 22, 1941:

Ladies and gentlemen, I greet you from the Nation's Capital after spending 4 weeks in the Fourth Armored Division, United States Army, Pine Camp, N. Y., one of the modern, fast-moving, hard-hitting divisions of our armed forces, comparable to the German panzer division, of which we have all heard so much.

In my capacity of captain in the Organized Reserves assigned to the division, it afforded me an opportunity to work with, live with, and eat with the men who make up our fighting forces. Not only was I in a position to learn, by association with the men, the morale of the unit but, by observation and use, the quality and quantity of equipment that is being furnished by our expensive defense effort.

Since leaving Pine Camp I have also visited Fort Bragg and Fort Lee. National defense today commands the largest appropriation from the Congress of the United States, and without doubt the most important. The moneys spent to date are staggering in amount, with no end in sight. When the bill comes due the citizens and taxpayers will be called upon to sacrifice. Not only will they have to sacrifice in money but already are they beginning to feel the pinch of being denied some of the many conveniences and comforts they have grown used to. Next Sunday you might not be able to take that afternoon drive into the country. You may not be able to purchase parts for the vacuum cleaner if it breaks. You cannot buy any more aluminum pots or pans. Your dealer perhaps cannot supply you with flashlight bulbs for photography. Maybe you won't be able to purchase the building materials for that addition you were going to build. When you try to turn in the old family car you'll find the price is much higher if you can get delivery at all, and if you do, you may find the car is not complete, even though it can be operated. Soon we will feel the effect of the new tax bill. This we, as taxpayers, are doing for the defense of our country. The American people are willing to make these sacrifices if they know their money is being spent for what it is appropriated by their Representatives. The people can't give the time nor are they in a position to find out, so it is up to their Members of Congress to determine this in one way or another. I have taken the time and have given up my vacation to do that in the Army.

Since the speech of the President of the United States on Thursday night, September 11, there is no question in anyone's mind that there is a near possibility of our becoming involved in the present war in Europe. It is obligatory that we now look to our defenses and defensive forces to determine how well we are prepared to meet that eventuality when it arises. It means sacrifice and unity, whether we agree or not with the principle or the causes. The gauntlet has been cast and it is for us as citizens to exert our every effort to the preservation of our country and its freedom.

In my judgment, there are four things necessary in a modern army to have a fighting force able to compare with those of the rest of the world, namely: Morale, equipment, leadership, and training. One cannot stand alone without the others. Make yourselves comfortable in your homes and let's discuss these problems in their order.

Morale, or the will to do and the willingness to carry on in spite of hardship, is the first and main objective and the foundation upon which the services are built. Picture, if you will, as you sit in the comfort of your home or your car with your family grouped around you, the soldier in a far-off camp living in barracks away from his loved ones, lonesome and tired from a hard day's work in the dirt, dust, and sand, having worked from early morning till late at night doing the same thing over and over again. Picture him in a bare barrack with a cot to sleep on or maybe he is sleeping on the ground in the field or in a pup tent, all for $30 per month and the glory of working for his country. This takes courage and sacrifice. But again, we must understand the psychology of the soldier. A good soldier is always "beefing" about something and he always wants to be somewhere

where he isn't, just as the civilians of our country like to complain and criticize. The men in the Army never knew how bad their morale was until they read about it in some of the periodicals and were reminded of it by many articles. A good soldier would never let it be thought that he couldn't take it for fear it would cast a reflection on his courage and manhood. He would consider it an insult to have people think he was a coward enough not to want to do his duty for his country. He is the last to want to give comfort to an enemy by allowing them to believe the morale is low. Being accused of such by some who are not well-informed does not help. He wants encouragement, not sympathy. If left alone, the morale is fine and the men are willing to do their jobs. They feel the people back home are letting them down by belittling their efforts and by their failure to produce the equipment needed.

Closely coupled with morale is equipment. The men, knowing they might be called upon some day to meet an enemy, are most discouraged when every other act is simulated because of the vast shortage of matériel. The men, however, are well clothed, housed, fed, and well equipped with personal needs. I have operated practically every type of vehicle the Army uses and fired every type of weapon, with the exception of the larger-caliber guns. The quality and design of both the vehicles and weapons are a credit to the American manufacturers. I have driven the vehicles through the worst and roughest type of terrain and in all kinds of weather except snow. They are excellent. The guns are easily handled and accurate. The quality is of the best. But what of the quantity? Germany has 20 panzer or armored divisions—that is, they did have before the Russian campaign—and they are fully equipped and manned by well-trained veterans. The United States has 4. The first and second, I understand, are 80 percent equipped and with the medium tanks slowly beginning to come in, but they are still very short on artillery. The third and fourth are 20 percent equipped with controlled items and no medium tanks, no antitank or field artillery as prescribed in the tables of organization. These divisions should be, if they are not, on the first priority list for equipment, as they will be the first striking force to contact the enemy. If these divisions are so poorly equipped, what must be the condition of the rest of the Army? I have not had the time to determine why this shortage exists after the vast expenditure of public funds. I can only guess that it must be one of three reasons: The multiple, expensive, overlapping, interfering red-tape coordinating agencies of the Government spending the money and time with a useless effort in creating obstacles; we are giving too much away; or those civilians charged with the actual production are falling down on the job. Whichever it is, I hope the shoe fits and they put it on, because if we fail, at their door will lie the blame, as the Army is doing its best. Whichever it is, however, the Army has not received the equipment while the money is being spent. I assure you I'm going to find out the place and reason. It's the results that count. Weapons, vehicles, and ammunition in the hands of the men who have to use them will be the deciding factor in conflict, not all of the multiple agencies that can be created or vast sums unproductively spent. It is most discouraging to use a tree trunk for a gun and wave a flag violently to indicate its firing. I'm afraid it would make little impression on an enemy. It's one thing to see a target and another to hit it—you can't simulate a good shot—it takes practice, and you can't practice without a gun or ammunition.

Morale and equipment is valueless, however, without good leadership and well-informed officers. There has been much criticism about the officers and many statements have issued about their lack of ability. We must remember, because of the pacifistic trend of the country over the past few years while Germany was arming, the Army was reduced to a minimum, with only sufficient Regular officers to man a skeleton force. Now that it has become necessary to expand the Army, the Regular Army officers have been too few to adequately officer the expansion and it has been necessary to call in the Reserve officers to augment the regular personnel and to officer the selectee army. These Reserve officers in the past have given of their time and services without cost to the Government to try to prepare for this very emergency. They were realists enough to foresee this critical period. Because of the shortage of funds to the Army during the peace years, the Reserve officer was only afforded training with troops once in every 3 years and had to learn what he could from correspondence courses, a poor substitute at best. Now he is called upon to take active command of troops and expected to be a professional soldier overnight. They're doing a good job and a remarkable one considering the small opportunity afforded to lay a foundation. Shortly after my arrival at Pine Camp, and at my request, I was assigned to the division officers' training center, which is a school every new officer assigned to the division must attend for full time over a period of 7 weeks. In this class I found newly assigned R. O. T. C. graduates who were, in most cases, mustered into the service shortly after graduation from college, officers from other units, medical officers ordered to active duty from civilian life, and four chaplains. The course consisted briefly of basic training in the organization and functions of the armored division, a review of basic military fundamentals, and a general knowledge of the equipment and objectives of the various units making up the division. It was necessary for each student to operate every type of vehicle from the motorcycle to the tank, on roads and rough terrain, with and without lights at night, to fire every type of weapon for record, except the heavy calibre guns, to function in each position in the various vehicles, to assemble each type of gun, to operate the radio and to use personal equipment through gas and over the obstacle course. They personally built two bridges in daylight and one at night without lights, operated assault boats and studied the method of supply.

This course, while not making specialists, nevertheless acquainted each officer with the jobs of the men and the difficulties under which they must operate as well as informing them as to the functions of the various component parts of the division, thereby in a short, intensive course equipping them with the necessary knowledge in addition to their basic training prior to commissioning, so as to enable them to take their places in the various units to which they were assigned.

That leads into the last point, namely, training of the troops. But here again there must be the equipment to train with. Wars of today are not as of years gone by, when the only weapons were the rifle or sword. Today, with the mechanized equipment and scientific methods, it takes time. Might we consider a scout car, for example, which is an armored car carrying six or more men and five different types of weapons. Each man must know his particular job and do it instinctively, with speed and teamwork for the safety to the entire crew. Each man must be able to drive the car, act as car commander, radio operator, or any other position in the car. He must be able to fire each weapon, repair the car, take down and assemble each weapon blindfolded, repair the radio, and operate any other type of vehicle in the division. It can't be done overnight nor in any given period. An untrained man cannot substitute for a trained one and still have the unit function. He must be trained before the trained one can leave if we want an army ready for an emergency.

In conclusion, let us liken the Army to a team. It is your team; if it wins, you win. If it loses, you lose; and all that is dear to you in the way of freedom and comfort and civilization is lost with it. You are the people supporting the team. They are doing their job. They need equipment and time to train with it. Remember a conqueror has no compassion for the conquered, so let's give our men full-hearted support, encouragement, and cooperation; they need and want it.

Thank you.

A Significant Congressional Change

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

Mr. MASON. Mr. Speaker, Abraham Lincoln in his Gettysburg address characterized the Government of the United States as a "government of the people, by the people, for the people." Lincoln's description was a true picture of our form of government as it was in his day. But times have changed. The "horse and buggy" days are gone, and a Government expressing the will of the people has also gone. Today we have a government by consent of the people's representatives in Congress. The Congress, during the past few years, has adopted a passive attitude, an acquiescent attitude, a yes-sir attitude—a Congress which in the slang of the street has become known as a "rubber stamp" Congress. Instead of initiating national policies and programs, the Congress now simply approves policies and programs that have been prepared and presented to it for approval. Congress now acts passively or negatively, whereas in former years the Congress always acted positively and in a dynamic manner.

This change on the part of Congress from an active part into a passive part, from a will-to-do policy into a consent-to-have-done policy, a change that has been taking place gradually for about 8 years, unnoticed by the majority of our people, is so well described and illustrated in an editorial in the Saturday Evening Post of September 20, 1941, under the heading "Government by consent" that I include it as a part of my remarks for the benefit of my colleagues:

[From the Saturday Evening Post of September 20, 1941]

GOVERNMENT BY CONSENT

The change that has taken place in the character of American government—a change within the form—may be studied in the behavior of the parliamentary principle, which was designed by the Constitution to be the creative, lawmaking power. Observe it in action. Observe particularly that eccentric movement of congressional debate, as if it was revolving off center. The appearance is true; it does revolve off center. The explanation of this bewildering phenomenon is that the immediate matter of debate is not the axis upon which the debate turns. Always

there is something else, something that is not there—and what that is, asserted on one side and denied on the other, can be neither proved nor disproved for the time being.

For example, the ostensible subject may be a matter called A. The vote will be upon that. But what the debate really turns upon is whether A is simple or compounded. Does it involve saying B later; and, if so, why is B not there?

It is as if the executive principle were spelling out a word. The consent of the parliamentary principle is necessary in order to preserve the form. The parliamentary principle is Congress. But Congress does not know what the word is. Only the executive principle knows that. If Congress knew, it might not consent. Therefore, what the executive principle does is to submit one letter at a time.

This was perfectly illustrated in the debate on the bill to extend the period of involuntary military service beyond the 1 year for which the draft army was first called up. Granted that all the arguments advanced by the President as Commander in Chief and by his Chief of Staff for extending the period were valid; yet why had they not been foreseen when Congress was asked to consent to the original Draft Act of 1940? Why was it not told then that a term of 12 months was too short, that an army could not be trained in that time, and that to begin releasing the draftees serially at the end of their 1 year's service would be not only disruptive and wasteful but, in the words of the President, a tragic error, and in the words of the Chief of Staff, a fundamental and tragic error, bound to weaken the country's prestige abroad and thereby invite war? Why had none of this been foretold? Had the General Staff foreseen it and said nothing about it?

The Senate Committee on Military Affairs sent for the Chief of Staff and asked him why, if he knew better, he had approved the 1-year draft in the first place. He reminded the committee that, in the first place, he had asked for a period of 18 months, and continued: "I said I would compromise on 15, but certainly we must have at least 12. I admit that is a peculiar way to put it, but I was trying to get the Selective Service Act passed."

The meaning of that naive admission is perfectly clear. The original draft act with the 1-year limitation was the letter A. Letter B, the extension, was bound to follow. The General Staff knew that. If the General Staff knew it, the President knew it. But they were afraid that A and B together would be too much. The Congress might not consent.

So then the immediate matter of debate was B. Ostensibly it was B—this one question of extending the period of service, and on that there should be aye and no. But what everyone was thinking of was C, which was not there. For an interesting reason it was not there. It was visible for a moment, everybody saw it, and then it was suppressed, leaving B to stand alone.

B and C arrived at the Capitol together and were to have been presented together. B was the bill to extend the period of involuntary military service; C was a bill to repeal that provision of the original Draft Act which said that the Army thereby created should not be sent off this hemisphere. B meant an army extended in time; C meant an army to be free in space, one that the Commander in Chief could send anywhere in the world in his own discretion, with no further benefit of congressional opinion. What happened was that the reaction to C was instantly hostile—so hostile that it was immediately withdrawn. Why? Because it was evident that Congress would not consent to B and C together.

In the debate Senator VANDENBERG referred to C, saying: "It was a sinister request. It was an ominous request. I fear it was a prophetic request." Yet C was not there to be either debated or voted upon. It had been withdrawn for the sake of obtaining consent to B alone. Whether C would follow B as B had followed A nobody knew. So the Congress voted upon B alone.

We speak here not of the merits of A, B, or C. We speak of what is happening to government.

You cannot say when it was that Congress ceased to determine public policy. It relinquished that prerogative little by little and unawares, until it had passed to the executive principle—to the President, that is. During the first phase of this change the significance of it was obscured by the happy fact that the executive principle was not yet autocratic. It held fast to the tradition. It submitted its policies to Congress. That was collaboration. But it was not likely to continue forever. It discontinued suddenly with the advent of a President who had neither a reverence for the tradition nor a fear of power.

Since then great matters of national policy, foreign policy especially, have been submitted to Congress never as a whole, but as parts of a rebus, A by itself, B by itself, until the word was spelled out. And since then every important act of Congress has been an act of consent, not an act of will.

You may say, even so, that the power to give or withhold consent is the ultimate power. But this is a veto power, uncreative in itself, able to act only upon what is presented to it.

Read article I, section 1, of the Constitution: "All legislative powers herein granted shall be vested in a Congress of the United States." Imagine it to read: "Such policies as the President may from time to time determine and the laws that may be necessary to carry them into execution shall receive the consent of the Congress of the United States."

In a fine essay on democratic discipline, Dr. C. R. Mann says: "In practicing self-discipline the American citizen is generally confused by no less a pillar of democracy than the Declaration of Independence. * * * Near the beginning it says: 'That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed.' This Declaration was issued some 13 years before the Constitution, and few seem to have noticed the misleading implications of the phrase, 'consent of the governed.' Yet mere consent generally is a passive or negative action, not strictly compatible with the positive action called for by 'We, the people * * * ordain and establish this Constitution.' Had the Declaration said, 'governments are instituted among men, deriving their just powers by delegation from the people,' would not the two have been more compatible, since both would call for positive action by the people?"

The form survives; but now for the first time we have government by consent of the people, not government by will of the people. For better or worse, that is the change.

Speculating With Insurance Funds

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

EDITORIAL FROM LABOR

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's issue of Labor:

[From Labor of September 23, 1941]

SPECULATING WITH INSURANCE FUNDS

Most of us carry some life insurance, and therefore there is general interest in the financial safety of the companies which collect from us once a year, or once a week, as the case may be.

Under the laws of various States, life insurance companies can only invest in approved securities. New York, quite naturally, has taken the lead in that respect, and other States have been inclined to accept its standards.

Now a legislative committee suggests New York permit life-insurance companies to invest in common stock. The excuse is that the companies should be permitted to get higher interest rates. It is pointed out that the return on good bonds is almost as low as on Government paper.

That's true, but it is also true that common stocks are and always have been, highly speculative, and insurance companies should not be permitted to speculate with the funds entrusted to them.

If the scheme is approved, the companies may get larger returns for a time and then lose all or part of the principal.

Selling Short the Seaway

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

Mr. GEHRMANN. Mr. Speaker, there is a great deal of misunderstanding circulating these days about the proposed rivers and harbors bill. I always have deemed it wise to be charitable, but in this case I believe the rumors to be purposeful and the resulting misleading propaganda conceived and spread by those hostile to the construction of the St. Lawrence seaway.

Why all the subterfuge? Why do some people attempt to convey the idea that the money for all of the projects in the rivers and harbors authorization bill is going to be appropriated and spent at once? Such contention is sheer nonsense, and its sponsors are well aware of it.

IT'S LONG-RANGE PLANNING

What the bill amounts to is a long-range planning program for the development of auxiliary water routes to broaden our transportation system to be constructed and paid for when the money is appropriated for that purpose by the Congress. From my own personal experience, let me say that I was fortunate enough to secure an authorization for a much-needed Coast Guard station in my district in 1935. To this very day the Appropriations Committee has never acted favorably in order to make money available for this important work.

It is obvious that bottlenecks are appearing in our present transportation system. The much-publicized alleged shortage of oil on the eastern seaboard is in reality not a shortage of oil, but

the inability to make deliveries here. If the seaway was available, we could free a portion of our equipment for transporting critical material.

Included in the measure is the regular rivers and harbors bill which is considered annually and is in no way affected by this program.

LETTER REFUTES DECEPTION

Returning to my former assertions that the groups who are opposed to the seaway are engaged in a malicious and completely deceptive propaganda effort, let me quote a letter from President Roosevelt which was written early in August to Chairman MANSFIELD, of the Rivers and Harbors Committee, in which he simply stated:

I think you will agree about the bill and the general view that should govern these authorizations in the present emergency. Some of the projects, notably the St. Lawrence, are needed immediately. Others will serve in the post-war reconstruction period. There is no reason why both groups should not be included in the present bill with the understanding that when it comes to appropriations the defense needs will be controlling.

I hope that this will serve to lay at rest at once and for all any question on the matter. The proposed rivers and harbors bill is an authorization bill and not an appropriation bill. Let us be done with tricky tactics and stop selling short a project as important as the seaway.

The Spirit Within

EXTENSION OF REMARKS

OF

HON. GEORGE A. PADDOCK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ADDRESS OF WILLIAM TYLER PAGE

Mr. PADDOCK. Mr. Speaker, under leave granted by the House, I insert in the RECORD an address by William Tyler Page before the Professional Business Women's Club of the District of Columbia, September 22, 1941, entitled "The Spirit Within," the theme prescribed by the national organization of professional business women, as follows:

In the Book of Job it is written "there is a spirit in man and the inspiration of the Almighty giveth them understanding."

From whence cometh this spirit in man? Man was formed in the image of God who breathed into his nostrils the breath of life, making man a spiritual being and a living soul. Hence, inspiration is literally "the act of breathing in" by which process the divine spirit entered into man.

We express this divine spirit in man by the oft used and oft misused pronoun "I", the living soul or spirit encased in a mortal body. This thing we call "I" is the real spirit of man, is indestructible, and lives on and on through eons of time.

The collective or community spirit in man is expressed in the word "ethos", meaning character of the people. This spirit or character may be developed to a high degree of spiritual attainment or narrowed to the lowest form of degradation, depending upon the exercise of the free will with which men are endowed. It often occurs that responsibility is the test of character. I have seen this exemplified in public service many times. The strong seize the favoring circumstances. The weak either let them slip or are borne down by the weight of responsibility which they impose.

In the Capitol Building is a beautiful fresco painting entitled "Westward the course of empire takes its way," depicting an emigrant train crossing the Rocky Mountains. On a side panel are these words:

"The spirit grows in its allotted spaces,
The mind is narrowed in a narrow sphere."

Man is master of his own destiny. The outward expression of the spirit within charts his course.

Someone has said:

"Sow a thought and reap an action,
Sow an action and reap a habit,
Sow a habit and reap a character,
Sow a character and reap a destiny."

It was the indomitable spirit within Christopher Columbus that surmounted all obstacles and made him cry out, "Sail on! Sail on and on!" And it was that same spirit that dedicated the New World to the King of Kings and Lord of Lords.

It was the spirit within the Pilgrims that wrote the enduring Mayflower Compact enunciating the eternal verities of God and freedom.

It was the spirit within that prompted those same Pilgrims to establish a Thanksgiving Day.

It was the spirit within the little colony at Jamestown which declared that it was their purpose "to erect a free popular state" in the New World, whose people were to have "no government put upon them but by their own consente."

It was the spirit within that inspired the Assembly of the Old Free State of Maryland to enact the first religious toleration act in America.

It was the spirit within that caused Patrick Henry to welcome liberty or death and to depend upon a just God to support the colonists.

It was the spirit within Ethan Allen that demanded the surrender of Ticonderoga in the name of the Great Jehovah and the Continental Congress.

It was the spirit within when the flesh was weak that enabled George Washington and his men at Valley Forge to rise superior to cold and hunger and overcome hardships.

It was the spirit within the mind and heart of Richard Henry Lee that penned the Resolution for American Independence, and it was the spirit within Thomas Jefferson that wrote the immortal Declaration.

It was the spirit within the Lexington Minute Men that fired the first shot for liberty that was heard around the world. It was the indomitable Spirit of '76 which won the independence of the United States.

It was the spirit within the patriot Nathan Hale to defy his executioners and to exclaim, "I only regret that I have but one life to lose for my country."

It was the spirit within that gave to George Washington the vision of inland transportation resulting in a "more perfect union" under a written constitution.

It was the spirit within the wise makers of the Constitution that established the Republic of the United States of America with metes and bounds of delegated authority and reserved powers to the States and to the people.

It was the spirit within that inspired Francis Scott Key to write the national anthem, The Star-Spangled Banner, during the British bombardment of Fort McHenry.

It was the spirit within the intrepid Andrew Jackson that declared "The Union, it must and shall be preserved," and likewise it was the spirit within Daniel Webster to declare, "The Union, now and forever, one and inseparable."

It was the spirit within the humble and tolerant Abraham Lincoln that preserved the union of the States and welded them into one mighty nation, "conceived in liberty and dedicated to the proposition that all men are created equal."

It was the spirit within the magnanimous General Grant when he said to a worthy foe, General Lee, "Let us have peace."

It was the spirit within the wounded Captain Lawrence gave the order "Never surrender," and whose last words were "Don't give up the ship."

It was the spirit within that gallant young officer, Stephen Decatur, that exclaimed, "Our country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

It was the spirit within the "Father of the American Navy," John Paul Jones, to the enemy's question, "Have you struck, sir?" that undauntedly replied, "Sir, I have not yet begun to fight," and fight he did and conquered.

It was the spirit within Admiral Farragut who, while lashed to the shrouds of his flagship, the *Hartford*, shouted to his captain, "Go ahead; damn the torpedoes."

It was the spirit within the young American color bearer that carried him far in advance to the parapet of the enemy, exposing himself to their fire, who, when commanded to bring back the flag to the men, called back, "Bring the men up to the flag."

It was the spirit within those hardy, fearless, and self-reliant American pioneers that surmounted obstacles and conquered the wilderness.

These and many other operations of the spirit within evidence the spirit of America. It has been the imponderable spirit that has made the American Republic a great nation, a nation with a soul, a nation with character. Its outward and visible signs are its Constitution and Bill of Rights, not their letter but their quickening, invisible, and unquenchable spirit, wrought out and developed by men inspired by the spirit within them in their quest for a stable and permanent government of laws and not of men, founded upon the eternal principles of truth, freedom, and justice. The foundation, therefore, upon which this Republic was erected consists of these imponderables, the things of the spirit, seen only by its master builders through the eyes of the spirit within.

The finest and best things cannot be grasped by the coarse processes of measurement and analysis. Sunbeams cannot be weighed on hay scales, and gorgeously colored bits of cloud cannot be caught in a crucible. We can weigh the new-born baby but not the mother's love for her child. There are more things in heaven and earth than are dreamed of in our philosophy. In our blind materialism we need to have our eyes opened that we may know that this Republic is a thing of the spirit, that it consists of those imponderable things that represent convictions, offspring of the spirit of men who had vision and who were willing to become vicarious sacrifices for the sake of principle.

Human nature has not changed by the introduction of modern inventions. Liberty and justice under law are sublime objectives not to be obtained by physics or chemistry. With all the inventions, discoveries, and researches that have benefited mankind there remains the primeval problem, How can mankind gain and hold liberty, justice, and safety?

Our Republic cries out today for men and women whose spirit is not dead, though sleeping, to rise to the occasion of its dire need to defend and preserve it at all costs. This done, prompted by the spirit within, we shall then take our place with and become fellow citizens with the saints of old.

American history—American achievement of the past shows that there is no emergency so great, no obstacle so big, that it cannot be triumphantly overcome by Americans who have the spirit to sacrifice, if need be, "their lives and fortunes."

Consciousness of what this spirit has made possible for Americans to accomplish in the past fills us with a feeling of confidence that will enable our people to achieve even greater things in the future.

It was in the spirit of my forefathers, one of whom was a signer of the Declaration, another a President of the United States, that I wrote the American's Creed during the World War. In saying this I hope you will not think me immodest.

You already may have observed that this creed was composed of some of the utterances of great Americans, in whom was that spirit which we have used as our theme.

The American's Creed is a summing up in 100 words of the basic principles of American political faith. It is not an expression of individual opinion upon the obligations and duties of American citizenship or with respect to its rights and privileges. It is a summary of the fundamental principles of American political faith as set forth in its greatest documents, its worthiest traditions, and by its greatest leaders. Its writing resulted from a Nation-wide contest in 1917, during the World War, in which there were 3,000 competitors. I happened to be the winner and received the award of $1,000, with which I bought Liberty bonds from Charlie Chaplin, Mary Pickford, Douglas Fairbanks, and Marie Dressler. But never mind about the award, to which I never attached any importance.

I might say that I began unconsciously to write the American's Creed in 1898. For it had been my custom for a long time, in fact ever since the 4th of July 1898, just following our glorious victories in the Spanish-American War, to spend Independence Day in my library reading our American fundamental documents—the Declaration of Independence, the Articles of Confederation, the Constitution of the United States, the Mayflower Compact, speeches of great Americans, such as Webster's and Hayne's, such as Lincoln's and Douglas', and Lincoln's Gettysburg Address. Thus I was fairly familiar with these great fountains of patriotic literature which I called my American bible.

No creed worthy the name could be written in the words of any one man which could express the belief or the faith of many others. A creed, it seemed to me, should contain those things to which its subscribers had believed all along, but which never had been brought together concretely. It must be a composite and so readily recognized as to be accepted without much, if any, controversy.

The American's Creed is not to be interpreted in a provincial or selfish spirit, just as there is nothing provincial or narrow about the principles of our republican form of government, which first saw their fullest development in America.

Every citizen of this Republic therefore, must think and act not in terms of what his Government may do for him, but what he must do to preserve the Republic in its true character and the blessings to him and to his posterity—precisely the spirit which moved the fathers to bring forth the Republic. Then may we say, with one heart and one mind:

I believe in the United States of America as a government of the people, by the people, for the people, whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation in many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag; and to defend it against all enemies.

Inflation

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

EDITORIALS FROM THE ST. LOUIS POST-DISPATCH

Mr. COCHRAN. Mr. Speaker, I realize the importance of the foreign situation. I do not underestimate in any way the changes that we read of daily, nor do I fail to comprehend what it means to spend such a vast amount of money for our own national defense, as well as for the assistance that we are rendering other nations at war with Germany. However, to my mind there is another subject that means more to the people of this country as a whole, a problem that must be solved or nothing but disaster will result. It is the question of inflation that is knocking at our front door at the present time. Efforts to curb, through cooperation, the progress toward inflation, all must agree, judging from the record, have failed and we must embark upon another road if we are to be successful.

For some time this subject has been under consideration by the Committee on Banking and Currency of the House. Hearings are being held. That is essential, but I say, the time has now arrived for action. This committee is not in any way to be criticized for the delay in bringing legislation to the floor, but it would be subject to criticism if a bill was reported before it had been thoroughly considered, and the views of those qualified to speak on the subject presented.

We have had experience in this respect. History tells how harmful inflation has been in the past, and we cannot only expect a repetition of what has previously happened, but on an increased scale.

We cannot evade inflation merely by freezing the price of certain commodities.

Mr. Speaker, under the permission granted me I include as part of my remarks two editorials taken from the St. Louis Post-Dispatch; one of September 15, and the other of September 21, which follow:

[From the St. Louis Post-Dispatch]

IMPORTANT JOB FOR CONGRESS

Today Members of the House of Representatives return to Washington from a long vacation. They are faced with a national peril, the imminence of price inflation, that demands immediate attention.

The danger was recognized as far back as August 1, when a bill to put a roof over prices was introduced in the House. It was described then as "strictly an emergency measure, designed to meet the threat of inflation and check the rising cost of living." In the meantime, while the bill has languished in the House Banking Committee, the threat has become much more real.

On August 12 retail food prices hit their 10-year peak, and continued upward. Other items contributing to the cost of living—clothing, manufactured products, and the like—are also heading for the stratosphere.

Retail prices, however, have not yet reflected the full force of the inflationary trend. Wholesale costs have risen more rapidly. A good yardstick is the commodities index of the Bureau of Labor Statistics, based on wholesale prices of nearly 900 products. It shows that wholesale costs have already soared to their highest level since 1929, and that in a single 30-day period, from mid-July to mid-August, they increased more than in the entire 12 months previous. These price rises are yet to be passed on to the public.

This, of course, is only the beginning. In the coming months more and more defense billions will be poured into circulation—about seventeen and a half billions in 1941; the defense program will absorb greater amounts of raw materials, and less and less consumers' goods will be produced. Then prices will skyrocket.

Persuasion has failed to stop the inflationary spiral. Only the other day, hard-coal producers rejected Price Administrator Leon Henderson's "order" against an increase in the price of anthracite. They, and everyone else, have full right to do so, as Henderson has no statutory power to enforce his "order." If prices are to be held down, Congress must confer on someone the authority to put a roof over them. That is precisely what the legislation before it would do.

It would not, it is true, put a roof over wages. Nevertheless, if price controls were enacted, Federal conciliation and mediation boards, which can help prevent wage increases by recommending against them in disputes they settle, would have a precedent for doing so. Should this practical method of control fail, the administration, because of public opinion, must surely then ask for a similar roof over wages.

Such a bill, considered separately and after enactment of price controls, should have a good chance of passage. Were it included, however, in the present measure affecting prices, both might be defeated by uniting opponents of the two proposals.

Time is running short. "Inflation is no longer a distant threat," Secretary of the Treasury Morgenthau warned the other day, as Senator BARKLEY had previously done. "We are facing it now," the Secretary pointed out, "and we must deal with it at once."

Nor is the specter of inflation visible merely to democratic eyes. Weeks ago, Senator MCNARY, of Oregon, an agricultural State whose farmers still remember, no doubt, the calamitous post-World War inflation, called for quick action on price controls.

"Quick action"—that should be the keynote. Congress has just put the finishing touches on the greatest tax bill in the Nation's history. It owes it to the people to protect them against a full-blown inflation that might cost them many more billions than the tax bill itself.

WORDS OF WISDOM

An elder statesman spoke words of wisdom to the House Banking Committee in Washington Friday. Bernard M. Baruch learned well the lessons of the first World War, when he headed the War Industries Board. He has studied the experiences of England during the present war. He is an expert on the management of national economic systems during periods of crisis.

Mr. Baruch's message, not only to the House Banking Committee but to every person in the United States, is simply this: Unless the Government puts a ceiling over all prices—and mark well that under the heading of prices he includes wages and agricultural products—we are going to have an inflation that may prove disastrous.

Next to actual human slaughter, Mr. Baruch classes inflation—which wipes out the savings of the people and causes ghastly and universal hardship—as the "most destructive of the consequences of war." And he predicts that unless this country has a low price structure when the war ends "we may win the war only to lose the peace."

No one needs an economics professor to explain that we are now on the threshold of an inflationary period. Every housewife who goes to a grocery store can detect the signs in the higher prices for food. Everyone who reads the newspapers or listens to the radio knows that prices in nearly all categories are rising and that the demands for defense are making hosts of products scarcer.

It is a perfect set-up for inflation of the most dangerous kind. The Government can stop the trend toward higher prices, rents, and wages, and the reason Mr. Baruch appeared before the House Banking Committee was to urge, in the strongest language of which he is capable, that the Government do so.

The committee is now considering a price-control measure, but Mr. Baruch feels that it is too weak to protect the country. It should be broadened and strengthened. It should include all rents, which always go sky high in an inflationary period, and it should include wages, because wages are one of the most important factors—often the most important—in fixing prices. There should be no jokers in the bill's authority over farm prices.

Let us not repeat England's mistakes in the matter of price and wage control. Let us rather learn a lesson from England's decisive action in the matter of rents. On September 1, 1939, the day war was declared (we quote from an article by A. Wyn Williams in the New Republic), "a Rent Restrictions Act was rushed through Parliament and became immediately effective the next day. It froze solid the rents of all dwellings in the working or lower-middle-class categories at prevailing levels for the duration of the war and for 6 months after. Rents in this war have not been a factor in the rise in the cost of living."

By contrast, England dallied with other anti-inflation measures. It placed controls on wool and on steel, but not on cotton or rubber. The Ministry of Food froze prices only on what were called basic foodstuffs, yet all foodstuffs are basic in time of war. Belatedly price control has been spread to almost everything edible. The Price of Goods Act of November 1939 was a compromise measure that did not stop price rises. Eventually it had to be broadened to cover almost the entire field of retail sales. These compromises and delays have been very costly.

Summarizing England's experience, Mr. Williams says:

"(Price control) cannot be effective if it is a matter of patchwork edicts haphazardly applied to separate segments of the price structure at odd moments as the spirit moves. To be successful, control must be applied to the whole structure, ruthlessly and simultaneously, lest the uncontrolled part vitiate the effort in the controlled and a weak section cause the whole edifice to topple. Wages must also be recognized to be a part of the price structure."

Special interests in this country, of course, are working hard against price control. We refer not only to persons who hope to get rich from soaring prices of this commodity or that, but to large groups, such as the farm and labor blocs, who want to see farm prices and wages go up, lest they be left behind in the procession. Yet a strong over-all attack upon the problem, headed by the President and his congressional leaders, should quiet the fears of one group or another that it would suffer by inflation controls while others would gain.

The President should get into this fight. He should serve warning on all sections, groups, blocs, and selfish interests—not forgetting that evil genius of inflationary periods, the speculator—that the national emergency must not be used as an excuse to pick the pockets of the people and to expose them to the tragedy of inflation.

Without the leadership of the President, we fear that Congress will be unwilling or unable to accept the wise counsel of Mr. Baruch. We fear that it will flounder and compromise and give ear to this group and that until much of the damage will be done. A stable economic structure is as vital to the defense effort as all the guns and planes that are being turned out of our factories.

Morgenthau Is Right

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

EDITORIAL FROM THE MEDFORD (OREG.) MAIL TRIBUNE

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Medford (Oreg.) Mail Tribune of August 10, 1941:

[From the Medford (Oreg.) Mail Tribune of August 10, 1941]

MORGENTHAU IS RIGHT

Ten citizens of the United States pay $10,000,000 a year in Federal taxes.

A million citizens pay the same.

Members of the first group pay a million dollars each.

Members of the second group pay $10 each.

The first group, however, has only 10 votes.

The second group has a million votes.

So what?

Figure it out for yourself—particularly with a class-conscious and politically conscious administration.

The rich minority is soaked, of course, because that is popular.

The vast majority is exempt—pays no taxes at all—because that is popular.

And, in between, the fairly well-to-do middle class carry the major tax burden, not because it is popular but because it is necessary.

Now Secretary of the Treasury Morgenthau, in one of the greatest financial crises in this country's history, comes forward with a new idea.

It is really a mild one, but it does, for the first time in the Roosevelt administration, propose to tax several million people who have never been taxed before.

And it places only a slightly greater burden upon the very rich, not because of any consideration for them, but because a greater tax would really produce less revenue, due to the law of diminishing returns.

And it leaves the middle brackets about where they have been with moderate increases in a few special divisions.

In short, it is a good tax measure, the best that has been proposed to date.

And its great virtue lies in the fact that it is based upon not what is popular but what is right and just; not upon what is politically expedient but what is economically sound and businesslike.

It takes no highbrow tax expert to perceive that in a crisis like the present one a political tax system—a system which exempts 98 percent of the people from paying any Federal income taxes at all—won't work for the very simple reason that 2 percent of the people can't foot the bill.

In other words, all who can pay must pay if the tax bill is to be paid.

It may be only $10 a year, it may be more or less, but, to express it all in a nutshell, there must be mass payment or the bill can't be paid. And failure to pay the bill means national bankruptcy.

The first paragraph above explains why this is true—why "soak the rich," potent as is its popular appeal, is "out" as a valid taxation principle today.

So just as mass production is essential for success in big business, so mass production is essential for success in national taxation.

It doesn't mean the individual in the lower brackets has to pay much. It does mean he must pay something.

With such an extension of the tax base, Uncle Sam's financial house can stand the strain and stress of this supreme crisis. Without it, the house will most certainly fail.

The Defense of America

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ADDRESS BY HON. MARY T. NORTON, OF NEW JERSEY

Mr. THOMAS F. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. MARY T. NORTON at a luncheon under the auspices of the regional conference of Democratic women of 11 Western States held in Los Angeles September 13, 1941:

Madam Chairman, Secretary Wickard, representatives of labor, other distinguished guests, ladies, and gentlemen, I have come to you today to attend this regional conference of the far Western States with a heart full of gratitude for what you women of the West have contributed to the building of our great country. My soul has been stirred by what I have seen and heard. I know I shall return to Washington strengthened in courage to face whatever lies ahead.

For 17 years I have worked side by side with many of your own Representatives from the various Western States, and I have learned something of your problems and something of the fine, rugged people they so proudly represent. I wish that time permitted me to speak of them individually and tell you of the many difficult problems they

have had to face and attempt to solve—of the battles we have waged together. JERRY VOORHIS has been very kind in presenting me today, but let me say to you, Jerry has always been a source of great inspiration, not only to me but to every Member of the House who values courage, honesty, and devotion to ideals. If we do not always agree with Jerry, we respect and love him even in disagreement. I have always felt that, had my son lived, I would like to think of him as a man like JERRY VOORHIS. Continue his service—you need him and our country needs him. I wish I could mention all of the good fighting Democrats you have sent to Congress—my dear friend TOM FORD, other than whom you have no better friend; able, conscientious, feet-on-the-ground, grand person. CHARLES KRAMER; CLARENCE LEA; JOHN TOLAN, who is doing such an excellent job on the migrant labor problem; LEE GEYER; and there are others from your several States representing you with much ability and integrity. I sincerely hope you appreciate what they are trying to do in this very critical time, and will not only give them your confidence but also encourage them to continue their service to you and to their country.

There are very serious days ahead for all of us, but for those of us who represent and serve you in Congress they will be doubly serious. Our task will be difficult and may require an unusual amount of courage and honesty. We will need your help. We will need your confidence. We will need all you have to give in the election next year if we shall continue to serve you and uphold the hands of a great President—Franklin Delano Roosevelt. As Chairman Flynn told you last night, failure to return a Democratic Congress in 1942 would be nothing less than a tragedy. Your duty then is plain and your work should begin at once under the able leadership of Helen Gahagan, Mrs. Porter, and the many fine women leaders from all the States represented here today. I know we can depend upon you to continue with a greater majority in the next Congress. I have attended many conferences of women, but I have never attended one that has done more for me than this has. From Helen Gahagan on through you are wonderful and, may I say, you have fired me with a new enthusiasm, a greater courage. I know I will be a better woman for having been here. Thank you very much.

It is my privilege today to address you on a subject in the mind and heart of every right-thinking American—the defense of America. Of necessity, in considering this subject we must ask ourselves, What does the defense of America mean to us as individuals? If we discard wishful thinking and face the question honestly, we know that it means sacrifice and discipline, it means a realization of the great heritage we have had handed down to us by our forefathers who fought and bled to make possible the freedom we enjoy and to perpetuate those freedoms for our children and generations yet unborn. We must decide how much our way of life, as we have lived it, means to us.

When we have considered all of those questions realistically, not one would hesitate to make whatever sacrifice is necessary to guard our freedoms and maintain our American traditions. Indeed, it is safe to say that not even the most arrogant anti-British person in America would hesitate to declare his choice. Why, then, does there seem to be so great a division on how we shall attain our objective? My own theory is propaganda. No real American has ever hesitated to give comfort to those in distress, and surely in all the world history there has never been a time of greater distress than this present period. What we do today may well be the determining influence not only of America but of the world. No human being can hear and read of the horrors experienced by men, women, and children of Europe and Asia without wondering whether or not our turn may come next. Of course, we shall always have the ostrich type of person with us; those who believe in burying their heads in the sands of optimism, who will never face reality. I am not appealing to that group; it would be useless. I am appealing to you, the thoughtful, intelligent men and women who make up the rank and file of the Democratic Party of the West.

You have always been progressives. Your forefathers were brave men and you carry in your veins the blood of generations of heroic women, those pioneers in covered wagons who made possible your glorious West. I have come a long way to greet you and to tell you how we of the East admire your independence, your great love of the Democratic Party, and, above all, your patriotism. We know you will join with us in whatever sacrifice is necessary to preserve our way of life. Many of you served in the canteens and the workrooms of the Red Cross during the World War. We hoped at that time we had reached a solution to the problem of war. We were within sight of the solution, but for the stubborn selfishness of a small group of men whose personal ambitions wrecked the work of a great President in his attempts to solve world problems around a council table. The greatest crime of the ages was committed when a small group of obstructionists in the Senate of the United States, because of political and personal hatred, destroyed the usefulness of the League of Nations. History is being repeated today in the United States Congress. Again a small group is trying to influence America and distort the truth. I am glad to say it is a small group. The majority of the Members of Congress are realizing the importance of building a defense so strong that not even a Hitler will care to challenge us.

It was because we knew the very great necessity for building an impregnable defense that we amended the Selective Service Act. Believe me, no Member of Congress voted to do this without much prayerful thought. It was a tense moment, and we would not have voted to increase the length of service did we not believe it was absolutely necessary to strengthen our defense. Billions were voted to build an Army and Navy—to support the countries fighting for democracy—for the things we believe in. Those billions would be lost if we did not train an army to use the instruments of war, if or when the war came to us. And even an eighth-grade schoolboy knows it is safe to assume it won't come if we build the strongest army in the world.

War is a brutal, useless, hideous thing, and more so today than in the whole history of the world because it is promoted by beasts in the forms of men—playing a ruthless game, not of war, but of extermination. These are the facts whether we like them or not. That being the case, we must be realists, not dreamers. President Roosevelt and Secretary Hull are realists. They are, no doubt, in possession of facts which might be dangerous to disclose. They are responsible for the safeguarding of America. It is their task to lead America in order that we may remain free human beings, not vassals of murdering gangsters. If we value our freedom of religion, of the press, and of speech, it is up to us to see that we support their policies and share their great burden.

My appeal today is directed particularly to the laboring men and women of America. On them falls the great task of producing the implements of war—of placing in the hands of young men of America the tools necessary to win the war. Much criticism has been directed at the great labor organizations of the country. A small part of that criticism has been justified. No Member of Congress has fought harder for labor than I have. Long before I ever thought of being a Member of Congress I understood the problems of labor. I knew as one who had suffered much discrimination that strong labor unions were a necessity if labor was to assume the dignified position in America to which it was entitled. And so, not minimizing the reasons labor has for its actions and believing the fault lies with industry as much and probably much more than it does with labor, nevertheless, I appeal with all the strength at my command for a united front during this great emergency. My appeal is based on two very important reasons.

First. We are in an emergency fighting the greatest battle America has ever faced, the outcome of which will decide whether or not our husbands and sons will face the war machine of a monster, and perhaps for years to come turn our peaceful happy land into a battlefield. Surely to prevent such a possibility is worth everything we have to give.

My second reason is—and to me it is almost as important as the first—that through decades of extraordinary hardship labor has reached its place of dignity and affection in the hearts of nearly every right-thinking American, and that this position is more important to labor now and will be in the years to come than whether or not it wins every skirmish with industry. Of course, there will be inequalities and sacrifices, but if the sacrifices are accepted in the proper spirit, the day will come when labor will be rewarded.

Public opinion is the most potent factor in America today. Public opinion when crystallized, can decide practically any question. Public opinion today, because it does not understand all the questions involved in labor disputes and because there is no way for us to have our case tried fairly in the newspapers, is turning against labor to a great extent. This must not happen. It would be much more detrimental to the cause than the loss of prestige in a strike. I know the heart and mind of the average worker. My own is in accord with theirs. I know the suffering silently endured for generations. I know the great gains labor has achieved in the last decade under the leadership of President Roosevelt—the National Labor Relations Act, the wage-and-hour law and many others—I want to see those gains preserved and continued. I want to be able to say to the enemies of labor, and there are many of them, labor has produced, labor has realized its responsibility and has lived up to its traditions of sacrifice and patriotism.

Do not allow the small group within the labor organizations, who are undermining the foundation upon which our great labor organizations have progressed, to destroy what you have built over a period of more than half a century. This group is not interested in the welfare of labor. It is pledged to destroy unity in the labor field. This group is more detrimental to the welfare of the American worker than is the most anti-labor industrialist in the country.

I am making this appeal to you from a heart full of apprehension for, let me tell you, the friends of labor in Congress this year have been hard put to it to prevent repeal of many hard-won labor laws. Ask your good friend JERRY VOORHIS, other than whom there is no greater friend of labor. Ask TOM FORD, ABE MURDOCK, all the other friends of labor, how difficult it has been. Public opinion was "fed up" with news of every little labor strike in the country and attention has been focused on delay to emergency defense work, regardless of whether or not it was justified. This can be very dangerous and the thing we must keep in our mind is not to allow anything to interfere with the laws we have established to preserve the progressive dignity of labor even though sacrifice may be necessary at this time

You may suffer injustice, but who does not in advancing a worth-while objective? Your injustice will now achieve a greater degree of justice in the years to come if you live up to the traditions established by those leaders

who fought your battle through the past half century and those of this day who have your real interest close to their hearts.

So, Democrats of the west coast, our friends and the friends of our great President, I appeal to you to assume the responsibility which lies ahead. Chairman Flynn and his able assistant, Mrs. Tillett, are giving all their time and conscientious effort to assist you in your problems. Their objective—and, I assume, your objective—is to elect Democrats to carry on the magnificent record of achievement made possible by the administration working with a Democratic Congress. We must continue this record. The enemies of progressive government are using every known weapon to weaken our Government and break down what we have built during the past 8 years. We are engaged in a crusade to strengthen our democracy, to maintain progressive working conditions, to bring about a more enlightened way of life to the millions of our fellow countrymen. These objectives are worth working for, and they cannot be achieved without individual effort, without going "all out" to secure. To you is given the great privilege of following the greatest advocate of democracy the world has ever known—President Roosevelt. Are you going to follow him?

During the next few years we shall probably be called upon to determine the future policy of the world. We are the only people left in the world today completely free—free to worship God in our own way; free to express our thoughts; free to control our homes and children; in short, free to live our lives in our own way. Into our hands may come the task of building a new world when the war clouds so close to us now will have disappeared. We now have an opportunity for great service; to discipline ourselves so that if and when the call comes to us to sit in council when this nightmare is over, and we have done our part and earned the right to be heard, we can demand that war be outlawed, that our children and their children will not be faced 20 years from now with the same problem we are facing today. We have a right to know what we may expect if we do our part now to prevent this horrible thing from happening again. America will cheerfully contribute all it possesses to achieve lasting peace and freedom; the right to live in the kind of world a man wants so badly for himself and his loved ones that he is even willing to die if necessary to secure it. This, as I see it, is the American objective—the thing we are organizing for today; the thing we shall be called upon to sacrifice for; the thing that should be uppermost in the mind and heart of every individual who values our blessings and who believes in the fundamentals laid down by Washington, Jefferson, Lincoln, Wilson, and which, with the help of God and the united effort of every individual in our great land, will be realized in the program of our greatly beloved President Roosevelt.

Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming, God bless you and keep you till we meet again.

Resolution passed by labor representatives of California at a special meeting honoring the Honorable MARY NORTON Saturday, September 15, 1941, at which the sentiments expressed in her address were unanimously endorsed by all labor representatives present:

"Resolved, That this group of labor representatives and members of the Democratic Party hereby declare that they will continue to give wholehearted support to both the foreign and domestic policies of President Roosevelt and the Democratic administration; that as representatives from the American Federation of Labor, the Congress of Industrial Organizations, the railroad brotherhoods, and independent unions, we do hereby reaffirm our belief that in this hour of crisis the interests of labor will be best served by wholehearted and active support of our President.

"Resolved, That copies of the speech delivered by the Honorable MARY T. NORTON be sent to all labor-union secretaries, and that a copy also be sent to labor unions in Mrs. NORTON'S own congressional district."

Representatives of labor unions present at Norton meeting, Saturday, September 13, 1941:

K. C. Beight, 2027 Andreo Street, Torrance, Calif. Steel Workers Organizing Committee, Columbia Steel Lodge Financial Secretary (1,256 members).

William R. Berry, Steel Workers Organizing Committee, Lodge No. 1502 (Continental Can).

Leonard A. Broderick, 363 Alexander Street, San Bernardino, Calif.

William J. Carsten, International Brotherhood of Electrical Workers, Local B-18, 520 Douglas Building, Los Angeles, Calif.

A. N. "Dick" Coleman, former representative, United Automobile Workers of America, personnel manager, Willys-Overland Motors, Inc., Post Office box 1208, Arcade Station, Los Angeles.

John Despol, Steel Workers Organizing Committee, representative for southern California.

James L. Durden, Local No. 2018, Steel Workers Organizing Committee.

George Dulworth, United Shoe Workers of America, Local 122, C. I. O., 617 Venice Boulevard, Los Angeles (secretary-organizer).

Fred Dulworth, United Shoe Workers of America, C. I. O., Local 122, 617 Venice Boulevard, Los Angeles.

R. M. Ely, Oil Workers, Long Beach, Calif.

Carl Fletcher, managing editor, Labor News, 229 East Sixth Street, Long Beach, Calif.

Fred Grissinger, Local 122, United Shoe Workers of America.

J. B. Haines, secretary-treasurer, Southern California Lodge No. 30, Brotherhood of Railway and Steamship Clerks (representing Southern Pacific, Pacific Electric, and Harbor Belt Line employees), 352 Pacific Electric Building, 610 South Main Street.

Patrick J. Halpin, Local No. 18, International Brotherhood of Electrical Workers.

Everett E. Johnston, secretary-treasurer, Glendale Central Labor Union, 411 East Broadway, Glendale, Calif.

R. J. Maguno, legislative representative, Lodge No. 30 Brotherhood of Railway and Steamship Clerks.

Jennie Matyas, organizer, educational director, International Ladies Garment Workers Union, 149 Mason Street, San Francisco

L. P. Morgan, financial secretary, International Brotherhood of Electrical Workers, Local No. B-18, 520 Douglas Building, Los Angeles.

Hazel Peairs, C. I. O. Miner's Auxiliary, Kellogg, Idaho; A. F. of L. Union Label League, Wallace, Idaho; chairman of North Idaho Democratic Women's Clubs.

Edward F. Pierce, managing editor, San Diego Labor Leader, also secretary-treasurer, San Diego County Federated Trades and Labor Council, San Diego, Calif.

Frank G. Pellett, secretary, California Legislative Board, Brotherhood of Railroad Trainmen; chairman, Railroad Brotherhoods' Joint Legislative Council of Southern California, 3336 Idell Street, Los Angeles, Calif.

Jerome Posner, manager, Los Angeles Joint Board, Amalgamated Clothing Workers of America, 833 South Spring Street, Los Angeles.

Clara Reno, treasurer, Local 122, United Shoe Workers of America, C. I. O.

Byron W. Rogers, State chairman, Denver, Colo.

Earl J. Ruddy, secretary and treasurer, Los Angeles District Council of Carpenters, A. F. of L., 214 Labor Temple, Los Angeles.

William Seligman, personnel manager, Joyce, Inc. (former organizer, United Shoe Workers), 55 North Vernon Avenue, Pasadena, Calif.

E. P. Taylor, president, International Brotherhood of Electrical Workers, No. 18.

Charles H. Tigar, business representative, Aeronautical Mechanics District Lodge, No. 22 (Lockheed), Burbank, Calif.

George Wishnak, representative, International Ladies Garment Workers Union, 215 East Eighth Street, Los Angeles.

Dan Harris, editor, Kern County Union Labor Journal, Bakersfield, Calif.

Alexander Watchman, president, San Francisco Building and Construction Trades Council, Building Trades Temple, San Francisco, Calif.

What Uncle Sam Means to Me

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ESSAY BY WARREN BIERMAN

Mr. KUNKEL. Mr. Speaker, not long ago the Benevolent Protective Order of Elks, one of our great fraternal organizations which has been doing such splendid work in the field of Americanism, sponsored a Nation-wide essay contest of high-school students on "What Uncle Sam Means to Me."

A young man from my own congressional district, Warren Bierman, 1213 North Seventeenth Street, Harrisburg, and a student at John Harris High School, won the third prize of $250. His essay would do credit to a person much older. It shows a real appreciation of America and a real vision as to the ideals which we in America seek to maintain. I hope every Member of Congress will take the time to read this very fine essay, which follows:

WHAT UNCLE SAM MEANS TO ME

Countless ages ago when Mother Nature was distributing her gifts she gave of her treasure to this land with a lavish hand. Precious metals and ores were hidden in the snow-capped mountains. Wide stretched the grazing lands; rich and fertile was the soil. Broad rivers and cascading waterfalls hinted at future power. There developed a land of industry, of golden opportunity, where life flourished at its best. Life—that is what Uncle Sam means to me.

A small band of Pilgrims struggling in a wilderness, the Minute Men gallantly making their stand at Concord, a brave Army facing disease and starvation at Valley Forge, gave meaning to this land. They made possible the unfurling of a flag, emblem of a nation dedicated to liberty. Liberty—that is what Uncle Sam means to me.

The founders of this Nation laid the cornerstone for the happiness of future generations when they framed our Constitution. This Constitution is based on the ideas of equality and civil justice for all. We have always believed in tolerance of religion. The advantages of education are available to all. This is a land of brotherhood where all men have an inalienable right to the pursuit of

happiness. The pursuit of happiness—that is what Uncle Sam means to me.

The priceless heritage of our individual rights is secure, yet in more than half of the world today people have traded their rights for security; now they are neither free nor secure. A knock on the door may mean search or seizure, with no warrant but force. Their property can be taken from them without payment by their gangster government. They may be sentenced to death for a minor offense which was not a crime when it was committed. The safeguards of our Constitution protect our lives and property. Such injustice shall not occur in this country.

Liberty is the very breath of our existence. We are free to seek the truth by radio, book, and newspaper. Free speech is even closer to our own lives. It is the right to talk with our friends upon any subject; to express our opinions at home, in school, and on the street without fear of spies, secret police, or informers.

Uncle Sam means education, enterprise, growth, power. He offers opportunity to all. A chance to work and play and live by the highest standards in this world—life as we know it in the American way.

Uncle Sam stands for the highest in national idealism. Always a champion of the oppressed, he is an enemy to the forces of aggression which are now sweeping the world. He is again aiding the cause of freedom.

I am proud to be an American. As a citizen of this Nation, who accepts without question such benefits of freedom as are found in no other country on earth, I will pay back in return respect and loyalty to my Nation's flag. I will do my part that the ideals of democracy for which Uncle Sam stands shall not perish from the earth

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

EDITORIAL FROM THE TIMBERMAN, PORTLAND, OREG.

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Timberman, August 1941, Portland, Oreg.]

ST. LAWRENCE SEAWAY

(By George M. Cornwall)

At the hearings before Rivers and Harbors Committee, House of Representatives, in Washington, regarding the St. Lawrence seaway project, the Governors of North Dakota and Minnesota described the proposed St. Lawrence seaway and power development as urgent for national defense and necessary to the economic welfare of the Middle West in peacetime.

Governor John Moses, of North Dakota, told the House Rivers and Harbors Committee that North Dakota had advocated the seaway for 20 years on the ground that it was essential to the development of competitive industry in the Middle West.

Gov Harold E Stassen, of Minnesota, also favored the program and urged the committee to consider it in the light of potential benefits in war as well as peace. Both Governors declared that no partisan issue was involved.

The eastern railroads, power companies, and other interests are fighting the bill with the utmost vigor, supported by certain newspapers.

The St. Lawrence project is one of the greatest engineering projects in American history, more important in some respects than the Panama Canal, T. V. A., Boulder, Bonneville, or Grand Coulee Dams. The project brings the Gulf of St. Lawrence 2,340 miles into the center of North American continent, serving a population of 50,000,000 people. No other continent has this natural advantage which only requires a few millions of dollars to provide a channel depth of 27 feet for the entire distance, making it available to 80 percent of the world's merchant marine. The present depth is 13 feet. A regular service has been maintained to Chicago by a Norwegian line operating light draft vessels, transporting principally European products, returning outward with cargoes of American goods.

It is calculated the revenue to be derived from the development of 2,000,000 horsepower of electric energy one-half belonging to Canada and the balance to the United States, will eventually amortize the undertaking.

Ex-President Hoover, an internationally known engineer, gave his unqualified endorsement to the project, maintaining that a reduction of 5 to 7 cents per bushel in the cost of transporting American grain to the markets of the world could be attained by deepening of the St. Lawrence River. This form of self-help to the farmer is economic sense and immensely better than any artificial subsidy.

The lumber industry of the country should get behind the St. Lawrence waterway as it directly benefits the farmer by increasing his purchasing power, which in turn is reflected in larger purchases of lumber and other building materials.

Take a few minutes and write, urging your Senator and Congressman to support the St. Lawrence waterway project in the interests of defense and the upbuilding of the Nation. W. S. Knudsen, head of O. P. M. gives his unqualified endorsement to the St. Lawrence waterway. He calls it a vital part of our defense effort.

Address of Mayor Trott

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

Mr. PATRICK. Mr. Speaker, I got this time to address the House for the purpose of inserting in the RECORD the speech of a good Democrat—not an Alabama Democrat this time but a Montana Democrat.

The gentleman is Charlie T. Trott, mayor of Billings, Mont. The mayor introduced Senator WHEELER at the start of a nationally broadcasted address at which Senator WHEELER was jeered, booed, and it is reported that other unpleasant things occurred—but I wish to say that there is no report of Mayor Trott being booed on this occasion and this is what he said:

You and I are well aware that there are those who feel that the permission for the use of this room should not be permitted by our school board, and that there are those who think that their mayor does not represent the opinion of this community when he consented to perform the simple act of courtesy of extending a welcome of the community to a very distinguished guest. * * *

There are two very definite trends of thought in this United States of ours. One would hope to advance our democratic forms by a type of prohibition—who would circumscribe our public meetings, our press, our commentators, our radio, our moving-picture industry. * * *

And then there are those among us who believe with him who said "I do not agree with a thing you say but I will defend with all the resources I can command your right to say it."

I have every confidence in the intelligence and in the honesty of the people of this community. I know they are well able to judge for themselves any type of propaganda.

America First may mean as many things as there are persons in this room. America First may mean as I think it means—to hell with you, Jack, I'm all right. Or it may mean as I hope it does, that the one man who has always stood for America first is the President of these United States.

He may be compelled to lead us to war—but if such tragedy should come to us it will not be of his making, nor will it be prevented by the America First committee, because it will be ordered by the Nazi thought as directed by Adolf Hitler. Hitler, who has shown by his every act that he is ready to make war on foe or friend alike.

I thank God for a Commander in Chief who has said to you in part, "I will not compromise with the honor of the people of America. I will not consent to a negotiated peace with evil."

The British Commonwealth of Nations may not be waging war for the United States, but the blood of fighting men and the sweat of industry and the tears of little children of our friends and neighbors to the north—the legions of Free French, the yellow man of China and the black man of Abyssinia are being sacrificed upon the altar this rapacious monster has prepared for all of those things that are no more dear to them than they are to us.

Labor—Partner in Democracy

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

ADDRESS OF HON. PAUL V. McNUTT

Mr. BLAND. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following address by Federal Security Administrator Paul V. McNutt, Coordinator of Health, Welfare, and Related Defense Activities, at a Labor Day celebration of the Virginia State Federation of Labor, at Buckroe Beach, Va., September 1, 1941:

"It is not needed nor fitting here that a general argument should be made in favor of

popular institutions, but there is one point, with its connections, not so hackneyed as most others, to which I ask a brief attention. It is the effort to place capital on an equal footing with, if not above, labor in the structure of Government."

Those would be bold words for many, even in 1941. But on December 3, 1861, they were bolder still.

They were written by a lean, gaunt man, sitting at his desk in the White House—Abraham Lincoln.

It was a hard day—a hard day, indeed—for Abraham Lincoln to send his first annual message to the Congress of the United States.

It was not easy to think deep into the underlying philosophy of Government. It was not easy to raise, in that message, fundamental questions about the social fabric of American democracy.

The Nation was at war.

State was fighting State. Brother was fighting brother. From the Potomac to the borders of Missouri the Armies of the North and South were on the march.

In 7 months of office Lincoln had exercised such powers as no President had ever wielded. "Arrogation." "Usurpation." "Dictatorship." These were some of the milder words by which his enemies were describing his presidency.

Only the day before he had sent his famous order to General Halleck which authorized suspension of the writ of habeas corpus within the limits of his Missouri command.

A few weeks before an American warship had boarded a British vessel on the high seas and forcibly removed 2 Confederate commissioners. On that very day 3,000 British troops were landing in Canada, in protest against that illegal seizure.

And, while the Nation was divided, the Monroe Doctrine teetered precariously. A Spanish Fleet was on the high seas bound for Mexico—a fleet which 2 weeks later was master of Vera Cruz. French troops were already embarking to overthrow Juarez; Maximilian was being groomed for the little Napoleon's short-lived puppet monarchy of Mexico.

Yes; no President until 1940—not Wilson in 1917, not Franklin D. Roosevelt in 1932—ever went to the Congress more plagued by events.

Yet Abraham Lincoln could look behind those events. He could think of fundamentals.

What was the issue? Why did men fight? What objectives must govern any peace?

He saw reaction—North and South—striking at the suffrage of little men. He saw attempts to fix forever a part of labor as a caste of serfs, without votes, without opportunity.

And he remembered the words spoken on the floor of the Senate by a distinguished Senator: "In all social systems there must be a class to do the mean duties. * * * It constitutes the very mudsills of society."

The Senator did not, of course, class himself among the "mudsills." In the self-annointed best circles that simply isn't done.

Behind all the pomposity of his colleagues, behind all the learned legal jargon that was Lincoln's issue—the dignity of man, the creative role of labor.

Valiantly he struck at the theory that labor is a passive pawn, a commodity to be hired or bought, and only thus to be productive.

Lincoln was from the West. In his own lifetime he had seen his labor and the labor of his neighbors turn a land from wilderness to civilization. He had seen communities born, real capital produced.

Not stocks and bonds, not coins and bank notes, but forests and fields, mines and streams. These, when touched by the creative hand and skill of labor, were to Lincoln the wealth of America.

And from the depths of his heart and his experience he set forth his understanding of the "role of labor in the structure of government." His rich voice would have done more justice than the Senate clerk to these stirring words:

"Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital and deserves much the higher consideration."

These were not accidental phrases. This was thoughtful elaboration of an attack he had made 2 years before upon the class-conscious Senator and his "mudsill theory of labor." They were part of his Milwaukee speech to the Wisconsin State Agricultural Society. And in 1864, when the Workingmen's Association of New York City made him an honorary member, he took those paragraphs from his message to the Congress and made them the foundation of his remarks of acceptance.

There is no question where Abraham Lincoln stood.

Where in all the range of history will one find such a parallel as this?

Again America is faced with the threat of war—total war.

Again the resources of the New World and the independence of American nations are the object of Old World conspiracies.

Again there is talk of a master race, and a small class within that race seeks to arrogate all power to itself. This time they would reduce whole nations to serfdom and to slavery.

Again there are those who would deny the suffrage to the poor. The poll tax and the paupers' oath still bar the ballot to the poor in some parts of this land.

Again there are those who would use national misfortune for special privilege.

Some would use the crisis to destroy the hard-won rights of labor. There are men in industry with the morals of an oriental satrap or Nazi gauleiter.

Some would risk the rights of labor. There are some in labor who would treat the emergency as a vast opportunity for power, prestige, and politics.

Thank God such men are few on both sides of the fence. Their organizations can't afford them on either side.

And again there is a President, whose enemies call him names. But a President who has had the insight to see the issues and the courage to meet them in peace and in defense.

But there the parallel ends.

Today America is united. America, mark you. Not merely the North and the South, the East and the West, of these United States.

Our good neighbors of the whole hemisphere have learned with us the great lesson Lincoln taught.

The world "cannot endure half slave and half free."

Modern transportation, modern communication, modern industrial technology of peace and war have given Lincoln's words new breadth of meaning.

The free labor of democracy cannot remain free if it must compete with the slave economy of a totalitarian order.

The free labor of America cannot remain free if our raw materials and markets are to be doled out—rationed to us—by Axis overlords.

So let us consider the stuff from which our freedom is fashioned. Let us examine the sinews of labor's strength in law and organization and action. Let us examine together the threat that faces us.

Through these past 8 years the traditional American rights of labor have been implemented. They are no longer fine phrases to be used only in oratory. They have been defined and recognized in formal law.

Congress has declared in most specific terms the right to organize. It has set up enforcement machinery to enable that right to be translated into sound collective bargaining.

Collective bargaining is no longer a debatable issue in the United States of America.

The right to strike is recognized. But machinery for sound and orderly mediation has been created to serve the cause of industrial peace.

In war or peace there should be no curbs upon the right to strike—save such as are counterbalanced by curbs upon the management and the owners of industry.

Child labor should have gone years ago. Today it has been reduced to a minimum. And it is definitely and finally on its way out.

Provision has been made for workers in their old age and for their families in the event of the worker's death.

A Nation-wide system of unemployment insurance tides the worker over periods of unemployment.

Both our old-age and survivors' insurance and our unemployment compensation are based upon sound financial principles. No system can bring security to the worker unless that system is itself stable and secure. The benefits are low—too low in many cases. But we have a solid foundation upon which we are able to build for the future.

Social security is here to stay.

And I need not tell any workingman who saw the defense program a quarter of a century ago of the importance of the United States Employment Service. Here for the first time we have a national clearing house to bring together the jobless man and the manless job.

Labor's outlook at the moment is bright.

Today, for the first time in a dozen years, labor is at the top of the heap.

We are in a workers' market.

A decade ago workers haunted factory gates. Today employers swamp the office of the employment service with their demands for trained men.

More people are employed today than have ever been employed before in our history. Excluding agriculture, there are 39,241,000 gainfully employed. Including agriculture there are 50,400,000.

And with this new position labor begins to assume a new responsibility in the industrial process.

It takes its place at the council table, a partner in planning the defense job. It assumes in industrial affairs that cooperative place it has held in our Government.

It is none too soon.

Grave issues lie ahead. There are questions which cannot be solved in terms of general principles and high-sounding phrases. The mere existence of law and administrative machinery is not enough. They must be solved by action.

There are shortages of certain types of skilled labor. Defense production requires a larger proportion of skill than does normal production.

Even before the stimulus of the defense program, vocational education was being extended and improved I am happy to say that through the cooperation of labor, management, and the Federal Security Agency, training is being more closely related to the job.

And I have watched with admiration and enthusiasm the training within industry program. Here one sees a return in spirit to the age-old relationships between skilled craftsman and apprentice. Your cooperation and that of thousands of progressive employers throughout the land has made that program possible.

The conversion of labor from the normal jobs of peace to defense jobs is another task that faces us. In recent weeks the increasing pressure of material priorities has made this issue increasingly acute.

Part of that problem is being handled through the redirection of defense contracts. Under normal conditions the lowest-bidder

rule in the letting of Government contracts is sound. It means economy. It prevents manipulation.

But today it may mean further centralization of American industry. It may mean the destruction of whole communities. For workers it may mean long migration in search of jobs, the loss of homes, the break-up of families.

That does not make sense. That would cost the country more than a few thousand dollars' difference on a contract.

Defense production authorities today are putting on increased pressure for subcontracting. That is good. But as material priorities close whole factories it is not enough.

A differential which may be as much as 15 percent has been provided in the letting of defense contracts to relieve that situation.

One case, that of the aluminum industry in Manitowoc, Wis., may serve to illustrate how labor, industry, the Employment Service can join to negotiate a solution. It may illustrate also the part the United States Employment Service can play in charting these problems in defense. The Manitowoc case serves as the basis for a procedure which we have this week forwarded to all the offices affiliated with the United States Employment Service.

Manitowoc County depended upon aluminum. It manufactured kitchen utensils for the civilian trade. For a time it hoped Army contracts would fill the gap. But in the face of material priorities the Army turned from aluminum. The middle of this year spelled the end of the aluminum-utensil industry in Manitowoc.

Quickly the United States Employment Service made a survey of the skills of the workers. Some it placed in nearby jobs, but many could not go. Employment Service technicians made a plant survey. The industry reported that its equipment could be used for rolling copper and even light steel.

One company indeed had bid on a contract for shell casings—and lost through a differential of a fraction of 1 percent.

Negotiations were begun with contracting authorities. Today the erstwhile aluminum industry of Manitowoc is again on its way to prosperity. This time shell casings are the product.

Manitowoc families are eating again. Rents are being paid. Families have confidence. When peace returns, Manitowoc can return to aluminum. Because America has at last created a method of diagnosing its job problem early, a community has been saved from disaster.

Another problem we face is finding jobs for soldiers. Within the next few months some 200,000 will be released. We laid our plans in advance.

Every man who went into the Army, and who did not have a job to come back to, filed a registration with the United States Employment Service. Today his experience sheet is being brought up to date—filled in with the new skills he may have acquired in the military service. We are examining future job demands in terms of the long-range plans formulated in conferences with progressive employers, large and small.

As those soldiers come from the Army we will know—as our reemployment service could not know 20 years ago—the whole pattern of job needs. Men and jobs may thus be brought together.

Labor's gains, you may have noted, must be measured in terms of specific machinery to do specific jobs. We have, as I suggested, passed the time when we can be satisfied with inspiring general principles.

Democracy's machinery must work.

It may sputter a bit now and then. It isn't a final model—any more than the automobile of 1920 or 1930 or 1941 was a final model.

But it is our machinery. We can fix it.

There are some who will tell you labor has no stake in stemming Nazi tyranny. Some counsel perfection. They say that until we have reached perfection at home, we have no business concerning ourselves with this onrushing wave of the future.

But it isn't a wave of the future. It is the dregs of the past.

It isn't a "new order." It is the "old disorder."

It is absolutism, tyranny, persecution all dressed up in a new suit.

If you don't think labor has a stake—look at the record:

In Nazi Germany a man couldn't pick the place he would work. He couldn't pick his industry. Apprenticeship employment was compulsory and "directed." To move to a new area, a man had to have "special leave."

Note, I said "man." Women couldn't work. Women were raising subsidized families, legitimate or illegitimate. The manner made no difference to Hitler. The Nazi state would provide.

Those not needed for the army were mobilized for munitions and war-equipment industry. The painfully disabled were put to work. Even patients with tuberculosis were segregated into factories where they gave their dying coughs to the manufacture of munitions.

But first of all, the labor unions were "liquidated." On May 2, 1933, Nazi party leaders took over the union headquarters. Non-Nazi party leaders found themselves in concentration camps. During the remainder of the year 1933, the vigorous Dr. Ley applied his own intensive methods to digesting the once strong German unions into the "German Labor Front."

Two May 1934 decrees reduced large groups of labor to serfdom. Male and female youth were conscripted for farm work at wages of $2 to $5 a month. Agricultural workers were required to remain on the farms. Industries which had hired such workers within 3 months were ordered to discharge them and force their return to agriculture.

In February 1935 the "work book" was established for every German worker. In that book is a continuous record of apprenticeship qualification or employment history. While the worker is on the job, the employer keeps it up to date. Its information was on file with the Government. It is every worker's evidence of his conformity to Nazi decrees.

In November 1936 all workers who had ever been trained in sheet-metal working, building, and other vital trades, but who were not now working in them, were labeled "strangers to their occupations." Arrangements were made in that and following years for them to return to "activities of greater purpose." Civil engineers who were "not properly placed" were reassigned to suit state needs.

Then "little business" was wiped out—little business which had been the backbone of earlier Nazi politics—first, peddlers and salesmen; then the journeymen and employees of small artisans; then artisans, shopkeepers in certain fields, bakers, butchers, tailors, and shoemakers. In the smooth words of the Minister of Labor, these were "allocated to other working places." Labor front officials announced the imminent end of "some 500,000 unprosperous small shops." Many were retrained to be metal workers and the training funds were ballyhooed as evidence of the paternal interest of the Nazi state.

In 1936, 1937, and 1938 women, youth, aged, Jews, convicted criminals, the insane, and the infirm were mobilized for designated industries. This was before the attack, which, according to the Nazi fairy story, the "warmonger" democracies so unexpectedly launched.

That's what the "new order" means to German labor. That, gentlemen, is not half what the "new order" means to the free labor of conquered peoples.

No, gentlemen, neither business nor labor can ever "do business with Hitler."

And don't think slave-labor competition is the only threat.

Don't think—as Chamberlain thought of Czechoslovakia—that Dakar is far away; don't discount the Philippines; don't think that Singapore is just "a distant outpost of British imperialism"; don't think that "freedom of the seas" is merely a mouth-filling phrase.

"Freedom of the seas" means jobs.

Well, let us take the most distant theater as a test. Let us look at Singapore and the Philippines.

Let the Philippines fall to the Axis, and there is a barrier reef of islands between us and the whole continent of Asia. Gone is the open door. Gone is our trade. Gone, too, are 17 or more strategic raw materials upon which America's military and industrial strength depends.

We hear a lot about rubber and tin.

We know what rubber means to our car. The workers in half a dozen American industries know what tin means for their jobs. Farmers know what tin means in terms of their markets with the food-preservation industries.

And the rubber worker of Akron knows his job depends upon America's life line to the Indies. It's his life line. And he hasn't the least doubt about the meaning of freedom of the seas.

And what of the steel worker? We need chromium as much as Germany ever needed it. And we are almost as deficient in domestic chromium. We need manganese. And our manganese came from Russia and India and Africa and the Philippines.

Oh, yes; we are developing domestic supplies. We are finding ways to use low-quality ores at higher prices. But the quantity is uncertain; the quality is uncertain.

The steel worker knows freedom of the seas is not a large abstraction of international policy. He knows his job depends on it.

And what of Singapore? What of Malaya? Well, ask the man at the crucible. His job needs graphite, and almost all our graphite must come from Ceylon and Madagascar.

And down dramatic Burma Road comes tungsten for high-speed steels. High quality mica for the spark plugs of fighting planes and tanks from India.

No; don't talk to the American worker of "haves" and "have nots." This peace the Anglo-Saxon nations and their Allies strive for is not an exclusive peace. The democracies never denied the "have nots" access to any of the world's raw materials.

Neither Britain nor the United States ever denied the channels of the seas to the vessels of any nation. Our Panama Canal was open to all. British guns never barked at any ships that passed the Straits of Gibraltar or churned through Suez.

Labor sees the facts. For labor must always raise the fundamental question. Labor is the fundamental.

When labor fails. When family income stops. When income can no longer be translated effectively into housing and food, recreation, clothing, and the education of one's children. When civil liberties are transgressed and workers are barred from the ballot box.

These are times when labor loses faith and nations fall.

What is the issue? Why do men fight? What objectives must govern any peace?

Labor fights for fundamentals.

And the issues of Lincoln come once more to the fore.

The dignity of man.

The creative role of labor.

Where Do We Go From Here?—World War Rookie

Monday, September 22, 1941

LETTER OF H. E. RIVERS, OF WINCHESTER, VA.

Mr. WHITE. Mr. Speaker, many of us, submerged in the tide of biased propaganda flowing through the channels of publicity in this country, in considering the course our Government should follow in the present world crisis, are disturbed by the past record of the international dealings of Great Britain, who now seeks to make her fight our fight, and we would like to have some of the questions raised by a citizen of Virginia, Mr. H. E Rivers, as printed in the Washington Post, answered.

The letter follows:

[From the Washington Post]

"WHY?"

Why is each and every American to be taxed to give to Britain under our lend-lease plan?

Why worry so much about Japan trying to pull Hitler's chestnuts out of the fire for him when we furnish the chestnuts, cook them, pull them out of the fire, and now Britain is howling for us to deliver them to her gratis?

Why doesn't Britain, with her world's greatest population, after over 2 years of war have an army capable of some offensive action? And if she does have, why doesn't she make some use of it?

Why fool ourselves about Britain ever even trying to pay us for anything that she is receiving from us now when she refused to pay for the goods and supplies that we furnished her in the late World War?

Why does Britain always wait for others to fight and win her wars for her?

Why does Britain, with the world's greatest commercial fleet, keep calling on us to deliver the supplies that we are giving her?

Why is Britain spending millions for propaganda in the United States when she claims she is in such dire circumstances?

Why are we so anxious to stand with Britain on the far eastern issues when less than 4 years ago Britain refused to stand with us on those same issues?

Why not treat Britain as her own dominions are treating her? Let her have all the supplies that she can pay for and haul away on her own ships.

Why not let Britain draft her own dominions' millions to fight her own war instead of drafting our own boys to be sent to Europe to fight another one of Britain's wars, to make the world safe for Britain's commercial dominance?

Why again be placed in the position of having to go to Europe to win a war for the British and then be kicked out and abused because we ask for the money for the just debts that she owes us?

Why not spend our money on our own Army and Navy, making it by far the strongest in the world, and, for a change, let Britain win her own war?

Why not wake up, America? Think American, be American, and American only.

H. E. RIVERS.

WINCHESTER, VA., *September 16.*

Address of Hon. James A. Farley, of New York

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

ADDRESS DELIVERED AT A TESTIMONIAL DINNER GIVEN MR. FARLEY BY THE DEMOCRATIC RURAL COUNTY CHAIRMEN'S ASSOCIATION, AT SYRACUSE, N. Y.

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by our former Postmaster General, the Honorable James A. Farley, chairman of the New York State Democratic Committee, at a testimonial dinner given in his honor by the Democratic Rural County Chairmen's Association, at the Hotel Syracuse, Syracuse, N. Y., Saturday evening, September 20, 1941:

Mr. FARLEY: Mr. Toastmaster, members of the Rural County Chairmen's Association, members of the State committee, honored guests, ladies and gentlemen, this really is a great welcome home, one of the greatest in my experience. In the past few months I have traveled widely. I was cordially received everywhere, but nowhere did I feel as happy and contented as I do now on my return to my own State of New York.

I am especially pleased that the welcome is extended by my friends in the rural counties of New York. I have had many occasions to be grateful to you. You bring to the smallest hamlet the message of our party; without you the party in New York State might become a collection of isolated groups. To stand by the party year after year, ever working harder against odds, takes courage, and from personal experience I know that you have that quality. Your loyalty makes you the backbone of the party and your regularity should be taken to heart by fair-weather friends. I am proud of you and very glad to be back among you.

It is a good thing for us to get together to discuss our problems, and I am glad to have this opportunity this year when we do not have a State convention. In these times it is essential that the normal and necessary party functions be continued. It is vital to the democratic form of government that now, more than ever before, the established political parties should fulfill their obligations, the formulation of policies, and the enlistment of public opinion in their support. If the dominant political parties abdicate their functions in a great emergency, the only alternative is the exercise of political power by irresponsible groups, and we already have too much of that.

The genius of our representative democracy is the two-party system—one party entrusted with power to carry out the will of the majority; the other, vigilant in criticism but always loyal in opposition, always loyal to the fundamental principles of the Republic. The alternative to the two-party system is a jumble of special-interest groups who, even in coalition are in disagreement; and in crisis are too disunited to act. To thus weaken our political system would be to destroy the very basis of our democratic government.

The sinews of our party system are found in devotion to the fundamental ideals of the party; in our case, the democratic ideals expounded by Thomas Jefferson. Victory for the principles of the party can be assured only by consistent support of the candidates who represent the party. It has been our aim to make the Democratic Party responsive to the will of the great majority of the people and through our choice of candidates and policies we have generally been successful in attracting the major part of the independent vote. We welcome the support of those who avoid party affiliation; I appreciate their sincerity. But I do criticize those who shun the burden of party responsibilities and seek personal advancement on issues which they are afraid to test out in a party forum.

I want to say a word in defense of the party system of preferment for public office. May I remind its critics that that system has never placed in office men who would use the power of their office to tear down the Government they were appointed to serve. Today, more than ever before, we must keep out of public office men whose appointment would encourage the spread of subversive doctrines.

So long as recommendations for public office are in order I would infinitely rather take the word of one of you county chairmen and other people in similar positions than I would the recommendations of those who hypocritically proclaim their independence of all parties, while through their flunkeys they seek the endorsement of the very organizations they so violently condemn. I have found party leaders trustworthy and frank in their recommendations. And here again, I want to express my wholehearted appreciation to you, your district leaders and election district workers, and to all who have helped in any capacity to bring our party to the people.

The Democratic Party has become the dominant party in this State due to the extraordinary qualifications of three great Democratic Governors, Smith, Roosevelt, and Lehman, and the efforts put forth by you and your predecessors in their support. It is not by chance that since January 1, 1919, with the exception of 2 years, the people have repeatedly returned a Democratic administration to power at Albany. We are particularly fortunate now that we have one of the greatest executives in our State's history in the person of Gov. Herbert H. Lehman. No man has given more unselfishly of his time and efforts, and no man has attained greater success as an exponent of true democratic principles. And in the future we intend to give the State the same type of leadership and service.

As you know, I have traveled widely in the past year. In some of the countries outside the United States I found that many people are preoccupied with two concepts. One concept is fear. They dread the consequences of a German victory, but they say, "What can we do? We are helpless."

The second concept is hope and faith—faith in a higher human destiny and a hope of attaining it—and they find the basis of that hope in America. America is truly the hope of the world today, and we, the people of America, are the living examples of that hope. To us they look for help in man's age-long struggle to establish the dignity of the human race. To us they look to save the freedoms for which man has been making every sacrifice since time began—freedom of religion, freedom of thought, freedom from fear, and freedom from want. From us they hear the message, "Take heart; all is not lost." No matter how hard we Americans might try, we could not avoid leadership in the world today, and that leadership is today embodied in the shining spirit of our great President, Franklin D. Roosevelt.

Our system has always been directed toward developing the happy way of life. As a democracy, our citizens have been afforded every opportunity for civilization and culture. We have had free rein in our personal and political differences. We will continue to have such free rein. To have less would be undemocratic.

But no nation can expect to exist without experiencing adversity. We, too, have had our hard times, and the American people have always closed the ranks. Today we are menaced, and we must close our ranks.

Those who use the present emergency to promote false political philosophies and to encourage racial and religious hatreds are the enemies from within against whom Washington warned us. Their efforts are calculated to destroy the unity of our people. Honest criticism of administrative policy is the very life of our democracy. But what shall we say of those who offer no constructive criticism but seek to achieve their nameless purpose by creating prejudice, hatred, and fear?

Let there be no mistake about this—the sooner and better we organize our men and materials and learn to use them effectively the sooner the threat of aggression will recede. As I see it, the major premise of our policy is as follows: The stronger we can make ourselves and the stronger we can make the enemies of Hitler the less likely is it that we will be called upon to do the job ourselves. And I have complete confidence in the astute administration of our foreign affairs by our eminent Secretary of State, Cordell Hull.

However, to effectively aid our Allies we must act. If we have learned anything in the last 2 years, we have learned that mere words will not help us. We must make an honest all-out effort. Anything less will endanger our liberty and our very lives.

We must take to heart the lessons of the European countries now living under the iron heel. In a world where force alone talks it would be folly to rely on words.

We must act; equally important, we must show that we still have the fighting spirit of our ancestors.

In mobilizing ourselves we must not flinch from any sacrifice. There must be a moratorium on easy living. I believe that capital and labor will forego the luxury of unnecessary squabbles lest they wear out the patience of the American public. Defense comes first.

The war has affected every aspect of our life. Certainly the battle of production is not a matter of industry alone. We must feed men as well as machines. The soldier and factory worker must have greater sustenance to equip them for harder work. The farmer is truly an indispensable man.

The greatest industrial machine in history is now geared for its greatest effort. When the war is over new and perhaps more difficult problems will have to be faced. But I have unbounded faith in the American people, and I know that our native courage and common sense will see us through.

It Is Important To Begin Now To Meet Future Problems

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

ARTICLES FROM THE CHRISTIAN CENTURY AND THE CHRISTIAN ADVOCATE

Mr. VOORHIS of California. Mr. Speaker, it is very encouraging to me to find two of the most influential religious journals in America commending to the Nation and the Congress the passage of legislation to provide for a national commission to begin now to deal with the problems our Nation will face when peace is restored.

The articles are as follows:

[From the Christian Century of August 20, 1941]

Few Congressmen seem aware that there are still millions of unemployed people in the United States. Fewer still have the courage candidly to face the fact that "when peace breaks out" the numbers of those out of work will suddenly swell to a total probably greater than this or any other nation has ever known. What can be done about it? A great deal, if we begin in time. This, at least, is the view of Congressman JERRY VOORHIS, of California. At a time when many of his colleagues are wasting their breath in futile condemnation of the men who failed yesterday to prepare for today he is trying to utilize today to get ready for tomorrow. He has introduced a bill (H. J. Res. 59) designed to establish a national unemployment commission. The duty of this commission would be "to develop a program for the permanent elimination of mass unemployment in the United States." It would be composed of 3 representatives from each of the Houses of Congress, 3 from the executive branch of the Government, and 3 each from farmers' organizations, labor unions, business associations, consumer cooperatives, and church organizations, making 24 in all. The commission would be authorized to work out not only legislative measures but also plans for the voluntary cooperation of business, agriculture, finance, labor, consumers, and other segments of our national life. The first mandate given the commission would be "to give special attention to measures to be taken at the time of the return of the Nation to a peacetime economy in order that the reduction of defense expenditures will not result in depression and severely aggravated unemployment." This proposal should have the immediate attention of Congress. It has the support of the Federal Council of Churches, the National Catholic Welfare Conference, and the Central Conference of American Rabbis.

[From the Christian Advocate of August 28, 1941]

Congressman JERRY VOORHIS, of California, has introduced a resolution into the National Legislature calling for a commission to study the problem of unemployment and to devise means by which a post-war depression may be prevented.

Government spending just at the present moment is taking up the slack, and hundreds of thousands of men are at work who would be idle except for the war activity. This is an unnatural and abnormal state of affairs. If peace should be declared next week, we would face a complete and disastrous reversal.

No one knows when the break may come, and it is none too early to make a study of the problem for the purpose of preventing a recurrence of the post-war mistakes of 1920–40.

Merit of River and Harbor Projects—Labor Employed

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

SPEECH OF HON. MARTIN F. SMITH, OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, at the suggestion of several of my colleagues serving with me on the Committee on Rivers and Harbors, I am inserting in the RECORD a speech which I delivered in the House on July 1, 1937, entitled "Merit of River and Harbor Projects—Labor Employed" during consideration of the omnibus rivers and harbors bill of 1937. In the course of my speech I described in detail the painstaking and thorough method of procedure pursued in considerating rivers and harbors projects and also the percentage expended for labor.

I agree with my colleagues that this information is timely and would be of interest to Members of the House in view of the fact that we will soon have before us an omnibus rivers and harbors bill. As published in the CONGRESSIONAL RECORD, the speech referred to reads as follows:

MERIT OF RIVER AND HARBOR PROJECTS—LABOR EMPLOYED

(Speech of Hon. MARTIN F. SMITH, of Washington, in the House of Representatives, Thursday, July 1, 1937)

(The House in Committee of the Whole House on the state of the Union had under consideration H. R. 7051, a bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.)

Mr. SMITH of Washington. Mr. Chairman, I have requested this time in order to briefly point out to Congress and to the country the fact that there is probably no type of Federal project, I care not what its nature may be, which receives the thorough, painstaking study and consideration to which a river and harbor project is subjected before it is authorized by Congress and the money is actually appropriated by Congress.

The local community initiates the project for the dredging or improving of the river or harbor in question, to serve the local community by providing low-cost water transportation, and to aid commerce and navigation at that point. The project is discussed in the community, the citizens themselves see the possibilities and advantages which would accrue, and therefore they agitate and advocate the project, and local industries

join with them in favoring it; then their representative in Congress is called upon and introduces a bill for a survey which is essential in the case of every new project. He presents the matter to the Committee on Rivers and Harbors, which submits it to the United States Army engineers having jurisdiction of rivers and harbors, who determine whether a survey is necessary and desirable and recommend accordingly. This results in the bill either being passed separately or included in the omnibus rivers and harbors bill, such as the pending measure, which includes numerous surveys. If the project is one for the modification or change of an existing project, then a resolution for review of prior reports is sufficient and the representative sponsors such a resolution, which is submitted to the Army engineers and later to the committee which passes it and refers it back to the Army engineers for the desired report.

The project is then referred to the district engineer, of whom there are 42 in the United States, embracing every section of the country. He calls a hearing in the local community and all those who might be interested are notified and afforded an opportunity to be heard and present testimony and arguments showing the need for the improvement and evidence in support of the merits of the project. It is a public hearing, the public is invited and welcomed, and all those who indicate a desire to be heard, either for or against the project, are heard. It is in the nature of a quasi judicial hearing. The district engineer, after considering all the testimony, makes recommendations and refers the project to the division engineer, of whom there are 10 in all sections of the Nation, the last division engineer's office to be established being at Portland, Oreg., in charge of Col. T. M. Robins, who was transferred from San Francisco on account of the large Bonneville Dam project on the Columbia River, in Oregon and western Washington.

The division engineer reviews the recommendations and report of the district engineer. He then makes his report and recommendations and sends the project on to Washington, D. C., where it is again reviewed and considered by the Board of United States Army Engineers, at which time the Representative in Congress is again heard in behalf of the project. The Board consists of seven members. They have served as district and division engineers in various parts of the Nation and, like them, were honor students at West Point and took the special course at the engineering school at Fort Belvoir, Va., prior to serving as district and division engineers before being promoted to membership on the Board. The members of the Board have no local interest to serve whatsoever; they consider each project from a national viewpoint—how it will affect the navigation and commerce of the United States. They are far removed geographically from each project. These skilled engineers are absolutely divorced from politics. They are nonpolitical and nonpartisan and consider and decide the project solely upon its merits and demerits. The final decision rests with the Chief of the United States Army Engineers, who reviews the report and recommendations of the Board.

After the project has run the gantlet of the district engineer, division engineer, Board of Engineers, and Chief of Engineers, these reports are submitted to the Committee on Rivers and Harbors, which hears the project de novo and listens to the presentation made by the local Congressman and representatives of the office of the United States Army Engineers and either approves or rejects the project, preparatory to its inclusion in an omnibus rivers and harbors bill. I repeat the assertion made at the outset that the scrutiny and searching investigation which I have described is probably not equaled or even approached by any other class of projects or expenditures of the Federal Government.

Mr. Chairman, not only are rivers and harbors projects based upon merit, but they also result in a greater proportionate expenditure for labor, direct and indirect, than almost any other class of public-works projects. To substantiate and prove this fact, I call attention to the following statement prepared under the direction of Maj. Gen. E. M. Markham, Chief of Engineers, United States Army, furnished to me under date of June 25, 1937. The total percentage, direct and indirect, of labor costs ranges from 78.5 to 87.9 percent, demonstrating conclusively the soundness and desirability of rivers and harbors projects as labor-employment projects.

The statement of General Markham referred to is as follows:

Percentages of labor costs, direct and indirect, to total cost for work completed with Government plant and hired labor by the Corps of Engineers, U. S. Army, between September 1933 and June 30, 1936

	Dredging, regular funds	Dredging, N. I. R. A. and P. W. A. funds	Operating and care of canals, regular funds	Dike construction, N. I. R. A. and P. W. A. funds	Revetment construction, N. I. R. A. and P. W. A. funds	Lock and dam construction, regular funds	Levee construction, regular funds
1 Direct labor

Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Rubber in the United States

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EXCERPTS FROM BOOKLET BY THE UNITED STATES TARIFF COMMISSION

Mr. ANDERSON of California. Mr. Speaker, the necessity and desirability of establishing a supply of rubber in the United States has been pointed out to the Congress on several occasions. We presently import approximately 97 percent of our annual rubber consumption and almost all of this comes from the Far East. It is obvious that, with world conditions as unsettled as they are at present, this source of supply is apt to be seriously curtailed or cut off at any time.

Members of the House will recall that several months ago I discussed the subject of producing rubber domestically. I tried to point out the advantages of fully developing the possibilities of the guayule rubber shrub, and my remarks and the discussion which followed can be found in the CONGRESSIONAL RECORD for April 16, 1941. Following this, I introduced H. R. 5030 on June 11, and this measure, which proposes to plant 45,000 acres of guayule, is now under consideration by the Department of Agriculture.

Yesterday I received a booklet from the United States Tariff Commission dated September 1941 and titled "Rubber—Possibilities of Producing Rubber in the United States." In view of the importance of this subject, I have requested permission to include in my remarks excerpts from this fine review of the rubber situation as seen by the Tariff Commission. May I commend it to your attention.

The excerpts follow:

RUBBER—POSSIBILITIES OF PRODUCING RUBBER IN THE UNITED STATES AND RUBBER CONSERVATION

The great importance of rubber in our civilian national economy is a familiar fact. Defense preparations require large quantities

of rubber which is classified by the Army and Navy Munitions Board as a strategic material. About three-fourths of the rubber consumed in the United States goes into tires and inner tubes, which are indispensable both for civilian and military use. Other highly important uses for rubber are in medical and surgical articles, water hose, electrical insulation, and gas masks.

If a shortage of shipping or other causes should greatly reduce the quantity of rubber obtainable from the Far East, serious problems would at once arise. For this reason the Tariff Commission has just completed a survey as to the feasibility of producing rubber in this country and as to means of conserving supplies. Representatives of the Commission have visited the principal rubber-manufacturing centers of the United States and the principal domestic regions in which guayule rubber has been grown experimentally and have obtained information from the best-informed men in the industry.

* * * * *

SYNTHETIC RUBBER

Synthetic rubber has been widely publicized as a substitute for Hevea rubber. In 1940 the domestic production of synthetic rubber amounted to only about 4,000 long tons. Production in 1941 may be twice that figure, and by the end of the year the total productive capacity may be 20,000 long tons.

Synthetic rubber has been produced only since about 1931, and practically all the output has been made from acetylene obtained from coal and limestone and from hydrochloric acid obtained from salt. This synthetic rubber has been sold at 65 cents to $1 a pound and it has been used only for special purposes, in which resistance to oil, heat, or excessive sunlight is desired. In these uses it is much superior to Hevea rubber.

Authorities on the subject think that if in the future synthetic rubber is produced on a large scale it will be made from butadiene, which in turn is made from petroleum products, in combination with styrene, acrylonitrile, or some of the olefins. If synthetic rubber is produced from butadiene on a large scale, it will be necessary to expand greatly the production of this material. Presumably plants for manufacturing butadiene would be erected near oil refineries or oil fields and the butadiene would be shipped to synthetic rubber plants near rubber-consuming centers. It would also be necessary to construct plants for the production of styrene, acrylonitrile, or olefins. Styrene or acrylonitrile would require chlorine or nitrogen, and both of these are now on the priorities list by reason of the strong demand for them in defense uses. The total cost of constructing plants for the production of butadiene, styrene, acrylonitrile, or olefins, and synthetic rubber would range from $75,000,000 to $100,000,000 for every 100,000 long tons of yearly synthetic rubber capacity. A single synthetic rubber plant having a capacity of 20,000 long tons might be erected and equipped in 18 months, but because of the difficulty in obtaining steel and chemical equipment it appears that from 3 to 5 years would be required to construct and equip a sufficient number of plants to supply the rubber requirements of the United States. Priorities would be necessary on steel and chemical equipment for erecting plants.

After the war there would be serious readjustments if imports of low-priced crude rubber from the Far East were resumed. Members of the trade think that probably synthetic rubber could be produced in quantity from oil products at a cost of about 25 cents a pound, or perhaps less. The cost of producing crude rubber in the Far East, in the absence of controlled output, is reported at 4 to 10 cents a pound, and since 1931 prices in New York have ranged from 2½ to 27 cents a pound. The Government is now purchasing all the crude rubber imported into the United States and is selling it delivered in New York at 22½ cents a pound.

Synthetic rubber of the butadiene type was not produced in the United States until 1940, and it is now produced only in negligible quantities. Tire companies have experimented with this rubber and have had considerable difficulty in using it. They have found, however, that they can make fairly good tires by mixing synthetic rubber in equal parts with natural rubber (Hevea or guayule).

Germany is using large quantities of butadiene synthetic rubber (made from coal and limestone rather than from oil products) in the manufacture of tires, but the Germans were 2 years learning how to use it. The cost of producing synthetic rubber in Germany is reported at about 40 cents a pound. Some passenger-car tires are made exclusively from synthetic rubber in Germany, but the lack of sufficient adhesiveness is understood still to present difficulties in the manufacture of large tires requiring many plies.[1] In the manufacture of some tires the Germans use synthetic rubber in the treads, reclaimed Hevea rubber in the side walls and plies, and Hevea rubber in the inner tubes.[2]

GUAYULE RUBBER

Guayule is a rubber-producing desert shrub which is native to north central Mexico and the Big Bend area of Texas. In 1912, the year of greatest output, Mexico produced 10,000 long tons of guayule rubber. After 1912 the Mexican output declined, and in 1940 amounted to about 4,000 long tons. Production facilities are being increased, and production in 1942 may amount to 7,000 long tons. The entire Mexican production is from wild guayule, and the output is now restricted by the Mexican Government in order to prevent extinction of the shrub. Most of the guayule rubber produced in Mexico is shipped to the United States.

For the past 30 years the Intercontinental Rubber Co., whose principal business is producing rubber in the Far East and importing rubber, has cultivated guayule at its experiment station near Salinas, Calif., and at scattered points in Arizona and Texas. The company has about 1,000 acres under cultivation at Salinas, where it produced about 225 long tons of rubber in 1940. After extensive tests, the firm has selected high-yielding, disease-resistant strains of guayule. Also, it has devised special machinery for planting, cultivating, and harvesting the shrub. One machine with a crew of 14 men plants 15 acres in 1 day of 10 hours, 8,000 plants to the acre.

Guayule requires little cultivation and an annual rainfall of only 8 to 12 inches, depending upon soil and climate. The climatic and soil conditions of the Salinas and nearby valleys in California have been found especially suitable for growing guayule, but other States in the Southwest also have areas suited to guayule cultivation.

The guayule shrub may be harvested at any time between the ages of 1 and 30 years, the general practice being to harvest it at 4 years. If for any reason it is desired not to harvest the plant after 4 years, it may be left in the ground and in that way serve as a continually increasing reserve supply of rubber until the plant is 10 years of age. After growing for 10 years guayule has a tendency to become gnarled. The shrub may be left in the ground for an additional 20 years, but without any increase in rubber content. The entire shrub is taken from the ground at the time of harvest and by a mechanical process the rubber is removed from the roots, stem, and large branches.

The cost of producing guayule rubber depends upon the age at which the plant is harvested. Starting with a cost of about 80 cents per pound of rubber when the plant is harvested at 1 year, the cost decreases for every year that the plant is in the ground until it is 7 years of age. After 7 years the carrying charges, principally interest on investment, exceed the increment in value. It appears that when the plant is harvested at the age of 4 years, guayule rubber may be produced at a cost of 15 to 19 cents a pound, including the cost of land rental, preparing the land for planting, and all other costs incidental to producing the rubber, except interest on investment and the cost of deresinating.

Guayule rubber has a resin content of about 20 percent. For this reason underesinated guayule rubber is suitable only for blending with Hevea rubber or for friction stocks (for use in manufacturing tire fabric plies, transmission belts, friction tape, etc.). It is especially suited to use in rubberizing tire fabric plies, the production of which is very large. Mr. J. H. Doering, of the Firestone Tire & Rubber Co., has written the most authoritative article on the use of underesinated guayule rubber.[3] After considerable testing, Mr. Doering found that tires made from underesinated guayule rubber give a mileage 60 percent as great as tires made from Hevea ribbed smoked sheet No. 1.

However, when guayule rubber is deresinated it is of the same quality as the lower grades of Hevea rubber and can be used interchangeably with them. It is softer than Hevea ribbed smoked sheet No. 1. Practically all the large tire-manufacturing companies have tested deresinated guayule rubber, and it is reported that tires made from it give approximately 90 percent of the mileage given by tires made from ribbed smoked sheet No. 1. Most of the purchasing agents and research directors of these firms think that the Government should advance funds for the production of guayule rubber.

It appears that if substantial quantities of guayule rubber were deresinated, the cost of deresinating would not exceed 1 or 2 cents a pound. The solvent used in the process can be used several times, and the resins recovered probably could be sold.

The information available indicates that the capital investment for agricultural equipment, nurseries, buildings, maintenance shops, rubber extraction mills, and deresinating factories probably would amount to about $20,000,000 for every 100,000 long tons of yearly productive capacity.

A shortage of planting material limits the quantity of rubber which could be produced from guayule in the next few years. If all the seeds available were planted immediately, there would be only enough seedlings to plant 45,000 acres of guayule shrubs in the spring of 1942. If 45,000 acres were planted in 1942 and harvested in 1943, they would yield a total of only about 1,500 long tons of deresinated rubber. If the 45,000 acres were not harvested until 1944, they would yield approximately 5,400 long tons. If harvested in 1946, they would yield about 21,300 long tons.[4]

In 1943 there could be made available sufficient seedlings to plant 450,000 acres. This acreage might yield 15,000 long tons if harvested in 1944, 54,000 long tons if harvested

[2] Germany accumulated a large stock pile of Hevea rubber before the war and has acquired additional supplies from occupied countries.

[3] J. H. Doering, Firestone Tire & Rubber Co., Guayule Rubber in Tires and Tubes—Service Tests in Which the Rubber Was Exclusively Guayule, Industrial and Engineering Chemistry, 1934, vol. 26, p. 541.

[4] For comparative purposes, about 650,000 long tons of crude rubber were consumed in 1940 in the United States.

in 1945, or 213,000 long tons if harvested in 1947. Further plantings would be possible in 1944 and subsequent years.[5]

The production of guayule rubber would utilize land and migrant labor not now employed; also, its production would not require, as in the case of synthetic rubber, large quantities of steel, chemicals, and chemical equipment, the demands for which are taxing the productive capacity of eastern factories.

Bank of America Assures Reemployment to Employees Called for Military Service

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

LETTER AND PRESS RELEASE OF THE BANK OF AMERICA, SAN FRANCISCO, CALIF.

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and press release:

BANK OF AMERICA,
San Francisco, September 16, 1941.

The Honorable LELAND M. FORD,
House Office Building, Washington, D. C.

DEAR LEE: Since the recent lengthening of the possible period of selective service to 30 months it has become apparent that some apprehension exists among many young men called or likely to be called into service that this longer interruption in their normal careers might cause them to lose out entirely in their private employment.

Our bank believes that it is a part of our proper duty to the Nation and to the young men who have chosen service with the Bank of America as their career to assure them that they will not be penalized because of their response to their country's call, and I am enclosing a copy of a press release given by Mr. L. M. Giannini, president of our bank, which shows that every employee will be taken back into our organization and will be given either his old position or one of equal standing and opportunity.

I thought you might be interested in this information and the attitude of our institution.

With kindest personal regards and best wishes, I am

Sincerely yours,

EARL LEE KELLY,
Vice President.

Permanent staff members of the Bank of America who have been called to military service need have no concern about their positions because of the extension of the military service period, according to L. M. Giannini, president of the bank.

Originally all such men were given 1 year leave of absence, with preservation of pension and seniority rights.

In answer to inquiries on the subject, Giannini stated:

"When extension of the service period was legislated we automatically extended the leave of absence, pension, and seniority privileges of the Bank of America employees affected.

"Any young man who has been called to the Nation's service from our permanent staff rolls and who desires to resume his banking career immediately following his release from military service will be welcomed back and given either his old position or one of equal standing and opportunity.

"Thus he will be in a position to pick up his individual career where he left off, with every chance for continued advancement," the banker said.

Giannini pointed out that this policy should cause no apprehension to the hundreds of young men now beginning their careers with the bank.

"California is growing, our bank is growing with it, and there is every indication this growth will continue. It is obvious we will have need of every man trained in Bank of America standards," he declared.

[5] There could be made available in 1944 sufficient seedlings to plant 4,500,000 acres. Theoretically, this acreage might yield 150,000 long tons if harvested in 1945, 540,000 long tons if harvested in 1946, or 2,130,000 long tons if harvested in 1948. For comparative purposes, about 9,000,000 acres are planted in cotton in Texas.

Leading and Reflecting

EXTENSION OF REMARKS
OF
HON. FOSTER STEARNS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EDITORIAL FROM THE FAIR HAVEN (VT.) ERA

Mr. STEARNS of New Hampshire. Mr. Speaker, in these turbulent days when every man in public life is criticized "whether he does or if he does not," it is a comforting thought that after all republics are not entirely ungrateful to those who give their best to the service of their country.

Because of our mutual agreement with respect to the foreign policy of this country, as announced by the President and confirmed by Congress, it is a pleasure for me to place in the RECORD an editorial from the Far Haven Era, one of Vermont's leading country weekly newspapers, wherein the position of Vermont is well stated, and the attitudes of Senator AUSTIN and Representative PLUMLEY respecting our duty and obligation to ourselves and the world at large are approved and commended.

The editorial follows:

[From the Fair Haven (Vt.) Era of September 4, 1941]

LEADING AND REFLECTING

That was a fine and well-deserved tribute which Wendell Willkie gave to Governor Wills at the sesquicentennial celebration on Saturday, when he said, "I was very happy to see Governor Wills, who represents the finest progressive element of the Republican Party. I admire very much his courageous stand on the international situation. I was also glad to chat with my old friend, Harold Stassen, of Minnesota. He, too, appreciates that we can preserve freedom in the United States only if it survives elsewhere. From all over the country Republicans of the rank and file are rapidly repudiating isolationism. In a few years the isolationists will be explaining that they did not really mean what they said in 1941."

The current Vermont attitude toward the present world-wide struggle between the forces of freedom and tyranny is certainly not that of the isolationists. The overwhelming majority of Vermonters are in favor of all possible aid to Great Britain; and a large body of opinion within our State also favors use of the United States Navy to protect our rights to sail the ocean. In fact, the opinion of Republican Vermont is more favorable to President Roosevelt's foreign policies than some States which voted for Roosevelt in the last three elections. As a political coincidence this may seem strange, but not so strange when one recalls, as we are doing in this sesquicentennial year, that Vermont was founded by courageous men for whom liberty was the breath of life. Our attitude toward the life and death struggle of democracy can doubtless be traced in no small degree to our heritage of freedom. But who can doubt that it is also due in large measure to the leadership of men like Governor Wills, Senator AUSTIN, and Congressman PLUMLEY? To his credit it can be said that Senator AUSTIN was one of the first Senators to realize that "we can preserve freedom in the United States only if it survives elsewhere." In days when national thought about the war is divided, confused, and confusing it is fortunate that three of those representing the State in high office are leading and reflecting Vermont opinion.

Flying Cadet John Anthony Burger

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EDITORIAL FROM THE NEW ROCHELLE (N. Y.) STANDARD-STAR

Mr. GAMBLE. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I include an editorial from the Standard-Star, of New Rochelle, N. Y., commenting on the death in line of duty of Flying Cadet John Anthony Burger, United States Naval Reserve. The editorial appeared on August 20, 1941, and is as follows:

[From the New Rochelle (N. Y.) Standard-Star of August 20, 1941]

SUPREME SERVICE

News of the death of John Anthony Burger in the service of his country was received with sincere regret yesterday throughout New Rochelle where the Burger family has lived for many years, and where John had many friends and acquaintances.

The young naval cadet was killed Monday night at Jacksonville, Fla., when two planes collided as they tried to land during night-flying instruction. The pilot of the other plane also lost his life.

It might be said, of course, that accidents happen in all walks of life, military and civilian, and that the air branches of the armed forces are no exception. Although that is true, the death of this young air cadet does emphasize that there is a certain amount of risk to which the youth in the Nation's defending forces must expose themselves even in peacetime efforts. It should intensify beyond all bounds our appreciation of what they are doing for us in this enormous national-defense program.

No amount of words, spoken or written, can accomplish anything toward filling that aching void which John Burger's death has left in the circle of his family and friends. Even a mention of the honor of the supreme sacrifice he made in preparing to defend his country, if need be, is little consolation to a grieving mother and a sorrowing father.

The whole community, however, does accept a share in that grief with a feeling that a heroic son has been taken from us by an untimely and cruel stroke of fate.

Declaration of the Atlantic

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of September 27, 1941:

[From the Saturday Evening Post of September 27, 1941]

DECLARATION OF THE ATLANTIC

When the memoirs come to be written, especially the second memoirs of Mr. Churchill, we may find out what happened to the millennium at the meeting of the President of the United States and the British Prime Minister somewhere in the Atlantic.

We have learned to know a good deal about Mr. Roosevelt's tenacity of idea and purpose. Therefore we cannot doubt that he took with him his four freedoms. They were, if you remember—

First. "Freedom of speech and expression—everywhere in the world."

Second. "Freedom of every person to worship God in his own way—everywhere in the world."

Third. "Freedom from want—everywhere in the world."

Fourth. "Freedom from fear—anywhere in the world."

In his famous message to Congress last January he set them out very carefully in that order of value—and this was no vision of a far-distant time, he said, but "a definite basis for a kind of world attainable in our own time and generation."

He must have taken with him also the State Department's annunciation, by Mr. Welles, of the two essential conditions for bringing that world to pass. The conditions were: First, to abolish offensive armament under some power of international control; and, second, to establish "fully and adequately the natural rights of all people to equal economic enjoyment," because, "so long as any one people or any one government possess a monopoly over natural resources or raw materials which are needed by all people, there can be no basis for a world order based on justice and peace."

We have never been able to make sense of such words as the "natural rights of all people to equal economic enjoyment." Suppose the Japanese should insist, as they once did, that for their equal economic enjoyment they must be permitted to settle in California. Certainly the words do not mean that. Then do they become rhetorical and mean only equal access for all people to natural resources? Among our natural resources we count the fertility of Iowa land, and water power at Boulder Dam and Grand Coulee. Shall all people in the world have equal access to these resources? If so, how? Do they mean, perhaps, only raw materials?

In time of peace there is a world market for all raw materials at world prices. How well do our southern farmers know there is a world price for cotton, even though they had a monopoly of it. When they tried to get more than the world price, they lost their monopoly. To whom in time of peace are raw materials denied at the world price? For her war machine Germany bought rubber and copper in London right up to the outbreak of war, and essential raw materials all over the world.

This doctrine of underprivileged nations, that must be appeased for the peace of the world, belongs to a phantasy of international socialism; moreover, it partly concedes the Hitler thesis that because the natural wealth of the world was not equally distributed by the Creator, he is justified to redivide it in favor of Germany by force. Nevertheless, it is idealistic, and Mr. Roosevelt believes it ardently, thinking of it, perhaps, as a New Deal for the whole world; and, as we say, he undoubtedly took it with him to the rendezvous along with the four freedoms.

What did he bring back?

Only two of his freedoms—the lesser two. Only freedom from want and freedom from fear were written into the declaration of the Atlantic, and these not as a definite basis for a kind of world attainable in our own time, but as a desirable feature of a peace which "the President of the United States and the Prime Minister, representing His Majesty's Government in the United Kingdom," say they "hope to see established" after the final destruction of the Nazi tyranny.

Freedom of speech and freedom of religion were left out. Were they omitted, perhaps, in deference to the sensibilities of the Russian dictator, to whom both freedom of speech and freedom of religion are anathema? If so, we would impute it to Mr. Churchill's magnificent and somewhat impish sense of political realism. He would embrace Satan to save England. Yet Mr. Roosevelt appears to have been somewhat conscious about it, afterward. When he sent the declaration of the Atlantic to Congress for its information and for the record, he said: "It is also unnecessary for me to point out that the declaration of principles includes of necessity the world need for freedom of religion and freedom of information." A slight change there. Not his own "freedom of speech and expression everywhere in the world," but "freedom of information." We don't know quite what that is.

Nor was that all.

The "natural rights of all people to equal economic enjoyment," to be fully and adequately established, fared badly in the sea air and came home like this: "They"—again the President of the United States and the Prime Minister, representing His Majesty's Government in the United Kingdom, announcing certain common principles in the national policies of their respective governments—"will endeavor, with due respect for their existing obligations, to further the enjoyment by all States, great or small, victor or vanquished, of access, on equal terms, to the trade and raw materials of the world which are needed for their economic prosperity."

The principal "existing obligations" of His Majesty's Government are those of the British Empire to its economic self—and, we say, very rightly and properly so.

As he left the deck of the *Augusta*, United States Navy, Mr. Churchill's person must have bulged with the trifles he got away with. Not the millennium. That was nothing. He probably dropped it overboard. Those Americans! What else had he got?

He had got a formal, irrevocable declaration of purposes in common: First, a purpose to destroy Hitler; second, a purpose to disarm Germany forever; and, third, a purpose to restore the overturned sovereignties of Europe.

He had got his Anglo-American alliance for the duration of the war in writing.

He had got the signature of the United States of America, by its President, to an unlimited undertaking to save the British Empire.

And what did he give for what he got? To what did he pledge His Majesty's Government? Only to forego the thought of aggrandizement, territorial or other, and to share with the United States the job of policing and minding an Anglo-American post-war world.

On his way home Mr. Churchill passed the largest convoy of American aid that had yet been seen. We wonder what he was thinking. Maybe of what he will do with Joseph Stalin at the peace conference and of the old hat he gave to Harry Hopkins, the Lease-Lend Administrator.

Efficiency of Army Engineers

EXTENSION OF REMARKS

OF

HON. PHILIP A. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EDITORIAL FROM THE CLAYTON (MO.) WATCHMAN-ADVOCATE

Mr. BENNETT. Mr. Speaker, I listened yesterday with interest to the debate on the proposed Great Lakes-St. Lawrence seaway.

One of the speakers yesterday had much to say about the accuracy of estimates of cost made by engineers of the War Department. I attempted at the time to remind the advocate of the so-called seaway to discrepancies in estimated cost of Army camps and the actual cost of same, but was not recognized.

Mr. Speaker, this is no time for the Congress to support billion-dollar projects that the Nation can safely do without. My friend may want a new residence or a new building to house his business, but if he is already deeply in debt and scarcely able to meet interest charges he will do well if he forgets his want of such buildings.

The proposed seaway is not necessary to national defense. Uncle Sam is not in financial condition to construct new projects that we can do without. Further, the terrible waste of funds at Army camps is sufficient proof that present managers are incompetent to successfully and economically handle large construction projects. As further evidence of administration weakness, I wish to call

attention to an editorial published in the Watchman-Advocate, Clayton, Mo., September 19, 1941:

[From the Clayton (Mo.) Watchman-Advocate of September 19, 1941]

THE SEAWAY QUESTION

One of the chief reasons for a Canadian canal (built at our expense) is that after its construction, all Great Lakes cities become ocean-craft harbors. Those who use that argument are overlooking the fact that it is possible for oceangoing craft to get to Chicago and other lake ports through the Lakes-to-the-Gulf waterway. That it was possible until the Secretary of War in 1936 allowed the construction of a fixed bridge over the Chicago Sanitary and Ship Canal.

This bridge, which has a clearance of only 22.4 feet at low water, was built over the canal when it was generally understood that Lakes-to-Gulf traffic needed 45-foot clearance. In spite of this and the fact that it is unlawful to sanction fixed bridges over navigable waters in such a way to restrict their complete potential use, the Secretary of War did approve this block to Mississippi River and Great Lakes water traffic.

If this sample of efficiency and foresightedness can be even, by a great stretch of the imagination, considered a fair example of the ability of the War Department, then it's time to investigate our national-defense program and the flood-control problem, both of which are entrusted to the same bunch of swivel-chair engineers. Reading about building a ship canal and then destroying its use with a low bridge makes one wonder if the railroads put their oar (or ore) into the puddle to bottle up water transportation. Did the War Department engineers suffer from administration pressure, and find that by closing the rear gate they could force the ships seeking the ocean to dig a way out through Canada with public money?

A bridge over a canal sounds like small potatoes, but this particular bridge over a canal in Chicago is the block to big-boat travel between the Gulf ports and the Great Lake ports.

Any suggestions that it could be raised, made a drawbridge or a turntable bridge, will be met with enough reasons for not changing it to choke a goat. Meanwhile the administration and the New Deal stooges in the Congress and the War Department keep clamoring for a St. Lawrence seaway. Now the man at the crossroads would like to know how long it would take these same thinkers to low bridge that project out of usefulness if they succeed in putting it over on the American people.

Science Aids Development of Modern Civilization

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EXCERPTS FROM AN ADDRESS OF HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following parts of an address which I delivered at the laying of the cornerstone for the new science building of Shepherd College, Shepherdstown, W. Va., on September 17:

Most people recognize the fact that science has made possible much of the development of our modern civilization. Born in the depths of ancient philosophy, it was cradled in the arms of alchemy and mysticism. Flouted and crushed by early religious zeal, it has revolutionized man's knowledge and understanding. Neglected and starved in attics and dungeons, it has created a world of untold wealth. Today science stands ready—a Hercules—waiting to perform the tasks we command to be done.

Science has opened a hundred different branches of knowledge in the field of physics, chemistry, and biology. The countless benefits showered upon us as a result have been mainly in the form of means to preserve and protect our health and in the form of strong strides in the march of our economic progress, and now we strengthen our national defense with its power.

Today we are beginning to realize what a great ally we have.

* * * * *

Industries both great and small have profited much by using science and the inventor's skill to reduce production costs. Lower prices and greater profits have resulted from their use of improved methods and labor-saving devices. Aided by this industrial patron, flush with vast resources, science has accomplished miracles.

* * * * *

A miller living in the time of Caesar could make in a day only a barrel and a half of low-grade flour, while our modern flour mills turn out more than 80,000 barrels a day, and much better flour, at that. A good brickmaker, working from sunrise to sunset in the early days, fashioned only 450 bricks, but a modern brick plant produces nearly 1,000 times that many.

Only a hundred years ago 83 percent of the workers were needed to produce food for all of the people. Today only 17 percent are needed. Many of the others have been absorbed into the new industries created by invention.

Industry has not hesitated to command the aid of science. It has been forced to do so. If it still took 83 out of every 100 workers to provide the food for the Nation, there would not be enough workers left to man our great industrial system and at present our vast preparedness effort.

* * * * *

Inventive genius and scientific research have combined to transform the drudgery of household duties or the dreams of a Jules Verne into great industries which provide jobs for millions of workers, and which represent an aggregate of wealth that surpasses the riches of any nation in all recorded history. It is far more profitable to find an industry-making invention than a great gold mine.

Resolutions of the Yankee Division Veterans' Association

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

RESOLUTIONS ADOPTED AT TWENTY-SECOND ANNUAL CONVENTION

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

RESOLUTION ADOPTED AT THE TWENTY-SECOND ANNUAL CONVENTION, YANKEE DIVISION VETERANS ASSOCIATION, SATURDAY, JUNE 7, 1941

We hereby resolve that the Yankee Division Veterans Association go on record with the suggestion that Congress posthumously award the Congressional Medal of Honor to the late Brig. Gen. William Mitchell for his patriotic service and foresight in recommending an adequate air force to function as a separate unit of the armed force of the United States.

RESOLUTION ADOPTED AT THE TWENTY-SECOND ANNUAL CONVENTION, YANKEE DIVISION VETERANS ASSOCIATION, SATURDAY, JUNE 7, 1941

We of the Yankee Division Veterans Association hereby go on record at our twenty-second national convention, being held in Manchester, N. H., as favoring the passing of necessary laws, rules, and regulations governing the transportation of all supplies for Great Britain and all the democracies, with the necessary assurance that these supplies will reach their point of destination: Be it further

Resolved, That we heartily approve and endorse the return to the age-old policy of the United States to the freedom of the seas.

RESOLUTION ADOPTED AT THE TWENTY-SECOND ANNUAL CONVENTION, YANKEE DIVISION VETERANS ASSOCIATION, SATURDAY, JUNE 7, 1941

Be it hereby resolved, That we of the Yankee Division Veterans Association hereby go on record as approving of delegating the necessary powers to the President of the United States in this period of national emergency for any and all programs of national defense which will safeguard the lives, the property, and the security of the citizens of the United States of America; be it further

Resolved, That we of the Yankee Division Veterans Association, assembled in Manchester, N. H., for our twenty-second annual convention, do hereby pledge ourselves to aid, assist, and support the President of the United States of America in fulfilling the necessary requirements in this program of national defense during the present period of national emergency.

RESOLUTION ADOPTED AT THE TWENTY-SECOND ANNUAL CONVENTION, YANKEE DIVISION VETERANS ASSOCIATION, SATURDAY, JUNE 7, 1941

Be it hereby resolved, That we the Yankee Division Veterans Association, in meeting at twenty-second national convention, in Manchester, N. H., do hereby favor the passage of a bill known as H. R. 4523.

This bill recognizes the high public service rendered by soldiers who volunteered and served in trench-fever experiments in the American Expeditionary Forces.

Danger Ahead

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 23, 1941

Mr. HOFFMAN. Mr. Speaker, do you know—

First. That our Navy, patrolling the high seas in blockaded areas, has now

been ordered by the President to shoot on sight German and Italian ships, even though Congress has not declared war?

Second. That British warships have for months been undergoing repair in American harbors in violation of international law?

Third. That the President has declared that the Axis Powers must be destroyed?

Fourth. That high-ranking British officers have told us that the war cannot be won, except on German soil and with the aid of American manpower, which they insist we send?

Fifth. That under the guise of preparing for national defense the President, disregarding his promises, and this administration have been prepared to send another A. E. F. to Europe to aid in crushing Hitler?

Sixth. That on August 24 Prime Minister Winston Churchill, of Great Britain, declared that Great Britain and the United States intend to become the armed policemen of the world after crushing Hitler?

Seventh. That under date of September 17 the press carried the announcement of the British statesman, Hore-Belisha, that:

> Churchill had an imaginative idea in offering France common citizenship with Britain. There is far more reason for common citizenship with America. If we can replace the Declaration of Independence with a declaration of interdependence, we should lay the firmest foundation for permanent world peace.

SCRAP THE DECLARATION OF INDEPENDENCE—A WICKED SUGGESTION

Scrap the Declaration of Independence? The Declaration which gave birth to liberty and to freedom; which has been the foundation upon which our civilization, our prosperity, and our security has been built, and sign up with Great Britain in a declaration of "interdependence" and "Union Now"?

Are we so weak, so lacking in courage, in confidence, in our own ability, that we must now renounce the freedom for which our forefathers fought and which they sacrificed so much to gain and maintain, and acknowledge our dependency upon the British Empire?

Scrap the Declaration of Independence, says Hore-Belisha. Patriotism calls to us in clear, ringing tones; self-interest admonishes us and oppressed people the world over beseech us to maintain our independence and to prepare our national defense to meet and to defeat all aggressors who may seek to destroy us, whether it be by armed forces, which no true American fears or will shirk from meeting, or by insidious propaganda which creates fear, conceals the true purpose of those who are either our enemies or would use us for their own selfish ends.

The Far Eastern Situation

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

ARTICLE BY MAJ. GEN. WILLIAM C. RIVERS

Mr. CRAWFORD. Mr. Speaker, these are days when our people are looking with great concern to the east and to the west, to the north and to the south. We seek enlightenment from responsible sources, and weigh in our minds the most important of what we read.

The Far East is at the moment one of our big concerns. One of those very familiar with conditions in that section of the world is Maj. Gen. William C. Rivers, retired, who discussed the Japanese situation in an article in the New York New Leader last Saturday, and because of the information contained in the article I have asked unanimous consent to present it here.

The article follows:

[From the New York New Leader of September 20, 1941]

(By Maj. Gen. William C. Rivers, retired)

Articles about the situation in the Far East flood our newspapers and magazines. A well-known writer believes that peace cannot come from the negotiations with Japan; that only a truce is possible. Lewis Mumford, a brilliant writer, expressed gloomy convictions in a recent issue of the New Leader concerning President Roosevelt's dealings with Japan. Mr. Mumford states that the President has lost the first Pacific battle by failing to use force against Japan; the Japanese waters are guarded by a navy inferior in number of ships and in fighting power to our Navy; that air bombers from Manila could set fire to the cities in Japan—if the United States had sufficient intelligence and moral fortitude to use its power. Also, that we could cut off Japanese supply lines by the sea and choke off the Japanese manufacture of munitions. And that our own indecision and moral weakness have allowed Japan to get into a position to strike effectively in eastern Asia either to the south or to the north.

I have taken part in campaigns and battles in all our important wars during the more than half a century since my graduation from West Point. Loaned by the Army for duty with the Philippine government, I served the unusual period of 11 successive years in the Philippines—when the law of Congress forbade Army officers from serving more than 3 years on one tour in the islands. I aided building up the Constabulary—a military police force of Filipino riflemen—of which I became the chief. My work required me to reside in all parts of the scattered archipelago. I was much in the jungle. I worked in close cooperation with the Filipino provincial governors, the Filipino judges, and other officials. I had the opportunity to visit Japan and other places in the Far East. I have continued my study of the strategy of the Pacific Ocean since my return from the Far East.

My conviction is that the conclusions of Mr. Mumford are much in error. He fails to mention our responsibilities and our dangers in the Atlantic. A discussion such as the one under consideration must view our position in all parts of the present World War, if it is to be thorough. The other assertions of Mumford require great modification. They are too favorable to the United States. They underestimate the power of Japan in her own waters.

Mr. Mumford states the navy of Japan is inferior to our own Navy; that our Navy alone could cut off Japan's supply line, and that our air bombers from Manila could attack the cities in Japan proper. Japan has one of the world's great battle fleets. It has the tradition of victory. It may be as large as our fleet. Japan has also a great field army. Japan is situated in a most favorable position which renders her almost impregnable to attack from the sea side.

Japan's danger is from the North. The great distances across the Pacific, the shape of the curved coast lines of Northeastern Asia and the location of Japan—and of her encircling chains of defensive islands running from the Arctic to the Equator—all aid greatly a defense of Japan against any attack or blockade from the west coast of the United States or from Hawaii. The almost 2,000 miles from Manila to Japan would render ineffective any attempt to bomb Japan from Manila. Japan has a larger air force in the Far East than we have. Japan could easily bomb such places as Manila and Guam from her great base at Formosa and from the Bonin Island base.

The smallest globe will show the position of Japan—squarely between our coast and Manila and on the straight, short, normal steamer line out to the East. Many are confused as to this, because they consult only the Mercator maps in all our atlases. These maps are distorted for the northern regions—for any region far from the Equator.

Japan has no desire to attack the United States. She cannot make such an attack. Hawaii is the greatest naval, military, and air base in the world. Our eight new island bases in the Aleutians and in the eastern part of the Pacific shelter air and naval forces which would operate against any attack from the western part of the Pacific.

Hitler is the principal danger to the Western Hemisphere. Germany cannot bring forces across the North Atlantic in order to attack the United States. However, a Germany victorious over Britain and Spain could send military and air forces from Dakar to Brazil. Such invading forces could then work northward and attack the Canal at Panama. The distance from Natal, in Brazil, to Dakar is only 1,862 miles. From Natal to Puerto Rico it is 1,100 miles farther. Natal to New York is 6,700 miles.

The President has recently announced that the time has come to defend the Americas. Our Navy has orders to seek out and eliminate submarines and other war vessels that endanger the defense of the waters of the Americas. Our defense line in the Atlantic is somewhat as follows: Labrador, Greenland, Iceland, the islands of the East Atlantic down to Cape Town. Naval authority has given our defense line in the Pacific as running from the Aleutians to the Hawaiians and to Samoa and to the Canal at Panama—all in the eastern Pacific. We so often say that the people who live in the Americas shall control the future of the Americas. My judgment is that it is the same for northeast Asia—that the people who live in north-

east Asia are bound to control the future of that region. Western nations, singly or in combination with other western countries, dream when they think of establishing again the old control over the Far East.

Other illusions are that we may have in the Far East a great trade. Canada has a population about that of greater New York—ten millions. Yet we sell Canada, at our door, far more than we sell the 500,000,000 people from Vladivostok to Australia—the teeming millions. There is no great trade in the Far East. Our trade with the Philippines and China has been a great disappointment. Another illusion is that the Philippines form an asset for us. The far-away islands are an economic and strategic liability.

Our trade with Japan is, I think, our only asset in the Far East. It has a balance favorable to us. It is much greater than our trade with China and the Philippines combined. The balance in the case of the two last-named countries is unfavorable to us. The large favorable balance on our trade with Japan makes up for the large unfavorable balance to us on our trade with the 20 nations to the south.

"Taking the initiative in the Pacific" would mean trying to dominate the western part of that great ocean. It would mean a costly war with Japan. It would mean abandoning the sensible idea that we are to control only the eastern half of the Pacific. It would mean doing exactly as Hitler would like us to do. It would mean that we might face the Axis Powers in Europe, and possibly in South America, with divided fleets and armies.

My own conviction is that we should make with Japan a new treaty of trade and friendship, and that the new treaty ought to contain a clause indicating the interest of Japan in the continued independence of the Philippines after 1946. I believe Japan has no intention to annex the Philippines after 1946. In any event Japan will get more and more of the trade with the Philippines. Japan is so near those islands.

We should first of all arrange our own affairs so as to get our main battle fleet east of the Canal at Panama.

Sabotage Against the Tyrant

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

ADDRESS OF HON. EMANUEL CELLER, OF NEW YORK

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks, I wish to insert the address of Representative EMANUEL CELLER, in part delivered over station WOR at New York City on September 9, 1941:

Europe before Hitler was divided and subdivided into national and international differences and disagreements. Today most of Europe is united—in hate of Hitler. It is a solid union of grim abhorrence that ignores boundaries and racial and social prejudices. Poles and Czechs, blond Norsemen, and swarthy Greeks and Slavs are now bound together by a common vengeance.

A Gestapo reign of terror in the conquered provinces has caused this federation of venom and hostility to the Hakenkreuze and all it implies. Rapine, pestilence, disease, plunder, and famine have aroused an opposition that even torture cannot still. Reprisals are rampant. Tens of thousands of political prisoners have been seized and forced into refined torture chambers. Thousands of pastors, priests, and rabbis are summoned by the Gestapo and insulted and defiled. They are forced to substitute prison clothes for their religious garb and are forbidden to conduct mass or say prayers. Regardless of age or infirmities, they are forced to do degrading manual work—to clean latrines and scrub floors.

Thousands of laborers and intellectuals resisting Nazi tyranny are machine-gunned and massacred. Scores caught escaping are brought back and subjected to sadistic cruelties. Here is a typical case of torture of students in Czechoslovakia who protested the ousting of certain professors because of their beliefs. Hundreds of these students were beaten into insensibility by blows from thick clubs and cudgels. Still others had their ears torn off and their eyes struck out by blows from whips. Groups of four youths were given whips and ordered to slash at each other. If they did not attack with sufficient savagery, they were goaded on and burned with flaming torches or slit with sharp swords. A number of girl students seized in raids were dragged into large open spaces and violated in view of bound male students, who were powerless spectators of these horrible scenes. Their cries of anguish and fright were met with new and more cruel tortures. These are but a few of the dreadful rites practiced by the German soldatin—the so-called Herrenvolke. These wretched soldiers are the vanguard of the master people (the German) who would make Sklavenvolk (slaves) of all other people.

Small wonder the world stands aghast, and the victims cry out in anguish and fear. Small wonder that resentment and hatred of Hitler grows—a hatred and a sabotage that one day will overwhelm this tyrant, Hitler, and his blood-stained cohorts.

Prometheus, now bound, is stirring.

The curses against Adolf Shicklegruber, if not loud, are still very deep. Subterranean forces that even he fears are at work. A common agony of pain drives all Europe against him.

The subject peoples may be prostrate and broken but they are not hopeless. They have weapons sharper than steel—ridicule, invective, insult, derision, intrigue, sabotage, terrorism.

These weapons will suffice temporarily until rifles, guns, bombs, and planes can be made available. Meanwhile, they suffer and wait. But they have a hope and faith that moves mountains.

In Belgium, Holland, Norway, Bohemia, Moravia, Greece, and Yugoslavia, Nazi storm troopers and the Italian Brasellieri no longer dare walk alone at night.

In all the conquered provinces, supply trains are stalled or strange and mysterious errors in signals send cars headlong into collisions; factories suddenly are stopped with machinery "monkey wrenched"; telegraph, telephone, and cable wires are cut; lighting systems suddenly fail; railroad tracks are blown up; rails are removed, and large rocks are placed across tracks causing dreadful wrecks; "Go" signals are substituted for "Stop" signals red and green running lights on ships are interchanged; kerosene-soaked rags are carefully flung through windows, air shafts, ventilators, hatches, and at convenient moments are ignited—detection is difficult; sand, ground glass, grit, cement, steel filings are inserted or flung into engine cylinders; a pailful of sand easily disables a factory, and weeks are required to put engines right again; motors of airplanes, tanks, trucks are disabled by sprinkling their parts first with cement and then with water; supplies at warehouses, cargoes at dock yards or at sea are destroyed by water, especially salt water; food supplies are rendered inedible by dousing with coal dust or fuel oil.

Hitler has not triumphed. He has partial obedience but no acquiescence. Resentment and stifled rebellion are everywhere—from Narvik to Athens.

In Norway the most despised and hated men are Reichskommissar Joseph Terboven and his stooge, Norway's first Nazi, Vidkun Quisling (Quisling is now a name synonymous with traitor, like Benedict Arnold or "copperhead"). Quisling has really succeeded in bringing about a complete underground national union—against himself. Quisling has jailed, tortured, shot, and sent to concentration camps thousands of Norwegian patriots. Serious demonstrations against Nazi occupation authorities are frequent. Military establishments are often the objects of widespread sabotage. Arrests and torture of victims only enrages the populace to more daring and more damaging deeds. The Nazis do not dare issue postage stamps with the picture of Quisling for fear the people will spit on the wrong side of the stamp. When he arrived in Bergen for the first time thousands shouted, "Down with Quisling" and sang the national anthem. Bergen, Stavanger, Namsos, and many other towns have been put under a strict curfew because of anti-Nazi demonstrations. In the country regions power lines controlling Nazi antiaircraft devices have been cut repeatedly. Frequent landslides, engineered by Norwegians, block for days the Bergen-Oslo railroad. Whenever a prominent Nazi speaks on the radio a crowd gathers outside and sings the national anthem loud enough to be picked up by the microphone. Military stores show an increasing tendency to spontaneous combustion.

A fisherman rowed out to a spot at sea where a plane crashed. He thought it was a British plane and wanted to pick up survivors. He suddenly let the men slip back into the water. When the fisherman returned, he was accosted by the crowd on the shore who were watching the rescue. Someone said, "Why were not the aviators brought back?" The fisherman replied, "They turned out to be Germans." "But were they not alive?" "Well, one of them said he was alive, but you know how these Nazis lie."

A clown struts across the stage of a local playhouse and mimics King Haakon, now in exile. When he reaches the opposite side, he sticks his head out of the wings and asks, smilingly, "Shall I return?" The audience thunderingly says, "Yes."

If Vidkun Quisling is still alive, it is a miracle.

Between 300,000 and 350,000 Nazi soldiers are in Norway to keep 2,900,000 Norwegians in subjugation. That is rather a vast army of occupation. It is proof of the vast resentment and sabotage in Norway.

In Holland, insulting and contemptuous anti-Nazi slogans are constantly chalked on fences and house walls. Nazi reprisals only stimulate the Dutch to greater daring. The local Nazi commander at Eindhover permitted a parade of workers to celebrate the

fiftieth anniversary of the founding of their employer's factory. To the astonishment of the local Nazis, the procession turned into a grand demonstration of over 20,000 people carrying orange flags, testifying their loyalty to Queen Wilhelmina and the House of Orange.

In Amersfoort, in a period of 6 hours, over 100 fires and explosions occurred simultaneously. They were the secret work of Dutchmen expressing their hostility to Nazis.

The Quisling of the Netherlands is Anton Mussert, leader of the Dutch Nazi Party. He, too, is an object of scorn and derision.

The Hollanders say of their rationed potatoes, "They are like the Nazis themselves—black, and rotten to the core."

Distribution of pamphlets attacking the Nazis, notwithstanding great dangers attached to it, is widespread throughout Holland. Mass arrests by Nazi storm troopers for sabotage and disrespect shown to German authorities are frequent, as well as torture of prisoners in order to obtain information they allegedly hold back. Burgomasters refuse to check hostilities to Mussert and his Dutch Nazis, who are ridiculed, spat upon, slandered, pestered, and sneered at when they march through the towns. Seyss-Inquart, Hitler's Gauleiter for Holland, berated the Hollanders and threatened dire punishment for "dislocating administration machinery." He charged that Hollanders were not filling out correctly the various official forms. Incomplete and erroneous data is supplied. They write thousands and thousands of anonymous letters to befog officials. Thousands of senseless complaints are made. Wholesale and unnecessary visits are paid to officials to create administrative chaos and trouble. The Gauleiter admits that he is powerless against much of this form of sabotage.

Revenge societies are formed everywhere. A group selects a Dutch Nazi or an occupation trooper or officer. The victim is followed day and night by one of the local group. Eventually, during a black-out, the victim is found drowned in a canal.

Despite cruel and inhuman punishments visited upon priests, the Catholic church has forbidden the sacrament to Dutch Nazis. There is no burial in Catholic cemeteries for Nazis and the christening of children born of Dutch Nazis is barred.

Pictures of Queen Wilhelmina are forbidden. Her name must not be mentioned. But Dr. Arthur Seyss-Inquart and his cringing Dutch Nazis are often forestalled by natives, who christen their children after the Queen or after members of the royal family. Frequently the newly born are baptized Wilhelmina, Johanna, Beatrix, Irene, thus naming definitely all the living female members of the House of Orange.

To annoy the Nazis, Dutchmen express their loyalty to the House of Orange by sipping in public orangeade slowly and ostentatiously. Children on bicycles, when making a turn, put out their arm with the index and third fingers outstretched to form the victory "V."

The underground information service on behalf of the Allies is functioning with wellnigh uncanny efficiency in Holland, permitting R. A. F. fliers to score direct hits repeatedly on vital targets. Such grapevine intelligence, apparently carried out in most instances with secret radio sets, time and again has foiled German ruses designed to prevent the bombing of supply trains, supply depots, ammunition dumps, and other important objectives.

The Nazis, e. g., tried to circumvent the British air raiders by using hospitals as ammunition dumps and barracks. But the underground intelligence worked. R. A. F. flyers scored direct hits on the hospital, killing 200 German soldiers.

The Dutch are simple folk. They are great individualists. They cannot stomach that Austrian, Arthur Seyss-Inquart, sent to regiment them. Their violent tactics to free themselves from Hitler are just the same as their machinations to dethrone their oppressor, King Philip of Spain, centuries ago.

The crime of this age was the Nazi destruction by ruthless air bombardment of Amsterdam, in which 30,000 were decimated and 80,000 made homeless, 25,000 dwellings smashed to smithereens. The Dutch will not rest until Amsterdam is avenged.

The Crown Princess' husband is Prince Bernhard. He is very popular. Thousands of Dutchmen decided to celebrate his birthday, June 29, by wearing his favorite flower, a white carnation. The Nazis tried to snatch them away, ripped them from coat lapels. The canny Dutch then inserted needles and old razor blades in the flowers. The Nazis cut and lacerated their fingers. They boiled with rage, but were powerless.

Hitler may close Dutch schools and universities. He may fill all papers with propaganda and lies. He may broadcast Nazi speeches 24 hours a day. But he will never turn the Dutch into Nazis. He will never quench their indomitable spirit.

When a Nazi puts a question in German he gets no answer, although knowledge of German is widespread in Holland. When a German enters a cafe all Dutchmen leave. When the Dutch were forbidden to leave a cafe in a demonstrative way as soon as a German entered they all placed their watches in front of them and left exactly after a quarter of an hour. No Dutch girl will dance with a German. Little children run away from him. He is an outcast.

Dutchmen wear coins displaying the Queen's portrait. The Nazis Deutsche Zeitung called this a "silly demonstration of political lunatics." The next day the whole populace practically wore coins.

Every success of the Allies, every defeat of the Germans is translated into jokes that spread rapidly. They do much to keep up the spirits of the people and wear upon the nerves of the Nazis. Each time the R. A. F. bombed military targets of the Germans in Holland the Dutch papers were forced to report no damage had been done, "except that a few cows had been killed." After some time the Dutch whispered that Goebbels would shortly unveil the statue of the "unknown cow."

A lady was arrested for listening to the B. B. C.—British short wave. Unperturbed, she defended herself by saying: "After the fall of France Adolf Hitler announced he would soon speak over the British wireless from London. I was so afraid of missing this historical speech."

Food and clothing are rationed. In protest, a Dutchman walked into the streets of Amsterdam stark naked except for hat, stockings, and umbrella. He explained that the meager clothes allowed forced him to go naked. The Nazis were infuriated. The Dutch laughed. He was sent to a concentration camp for what the Nazis called impudence but for what the Dutch called courage.

In Schiedam a soldier was made drunk. The natives fixed a board on his back with the inscription: "Although I am a German dog, I may wear Orange on my back."

Such pranks recur daily. Mass punishment of the population only brings more reprisals against the Germans.

The Danes are suffering under the Nazi yoke. Economically, Hitler is plundering the country by making the Danes pay 450,000,000 kroner for Reich "protection." Denmark now owes the Reich 1,500,000,000 kroner because by Nazi hocus-pocus the National Bank of Denmark must finance German imports with unlimited credit. Unemployment, inflation, famine in a country of plenty are the portion of the Danes. They show resentment in many ways. Copenhagen University refuses to exchange its professors with Reich universities. Threat of padlocking is unavailing. It still refuses. On June 5, Denmark's Constitution Day, a crowd at a soccer game bombarded German soldiers with rocks and bottles.

When we took Greenland into our keeping, the Danes expressed their pleasure by wearing little Statue of Liberty insignia on their lapels. When the Nazis forbade display of such insignia, the Danes wore the emblem under their lapels.

In Denmark, where in normal times the ore is worth about a quarter of a cent, the newsboys now cry: "Papers. Eight ore's worth of lies, four ore's worth of advertisements." The cry of the newsboys, the letter says, sums up the Dane's opinion of the censored press.

In Copenhagen, a newsdealer displayed a textbook, English in Fifty Hours, under a poster saying: "Learn English before the Tommies arrive." Nazi occupation authorities made him take down book and poster. Next day the newsdealer displayed a new book, German in Fifty Hours, under a new sign: "Learn German before our friends the Germans depart."

In Yugoslavia, 80,000 Serbian men and women have been hanged or killed by firing squads. Most were members of the "Chetniks," a far-flung organization of patriotic Serbs, sworn to die rather than give in to the Nazis. They have been conducting a guerrilla warfare against their Nazi conquerors. Nazis are constantly being shot, stabbed, poisoned, and garroted. These guerrilla fighters operate in groups of 15 or 50. They are well equipped extremely mobile, and hide in the mountains and in the woods. The Nazis have tried to rebuild the destroyed railway from Belgrade to Salonika, but what is built during the day is destroyed at night. Despite the heavy toll of dead, the fight for freedom continues and will continue.

The Germans have warned that 100 Serbs will be killed for every German or Croat shot by the "Chetniks."

All over Bohemia, Moravia, and Slovakia signs appear chalked up on walls, bridges, and painted on rocks, "Tuka (Nazi gauleiter) is a traitor; bring back Benes." "Throw out the Hlinka Guards (storm troopers); Benes is coming back." Barge crews and dockmen prevented, by sabotage, transport of oil from Rumania to Germany. Hate of Hitler has united at last all Czechoslovakia.

The most incredible refinement of medieval torture have been employed against the people of Masaryk and Benes. Czechs and Slovaks have had their teeth broken, their faces mutilated—even their eyes put out—fingers broken, nails torn off. With bestial sadism, some of the Nazis attack and befoul Czech women. All these tortures have bred a resentment and revenge that grows daily. No terror can intimidate these peoples.

Small wonder the Nazi army of occupation is over 250,000, with legions of Gestapo agents.

The inhabitants of Louvain, in Belgium, have been ordered to examine their house fronts every morning and to wash off all inscriptions insulting to the Germans painted or chalked on them during the night.

At Roulers (West Flanders) the Germans are still offering rewards of 1,000 marks each for information regarding sabotage and the distribution of illegal pamphlets. As this shows them to be unable to discover the channels of distribution, the distributors are becoming bolder and more pamphlets than ever before are circulating.

At Malines acts of sabotage and the distribution of anti-German pamphlets have grown to such proportions that former Minister Bouchery and former Municipal Councilor Van Kesbeech have been arrested as hostages. A number of priests have also been arrested for helping in the systematic distribution of La Libre Belgique (paper of Belgium freedom).

And what of France? In Lille, 100 truckloads of ammunition and machines were ready to be sent to Germany. They blew up.

Unable to discover the saboteurs, the German authorities decided to punish workers by imposing a large cut in wages. A general strike ensued, and the Germans were forced to give in. At Chartres the telephone lines to the German-controlled airdrome were cut. For this a 15-year-old boy, who refused to give the names of his coworkers, received a sentence of death. There was a huge demonstration of protest, particularly by women. The local gauleiter, in fear of personal violence, was compelled to withdraw the sentence of death. The town of Nantes was fined 5 times, nearly a total of 9,000,000 francs, to pay for destruction of railroads, telephone lines, and factories. The Nazis offered huge rewards for the apprehension of the wreckers. The solidarity of the resentment against the Nazis was so great that not a single workman was caught. Not far from Marseilles 200 railway cars were filled with ammunition for Germany. The cars were suddenly blown up. This act of destruction was so systematically prepared that the German and French authorities were unable to point a finger of responsibility at anyone. There have been, up to date, over 100 cases of reported railroad sabotage. The warnings of Marshal Petain and Admiral Darlan are unavailing. There are all manner and kind of riots in Paris, despite the stern warnings of Heinrich von Stuelpnagel, the Reichfuehrer's military commander in France. In fact, the Nazis have turned Paris into an armed camp, with 20,000 boches patrolling its streets. Scores of night terrorists' courts have been set up to punish the brave French rioters. There is a veritable spread of arson in both occupied and unoccupied zones of France directed against arms plants and war industries under German control. Mystery fires have destroyed the Graff factories at Versailles and other Nazi-controlled plants in Lyons and many other places. Underground cells to create unrest and insurrection are springing up all over France. When R. A. F. bombers appear over parts of northern France, villagers crowd the streets and hail British aviators. Photographs of General De Gaulle, leader of the Free French movement, appear everywhere. His pictures, cut from the newspapers that have the temerity to print them, are framed and venerated by scores of thousands.

Sometimes the population of entire villages gather nightly in five or six houses that have receivers with strong enough reception to hear the B. B. C. short-wave broadcast. Threats of dire punishment are unavailing. The two great heroes of France today are General De Gaulle and President Roosevelt. On Armistice Day, last, the French were prohibited from covering war memorials with the tri-color. Instead they managed to secure red, white, and blue flowers and, despite the ban, the cemeteries and monuments were filled with flowers of these three shades. The heavy German propaganda is no match for French wit. Its lies are no longer believed, and mostly laughed at. In France the people read nothing but Swiss papers. They club together to buy the Journal de Geneve or Gazette de Lausanne.

In Paris it is not uncommon to see a German storm trooper with a piece of paper pinned on his back, "I am for De Gaulle." In Alsace the young people will march and shout "long live England." In the city of Thann the hinged cross, the hakenkreuze, that floated over the city, was taken down and burned. All Nazi strategems and reprisals to find the culprit were unavailing. In Alsace-Lorraine there is a motto in French, the translation of which is "hold tight—try to stay put—not to give place to those across the Rhine till that later day when we shall see them leave again." This slogan strikes a response in almost the entire population of Alsace-Lorraine and plagues and stuns the Nazi forces. A popular form of greeting is the word "elf," an abbreviation for "es lebe Frankreich." (France lives.)

Films shown may be French, but news reels are always German. When Hitler appears Parisians and Frenchmen in cities like Vichy, Lyons, Nimes, and Marseilles invariably hiss. When Mussolini appears they laugh. At a cinema in Paris one night these manifestations of ridicule and hate became so great that the local German kommandantur ordered the lights turned on. He then mounted the stage and said that the news reel would be repeated and at the slightest disorder one Frenchman would be taken from each row and he would—disappear. The lights were lowered, the film was rerun. When the theater was again lighted no Frenchman was to be seen. They had all left.

Paul Collette, who shot at Pierre Laval and Marcel Dent, Quislings of France, has now become a hero, like Pastor Niemöller in Germany.

This shooting symbolizes a new French Renaissance against brute Nazi force.

The French Chamber of Deputies, consigned to the dog house, has courageously emerged and defied Petain and Laval. Over 100 members under former Premier Herriot have met in rump session and denounced Vichy "collaboration."

In Paris all sorts of jokes are played on the Boches. Stickers are fastened to them, particularly where there is corporeal affluence. On these stickers is a notation, "Pig for sale—without food tickets." All over France posters by Goebbels against England are regularly torn down. Despite arrests and threats of execution, the destruction continues.

Letters smuggled out of France tell of rifles and cartridges and other instruments of war being stored in scores of towns and villages—for the eventful day.

In a town students posted signs with the following inscription: "Greece is hot; macaroni is cooked; long live General De Gaulle." In reprisal the town was condemned to 40 days without meat. Anti-Nazi demonstrations followed. The posters appeared in greater profusion. Additional punishments were unavailing. Wherever possible the cross of Lorraine takes the place of the crooked cross of the Nazis. Near St. Malo shopkeepers were ordered to display the picture of Admiral Darlan surrounded by French colors. One shopkeeper did so, but under the picture he placed a card marked "Sold."

The mass arrests and executions in France call to mind the terrible scenes from the Paris Commune of 1871 and the reign of terror of a century and a half ago. The new reign of terror speaks volumes for the unrest and native resistance against Hitler throughout France. The very word "collaboration" is now anathema. Blaming all the sabotage upon the Jews and/or Communists "won't wash." That trick does not work any more. Hitler has slain too many Banquos, whose ghosts now arise to plague him.

The R. A. F. pounds German and Italian military objectives throughout Greece. Yet no air-raid alarms are sounded. Asked for a reason, a German officer said frankly: "Sound the sirens? Why, we'd have all Athens on the rooftops whooping and yelling and waving handkerchiefs to the British airmen." Little Greek lads follow the Italian Bersaglieri and beg them for feathers from their hats. Usually crowds of their elders urge the lads to pester the Italians to "pluck their feathers."

There are thousands of Greek snipers or "swamp foxes," not unlike those commanded by Francis Marion during our Revolutionary War. "Swamp foxes" acquired their name, you may remember, by their habit of hiding in swamps and suddenly striking out to harass enemy troops and supplies. These patriotic Greek guerillas snoop out of wooded river banks and caverns and make life miserable for the I alians.

The intense spirit of resistance is typified by the Greek soldier who tore down the Nazi flag from atop the Acropolis and hoisted in its place the Greek light blue and white banner. When ordered by the German commander to tear down the Greek flag he took it down gently, wrapped it around his body, and leaped to death on the rocks far below. Frequently the Greeks show their hatred of the German by risking their lives by smearing with mud and mire the swastika hung on the Acropolis.

The most tortured nation is Poland, where many thousands have been machine-gunned and gassed—murdered for what the Nazis call eugenics—the Poles being a lowly, inferior race, according to the Nazis. Mass executions have claimed more lives than did the Polish-German War. The thirst for revenge is thus most ravishing and insatiable. Two-thirds of the German obituary notices in the newspaper are of the Gestapo and Nazi occupational officers—dark work with knife and gun. More than 2,000 clandestine groups have organized to carry on ceaseless opposition to the Nazi war machine. So vigorous is anti-swastika sabotage that Hitler must keep 37 divisions, or 555,000 Boches in Poland.

The "V" campaign started by the British made its appearance first in France, where Frenchmen chalked the "V" everywhere for final victoire, much to the chagrin and discomfiture of the Nazis. The idea soon spread like wildfire across all frontiers. It has become the tocsin for British victory.

In Prague the "V" appears on walls, in movies, on streetcars, busses, and trains. The Victory slogan repeatedly meets the eye in Cracow, Warsaw, Copenhagen, Antwerp, Vichy, Oslo, Athens, Belgrade—in short, everywhere Nazi troops are found.

The Morse Code for "V" is three dots and one dash. The opening bar of Beethoven's fifth symphony is a series of three short notes followed by one long note, corresponding in rhythm with the Morse "V"—three dots and one dash. Thus the oppressed of Europe soon learned to play, sing, or whistle and tap on counters and glasses the now famous "V."

Propaganda Minister Dr. Joseph Goebbels, irked by the devastating effect of the "V" nerve war claimed the "V" idea as his own. He clumsily spread a counterfeit propaganda and proclaimed "V" meant "viktoria" or German victory. He was laughed at. He dismally failed. The "V" is painted, chalked, splashed, printed, played, sung, whistled, and tapped with increasing profusion and intensity. By July 21 last there were over 6,200 "V" prosecutions by the Nazis in Paris alone. "V" in France has become a great counter-offensive against "collaboration" with Hitler. "V" may, we hope, become a handwriting on the wall, as at Belshazzar's feast.

The British Library of Information, in its bulletin dated August 6 last, says:

"According to a report received in Basle from Germany on July 21, a Nazi training plane which crashed into a village in south Germany recently, killing pilot and student, and injuring several villagers, was found to have the letter 'V,' democratic victory symbol, painted in red on the engine casing. The accident was said to be only one of many mishaps to training planes which have brought death to more than 200 pilots and student fliers within the past 3 months. The Nazi authorities were said to have laid this long list of accidents to sabotage in factories in occupied France which are making plane parts for the Reich. Three of the French factories, Hispano, Gnome-Rhône and Salmson, which were recently reequipped by the Germans and put into commission are under Gestapo scrutiny for sabotage. To date, however, the Nazis have failed to track down the saboteurs and the accidents to training planes continue. The Oslo correspondent of the Neue Zürcher Zeitung reports 'practically everybody' wore the 'V' sign during the week-end. The Bremen radio admitted that during the last few days newspapers, flags, railway carriages, motor cars, and walls, almost everywhere in Europe, have carried the letter 'V'."

The "V" nerve war is not unlike the slogans and catch phrases used in many wars. We are reminded of "Liberty, equality, and fraternity" which ushered in the French Revolution. During our Revolutionary War we used "Taxation without representation is tyranny." We defeated the Barbary pirates with "Millions for defense, but not one cent for tribute."

Others were "R· ·mber the Alamo" during our War with Mexico, "Remember the Maine" during the Spanish-American War, "Over the top" and "Lafayette, we are here" during the first World War.

Bismarck, whom Hitler emulates, frequently instigated insurrection against his "blood and iron" rule.

His troops, like Nazi troops in Greece, in Holland, in Norway, were fired upon from roofs. Those who could not get arms assaulted the loyal troops with whatever they could lay their hands on. Tiles were torn off houses and paving stones were carried to the roofs in baskets, later to be hurled at the German troopers. So it is today. History repeats itself.

Napoleon, like Caesar and Alexander before him, was well aware of the resistance, active and passive, of the people he conquered. He recognized the force of sabotage when he said, "Bayonets are effective weapons, but they are not so good to sit on." In fact, sabotage is a word of French origin. Sabot means wooden shoe in French. Frenchmen, arising in wrath and rebellion, often threw their sabots into machinery to wreck it—hence the word "sabotage," to resist by destroying.

The predecessor dictator of Hitler, Kaiser Wilhelm II, feared an untimely end by assassination, just as Hitler does today. He, too, ruled with merciless rigor. He incurred the everlasting hatred of his victims. He proclaimed, e. g., all Social Democrats enemies of his empire and ordered his young recruits assembled at Potsdam, if necessary, to shoot down in the streets said Social Democrats even if they were "your relatives, brother, and even parents. * * * You must obey my orders without a murmur."

How like Hitler speaking. Neither he, nor the Hohenzollerns before him, successfully stifled revolt against their tyranny. Already in the Reich there are portents of revolt.

All is not quiet and well there. There is great discontent.

There is much complaining and unrest within the German Army itself, reports returning traveler from Germany. The German people, rationed almost to nakedness and starvation, surfeited with endless propaganda, tired of "heiling" and kowtowing to officers, weary of enforced listening over the radio for hours at end to military bands and speeches about lebensraum (living space) and about macht und erde (power and earth), heartsick over the daily trainloads of wounded streaming in the cities from the Russo-German front—they are becoming disillusioned and suspicious.

The Atlantic charter of Churchill and Roosevelt, the insistent R. A. F. bombings have given them something to ponder over. The future does not look so rosy. They have grown to disbelieve most of the communiques of that runt, Goebbels, and of even the German high command.

They were not impressed with the show that Hitler and Mussolini put on at the Russian front. They realized it was a weak imitation of the Roosevelt-Churchill meeting at sea. It was "ersatz," like their coffee. The Germans have the jitters.

Seditious leaflets thrown on the pavement or stuck on house fronts, have lately made their appearance in Berlin. They are generally in doggerel rhyme. One of the most popular runs:

"Wir wollen Keinen Krieg (we want no war).

"Wir wollen Keinen Sieg (we want no victory).

"Wir wollen Keine Eiche (we want no honors).

"Wir wollen Hitler's Leiche (we want Hitler's corpse)."

Gauleiter Mutschmann, of Saxony, to put a good face on the tobacco shortage prior to the supply brought in and stolen from the Balkans, had placards posted up: "A good German does not smoke in public." The next morning the text had received an additional sentence. It said, " A good German does not fly to Scotland."

Hitler annihilates daily hundreds of those who refuse to bear his yoke. Yet for every one he shoots scores of others take the place of the martyred ones in plotting riot and revenge against him.

The behavior of the oppressed is no different today against Hitler and Mussolini than it was against Frederick the Great, Hannibal, Xerxes, Augustus, and Caesar. Then as now arson, assassination, riots, strikes, and insurrection were and are the most effective weapons.

The rule of force of dictators always engenders a reaction of subdued fires of hate with embers always ready at opportune time to leap to flame.

Farms for City Men

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

EDITORIAL FROM THE BOSTON POST

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include therein a very constructive editorial appearing in the Boston Post, entitled "Farms for City Men," which is worthy of profound consideration, and of legislative action:

[From the Boston Post of September 22, 1941]

FARMS FOR CITY MEN

A peculiar set of modern circumstances conspire today to make a genuine back-to-the-land movement opportune.

But, things being what they are, little is being done about the movement by local, State, or Government agencies.

Our Federal Government has proclaimed it desirable that the movement be stimulated. America was a better balanced country when most of its population was on the land.

Financial storms are weathered better on small farms than elsewhere. The man who can raise his own provender, or a large part of it, not only does not need to worry so much about depressions but he actually does not worry.

The large farms, which are almost like industries in themselves, are hit by depressions like any other large industries. They are troubled with labor and mortgage and loan involvements. But the little farms, such as we commonly have in New England, are the greatest buffers against money troubles and governmental idiocies ever conceived.

New England is a section where large cities are not far by rail or automobile from the deep countryside. Many of our city people have come to the cities from New England farms.

Therefore, with a war boom on and ready cash gradually getting into the hands of urban dwellers, the thought has come to many of them that this would be a good time to sink a couple of thousand dollars in a farm within 2 or 3 hours' driving distance.

Supposing the war boom lasts 3 years, with shipyards and factories giving regular employment.

In that time a man could earn enough money to buy a small farm outright. In this period he could visit it regularly by automobile to ready it and keep it from falling into irreparable disuse.

At the end of the boom he would not be absolutely helpless if a violent depression strikes.

He would not see his savings go for living purposes and finally have to go on relief.

He would have his house and this piece of land on which he could live nicely, with a reasonable amount of labor, and in addition he would be drawing from our historic soil the spirit of independence which is the mark of a free American.

The small towns throughout the countryside would benefit, for hundreds of their unused farms would go back on the tax lists and new blood would enter their communities.

The city workers should benefit in health, just as the rich men do when they retire to their estates and country acres. The buffer to widespread financial panic should be tremendous. The mills and factories could close right and left, but the provident worker would not have to worry.

Government agencies do not provide any system so that a thrifty city man or industrial worker can strike out now into the country and buy himself a home for himself and his heirs and assigns forever.

Banks are reluctant to adopt any system to encourage this sort of buying. Some Government agency should be set up immediately to make the back-to-the-land movement a simple and speedy affair, and this is the time to do it.

It Is Time for a Show-down

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, September 22, 1941

Mr. PLUMLEY. Mr. Speaker, the gentleman from Illinois [Mr. DIRKSEN] needs no defender or interpreter. He is perfectly competent to take care of himself, and anybody who tries to tell us what the gentleman from Illinois means by what he says might save a lot of time by stating that Mr. DIRKSEN says just what he means. If there is any Member of the House who can competently speak more fluently, eloquently, or effectively, I have yet to hear him.

You had better read his speech if you did not hear it.

NO DELUSIONS

I agree with the gentleman from Illinois [Mr. DIRKSEN] almost 100 percent. I labor under no delusions in undertaking to go a bit further than the gentleman from Illinois went, for there are those who are so convinced that no good whatever can come out of the White House or from Mr. Willkie that it is really no use to try to convince them otherwise or to

tell them that the time has come for them either to cut bait or to fish.

It seems to me that Senator CAPPER, of Kansas, has about the right idea as to what he and all of us should do when he says:

By taking the action he told us about, the Commander in Chief ordered the Army and Navy to clear the seas of all German and Italian war vessels they can find.

Whether, under our Constitution and traditions and way of life, the President should have consulted with and advised the Congress before taking this fateful step was the President's to decide. He decided not to do so. He cast the die himself. For weal or woe, the United States and the people of the United States are involved to whatever extent President Roosevelt has gone to implement his policy of national defense.

My own position is simply this:

For myself, I will support the national-defense program, as I have been doing. The United States must be kept a free and independent and powerful nation at all costs. The President having acted, the Congress of the United States and the people of the United States must and will support that action. There is no other course of action open to us.

NOW FOR A SHOW-DOWN

There must be a show-down. We have a right to know whether or not those directing the policies of the parties are going to continue to permit disunity, lack of harmony, and demoralization of defense by the extension of a political, partisan feud which results in inability to unite all factions for the common defense.

Is the defense program to be "damned with faint praise," stalled, defeated, abandoned because of the lukewarm attitude of the leadership, or are we going to get behind the one and only foreign policy and program, for there can be but one, which shall insure our adequate defense?

As Commander in Chief, the President assumes a tremendous responsibility. He has discharged it efficiently, in the main, despite the attempts of many to destroy popular confidence in him and in the foreign-policy program. These people have contributed no little to the situations of which they complain. They have confused and frightened the people, disturbed the morale of the men in the Army and Navy, and encouraged our enemies to believe that there could be no such thing as unity of policy in a democracy.

TOO BAD BUT TOO TRUE

It is time to ask these people, as Walter Lippmann suggested—

Whether they are in fact in favor of arming the United States, and, if they are, what effort they have ever made in these past 3 critical years to see to it that the United States had a great navy, a large air force, and an adequate army.

Mr. Lippmann goes on to say:

They go about saying that they favor national defense; but when, for example, did Mr. Hoover or Mr. WHEELER advocate in advance any important defense measure, or use his influence to get one enacted? Have they not been either ominously silent or openly opposed, while others, Republicans and Democrats alike, were struggling to plan, enact, and administer the defense program?

It will then be in order to ask them whether, in opposing effective support of Britain and China, after failing to commit themselves to the arming of the United States, they will, if Britain and China fall, continue to give even nominal support to the arming of the United States. If, with the Axis and Japan held at bay by the heroic resistance of the British and the Chinese and the Russians, they give no positive support to the American defense program, what will they advise the country to do if they succeed in paralyzing its support to Britain, China, and Russia, and if they compel it to stand alone against a victorious alliance of Germany and Japan?

Will they, if they manage to get America entirely isolated and encircled, advise us to continue arming for defense, or will they then advise us to reduce the appropriations, repeal conscription, demobilize, and disarm? If, as they now profess, they favor an impregnable defense, what will they do if the totalitarian victors demand that we disarm or prepare to fight? For, surely, they cannot be so infantile as to imagine that if Germany and Japan conquer all opposition in Europe and Asia, the victors will then sit quietly by and let the United States produce the greatest naval and aerial power on earth.

So when we come to the show-down with the opposition we shall need to know whether, when they have isolated the United States, they intend to disarm and surrender, or to arm and resist.

And these are only a few of the questions that they will be asked, and should be.

THE AMERICAN PEOPLE THINK

Do you know what the great majority of American people are thinking today? Obviously too few understand what a tremendous tidal wave of popular opinion is in the making. The people think, as evidenced by what my friend the Honorable W. Arthur Simpson said in his Patterns for Tomorrow, that

To be an isolationist is the easy way of life. Of course, we do not want to shed American blood. All the sympathy is on the side of America first. None of the little nations of Europe wanted war but today they are chained to the chariot of the conqueror. They hung separately because they would not hang together.

With the fall of Denmark, Norway, and Holland, and the encirclement of Sweden there perished the finest cooperative society in the world, the finest forms of social security, the finest types of health insurance, and the ideals of great peace-loving peoples. Finland has no heart in the struggle except to regain and preserve its own territories. Rumania does not want to fight for Nazi overlords and the good Italian peasants have no desire to perish on the steppes or in the marshes of Russia.

* * * * *

The wishful thinking of really sincere men and women and the skillful maneuvering of politicians who are afraid to face facts or fear loss of votes have little validity in the face of grim realities which must be faced without soft concealment. Liberty is fighting for its life.

The people know we are at war even if there are those who still think Hitler's intentions to embrace this hemisphere are honorable. He is a murderous fiend and a national rapist without any good intentions. We should do nothing to aid him in the slightest degree to accomplish his purpose to ravage the world.

WORLD FIRE OF WAR

However, the fact that the world fire of war was set by an incendiarist, a warmad lunatic, still at large, seems to make no impression upon those who, while they cry loudly that if their house be endangered they will unite to help put out the blaze, yet do everything in their power to hinder and to distract the firemen who are attempting to check the carnage before it reaches us. Their misguided attempts to check the ravaging flames of war by hurling their rhetorical bombs of dynamite and combustible hot air at the firemen and into the flames reflect no credit on them. Those who in days to come will coldbloodedly write the history of these times will make very plain that fact. It needs no prophet to make such an indisputable prediction.

EAT THEIR WORDS

There is another thing I want to talk about, and it does not take a seventh son of a seventh son to make this prophecy. Some of the disappointed, jealous, defeated office holders or seekers and some of the Members of Congress, who have been so vociferously vocal, privately and publicly, and who have taken every opportunity to denounce and to criticize the statesmanlike attitude of the titular leader of the Republican Party, the Honorable Wendell Willkie, will have to eat their words eventually. The position he has taken with respect to supporting the foreign policy of the President is impregnable. Moreover, it is approved by an overwhelming majority of the people. That is a sufficient defense against such attacks as have been made against him on this floor and elsewhere, were any such defense needed—which it is not.

However, to ignore such attacks might lead some to think that all of us are in agreement with them. We are not.

That these people have a right to do and to say what they please, I grant, but that does not make it right for them to do it; and I must not be counted as submitting to their pronouncements because up to date I have not publicly said I did not go along with them. My votes would indicate that fact, however.

It is going to be a rude awakening that will be theirs eventually. You just cannot get away with a continued attempt to hamstring defense under the guise of political patriotism. It never has worked. The wastebasket of the world is filled with the names and the speeches of those who in days gone have undertaken to do it.

I AM NO MOSES

Mr. Speaker, I am no Moses. It is not up to me to lead the Republican Party out of the wilderness. Nobody has asked me to do it. Nevertheless, I am the sole Representative of the only consistently Republican State in the Union, and as such I assert my right to be heard.

Recognizing the fact that there cannot successfully be two foreign policies followed by the United States, my State of Vermont has, almost unanimously, voted and voiced its determination, by its legislature assembled, to support the foreign policies announced by President Roosevelt.

This fact is significant. The people of Vermont are realists, believing in free speech and inclined to feel that abuse of that freedom is just as conducive to disunity in these days as would be any restriction of its use. Moreover, they pay little if any attention to the vaporings of that self-appointed, if not anointed, group of apostles of isolationism, nor do they heed those who see fit to take

advantage of the situation to vent their spite and voice their spleen of pet peeves against Mr. Roosevelt and Mr. Willkie.

VERMONT KNOWS

Up in Vermont we know that war is coming closer and closer every day. To us this means that there will be no A. E. F. We shall need our manpower here in order to defend ourselves. That is the answer.

We were not born yesterday. We look askance at the straw men these opponents of the program for defense and to insure the freedom of the seas are setting up to knock down for their own personal, political, and publicity purposes.

We are not too much disturbed, yet we view with alarm the attempts of these people to play politics with national defense. We disavow utterly and completely the right of these people to undertake to brand the Republican Party as opponents of national defense or of the President's policies, which are ours. They are in the wrong pew.

We have but little time to spend listening to or considering what these straddlers or "if and wheners" have to offer. We are of the opinion that the time has come for a show-down and that the sheep should be separated from the goats. We do not propose to be the goats.

We have a place where we think all those who are breeding disunity and discord ought to go. If they want to talk, let them accept and assume full responsibility for what they say, as individuals, and not as persons speaking for or under the banner of the Republican Party. They certainly do not represent the Republicans of this land, 80 to 90 percent of whom, though opposed to the New Deal and its mal- and mis-administration of internal affairs, are, nevertheless, 100 percent American, for the Constitution and for constitutional government, and, therefore, are back of the policies announced by the President and confirmed by the Congress.

APOSTLES OF DISUNITY

These apostles of disunity seem to get a lot of fun out of the fact that, as they say, "Vermont declared war against Germany." Let me tell them, as Molly does Fibber, " 'Tain't funny."

A WASTE OF TIME

It is a waste of time to undertake to talk to such egocentrics, although the history of the world is filled with stories that parallel the experiences of these days. There always have been and there always will be those theorists, egocentrics, world-saver pseudo-patriots (for their intentions are good) who, had their efforts been directed along proper channels, might have made a record for themselves than which none could be finer or better. However, because of mental aberrations, for which they possibly should not be held responsible, they have always fought windmills and furnished the hot air with which to disturb the atmospheric political currents. Except for giving them credit for being patriotic, though crazy, we might as well ignore them as they have been ignored, largely.

VERMONTERS ARE REALISTS

As I say, Vermonters are realists. To us it is not so much a matter of concern as to who got us into the war or how we got into it. We are in it. We know that Hitler's plan of world domination involves this continent, for he has told us so. These are facts. They cannot be beaten down.

Those of the Republican Party who have repeatedly talked for but voted against national defense, and who have assured us that they would be for national defense "if and when, and so forth and so forth," and who have been motivated by petty spite or petty peeve, have bred discontent and prevented unity and are laying up wrath against the day of wrath and against a day of reckoning which is as sure to come as is the sun to rise and set. The people cannot be fooled all the time.

THE REPUBLICANS OF THE NATION RESENT

The fact is that the Republican Party, en masse, country-wide, is against this group, and is against their attempt to brand it—the party—as opposed to national defense.

Now, no Member of Congress has been more active or more vociferous in his denunciation of the New Deal policies, internal and economic, than have I. The record bears out this statement. I have tried ineffectually to make the people understand where they were headed and which way they were going. I challenge anybody to match my persistent opposition to the administration's policies and its paternalistic inclinations.

However, this is a different proposition. We are at war. What profit is there in trying to tell the people we have been led into it? They know better. They have ears and eyes and brains. They know the Hitler program involves all of us, and them.

Those who profess to believe otherwise talk to empty seats or empty heads. They do the Republican Party at large a disservice by seeking to make it appear that the party is opposed to the foreign policies of the President. They straddle and wiggle and talk about coming down off the fence if and when they can decide on which side to jump and whether or not we are at war. They make a lot of noise. They get a lot of publicity.

WE ARE AT WAR

We are at war.

Of course, the people of this country are opposed to war and are opposed to an A. E. F. Why talk about it? What these good friends of mine neglect to appreciate is that the people are just as much opposed to all their attempts to play politics. The people are determined to defend themselves, to maintain this form of government, to preserve and conserve their blood-bought liberties.

Every day these misguided patriots spend trying to find some limb on which to hang themselves and those who are supporting the President's foreign policy, is just so much wasted time on their part. Every day the war comes closer and closer and knocks their theories galley-west. Every day, what these people say becomes more and more silly, inspired as it evidently is by their desire to talk while the opportunity for talking is good. That is that, and that is the truth. Forgive me.

The State of Vermont proposes, and I as its Representative shall undertake, to support the foreign policy of the President, the Commander in Chief under the Constitution. That is the only thing to do in order that constitutional government, about which these people talk so much, can be continued and our democratic form of government maintained.

TIME FOR A SHOW-DOWN

It is time for a show-down. It is high time for somebody to say something lest silence be assumed to be an assent to the remarks of the rabble rousers. I have spoken and have no wrong ideas as to the reaction that my colleagues will accord this speech.

"Thus endeth the first lesson."

Do not get the wrong idea. Do not be mistaken. I am laboring under no impression that it is up to me to lecture my fellow Members, nor am I trying to spank anybody, or to force my conclusions on anybody. Far be it from me to undertake to do that.

I am only asserting my constitutional right to say what I believe.

But do not fool yourselves. I am not talking for the fun of it. I am convinced that it is my duty to make this speech. And, believe it or not, I deliberated for a long time before reaching that conclusion. Then, before deciding to stick my neck out, I had access to a very careful survey of the country and a more careful study of the political situation, Nationwide, in order to get the picture as the people see it.

I have told the story in my own words, but I am assuming to speak for uncounted millions of real Republicans and Americans who do not propose to do otherwise than to defend themselves, maintain constitutional government—and that now—and who are determined that the good name and wonderful record of the Republican Party shall not be impugned by the has-beens or would-be's who presume or assume, unwarrantedly, to speak, as leaders, for the rank and file of the Republican Party. They do not speak for me, or them, or it.

I am making this speech on my own responsibility, but with the conviction that it is high time somebody on our side of the aisle let the world know that we could, and can, and will, in time of national emergency, as of today and as heretofore, rise above partisanship and prejudice and vigorously contribute to that unity without which we as a democracy are sunk with lost Atlantis.

Address by the Postmaster General

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

RADIO ADDRESS OF HON. FRANK C. WALKER AT ANNUAL CONVENTION OF NATIONAL ASSOCIATION OF POSTMASTERS

Mr. McKELLAR. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the address deliv-

ered by the Honorable Frank C. Walker, Postmaster General, at the annual convention of the National Association of Postmasters held at Boston, Mass., on September 18, last. It is a very learned discourse, and I think all will be interested in reading it.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is good to be in Boston this evening to meet with the members of the National Association of Postmasters assembled here for their annual national convention.

It is particularly appropriate that the postmasters are met in Boston for perhaps no other community in the United States is so steeped in postal tradition.

It was here in Boston that the first post office in America was established away back in 1639, when the Massachusetts General Court designated the house of Richard Fairbanks "as the place appointed for all letters which are brought from beyond the seas, or which are to be sent thither."

Years later, when a colonial postal system was laid out along the Atlantic seaboard, there was inaugurated a post route service by couriers on horseback between Boston and New York. This famous old post route, today knwn as the Boston Post Road, was the real beginning of the overland mail service in this country.

Here in Boston, at what is now 17 Milk Street, was born Benjamin Franklin, later to become first Postmaster General under the Continental Congress; and a native of Boston, Samuel Osgood was selected as the first Postmaster General under the Constitution.

In those days the important function of the Postal Establishment was the carrying of the mail, but since that time other functions have been given to us, functions which the public expects to see conducted as expeditiously, efficiently, and economically as modern-day invention, operating procedure, and organization will allow, and in keeping with the finest traditions of the Postal Service.

But the execution of our present functions is not a simple matter because for each of the many services we perform for the public there are thousands of technical and complicated problems which must be solved. These problems, both in the field and in the Department, are becoming of increasing complexity because of modern business and social life and the demands of the public for speed.

There are few households in the country, and certainly no business, which do not in some degree depend upon the Postal Service. Postal administration must be sensitive to local and temporary changes. If a new factory is constructed, if a new army camp is built, if a new community comes into being, the Postal Establishment must be ready to provide service.

It must prepare for special events such as Christmas, great industrial fairs and expositions, great conventions, vast public gatherings, and similar events, all of which demand special services. For none of these events, as the public has learned by experience, do we interrupt our normal and usual service.

Great emergencies and unforeseen events such as floods, droughts, fires, wrecks, which dislocate the ordinary service, create their own necessities, which the public expects us to meet efficiently and quickly. For instance, the induction and enlistment of hundreds of thousands of Americans in our military and naval service, the creation of new army camps and posts, and the transfers of the military forces to and from various camps and in the course of maneuvers created a mail problem that had to be met promptly and effectively. Many thousands of these young men inducted into the military service have left home for the first time. In order that they maintain the bond with their homes, their relatives, and their friends, it is most important that they receive the best possible mail service, as the maintenance of this bond of communication has a vital effect upon the morale of these young men. With the cooperation of the War and Navy Departments, we are today providing the boys in the camps and at sea with mail service the equal of that which they received back home.

I cannot impress too strongly upon our postmasters the necessity of constant vigilance so that we may continue to provide the best and the most expeditious mail service possible to those in the naval and military service.

In addition to our regular service and meeting emergency conditions, special tasks are given us from time to time because the Government and the public have come to expect that the Postal Establishment can do a job and do it well. Recently we have received the special assignment of distributing and selling throughout the Nation defense postal savings stamps and series E defense bonds. This task, in and of itself, is one of first magnitude. To finance the defense needs of our Nation and thus insure our national security in this chaotic world the full assistance of every American is needed.

After considerable planning, in consultation with postmasters, departmental officials of our own and other agencies of the Government, and postal employee organizations, a comprehensive program has been developed.

This program, which will soon come to the postmasters of the Nation for action, will require wholehearted and enthusiastic service by every postmaster and post-office employee. I am confident that we can—and we will—inspire the Nation by the excellence of our performance in providing this important service to national defense. Yet with it all, in keeping with our fine traditions, the regular and usual post-office service to the public will be continued unimpaired.

Effective execution of our regular duties, our special assignments, and meeting of emergencies combine to make the management of the postal business a most complex undertaking.

Our business is sensitive not only to the economic state of the country, with its peaks and valleys, but also to the fortunes of particular localities. Every general improvement in the business of the country is reflected by rising business in the Postal Establishment, and every decline in the prosperity is stated by lowering postal revenues. We are a fine barometer of general business.

Because of the general over-all growth and prosperity of our Nation, the Postal Establishment is now one of the largest single businesses in this country, if, indeed, it is not the largest in the world. It provides employment for more than 300,000 persons. Each year it handles, through some 44,000 post offices, more than 27,000,000,000 pieces of mail, weighing some 6,000,000,000 pounds, a city block of mail a mile and a third high.

We are a far-flung organization. Every day and night trains and planes carrying mail go to the four corners of the United States. Thousands of mail trucks circulate between post offices and the thousands of carriers who are going their way from village to village, house to house. Service to the ports and airfields link the Postal Establishment to every village in the civilized world.

We in the Postal Service manage and operate a Nation-wide savings-bank system with resources of over $1,300,000,000. Through the money-order system each year we issue, and later pay out, more than 250,000,000 separate money orders. The Postal Establishment as a whole during a year handles more than $8,000,000,000 in cash.

There are vast numbers of special-service transactions each year. Through post offices 55,000,000 registries are made, 80,000,000 insurance transactions are completed, we make 35,000,000 C. O. D. collections, and we execute 96,000,000 special deliveries.

Of these services the public has long known. However, it has been little aware of the problems behind the familiar everyday business of the Postal Service. But in the past few years the public has shown itself ready in many ways to interest itself in its own business, and one of the public's largest operations is the Postal Establishment.

Although it is a business, yet it differs from a commercial business, for a commercial business must constantly seek out and constantly entice its customers and the public to trade with it. The public, however, has ordered the Postal Establishment by law to have available and in constant readiness its services to any and every person who chooses to use its fine conveniences.

Our responsibility is to the public; it is not merely a responsibility to some private individuals. Our organization, our methods of operation, and our procedures must be such as will insure the continuity of service and the stability and efficiency of our operations.

Another important difference is found in the matter of economy. In private business the results of extravagance may affect a small group of employees, a small group of investors, or a small group of stockholders. Extravagance or imprudent management of the Postal Establishment—indeed, of any post office—affects every single man, woman, and child in the United States, for each and every one of them are taxpayers.

If inefficiency is allowed to creep into our operations, if economies are not practiced, the public, slowly but nonetheless surely, becomes willing to support drastic changes.

Public criticism, which is an outside check on extravagance, is slow to rise. No department of government should conduct itself so as to merit public criticism.

I have heard it argued that while management of private business has to justify its stewardship to its stockholders, no such spur exists in the case of the Postal Establishment. Furthermore, it is argued that the necessity of maintaining a particular company's business in the face of outside competition and the requirement of earning a dividend that will satisfy the stockholders is an incentive to efficiency which is absent in the case of the Postal Service. It is therefore argued that an organization running a business without stockholders, and performing its prime function without competition, will lack the spirit of progress.

I sincerely feel that the Postal Service is progressive. The glorious reputation of the Service, the many conveniences we have for the use of the public, did not come by mere accident or ordinary voluntary growth. They came because thousands of employees, hundreds of postmasters, dozens of officials, inspired by love for the Service, have studied public needs, worked out practical procedures to handle those needs, and have done their work well.

The Postal Service always has been and still is evolutionary. Our last service for the public has not been inaugurated; our work is not one simply of refinement of method of operating present conveniences. The public expects that we shall improve and extend conveniences for its benefit.

As we review our history, we are mindful of the fact that in the main the public has been a good employer. While it has not been lavish in its treatment, the public, through the years, has seen to it that we employees in the Postal Service have been fairly and honorably treated.

To conduct this business for the public we have been permitted a generous personnel. For new tasks and assignments additional employees have been provided. Furthermore, in improving working conditions for us in the Postal Service, such as reducing hours, the public has further authorized additional employees.

As we review the various acts of Congress, many of them passed during this administration, we appreciate that we have been favored in our working conditions.

We have, in common with other governmental departments, provision for retirement

both for age and disability, and benefits for injury or death in the course of employment. In common with other Federal employees we have provisions for annual vacation and sick leave; provisions for grade to grade, administrative and automatic or successive promotions. We are establishing machinery whereby employees may appeal from administrative action in respect of assignment, ratings, and classification.

But in addition generally in our service we have a 40-hour week. We have a workday limit of 8 hours in 10. We have payment for overtime. We have provision for compensatory time. We have a night differential. We have security of tenure in the Postal Service, and recognize the principle of seniority.

Each of these is a charge on the public in two ways, one, in the charge to each customer of the Postal Service, and two, the charge to the general taxpayers of the country. These two charges have been paid with little resentment because the postal services are services that the public wants.

However, because the public has ordered, and is presently paying for the various conveniences provided by the Postal Establishment, and because there is no particular clamor about it, it does not necessarily mean that further important postal-service improvements are not possible. Nor does the fact that the public is satisfied to a large extent with our services mean that we are not expected to continually and constantly make more efficient and economical the conduct of our business.

This is the fifth successive year in which postal revenues have reached record highs. A year ago our revenues reached the then unheard of total of $767,000,000, but it was apparent with the defense program getting into full swing with the accompanying boom in business and industry that the peak had not been reached. This past year postal revenues and volume were the highest in history. Preliminary figures indicate that never before has there been such a volume of mail of all types and classes moving through the post offices of the land. This was reflected in postal revenues for that period which for the first time reached the peak sum of approximately $812,000,000.

This means that the public has placed with us the greatest volume of orders we have ever received. However, unlike a commercial business, we cannot place our increased orders from the public on the shelf and thus build up a backlog of orders to await the time when with existing plant facilities and personnel we may finally make delivery on the orders. Neither can we, like a commercial business, in slack times build up a stock pile of our wares, so that in periods like the present we can fill orders from an inventory built up when our orders did not keep existing plant and facilities fully occupied.

We must fill the orders as each one of them is placed. We must carry the mail now. We must provide the service when the public wants it in whatever amount or volume it wishes.

It is for these reasons that increased postal revenues actually require increased postal expenditures. We should conduct the affairs of the Postal Service in such a manner as to be in a position to cushion ourselves for the decline in postal revenue and volume, that is certain to be felt some time in the future.

You postmasters must keep these facts in mind at all times, and you should be guided by this outlook in considering your requirements from the budget of the Post Office Department.

We have only to look back at the recent history of the Post Office Department to see what happened when the Department expanded its forces at the peak of the postwar boom in the late 1920's.

You know of that experience. When postal volume, and particularly postal income, dropped sharply with the corresponding curtailment in business and industrial activity in the early 1930's, the burden fell on the postal personnel.

We must guard against that today. We must look at the current business increase throughout the Postal Service not only in terms of today, but in terms of future years when postal income is bound to drop with the end of great national-defense outlays.

I do not suggest that no new postal extensions, or services will be authorized at this time, but I do say that it is the patriotic duty of every postmaster to determine the absolute necessity of each such addition on the basis of a definite long-range need of the Postal Service and the public.

In view of the vast sums that represent postal expenditures, the public has the right to require us to seek constantly to control our expenditures and reduce them.

To fulfill our public trust, we must constantly scrutinize every service. We must take pains to ascertain how our various conveniences can be adapted and improved, and what services are needed to fit more closely the needs of business and social life. We must better evaluate new postal proposals and constantly seek out more efficient methods. We must search for ways and means to simplify procedure and eliminate records, reports, and forms that have become outmoded. We must seek better and more accurate information as to costs, seek possible reductions of costs and yet retain and increase efficiency in operations.

The need for financial studies and investigations of the various services of the Postal Establishment is therefore a continuing one.

I should like to see us more and more bring to the notice of the public the many post-office facilities which individuals and business could use more fully to their own advantage, but which are often unknown. I should like to see rules, regulations, orders, and instructions which guide the postmasters in their day-to-day duties simplified and written in plain language. Some of our rules lack clarity, many are outdated, many require amendment and modification. I should like to see a more widespread establishment of our own schools of instruction for post-office personnel so that we may all the better understand operating and financial procedures.

As we go forward with our work I am hopeful that in the time to come there can be devised a practical and effective plan whereby there are provided more opportunities for postmasters to come in touch with officials of the Department so that the postmasters and the officials will know more of each other's problems, so that there may be more exchange of ideas. There are great numbers of thoughtful postmasters who, with the interest of the Service at heart, are continually studying their own operations and constantly improving their own offices. There should be more. There are great numbers of earnest postal employees interested in the improvement of the Service. We should encourage that interest. From even the least of these can come many helpful and wholesome ideas and suggestions.

The vast majority of those in the Postal Service, indeed with very few exceptions, all personnel of the Postal Establishment honor the trust reposed in them by the public which they serve. We have a reputation for integrity. The account of stewardship of the 44,000 postmasters, as I see it reflected in the day-by-day operations, not only is a great tribute to this fine Service, but demonstrates clearly that we can do much to improve and become more efficient. To that task we should dedicate ourselves. And on that task America confidently and proudly knows you will do your duty. I thank you.

The Obligations of Citizenship

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ADDRESS OF HON. ARTHUR CAPPER, OF KANSAS

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a radio broadcast delivered by myself over broadcasting station WIBW, Topeka, Kans., and the Kansas network, September 21, 1941, on the obligations of citizenship in these times.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends in the radio audience, by a series of successive steps very similar to the "piece by piece"—"country by country"—methods by which Hitler has conquered one nation and then another in Europe, the United States in the past 2 years has been led to the very brink of active military participation in the latest European war.

Through a series of successive pronouncements and actions the direction, the objective, of the foreign policy of the United States has been changed from defense of the Western Hemisphere to an unrealistic but very real policy by which the United States recognizes its responsibility to build a democratic world.

Now, as I pointed out months ago, national defense—even defense of the Western Hemisphere—is one thing.

Carrying the four freedoms everywhere in the world is, as I see it, something entirely different.

I believe it is only fair to those of us who have opposed each of these successive steps by which our entire national policy has been changed—in effect, has become an international foreign policy instead of an American foreign policy—I repeat, it is only fair that the distinction we of the opposition make between national defense, including Western Hemisphere defense on the one hand and a policy on the other hand of underwriting the building of a democratic world through force of arms and economic pressure—that this distinction be kept in mind.

Very frankly, as between a foreign policy which is based on the interests of the United States of America and a foreign policy based on domination of the world in the interest of international solidarity, I consider the American foreign policy better for the United States—in the long run a sounder policy for all the world—than an international foreign policy calling for domination of all the world by a chosen people.

Unless I work myself into a frenzy, whether a frenzy of fear, a frenzy of hate, or a frenzy of Messianic fanaticism, it is very difficult for me to see how the United States, even with the assistance, guidance, and leadership of Britain, can hope to bring an end to the hitherto endless conflicts among scores of European nations, nationalities, and peoples.

Suppose we had in the United States, instead of 48 States inhabited in the main by homogenous peoples, recognizing ourselves as one people, one nation—suppose we had 26 or 27 or 30 States, each sovereign, each

fearful of the others, frequently with age-old hatreds of each other. We are having trouble as it is in attaining and maintaining complete national unity.

Looking at this picture, how can you, except in moments or days or years of frenzy, hope for international unity between Communist Russia and the United States; between Germany and France; among the warring Balkans; among China, India, Japan, Australia, New Zealand, Argentina, the Dutch Indies?

My friends, I have tried to paint this background for you at this time because, as I fully realize, the time may come soon when we no longer can think of our foreign policy in terms of the interest of the United States of America, or even of the interests of the Western Hemisphere. It may be only a matter of months, weeks, or even days, before the United States of America has become definitely, and I fear inextricably, merged into the tumult and conflict, the maelstrom, of European power politics. A few more steps in the direction we are going, and the only thing any American can consider will be winning the war.

I had hoped this place would not be reached. I still hope, though rather desperately I must admit, that the stage of all-out war for the United States will not be necessary.

I believe just as completely and sincerely as I ever did that the perpetuation of the Republic of the United States; the preservation of democracy in the United States; depends upon our keeping out of the entanglements, the hatreds, the jealousies, the intrigues, and quarrels and conflicts and wars of the Old World.

I know that the American farmers, the American workers, the great mass of the American people, want no part in this all-out war, no matter how high-sounding the language with which the bitter pill of truth is enameled. These folks know if we get all the way in they will do the suffering; they will lose the war, no matter what government or combination of governments forces the enemy capitulation.

I am opposed to sending our American boys to fight in foreign lands in what I consider, very frankly, a foreign war. If we keep them at home, and prepare an adequate national defense—then if our country is attacked (which in my judgment it will not be) our boys will be ready to defend us; they will not have been already sacrificed in vain.

While I am opposed to our getting into this war—have been opposed; still am opposed—I shall continue to do my best for strong and continued armament for national defense.

So much for the international aspects of the world situation. Now, how about our situation, right here in the United States?

We have the four freedoms, freedom of religion, freedom of speech, freedom from fear, freedom from want, in measurable degrees. I can worship God in my own way, and the God that I choose to worship. I can speak my mind, express my opinions—except perhaps in some isolated communities, in parts of some States. Candor compels the statement that we do not have entire freedom from fear, nor entire freedom from want.

Nor will we attain freedom from want (for ourselves or for people every where in the world) through war. War brings poverty, destitution, suffering. The burden of debt from our previous war "to save democracy and to end war" was the biggest single factor in the depression that gave us the New Deal. The $40,000,000,000 that war cost us dealt a heavy blow to freedom from want in this country, in the whole world.

This Nation is not a nation of pacifists, though we are basically a peace-loving people. This Nation won its independence from Britain—and from involuntary participation in Old World wars—by fighting and winning the War of Independence. This Nation, united and unafraid, would fight to retain that freedom and independence.

The Constitution of the United States, which I for one still regard as the fundamental law of the land, provides for the making and waging of wars. It provides that the Congress of the United States has the power, and the responsibility, to declare war.

I hold that means that the United States should not enter this war, or any war, without the approval, the action of the Congress.

If the question of entering this war was submitted to Congress, I would vote against going to war.

If Congress declared war, as the Constitution provides, I would consider myself, and every other loyal American, bound from that time on to support the declaration of war; to help win that war; to make every sacrifice necessary to win that war.

A week ago tonight, I made a statement that has been criticized in some quarters, commended in other quarters, through what I believe is a misunderstanding of what I said. I said at that time, and I repeat the statement:

"For myself, I will support the national-defense program, as I have been doing. The United States must be kept a free and independent nation at all costs."

Let me call attention to those words, "a free and independent nation at all costs." I mean just that.

Continuing I said—and I now repeat—what is to me the perfectly obvious fact that after the President, as Commander in Chief, has ordered the Navy to shoot first, neither the Congress nor the people can countermand that order. It is an accomplished fact. Following are the exact words I used:

"The President having acted, the Congress of the United States and the people of the United States must and will support that action. There is no other course of action open to us."

To me that is perfectly obvious. This does not mean that I approve the action taken, even though I must accept it. It does not mean I believe the President had the right—though I do not question his having the power—to put us into the war. I say he does not have the right.

It certainly does not mean (because this order to shoot on sight is an accomplished fact) that I cannot oppose, because I will oppose, the step which may follow: A declaration of war and the sending of American expeditionary forces abroad to fight in foreign wars. I am utterly and unalterably opposed to that.

Getting back to our Government. The Constitution gives certain powers to the President; certain other powers to the Congress. The forefathers did not contemplate a one-man government, any more than our American system contemplates a one-party government.

I believe I am a realist, as well as a patriot.

Congress has given many of its powers to the President. Few of them have come back to Congress. Another emergency has been drawn out of the hat always before an existing emergency ended.

Congress continues to give away its powers to the President; sometimes these powers, from my viewpoint, are taken by the President a little at a time without the formality of Congress yielding them. And until another election is held, Congress is powerless to take these powers back.

I tell you, my friends, if this process is kept up, there is danger that there soon will be no Congress such as was contemplated by the framers of the Constitution.

Without any authorization whatever by Congress (in the face of a formal declaration of intent by Congress in the terms of the lease-lend bill) the United States today apparently is in an undeclared—though not yet an all-out—war.

This is not a question of hating Hitler. No one hates the things for which Hitler stands, the things which Hitler has done, more than I do. I sincerely hope that this madmen's war in Europe will destroy both nazi-ism and communism.

But I say this is a question of preservation of the United States, and its preservation as a free and independent nation. That is where a line is drawn between nationalism and internationalism. I grant anyone's right to favor internationalism. As for me, on this issue, I am for nationalism.

Of even more immediate moment is the question of preserving our republican-democratic form of government. As things are going in the United States today it seems more and more a struggle between legislative government (with the Executive enforcing the laws) and a one-man government (with the legislative branch relieved of all power except to pass the necessary appropriations).

If we become involved, all-out, in Europe's war now, as seems likely, will it be by authority of Congress or by decision of the President? Is that the way the gravest decision our Government can make—peace or war—be decided?

I do not hesitate to repeat that we should build our air force and our Army and Navy to superlative strength so that no nation will dare attack us. President Roosevelt has my support to the limit on that kind of a program, and will continue to have it.

But I do object to sending our men overseas to fight other peoples' wars.

I am opposed to our going into undeclared wars solely upon announcement by the President, when the Constitution places that responsibility and power in the hands of Congress.

I am opposed to our attempting to police all Europe, Asia, Africa, and the Seven Seas; and to our paying the costs of all their wars.

I want to see Hitler stopped. I want nazi-ism and communism stamped out.

But my first consideration is the defense of my own country.

I am for saving America for Americans.

Addresses, Ohio Federation of Republican Women's Organizations

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ADDRESS OF HON. ROBERT A. TAFT, OF OHIO

Mr. TOBEY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the address delivered by the able senior Senator from Ohio [Mr. TAFT] to the Ohio Federation of Republican Women's Organizations on September 22, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three years ago I was elected by the people of Ohio to represent them in the United

States Senate, principally on a program of opposition to the domestic policies of the New Deal. Until the war in Europe we succeeded in blocking any further extension of the New Deal program, and I think it is fair to say that except for the war the people of the entire United States would have expressed in 1940 the same opposition to the New Deal which the people of Ohio made evident in 1938.

1. I AM OPPOSED TO THE PRESIDENT'S POLICY OF INVOLVING THE UNITED STATES IN THE EUROPEAN WAR

For most of the time since I have been in Washington, however, the principal issues have related to foreign policy. I have found myself in substantial disagreement with some of the fundamental features of President Roosevelt's foreign policy because that policy has been guided by an underlying determination to involve the United States in the problems of Europe, to proselyte the four freedoms throughout the world, and to intervene in the European war.

I voted for repeal of the arms embargo because I felt our markets should be open to the French and British, who had always relied upon those markets and supported them. I was in favor of extending aid to Britain also by loans of money and extension of credit, even though it stretched strict principles of neutrality. But it gradually became apparent that the foreign policy of the Roosevelt administration went much further than this. The only logical conclusion from the many speeches made by the President is that he is in favor of intervening in the European war in order to assist Great Britain against Germany. While he has not acted as quickly as the interventionists desire, intervention is the logical and inevitable conclusion of his policy.

There are many people in the United States who believe we should go to war with Germany in order to crush Hitler. While I do not agree with their arguments, I recognize their sincerity and strength. But I have often stated my own reasons for my conviction that the United States should refuse to intervene in the European war. If isolation means isolation from European war, I am an isolationist. My reasons today are the same reasons I gave in 1939. My position is the same position occupied by the President in 1940. It is the same position occupied by Mr. Willkie in 1940. It is the same position occupied by the American Legion for years. It is a policy of all-out defense of America on the lines of the Atlantic and Pacific Oceans, plus the extension of aid to Britain short of war. I see no reason to change those views. In fact, there is much less danger to this country from Hitler today than there was 2 years ago, certainly much less than there was 1 year ago.

2. THE PRESIDENT'S POLICY HAS CONSTANTLY DECEIVED THE PEOPLE AS TO HIS REAL PURPOSE

Not only do I disagree fundamentally with the President's policy, but I object strenuously to the deceptive way in which that policy has been developed. It is perfectly apparent now that that policy has always been steadily designed to involve the United States in a shooting war as rapidly as any semblance of public opinion could be rallied in support of such action. But the President has been frank neither with the people nor with the press. Only a year ago he was promising the American people that "We will not participate in foreign wars, and we will not send our Army, naval, or air forces to fight in foreign lands outside of the Americas except in case of attack." Conditions today are in no way different from what they were a year ago when that promise was made. In fact, at that time Hitler had almost complete domination of the air over England, and it looked as if an invasion might occur at any moment. Today an invasion of England is almost impossible. The German, Italian, French, and British Navies have suffered substantial losses; our own is stronger than it ever was. We have a tremendously increased capacity to build airplanes.

When the lease-lend bill was before Congress, its advocates asserted that it was intended to secure peace, but as a matter of fact it placed in the hands of the President that power to involve us in war, which he is now exercising. The occupation of Iceland was represented to be defense of the United States. I pointed out at that time that the President had no legal or constitutional right to occupy Iceland, which is in the eastern Atlantic and as far away from the United States as Ireland. The occupation of Iceland, of course, was not defense of the United States, but defense of Great Britain. Since it is in the actual war zone, it has led and will lead again inevitably to incidents like that of the *Greer* and ultimately to war. In my opinion it was so intended by the President.

The President in his recent speech, without consulting Congress, proposed a new policy, which if carried through, must lead to war with Germany. He is ordering the Navy to attack any German and Italian war vessels in what he vaguely calls our defense waters, reserving to himself, apparently, the right to determine what waters are defense waters. Of course, such defense waters now include the Atlantic all the way to Iceland, which is three-fourths of the way across. His speech seems to imply that they may include any waters to which American ships, or neutral ships carrying American contraband may go, such as the Red Sea and the Mediterranean. It is a policy of convoying, although the President himself has said that "convoys mean shooting, and shooting means war." In view of all the outrages perpetrated by Germany in Europe, there are arguments for our entry into the war, but the pretense that these things are being done in the name of defense is not worthy of the ruler of a sovereign nation.

3 THE PRESIDENT HAS NO LEGAL OR CONSTITUTIONAL RIGHT TO ENTER UPON A NAVAL WAR WITH GERMANY

In my opinion, the President has no legal or constitutional right to enter upon a war, declared or undeclared, with Germany and Italy without action by Congress. There is, of course, no question that the Constitution confers the right to declare war only upon Congress. It has been frequently stated that the President has power to begin a war because he is Commander in Chief of the Army and Navy. It may well be true that the President has it within his power to make war without authority from Congress. Undoubtedly, since he is Commander in Chief of the Army and Navy, if he orders the Army or Navy to go anywhere in the world, they will obey him. In this sense he may perhaps have it within his power today to begin even a land war with Germany by ordering the Army to land on the German coast. But this does not mean that he has any legal or constitutional right to order either a military or naval attack on Germany. The mere fact that power may be usurped is no evidence of legal right.

The President's legal powers are limited to the defense of the United States and of its citizens and of the property of its citizens. Of course, he has, without the approval of Congress, the right and duty to resist insurrection and invasion of the United States. If another nation makes or declares war on the United States, it is the President's duty to carry on that war, whatever Congress does.

4. THE PRESIDENT'S POLICY IS UNSOUND

In my opinion, the action of the President is therefore contrary to law and to the Constitution. It is clearly contrary to the promises which he made to the people before the last election. Finally, it is supported by utterly unsound arguments, trying to give the policy a defense aspect on the ground that we are defending the freedom of the seas. There probably could be no more illogical discussion of the freedom of the seas than that contained in the President's address. He confuses freedom of the seas in time of peace with the very different question of freedom of the seas in time of war. No one that I know of is proposing to deny the freedom of the seas in time of peace. In time of war that freedom has always been strictly limited by no nation more than England. It has never included the right to send contraband material to one of the nations engaged in war.

Under international law any German raider or submarine has a perfect right to go anywhere it can get and to stop any vessel carrying contraband. In the sinking of the *Robin Moor* and the attack on the *Greer*, the Germans went far beyond their legal rights; but even in the World War we did not consider such incidents a cause for war until they had occurred many times, resulted in great loss of American life, and been apparently adopted as a deliberate policy.

Furthermore, the policy of the Neutrality Act was to avoid such incidents by keeping American ships away from the areas in which they might occur. That policy in the main has been successful, and I believe that the people thoroughly approve of it. They are not disposed to go to war because of some interference with American trade thousands of miles away from the United States.

If there is any such thing as freedom of the seas in time of war the British today are limiting it far more than the Germans. No American ship can take even foodstuffs to Belgium, Holland, France, or any of the occupied countries of Europe, because the British maintain the same kind of general blockade against which the President protests in the case of Germany, and the Neutrality Act is still the law of the land.

5. THERE IS NO OBLIGATION TO SUPPORT THE PRESIDENT'S WAR POLICY WHEN IT HAS NEVER BEEN APPROVED BY CONGRESS

Holding these very definite opinions on the legality and the wisdom of the President's policy, should I now cease to express those opinions simply because the President's actions relate to foreign affairs? It is suggested that because the President has taken this action, everyone must acquiesce in that policy for fear that in some way the prestige of the United States will be affected. With that position I absolutely disagree. Once the United States, in a constitutional way, adopts a foreign policy, I propose to support that policy without stint or qualification. I have supported the policy of the lease-lend bill, although I believe that the bill went far beyond the proper assistance we might have given Great Britain. I propose to vote for the new lease-lend appropriation.

But the lease-lend policy does not justify the President's proposal or the orders given to the Navy. In fact, the lease-lend bill, extensive as are the powers given, expressly provides that nothing in the act shall be construed to authorize the convoying of vessels by naval vessels of the United States, the entry of any American vessel into a combat area, or the extension of the use of the land and naval forces of the United States.

The policy of the Neutrality Act, as modified by the lease-lend policy, is still the law of the land. It is a policy of defending the United States on the line of the Atlantic and Pacific Oceans, plus the delivery to Great Britain, in the United States, free of charge, of war materials and equipment. While such a policy might lead to war, yet if it were carried out in good faith by a President desiring peace it probably would not have involved the United States in the present war.

But the President has now pressed far beyond that policy without consulting Congress. I deny the right of the President to

take us into war against the wishes of the American people without obtaining authority from Congress, designated by the Constitution as the people's representative on the question of waging war.

If Congress repeals the Neutrality Act and authorizes a naval war to eliminate German vessels from the Atlantic, I will support that policy, even though I disapprove it, as I have the lease-lend policy. But I am convinced that if the question of war is submitted to the people by referendum or if it is submitted to Congress, a great majority will speak for peace and aid to Britain, but against war. The most recent Gallup poll, carefully ignored and played down by the whole interventionist press, shows that the percentage of American voters favoring American entrance into a shooting war has declined in 2 months from 24 to 17 percent of the American people, and that sentiment in favor of convoys has decreased from 56 to 52 percent. What right has the President to take us into war against the wishes of the American people? What right have I, as a representative of 7,000,000 of those people, to acquiesce in that policy without protest?

It is not an agreeable task for me to question the authority of the President to take any action which he has taken in the name of the Government of the United States, but I believe it would be most unfortunate if the Congress of the United States acquiesced without protest in acts of the President which may nullify for all time the constitutional authority distinctly reserved to Congress to declare war.

Today the defense program is being used to promote every policy which the New Deal advocated in time of peace in the direction of economic planning and state socialism. The President is asserting his right to make war without the consent of Congress. He is asserting his right to fix prices without the consent of Congress. The theory that an emergency justifies the suspension of all peacetime rights is combined with the theory that the President can declare an emergency at his own sweet will. Only last week Arthur Krock, the leading columnist of the New York Times, seriously discussed in the Times the proposition that the emergency might be used as an excuse for setting aside the election of Congress in 1942. If Congress does not protest against usurpation of power by the present Executive, there will be no Congress left to protest.

6. THE CONSEQUENCES OF A WAR POLICY ARE GIVEN NO CONSIDERATION

In my opinion, those who are urging our entrance into the war are utterly mistaken. I believe that if we choose to defend the United States on the line of the Atlantic and Pacific Oceans it is so impossible for Hitler or anyone else to attack us that there will not even be an attempt to make such an attack. We have the largest navy in the world. We have unlimited ability to increase our shipbuilding capacity. The President's argument that the total shipbuilding capacity of Europe is greater than ours is utterly unsound, because ours can be increased indefinitely, and our ability to manufacture steel and other ship materials is greater than all of Europe combined. Furthermore, we will have several years' start on our two-ocean navy, and Hitler could never catch up with us. It would not be easy for him to organize the productive capacity of Europe. How is he going to get any enthusiastic cooperation from the shipbuilding labor in a dozen countries whose people he is oppressing with an alien dictatorship?

The ability of airplanes to fly the Atlantic Ocean has been used to frighten the people into the belief that America is now more subject to attack. The truth is that the development of air forces has made it much more difficult for an army or a navy to cross the Atlantic Ocean. No navy far from its base can stand up against a great air force operating from land bases. Troop transports are particularly vulnerable to air attack. With our great capacity to build airplanes today, even a navy twice as large as the American Navy could not safely approach our shores. The threat of an attack by Hitler is, and always has been, a bugaboo to scare the American people into war.

The war policy has never been thought through. It seems to me impossible to bring a war with Germany to a successful conclusion except after many years of destructive warfare. Vast expenditures of money and men will exhaust this country as they are exhausting the world. In the end we may crush Hitler, but in the process of doing so we are likely to set up a complete dictatorship in this country from which we may never return to American democracy as we have known it.

Of course, it is being said now that there will be no expeditionary force. Mr. Walter Lippmann is now advocating the policy of a naval war while we reduce the Army. But just as the President advanced from peace to lease-lend, and from lease-lend to a shooting naval war, the adoption of a naval war policy, after a few months of stalemate, is bound to lead, Lippmann or no Lippmann, to another American expeditionary force.

Then if we succeed in crushing Hitler and marching to Berlin, that will only be the beginning. The advocates of war frankly now look forward to domination of the world by the United States and Great Britain. That implies not only the shutting off of all other nations from the high seas except with our consent but a continued policing of the continent of Europe to prevent the development of another Hitler. For such a policy of imperialism this country is not adapted. It is inconsistent with the whole theory of American democracy. Either the entire structure will tumble about our ears or we will have to turn ourselves into a militaristic and totalitarian nation as Rome turned from a republic to an empire.

Furthermore, let us not fool ourselves about the four freedoms throughout the world. Those freedoms, and a democratic form of government, cannot be conferred on the rest of the world by force, by war, or by our domination of the world. Democracy must rest on local self-government arising from within each people itself.

Let those who favor intervention in the war think through the course which they are advocating. If that is the course we are to take, it should be thoroughly debated by Congress either on the proposal of a declaration of war or on a repeal of the Neutrality Act. If and when the American people do decide to go to war, I will support that war as vigorously as the President himself, but I shall continue to deny the right of the President without consulting Congress to involve us in a war with Germany, or to send American naval vessels, either as convoys or otherwise, into the war zones of Europe. I believe it is not only the right but the duty of all those who feel as I do to continue to oppose the arbitrary actions of the President.

Constitution Day

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ADDRESS OF HON. W. LEE O'DANIEL, OF TEXAS

Mr. McFARLAND. Mr. President, I ask unanimous consent to have incorporated in the RECORD the able address delivered by the junior Senator from Texas [Mr. O'DANIEL] at Fair Park, Dallas, Tex., on Constitution Day, September 7, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I deem it not only a privilege, but it is a great pleasure to me to have the opportunity of speaking to the citizens of Texas at this time. This is Constitution Day. This Constitution Day is set apart in commemoration of the signing of the Constitution of the United States.

I believe that when this document was signed it enunciated the greatest principles of government which have ever been conceived by the minds of civilized and Christianized people. I believe that the fundamental principles laid down in the Constitution were at the time it was signed milestones in the progress of mankind toward the ideal of a free and representative democracy. I know that it has recently become somewhat unpopular to talk about the fundamental principles of the Constitution of the United States. I know that we have among us today many people who look upon the Constitution as something to be evaded rather than something to be observed. But I, for one, believe that the principles of government laid down in the Constitution were sound when this document was written and I believe they are just as sound today as they were then. Furthermore, I believe that many of the difficulties which face us today could have been avoided if we had steered our course a little closer to the ancient landmarks which were given us by the fathers of this Nation.

There are many things which deal with detail legislation going on in Washington which I should like to discuss, but I feel that it would be inappropriate on the occasion of this great patriotic rally to consume the time in a discussion of legislative details because we should at this time be thinking more in the broad terms of fundamental principles of government. Therefore, if I make reference this evening to pending legislation, it shall be only incidental to the main objective which I have in mind, and that is a discussion of some of the broad fundamental principles of government upon which this Nation has been built, to the end that we may consider now the course which we are charting for future generations.

We are now engaged in a great effort to equip this Nation to defend itself and to preserve the principles of democratic government here and abroad. I should like to say, with all of the emphasis which I can command, that I for one believe that if we are to maintain the principles of democratic government in the United States that this Nation must be ready and willing to lend aid in a proper manner to the maintenance of these principles throughout the world. The principles of right and justice are at stake, the issue is being determined as to whether or not the world shall live under a dictatorship or if we shall continue to have free governments where free people rule.

I am as much opposed to war as anyone, but I say to you that I am thoroughly committed to the principle that we should grant all the aid we possibly can to England and to the other democracies that are fighting to save civilization.

I believe in stating plain facts. I do not believe in stating nonfacts. This, as yet, is not our war. We have not declared war. When and if it becomes our war—and God grant that shall never happen—but I say, when and if it does become our war, then we shall conduct it as we have conducted every one of our previous wars and win it, as we have won every other war. In the meantime, I am strongly in favor of furnishing all the war equipment and ammunition we can

possibly spare to any nation that will fight, weaken, and possibly subdue the common enemy of democracy which has its angry covetous eyes focused on us. It is unfair in the extreme to charge those who are willing to fight to maintain these principles of free government, with being warmongers. Was George Washington a warmonger? God grant no ungrateful beneficiary of his bequest to freedom and civilization may accuse him of being such. Were Abraham Lincoln, Grant, Lee, and others, who fought and sacrificed for noble principles, warmongers? God forgive any sane citizen of this great united Republic from ever making such an accusation. Were Sam Houston, Travis, Crockett, Bonham, and others warmongers because they fought and sacrificed their very lives on the altar of freedom and liberty, that we might live to enjoy the fruits of their efforts? God forgive any descendant of that generation of brave people from ever saying they were. Those three wars, successfully fought and won on American soil, should convince any nation or combination of nations that American force is invincible and American freedom is perpetual. It is founded on the unchangeable Word of God and the perfect philosophy of His Son, as expressed in the Declaration of Independence and in the Constitution of the United States. As long as we cling to those fundamental ideas of organized human society, none of us need have any fear.

I believe the Constitution of the United States, when it was written, was written by men who not only believed in the principles of government there enunciated, but I believe it was written by men who were willing to fight to maintain these principles. I believe it was written by men who had an abiding confidence in the willingness of all future generations of America when the time came to stand firm to maintain these great fundamental principles of government. No people on the face of the globe have proved by their acts a greater desire for peace than the people of the United States. We are not seeking to acquire an empire; we are not seeking to rule the world; but what we are seeking to do is to maintain a world which will be free for freedom-loving people. We are seeking to maintain a world where the business intercourse between nations will be carried on in the future as it has been in the past. We are seeking to avoid a world where some dictator, by simple decree, determines whether or not there shall be freedom of the seas and whether or not there shall be open markets. This, to my mind, represents the fundamental principles which those who wrote the Constitution of the United States believed should be maintained. One thing is certain: We cannot have in this Nation a nation of free people from a social standpoint and from a governmental standpoint unless we maintain the necessary degree of freedom along economic lines. Now I think I have made myself clear with reference to my views as to the position which this Government should take in discharging its duty under the Constitution to its own citizens, as well as in discharging its duty to mankind throughout the world, and, may I add, discharging it as we believe the Creator of this earth desired that human inhabitants should discharge their duties in order to insure freedom to all freedom-loving people forever.

There is another matter, and I say to you that I think it is as important if not more important than the general program of national defense, and that is the question of the maintenance of free government within our own borders. Those who study world affairs, and I will say that my short stay in Washington has impressed this fact upon me, had as well realize now that if free government is to be maintained in America, we are going to have to guard two fronts: On one front we must guard to prevent the dictators of the Old World from being able through force to control the affairs of our Nation and to implant on our shores all of those foreign "isms"—nazi-ism, communism, and fascism. In other words, we must prevent the invasion of dictators from without, and while we are doing that, we must not forget there is another front on which the invasion is being waged every day and that front is right here at home. Well-organized groups, with powerful leadership, have for a good many years been seeking quietly, but effectively, to undermine the fundamental principles of the Constitution of the United States and to substitute for the American system of free enterprise a socialized system of business, where the power of government comes from the top down instead of going from the bottom up. They have been trying to establish in this country a government where the public officials are the masters of the people rather than the servants of the people. They have been striking at the very foundation of democratic government which is the rule of local government and the rule of State government, and day in and day out the battle has gone on in an effort to centralize the control of most everything in Washington.

Those who wrote the Constitution of the United States were wise enough to know that this Nation is too large, that it represents too many diverse interests, for us ever to be able to establish in Washington a government that would be wise enough and honest enough to decide all of the problems for all of the people. Therefore, if you will read the Constitution of the United States, you will see written into it from the beginning to the end the hope and belief that the sovereignty and the integrity of local government and of State government would always be maintained.

There are those who will tell you that due to the great changes in the economic life of the people, due to the fact that business has become more complex, we have now reached the stage in our development where government has become too complex to be understood by the average man, where it has become too complex to be administered by State and local government, and that it is time, therefore, to begin to centralize all of the power of government in Washington. So far as I am concerned, I do not subscribe to that philosophy. I believe that we have built in America a great nation because we have recognized initiative, because we have protected the theory of free enterprise, because we have made it possible for our citizens to be rewarded for their efforts in proportion to the intelligence and the diligence which they put forth. And I do not believe that anything would be gained by destroying these virtues and by setting up a highly socialized government in the Capital at Washington, where the bureaucrats rather than the people will rule. It is only necessary to observe the meager results which have thus far been obtained in our national-defense effort, to realize that the centralization of power in Washington is not an answer to the problems of today. The Constitution of the United States grants to the President very broad powers to act in great national emergencies, such as faces this Nation at this time. The Congress of the United States has by law further enlarged these powers. In fact, during the past 7 or 8 years, it seems that we have simply been jumping from one emergency to another and every time there was a change some fair-haired governmental theorist discovered that as a result of this change, more power could be taken away from the people and more power vested in the Federal Government.

Today we have in Washington so many bureaus and agencies that it would be necessary for you to live there probably 2 or 3 years to even have time to make a superficial call on each one of these governmental boards. This highly centralized machinery is not working very well. Evidence of the fact that it is not working lies in the statement that it is not getting satisfactory results. Our Army is not getting enough equipment. We are nothing like meeting our promises to other nations of the world to help in the great emergency. But when one of these governmental agencies fails to function, the remedy which would be applied in a business organization is never applied in Washington. The agency is never abolished, but what they do is always to create a still bigger agency and superimpose the new agency on the one which has failed to function. Thus we go merrily on spending the taxpayer's money by the hundreds of millions of dollars, maintaining fat patronage pay rolls and getting but little results. When it seems that conditions have become almost unbearable, a new bureaucratic board is set up. The Constitution of the United States was not written with this idea or this plan of government in view. The Constitution of the United States was written on the theory that this was to be a government of law; that the citizens of this Nation were to be ruled by law. It was never the theory of those who wrote the Constitution of the United States that we would have a government of men where some bureaucrat would be able on his own authority to write rules and regulations which have the effect and power of law. No one questions the fact that in a great emergency, such as we are now engaged upon, that there must temporarily be a broadening of the power of the Federal Government and a strengthening of the power of the executive department of government, but, on the other hand, those who wrote the Constitution did not believe that it would be necessary to destroy the fundamental principles of free government in order that democracy might function. It is my opinion that one of the gravest questions which faces the Congress of the United States today is the question of how we may achieve success in our great program of national defense and how we may meet our obligations to the world and at the same time maintain the fundamental principles of democratic government at home. After all, what is our program of national defense?

First, it is to train soldiers and sailors, but you cannot mobilize an army running into the millions without some place to care for them. Therefore, it became necessary to build great Army camps throughout the Nation. It became necessary to draft the young manhood of this country, to take them away from their work, send them into the Army, and pay them the paltry sum of $21 a month to serve and save the country. But while this has been in progress, we have seen all over this Nation the construction of these Army camps held up by strikes and labor troubles. We have seen the great munitions plants tied up with strikes and labor troubles. We have seen the great munitions plants tied up with strikes. We have seen the plants where they are manufacturing airplanes and bombers tied up with strikes, and at the same time we have seen a government in Washington, created under this great system of centralized bureaucratic control which has proved itself either unwilling or unable to cope with these problems involved. So far as I am concerned, I believe that this great national-defense effort should be a Nation-wide effort and if we are going to call from the homes of this Nation the youth of the Nation and without consulting their wishes, force them to render service in the Army and in the Navy for a compensation of only $21 a month, then I say to you that that same government which is making this demand on the youth of this country, has an obligation to have enough courage and enough backbone to say to the C. I. O. and to the A. F. of L. and all of the other representatives of special classes, that these munitions plants, and all other national-defense plants, are going to operate continuously and at full capacity and they

are going to operate free from violence in strikes. For going on 2 years, these demoralizing strikes have been continually in progress in this Nation, and the Congress of the United States has not done one single thing to try to stop them. These unjustified strikes could not thrive and flourish were the wild-eyed labor leader agitators and perpetrators not legally clothed by inaction of Congress with the right to take clubs and knock honest free men in the head because they want to work at honest jobs of their own choosing. As per my promise to the citizens of Texas, I introduced a bill in the United States Senate that would make force and violence in strikes a felony punishable by prison sentence. In fact, I introduced it twice; once as a bill and once as an amendment to another bill. The amendment was acted on and killed by a voice vote of "No's" which sounded louder to me than the roar of a gang of rowdy professional politicians at the Beaumont convention. After the roar subsided, I asked another Senator to ask that the vote be reconsidered and ayes and nays called for. He said, no, he would not do that because there were too many Senators who didn't want to make a record of their vote on that question. I finally got Senator Eastland of Mississippi, who has been in the Senate only about a month longer than I have, to ask for reconsidering and a vote by ayes and nays, but we couldn't get enough votes to force a yea-and-nay vote.

What kind of a United States Senate do we have in this country, when they vote against a bill that will give protection to honest laboring men by serving to keep them from being beaten over the head just because they want to work at an honest job of their own choice? Do you believe anything like that was ever contemplated by the honorable framers of our Constitution? Those who framed the Constitution of the United States never believed that the time would ever come in America when organized minorities would be able, through political wire pulling, to dominate the Government of the United States. And I say to you that if this Nation is going to carry on successfully its great program of national defense, and if we are going to meet the promises which we have made to the democracies of the world, it is going to be necessary for us to have in all places of public authority in Washington—in the House, in the Senate, in the executive department of government, as well as in the judicial department of government—men of courage and men who cannot be intimidated by organized minorities, regardless of the voting strength of such minorities. The whole national-defense program is now bogged down, and it will still be bogged down until we have a demonstration in Washington of some of the courage of leadership upon which this Nation was originally built. This problem is not going to be solved so long as the main thing Congressmen, Senators, or other public officials are thinking about is holding their jobs first, and saving the Nation second. Unless a man is blind to events, he must know that there is a well-organized plan whereby an effort is being made throughout the United States today to take the emergency of national defense as a means to dominate production in every essential industry and to establish over the American workmen a dictatorship of various and sundry organized minorities of labor. Think of it, if you will: The great strike in New Jersey, where the issue involved was a demand on the management that every man who worked in the shipbuilding plant who was a member of some labor organization be required to keep his dues to that organization paid up and in good standing or be dropped from the pay roll. And picture, if you will, the Government of the United States lending moral support, as it did, to just such a demand. On every hand we have the imperative call from England and all of the other democracies of the world to furnish them ships, to furnish them with supplies. We have at the same time an effort to build for the defense of this country a two-ocean Navy; but, in spite of all this, this great shipbuilding plant is closed down for days, not a wheel turned, because a labor union wants the management to assume the responsibility of collecting labor-union dues.

Let me ask you people who are here this evening if you believe that those who wrote the Constitution of the United States anticipated any such condition as this would ever be possible in free America? It is my opinion that when this Nation faced the great emergency which we now face, that the Congress of the United States should have written on the statute books of this Nation a bill which would provide that it would be unlawful for any industry engaged in production for national defense to sign any contract which would either prevent his employees or coerce his employees in the joining of a labor union. I think the defense of America is of far more importance than the building up of the membership of organized labor. I believe that every plant in America where goods are being produced for national defense should be open to every honest and competent workman. And I do not believe that any workman who is seeking to serve his country by pushing forward the great program of national defense should be forced to pay tribute to any group, no matter who they are, for the privilege of working. And I believe, further, that the principles upon which this Government was built presupposed that the right to work would always be protected, and certainly that it would be protected when the work being done was essential to the preservation of democratic government. We have other powerful minorities as dangerous to our national welfare and security as union labor leader "racketeers." The citizens on the Atlantic seaboard were threatened with a shortage of gasoline and petroleum products which they need for national-defense purposes because some people claim—and may I say claim falsely—that shipping facilities are not available to move the products from source of supply. As a member of the Senate committee which sat for 2 weeks and listened to testimony in the alleged gasoline-shortage case, may I say that I am fully convinced, personally, that there is no gasoline shortage, and never has been, and that there is no shortage of transportation for gasoline and petroleum products, and never has been, and the unanimous report of our committee to the Senate so stated. As an individual member of that committee, and as your Senator, I am also fully convinced that the whole detestable plot of trying to manufacture the gasoline shortage was conceived and engineered by certain people for selfish financial purposes, one of which was to get permission to build a large 24-inch pipe line from Texas to the large industrial States of the East through which they could siphon one of Texas' greatest God-given natural resources—natural gas—and thus impede Texas' industrial progress and deprive Texas laboring people and others of their heritage, all for the gain and profit of a few big corporations of the East.

It is my opinion that we have some people in both public and private life who would be glad to see an occasion develop which would enable them to put over a complete program of Government ownership and control of the oil business in this country, and I also think we have some big corporations who do not fear Government control, because they believe in the end they can control the Government, and I think both factors entered into this gasoline-shortage scare on the Atlantic coast, which we proved did not exist. These two forces are synonymous and represent minority rule of force by money in some instances and by force of votes in other instances. I do not believe the framers of our Constitution ever expected these things to happen in this country. They are both impeding our national-defense program; therefore extremely dangerous to the very existence of our democracy. The Congress of the United States, by the terms of our Constitution, is wholly responsible for the existence of these dangerous elements in our Nation, because the Congress could curb such unwholesome acts promptly by legislation.

The principles of equality and justice are the guiding principles upon which the Constitution of the United States was built. I believe that those who framed this document believed that in great emergencies, such as we now face, all of our people should be required to contribute their fair share toward the maintenance of our free institutions. I believe that it was in the mind of those who framed this Constitution that the rights of all of our citizens would be protected and that in periods of great emergency none would be allowed to profiteer at the expense of others.

So far as I am concerned, I believe in this principle. I am opposed to racketeering and profiteering out of the national emergency, regardless of whether it be done by a system of awarding fat contracts to political favorites or if it be done by racketeers promoting the interest of selfish groups, or whether it be done by a few businessmen who represent much of the wealth of the Nation. I do not believe that any businessman should be allowed to make an excessive profit out of this great emergency. And I say to you that it is not necessary to do what is being proposed, and that is, to destroy the whole system of free enterprise in this country in order to prevent the making of a few war millionaires. Do not be deceived about it—under the plan we are operating now, we are making plenty of war millionaires and we will probably be making many more. But if the Congress of the United States would put on the statute books of this Nation a law which would provide that all excess profits—and by that word "all" I mean 100 percent of the excess profits—would go into the tax fund to pay the cost of national defense, then, in that event the problem of making war millionaires would be solved. All lines of business, if they are to operate, should be allowed to earn a normal profit to be determined by a fair formula, but none should be allowed to earn an excess profit over and above that normal profit.

There is being advocated in Washington today a great system of price control urged upon our public officials by selfish people for profit motives. Now, obviously, it is necessary to have priorities on supplies in order that these supplies may be channeled into the proper sources, but there is no necessity for setting up a great bureau in Washington to fix prices. Having been in business myself and having had the experience of meeting business pay rolls I think I know something about the question of price fixing. Whenever the Government undertakes to fix the price for which one commodity may sell, then this price fixing upsets the price structure of many other commodities. A system of putting power to control prices in the hand of the Federal Government is unwise for another reason—it would probably take seven hundred thousand or a million men in the United States actually and effectively to establish and operate a real system of price control and to enforce it, and it would probably take 3 or 4 years to get this personnel trained to do the job, and when it was eventually accomplished you would then have completely destroyed the whole system of free enterprise in American business.

Therefore, any general scheme of governmental price fixing is objectionable: First,

because it would take too long to secure sufficiently trained personnel to make the plan work, even if it could be made to work; and, second, it would destroy the whole system of free enterprise when it commenced to work and we might never get out from under this system, even when the emergency is over; the third objection to the establishment of price control is that it is not needed. If the Government will pass an effective tax measure which will take in all of the people, if they will raise by current revenue at least 75 percent of every dollar spent currently, and if as a part of this tax bill they will take all excess profits, then they can forget about price control, and when the emergency is over we will not have a socialized business run by a few bureaucrats, sitting behind mahogany desks in Washington, and telling every individual in this Nation what to do and when to do it.

Certainly the Constitution of the United States did not presume the time would ever come in this Nation when we would attempt to grant as much authority to any individual as it would be necessary to grant if we were to establish a dictatorship over the price structure of American business.

Some people seem to be greatly concerned about the willingness of all people who are in public life to fit into the plan of national administration to handle the present emergency. I have stated and I should like to restate here my position with reference to this matter. So far as I am concerned, I believe that the present emergency can be met, and it can be met well within the limits of the Constitution of the United States. The Constitution gives to the executive department of government broad powers to conduct our foreign affairs; it gives to the executive department very broad powers to deal with domestic affairs in periods of great emergency. These powers granted by the Constitution properly belong to the executive department of government and to that department alone. The Congress of the United States has enacted numerous laws which have expanded the Executive authority of government in this emergency. I recognize that every citizen of this country has the right of free speech, but it is my honest opinion that during these times of great national emergency it is harmful to the general welfare of our Nation for people like Senator WHEELER, Colonel Lindbergh, and others identified with the America First Committee to be continually sniping at the President of the United States about the way he does his job. I do not think that does any good for our country. I think it is ill-advised and harmful.

The Constitution of the United States puts in the hands of the President the authority to command the United States Army and Navy, puts in his hands the power to carry on the foreign affairs—it does not put part of the power in his hands to carry on foreign affairs, it puts all of the power in his hands to do this, except where in the exercise of this power it becomes necessary to make a treaty with a foreign nation or to declare war in which instance it is the responsibility of the President under the Constitution to submit these matters to the Congress of the United States for its approval. So neither the Senate nor the House has any responsibility or any authority to deal with any of these matters unless they are submitted to the Congress by the President.

I think senseless sniping at the President, such as is being done by some organized minorities, is not only a waste of time but it is positively harmful. These people seem to forget that when we wrote the Constitution of the United States, when we vested in the executive department of government certain powers, when the Congress further enlarged these powers, that it then became perfectly legal and legitimate not only for the executive department of government to do the wise thing, but it also has the constitutional authority to do the unwise things. In other words, it is a power exercised not jointly but solely by the executive department of government, and no one has the right to tell the executive department of government what it shall do within this field except as that authority is written into the Constitution of this Nation. So I do not appreciate those who stand on the sidelines and criticize the President when he is acting within his authority as granted by the Constitution and laws of this Nation. He has as much right to do things wrong as he has to do them right. The Constitution did not presuppose that perfect men should ever be chosen as President, because there are no perfect men living. In my opinion, most of our troubles in this country are caused by bad laws. The President does not pass the laws. Bad laws passed by Congress permitted the establishment of bureaucratic departments, and bureaucratic departments can do untold damage to our economic form of life and undermine our democracy.

Now my position is simply this: When the President of the United States is acting within the limits of the authority granted to him by the Constitution, and within the limits of the authority granted to him by the Congress of the United States, I, for one, expect to give him 100-percent support. In other words, I do not think it is any of my business or my responsibility as a member of the legislative department of government to attempt to tell the executive department of government how that department should be run. My responsibility is that when the law has been enacted and the power to execute it has been placed in the hands of the executive department to give the executive department 100-percent support, whether I like the law or not; and this I have always done and this I expect to continue to do. I think that is what the Constitution of the United States presumed every Member of Congress would do. I do not believe in sniping at the executive department of government when it is doing the best it can to carry out the mandates of the Constitution and the laws which Congress has passed. Therefore, believing as I do, I have assured the President of the United States of my 100-percent support in carrying out his duties, and I expect to make good on that promise.

Now, on the other hand, the Constitution vests in the Congress of the United States certain responsibilities. It is the responsibility of the Congress to pass laws, and whenever a law comes before Congress I expect to consider every angle of the law, I expect to seek all the information I can get from every source, and when I have done this I shall vote for what I believe is the best interest of this Nation. So far as I am concerned I did not go to Washington to be a rubber stamp for anybody. And again, as this is Constitution Day, let me say that I believe this position is in full accord with the fundamental principles of the Constitution of the United States. I am concerned about the domestic affairs of this country and I am concerned about the future of democratic government in America, primarily because of the fact that it does not seem to me that the American people as a whole realize the tremendous significance of some of the things that are happening to this country, and particularly at our Nation's Capital at this time, nor do they realize the significance of the fact that some of these things which are happening, which strike at the very fundamental principles of free government, are being done under authority of the Federal Government in Washington.

I do not think I am an alarmist, but I believe we all realize that one of the very foundation stones upon which democracy rests is based upon the absolute freedom of the press. I believe that the press should always be free to say what it pleases, about all public questions, to criticize or to praise public servants, and to give to the people an unbiased account of public affairs. In view of the personal experience which I have had, wherein it seems that many of the great daily papers here in this State have taken keen delight in writing page after page of unjust, unfair and untrue criticism and condemnation of me, it may seem strange for me to stand here this evening demanding freedom of the press, but I want to say to you that whenever you destroy the freedom of the press in this country you will destroy the very fundamental principles upon which the Constitution of the United States was based, and no man who is worthy of holding public office would ever seek to limit this freedom for any purpose. From experience I am able to testify that free press can never damage a good nation or a good cause. The great rank and file of our people are smarter than the editors of some newspapers.

I believe that we have in Washington today influences that believe they are better judges about what the people should hear and what the people should know than the newspapers are. Thank God for the fact that they are not now in the majority, but that influence is definitely prevalent. And, I want to say furthermore that I am definitely of the opinion that the Federal Government has already gone further than it should go in controlling and in establishing a censorship over radio programs. Radio has become an instrument as vital in the dissemination of public information as the press and I believe it is essential that the men who own the radio stations be given the utmost freedom consistent with reasonable regulation in the operation of these stations. I do not believe that they should be held as they are now under the constant threat of the possibility of incurring the ill will of some governmental bureaucrat at Washington, and I do not believe the people generally realize the danger of this situation. It is my opinion that if you will allow the people of America to have full access to all of the facts you may rely upon those people to reach correct conclusions. But when you consider the millions upon millions of dollars now being expended by governmental bureaus in Washington for pure propaganda purposes, it is my considered opinion that we are moving toward that theory of government where the masters in Washington will tell the slaves at home what to think. There is another very fundamental danger facing this Nation today and under this great program of national defense, this danger is being magnified and materially increased and that is the attempt of those who hold power in Washington to secure control of State government and to secure control of the Members of Congress and the Members of the United States Senate by using political patronage and the awarding of fat contracts to political contractors in order that the Congress of the United States may cease to function as the Constitution supposed it would function as an independent agency of government, and make of that body a rubber stamp to do what it is told to do. And I would impress upon you this evening that this is not a question of men I am discussing; it is not important as it affects individuals; but it is tremendously important as it affects the future welfare of this Nation. This Nation is too large and it has too diverse interests for it to ever be operated on any basis where all of the thinking is done in Washington and where the people receive orders from their masters as to how they shall vote.

I am concerned about the domestic affairs of this country for another reason. For many years we have listened to some of the demagogues who hold political power, day after day, preach to the American people the doctrine of class hatred—the employer and the businessman have been held up to scorn and tolerated only as a necessary evil which must be kept for taxpaying purposes only. The Constitution of the United States never comprehended that we would ever have in

public life in this country, public servants who represented all of the people, who would seek to appeal to class prejudice and to the mob by trying to array one group of our people against some other group. The Constitution presumed that our public officials would write the laws which are to rule the conduct of business in this country and as a referee they would see that these laws of fair play were observed, and when this was done, they would accord to every citizen the right which he actually possesses and that is, the right to honor and respect regardless of whether he might live in a humble cottage or a mansion. And I believe as firmly as I believe anything that today some of the greatest difficulties which we now face, have come about because of the ill-advised action of some men in public life who have sought to create the impression that every man who was successful in business, was a crook. I say to you that no government can long exist if it permits either wealth or poverty to be a standard by which the honesty and integrity of its citizens are judged because you cannot measure those sterling qualities of manhood and womanhood in this country on such a basis. Some of the greatest citizens we have ever had in this country have, when their life was over, failed totally to ever accumulate a dollar, many of them have died in abject poverty. On the other hand, some of the greatest citizens of this country have been men who have accumulated great wealth, who have used that wealth honestly and sincerely for the benefit of America. I am concerned about the domestic affairs of this country for another reason.

During recent years the Federal Government has enacted laws where the alleged purpose of these laws was to protect the rights of the workingman of America, but, unfortunately, some of these laws, especially the National Labor Relations Act, has been so administered that it has simply become a club in the hands of labor racketeers to dominate and control the workingman of America, to control the business of America, and to control the Government itself. I, for one, believe as strongly as anyone in the rights of all of our citizens, whether they be laboring men who wear overalls or bankers who sit behind mahogany desks. I believe in the right of labor to organize. I believe in the right of labor to bargain collectively. But there are some things I do not believe. I do not believe in the right of labor racketeers to use force and violence to prevent other men from working when they want to work. I do not believe that when we have called from the homes of this country millions of young men and have sent them to camps to be trained to serve his nation, possibly to give their lives for this Nation, that we should permit a bunch of labor racketeers to tie up the munition plants and the other defense industries of this country with senseless and useless strikes. And I want to warn you people here tonight that this power and this influence must be checked. It is absolutely foolish to talk about maintaining Democracy in America if we do not maintain in America the right to work. Whenever the time comes in this nation, whether it be in the time of normal business operation or in a period of great emergency, when the citizens of this country are deprived of the right to work in their chosen vocation unless they pay tribute to some organization or some agency, then I say to you that democracy is at an end. You have something worse than government dictatorship, you have a dictatorship of organized minorities who are under the control of none except their unrestrained leaders.

Let me say to you people to whom I am talking tonight, if you believe in America, if you believe in the freedom of America, if you believe in the rights of individual citizens, if you want to see the young manhood of this country during the next century live where they will be free, then I say to you that it is just as essential to stop the establishment of this line of dictatorship as it is to stop the challenge of the dictators from Europe. And let me impress upon you people that it is not a visionary idea which I have, but it is an immediate and a present danger. If you do not believe this, all you have to do is to think of this fact: We have today in the United States Army millions of young men who are training with broomsticks or branches of trees for guns, who are walking because they do not have trucks in which to ride, we have regiment after regiment that is not equipped even sufficiently to carry on a proper training course, to say nothing of actually entering a war. We have made broad promises and commitments not only to defend this Nation, but to aid other democracies of the world, but still we do not have in our Government at Washington men who have sufficient courage to meet this issue and to take the necessary steps to solve the issue. When I introduced in the Congress of the United States my bill which simply proposes to make it a felony for anyone to use force and violence to prevent a man from engaging in his lawful vocation, it caused quite an uproar. Now, bear in mind, this bill in no sense interferes with the right to strike, the right of labor to organize, or any other rights; it merely provides that it shall be a felony to take a club and beat a man up because he may happen to want to work at a lawful job to earn an honest living.

Before I introduced this bill I was told, by a man who was supposed to have a rather broad knowledge of public affairs, that the introduction of such a piece of legislation at this time would be dangerous because if it should be enacted into law, it might cause a Nation-wide strike. My answer to him was this: "I think you are absolutely wrong and I do not think American labor is composed of that kind of men.

I do not believe the average workman of the United States wants the privilege of beating up his fellowman. I told him that I believed the rank and file of American labor would like to see this curb put on the racketeers and their beef squads, but I also told him that if he was right, if it is true that we just think we have a democratic government in this country, but if, in fact, we are now subject to the dictation of a few high-powered labor-union racketeers, then I think we should just as well find it out and the sooner we find it out, the better. In other words, while we are engaged in this great effort of national defense to preserve the fundamental principles of the United States and to preserve the principles of free government, if we have already lost democracy in this country, if we have already established class dictatorship, then the sooner we find it out, the better. I want to say to the people who are here this evening, that the laboring man of this country, the professional man, and the businessman should realize that this is a real and pressing problem now. When you fight the battle for freedom of democracy and for the freedom of mankind, do not forget that if you would preserve this freedom at home no dictatorship must ever be established regardless of whether it be the dictatorship of labor or the dictatorship of capital. Let us keep America as a place where all men are equal; where the rights of all are respected. These things, I believe, are essential for the preservation of the principles of the Constitution of the United States. It is, in my judgment, time to retire from public life the pussyfooting politicians. I think it is time now to stop awarding fat contracts for political reasons. I think it is time to stop thinking about whether we are helping or hurting the Democratic Party or the Republican Party. We are engaged in a great battle and we are fighting that battle on two fronts. We are engaged in a battle to keep the dictators out of America and while we are doing this, let us not forget to press forward the battle to prevent the establishment of a dictatorship which comes from within.

Be not deceived, there are plenty of influences at work in Washington now which would welcome a complete change in our form of government and who would like to use this national emergency to bring about the change. It is time now for the people to be alert if they would preserve the principles of the Constitution of the United States. Let us rededicate ourselves to the fundamental principles of government laid down in the Constitution of the United States. Let us as a people demand that the Congress of the United States see that the rights of the average man are protected. As the young manhood of this country goes forth to battle, let them go with the assurance that those who stay at home will bend every energy to see that there is placed in their hands every modern implement of war. Let them go forth to battle with the assurance that no selfish minority will be allowed to tie up production in essential industries while they argue about the question of forcing the employer to collect union dues. Let the youth of America go to the front with the knowledge that all of America stands back of them, that all of the people are going to work together to give them 100-percent support. Let these soldier boys who are making such great sacrifices know that while they are making those sacrifices, others who remain safely at home will not become war millionaires. Let us by law take from every person and every industry every dollar of excess profits. Let no man earn more than a normal profit out of the national-defense program. Let us reestablish in the hearts of the American people the principles which have made this country great and then with confidence we can look to the future and we can invoke the blessings of Almighty God on all our efforts. Let us eternally stick to the principles of the Constitution of the United States and to the Holy Word of God and the teachings of Christ. So mote it be.

Our Hope for Freedom Lies in the Constitution

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ADDRESS OF HON. CHARLES W. TOBEY, OF NEW HAMPSHIRE, AT CARNEGIE HALL, NEW YORK

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at Carnegie Hall, New York, on September 17, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One hundred and fifty-four years ago today at Independence Hall, in Philadelphia, 39 members of the Constitutional Convention signed the completed document of the Constitution of the United States which Mr. Gladstone appropriately termed "the most wonderful work ever struck off at a given time by the brain and purpose of man." Both the inspiration of its construction and

the tenacity of its existence have fully justified that praise bestowed upon it. On us rests the responsibility to perpetuate it.

The Constitution provided that it should go into effect after nine States had approved it, and the signal satisfaction of being the decisive ratifying State fell to the State of New Hampshire, which I have the honor to represent in the Senate of the United States.

We have heard often of late the phrase "the horse-and-buggy age" applied to the sayings and wisdom of our founding fathers. My only hope is that history may remember as kindly the officials who thus desecrate the memory of those who presided at the modest beginning of our great Government, which has brought a greater degree of liberty, prosperity, and happiness to our people than that enjoyed anywhere else in the world—a government that, until recently, was at peace with the world and respected by the world.

The wisdom and philosophy of the Constitution has been tested by the whirlwind of party passions, fratricidal warfare, and grave economic convulsions. Never until these last few years have the great merit and immortal principles of this document been assailed.

Think of the magnitude of the task which confronted the fathers in Philadelphia in 1787. They were called upon to write down upon parchment, for the first time in history, a scheme for a government that would insure the preservation and evolution of liberty for all time. Their problem was clearly stated by Lincoln in 1858 in these words: "It has long been a grave question whether any government, not too strong for the liberties of the people, can be strong enough to maintain itself in a great emergency." Still they created a government which was to prove not so strong as to trample upon the rights of the slave with shackles on arms and ankles, and yet was strong enough to maintain itself in the face of the greatest trials and hardships that ever confronted a republic in the history of the world

True to the trust reposed in them by the people, our founding fathers steered clear of autocracy; rule by one man, which can only mean tyranny and despotism. They realized that God has not yet created any one man wise enough or benevolent enough to seize and enforce his individual pattern to govern the minds, property, and lives of every citizen in the land. They comprehended the true science of government. Passionately, they believed that powers of the Government must be separated. As often expressed by them "the accumulation of all the powers of government in the same hands, whether of one, or a few, or many, and whether hereditary, self-appointed, or elected," could justly be pronounced the very definition of tyranny.

Let us review a few of the modern trends and developments which threaten to destroy our constitutional form of government.

I will not enumerate the series of deviations from the letter and spirit of the Constitution which have marked the philosophy of government behind the President from his first election to the present period of war hysteria. I but mention, in passing, the flood of "must" legislation, concentrating always more and more power in the hands of the President and railroaded through a "rubber stamp" Congress.

Added to this line of evasion of the Constitution by the President was his flagrant and unprecedented attempt to destroy one of the three coordinate branches of our Government I refer to his attempt to dilute the effectiveness of the Supreme Court by packing it, as an unprincipled lawyer would try to pack a jury, a recent issue of Collier's magazine to the contrary notwithstanding.

The latest maneuver of this master of a free people was accomplished in his last radio talk, in which he announced the issuance of orders to the Atlantic Fleet to eliminate the submarines, but his radio talk went much further even than that. By that talk the President eliminated the Congress along with the submarines. Fellow Americans, the President has, in fact, eliminated your Congress just as effectively as a depth charge puts a submarine out of business.

I measure my words when I say that, in my opinion, the greatest menace to this country and to our form of government does not come from any enemy abroad but rather exists right here in our own country, and more particularly and specifically under the Capitol dome in Washington, where the people's representatives in the Congress have apparently lost their sense of responsibility under the Constitution to act as a separate but coordinate branch of the Federal Government and have yielded to pressure and blandishments of another branch, the Executive. Therein is the great threat to the American way of life and the American form of government.

We of America need a new declaration of independence by the American Congress.

This is a fateful hour in the history of our Nation. Common honesty and integrity have been cast to the winds and the people are being deceived in a gigantic conspiracy to drive them into the war. We all should have a share in arriving at such a momentous decision as faces our Nation. No one man—no one group of men—should be allowed to make the decision for us, only the people's representatives in Congress, to whom the Constitution grants the sole power to declare war. A great fundamental precept of the Declaration of Independence is that governments derive their just powers from the consent of the governed.

Tonight as we look across the seas at the Old World, we see the lights of civilization being again extinguished in another chapter of the many wars which have devastated the peoples of Europe for generation after generation. We can characterize this war as Romain Rolland did the last: "A sacrilegious conflict which saw a maddened Europe ascending its funeral pyre and, like Hercules, destroying itself with its own hands."

Today, certain forces in our country, intrigued by international interests, are bending their every effort to embroil us in the European holocaust, by ignoring the constitutional prerogatives of the people's representatives in the Congress, which body has the sole power to declare war.

I ask you: Shall the American people be driven into that chaos by leaders in this country in violation of their solemn promises to the American people?

Shall the American people lose to power-inebriated leaders in this country the individual rights which they now hold under the Constitution?

Shall the American Congress be reduced to a supine group of fear-stricken, timid men, as was the German Reichstag?

Last November the American people throughout the country went to the polls with promises of peace still ringing in their ears. Both major parties had adopted strong and unequivocal peace planks. For months Mr. Roosevelt and Mr. Willkie had been competing with each other in making more and more vigorous promises, more and more reassuring promises that the American people would not be driven into the European war. Mr. Roosevelt pledged this in the following words, I quote: "And while I am talking to you, fathers and mothers, I give you one more assurance. I have said this before, but I shall say it again, and again, and again, your sons are not going to be sent into any foreign wars."

In a voice vibrant with emotional appeal and with the ring of sincerity designed to win votes, Mr. Willkie said, I quote: "The battle of America is a battle for liberty. It belongu right here at home. I believe we should keep out of war at all hazards. We are being urged toward war by an administration which is alike careless in speech and in action." But when after election some of his campaign statements were recalled to Mr. Willkie, he replied, "That was a bit of campaign oratory."

Can our people no longer listen to the words of our so-called statesmen with any confidence that they are speaking what is in their minds and hearts?

Are we, like the European nations, to have a government of men and not of laws?

Are we to be tricked and duped with impunity, only to awaken like the Germans and the Russians to find that we are mere cogs in the wheel of government and no longer free individuals endowed with inalienable rights?

Can the President and Mr. Willkie successfully jeopardize the well-being and the very lives of the American people on the assurance of Lend-Lease Administrator Harry Hopkins that "the people are too damned dumb to know what it is all about"?

Shame on any man, whether he be the President, whether he be counsel for the motion-picture industry, or whether he be a Communist office holder in an administrative department of our Government—shame on any man who would deliberately deceive the plain people of America on a matter which means life and death to them.

Administration spokesmen are criticizing the majority of the people because they are not united for war in Europe. National unity is much to be desired, but you can't have national unity by deceiving the people or by going against the will of the people.

Fellow Americans, we can achieve national unity overnight if the President, by action and words, would adhere to the will of the people by announcing and carrying through a program for national defense—a defense policy to make the United States so strong that no nation or combination of nations would dare attempt to set foot in the Western Hemisphere—we could have national unity overnight if the administration would return to the principle of America for America, with no entangling alliances with any of the European nations.

Europe has always been engaged in wars, and it will not cease to be a cesspool of bloody ventures until it has spent its hatreds, its passions, its greeds, and until it has learned the principles of the Prince of Peace, that those who live by the sword shall perish by the sword.

History has proven that America cannot ally herself with any nation in war with any assurance that her decision of the moment is a wise one. Our boys died on the battlefields to defeat the Kaiser, but after the war Woodrow Wilson went to Europe to arrange the peace and came back a disillusioned man. In the Genesis of the World War, by Harry Elmer Barnes, professor of historical sociology at Smith College, we read the following:

"Perhaps the best 'epitaph' on the whole episode of America and the World War and the finest proof of the futility of intervention, is contained in the statement of Mr. Wilson to James Kerney on December 7, 1923, relative to the policy of Poincaré—'I should like to see Germany clean up France, and I should like to see Jusserand and tell him so to his face.'"

He knew that the peace terms of that war could result in nothing but a greater war to come.

Only a short time ago we were helping Finland against Russia. Today we are sending munitions to Russia which will be used to bomb Finland. Today we would ally ourselves with Russia in her war with Germany, but it is possible that 10 years from now we might ally ourselves with Germany to halt the menace of communism sweeping Europe.

Why spend the lives of our richest blood on the battlefields of Europe on such uncertain and impermanent ventures? Why not take a

lesson from our experiences and follow the wisdom of the father of our Nation, in his advice against entangling alliances?

But there are those who say: But what are we going to do to stop Hitler? These people are divided into two groups. One is the group of those who use this fear propaganda because they have selfish motives for getting us into the war, and are willing to use any pretext to get us in. Take for example the group in the motion-picture industry which has control of one of the greatest instruments of propaganda in the country.

It has been advised that the motion-picture industry has millions of dollars owed to it by British motion-picture interests. It is obvious that they have a reason for wanting us to get into the war. Million-dollar investments must be protected.

There are those in another group, however, who have a sincere and honest apprehension that Hitler can conquer the world. My answer to that is that Hitler has built up so many hates in Europe that he will never be able to untangle the potential "fifth column" against him, which exists throughout the Continent, should he live a thousand years.

Each new conquest—each new country he invades—only weakens him and hastens his downfall. He cannot turn his back on the people of Europe and Russia and seriously threaten the United States either militarily or economically. No less an authority than Bernard Baruch has testified that even though Hitler should win a technical military victory in Europe, Germany, and not the United States, would be the loser of the economic campaign for world trade.

Let those who sincerely fear invasion by Hitler listen to the considered judgment of Lt. Col. Thomas R. Phillips, of the General Staff Corps of the United States Army. I quote: "Even if the United States had no harbor defenses, it would be impregnable to invasion. And this still would be true if our Navy were inferior to that of an invading power. * * * The bomber has made the American coast impregnable to invasion."

And yet, despite this, there are those who are bent on getting us into the war, even by the twisting of the true meaning of freedom of the seas. Let me tell you something about that.

Freedom of the seas does not mean that one nation can send ships laden with contraband to a warring nation without accepting the risk of their being sunk by that nation's enemies. As a matter of fact, Great Britain will not allow American vessels to carry food to the stricken peoples of Europe. Let a group in this country try to ship food to the starving Greeks or to ship medicine to our friends in Finland, and see what happens. Let it be remembered that the American merchant ship *Steel Seafarer* which was sunk in the Red Sea was loaded with contraband of war at least 12,000 miles from our shores.

Let those who urge us to go to war to uphold the doctrine of freedom of the seas, be honest in discussing this subject. The American people are not children. They know what contraband is.

We have one clear duty, to build up our Army and our Navy and our military production with unceasing determination, and thereby demonstrate to Hitler that any attempted invasion of the Western Hemisphere is out of the question.

Bear in mind that after the war is over Europe will be filled with depraved minds and starving bodies, and the seeds of communism will find fertile soil and insure its growth. The Russian doctrines will over-ride Europe and the pressure of that propaganda upon our own Nation will be tremendous. By building up our economic strength, by building up our productive capacity and by making the four freedoms a reality in our home country we will better be able to withstand this menace, both militarily and politically, than we would if we were to throw our all into the death struggle of Europe.

There is a deadly conspiracy to get us into the war, but it is not too late to make that conspiracy an unsuccessful one.

Two well-known columnists, Mr. Alsop and Mr. Kintner, have received appointments in the United States Navy. One of them is a cousin of Franklin Roosevelt. On June 4 they frankly stated in their syndicated column that the President and the men around him hoped that the Atlantic patrol would result in an incident which could be used as an excuse for taking this country into war. That was expert testimony but the sinkings have not been fast enough, and now orders have been issued which are expected to produce more incidents. Congress is being bypassed. Congress, which has the sole power to declare war, has been eliminated in the matter. Congress will come back and exercise its prerogatives only if the people demand of the individual Members the courage that is so greatly lacking today.

If those who are seeking an incident to involve our Nation as a shooting participant in the European War are successful what lies ahead of us? What price war?

A debt unprecedented, so staggering in its magnitude as to make inevitable inflation, the impairment of savings, life insurance, and annuities; the crippling of trust funds, educational and charitable institutions, and the repudiation of a large part of our national debt; a depression in industry and finance which will make the depression of 1931 and 1932 seem mild in comparison; the sacrifice of millions of lives of young American manhood and, what is even worse, a tragic harvest of mentally incapacitated men, broken-hearted mothers and fathers and families.

We will lose our democratic way of life, the liberties and freedoms vouchsafed us in our Constitution, while in their place there will arise some Fascist or Communistic form of government.

What a heritage for our children! And in the long years of aftermath of the hell of it all those of us still living will turn back in sad retrospection to these days, and the youth of that day will turn and ask us why we permitted the warmongers of 1941 to push this Nation into the maelstrom of European intrigue and selfishness.

Wake up America. The hour is late. The danger is acute.

Demand that there shall be no waging of war by Executive decree but only by the considered action of the one branch of our Government empowered to declare war by the Constitution—the people's representatives, the Congress of the United States. Article I, section 8, of our Constitution has not been repealed.

So, on this anniversary, when we turn our minds to that sacred document, the Constitution, on this day when our individual liberty and the welfare of our Nation is at stake, let us give solemn thought to the words of former Chief Justice Hughes: "But in the great enterprise of making democracy workable, we are all partners. One member of our body politic cannot say to another, 'I have no need of thee.' We work in successful cooperation by being true, each department to its own functions, and all to the spirit which pervades our institutions; exalting the processes of reason, seeking through the very limitations of power the promotion of the wise use of power, and finding the ultimate security of life, liberty, and the pursuit of happiness, and the promise of continued stability and a rational progress, in the good sense of the American people."

To that good sense we appeal tonight.

Address by Representative Plumley on the One Hundred and Fiftieth Anniversary of Admission of Vermont into the Union

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ARTICLE FROM THE ROCKWOOD PUBLICATIONS, FAIR HAVEN, VT.

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Representative CHARLES A. PLUMLEY, of Vermont, who was the principal guest speaker at the sesquicentennial celebration recently held in the town of Wells, Vt., in commemoration of the entry of Vermont as the fourteenth State into the Union. The address is taken from the Rockwood Publications, of Fair Haven, Vt., under date of August 28, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Rockwood Publications, Fair Haven, Vt., of August 28, 1941]

CONGRESSMAN PLUMLEY SAYS IT IS "THEY" OR "WE"

"If we let England fall we must be prepared to fight, at a midnight hour of our desperation, for self-preservation in an almost endless war against the mightiest, maddest, most ruthless coalition of murderous conquerors the world has ever known."

Congressman CHARLES ALBERT PLUMLEY was the principle guest speaker at the sesquicentennial celebration held in the town of Wells on Saturday and in commemoration of the one hundred and fiftieth anniversary since the entry of Vermont as the fourteenth State of the Union.

Approximately 600 persons from Wells and adjacent towns were in attendance at this observance and listened to the address delivered by the Representative from Vermont in the Lower House of the Federal legislative body at Washington, D. C.

In his speech Mr. PLUMLEY said:

"Mr. Chairman, it is a long look back to 1761 when the charter of Wells was granted—then only 152 years from the date Champlain first saw the lake that thereafter was to bear his name forever. And your town was organized in 1773—a long, long time ago and at a time when every man and woman prized their freedom to such a measure that they were determined to enjoy it no matter what it cost.

"The story of those early days is the record of the achievements of men and women who greatly dared and greatly did.

"Hardy, grim, resolute, with incredible toil and unbelievable risk too great to try to measure they laid deep and firm and strong the foundations of civilization for the opportunities and all the blessings we inherit.

"It is therefore most fitting and it is right and proper that we should meet here today to glory in the accomplishments for which our pioneer forebears paved the way; yet lip service awaits but little. The deeds of our ancestors should be no excuse nor alibi for our

failure to show by deeds that we also have courage and strength and are ready to dare greatly and do nobly if and when the need and the occasion shall arise.

"In the great part which our country and each and all of us hereafter must play (whether we will it or not) in the world at large, let us emulate the example of our forebears, enthused and inspired by their confident faith in the future and in themselves, and by their purpose and determination that all men shall be free.

"I have a particular and a peculiar interest in the observance of the sesquicentennial of Vermont's admission to the Union. My great grandfathers on both sides of the family contributed their part to make it possible and my great grandmothers kept the home fires burning. They, my great grandfathers, were at Bunker Hill, at Hubbardton, at Ticonderoga, at Bennington, and if there was a fight for freedom going on anywhere in New England's forest you will find the names of my ancestors in the official records as present and accounted for. Incidentally, my great grandfather, Ebenezer Fletcher, was taken prisoner at Hubbardton. He wrote his story of the battle in a pamphlet which has appeared times without number as a historical document. Naturally I am proud of these old Green Mountain Boy ancestors of mine, and if once in a while my blood boils and I feel the urge to fight against tyranny I lay it to them, and hope I have enough of their spirit in me to make me want to fight for and enable me to maintain the honor of the State, my country, and my family.

"Anyway, who can analyze or fathom the pathos, emotion, passion, and love of a Vermonter for his homeland? No one but a Vermonter knows the answer.

"The love of that place where and by whose institutions he has been molded and by whose laws he has been protected and defended is an inborn sentiment which no power can erase, fixed and immovable as are our mountains. There is no power which can strike from our hearts the memory of the hamlet or town, the cottage or the mansion, in whose atmosphere we first breathed and with whose soil and scenery the innumerable and imperishable associations of our childhood and our lives are linked.

"All of us are so busy making history these days that we are prone to treat too much as commonplace the wonderful tradition and the history that is ours, but 150 years is a long time in the life of a Nation or a State, and its passing should be appropriately observed.

"Before and since the Revolution the territory occupied by the Green Mountain Boys was and has been the scene and seat of intense patriotism, local and national. The reckless courage and daring, the bold defiance of conventions, the natural military genius, and the determined purpose to win and to defend the liberty and freedom to which they believed themselves entitled made and make the Green Mountain Boys the intrepid heroes they were and are in song, story, and fact.

"The years only serve to testify the deferred but always deserved appreciation accorded those fearless fighters for the cause of the humble citizen, those contending for the rights of individual property and the equal dispensation of justice under the law.

"The very pyramids have forgotten their builders, but so long as courage and daring, love of liberty, justice, and country shall last, the story of the struggles of the Green Mountain Boys, enemies to oppression, strangers to fear, will be held in the memories of and be venerated by their appreciative countrymen.

"As someone has well said, deeds, not stones, are the true monuments of the great. The Green Mountain Boys erected to themselves a monument more lasting than brass, more sublime than the pyramids; a monument which neither the storms of the centuries that waste, nor of the years which succeed each other innumerably with their everlasting flight of the seasons, shall be able to demolish.

"So today we are observing the one hundred and fiftieth anniversary of the admission to the Union of the State of Vermont, which event was made possible by the sacrifices and the services of those men and women—150 years of enjoyed liberty under law made possible for us by those brave, patriotic, farseeing men and women who built the foundations of our State.

"Today we, their descendants, are confronted by the threat of the loss, the possibility of the obliteration of the rights and privileges of free men and women, and the destruction of civilization itself.

"The pagan, atheistic philosophy of Hitler and Mussolini, their totalitarian theory of government, and our Christian civilization and democratic form of government cannot coexist in the world. The issue is clear-cut and as well defined as anything possibly could be. It is reduced to a matter of principle. A man's judgment in these days of perplexity is safe when, and only when, it follows the line of principle, as he undertakes to chart a course of patriotic action. The two forms of government and the two philosophies of life cannot coexist; and the sooner we realize what confronts us and face facts, the quicker we can determine what is demanded of us by the emergency.

"Looking into the jaws of a Hitler hell, can there be any question in your mind as to the course we must choose to follow to the end? Are you for freedom? Remember that only those can defend freedom who are free and who love it.

"I tell you, my friends, that we cannot relieve ourselves of our responsibility to ourselves, to our children, and to the world, by trying to purchase peace at any price; nor by making a money contribution to our own temporary safety. Can it be measured in dollars and cents alone, or assured?

"Appeasers and isolationists and all of us should make no mistake. Whether we like it or not, we cannot dodge the fact that if we let England fall we must be prepared to fight, at a midnight hour of our desperation, for self-preservation, in an almost endless war against the mightiest, maddest, most ruthless coalition of murderous conquerors the world has ever known. Who questions it?

"The remorseless logic of facts and events proves the truth, and that the issue has long been drawn and is clear Remember what I tell you. It is either they or we in the last analysis. It is not easy to assume the responsibility for that statement; but it is right and will prevail.

"Calvin Coolidge was right when he said, as some of you have heard me quote before:

" 'No great question has ever been decided by the people of this Nation on the sole basis of dollars and cents. All that is needed,' said he, 'is for us to give what we think America is worth.'

"Love of money and the greed for gold always have been and always will be at the root of all this old world's troubles. Thirty pieces of silver sold Christ to crucifixion. There are other and better standards of measurement of the value we place on our lives and liberty.

"We must face facts. We should prove to the world that democracy can save itself. We should not hide behind the skirts of expediency, in an emergency, nor should we be blinded by personal prejudice or political partisanship.

"We should not fear the consequences of doing everything in our power to save ourselves. We should be desperately afraid of the consequences of doing too little too late. To see what is right and not to do it is cowardly. As Samuel Johnson once said:

" 'When desperate ills demand a speedy cure, distrust is cowardice and prudence folly. I say to you that we must be fit in order to be free.'

"INDIVIDUALITY

"In these days of centralization of government we are too prone to forget that it is not by pruning away individuality but by cultivating it wisely that human beings become valuable to themselves and to others and that human life becomes rich, diversified, and interesting. Individuality is equivalent to development. This the pages of history abundantly demonstrate.

"We Vermonters are called rugged individualists. While we know that is true, we modestly conceal from everybody our appreciation of the fact that the story of the Green Mountain Boys parallels even that of the Greeks at Thermopylae in its uniqueness with respect to the intrepidity and the bravery exhibited, in its intense interest to students of government and in its appeal to lovers of liberty. That is the Vermonter in us.

"UN-AMERICAN ACTIVITIES

"I would like to take advantage of this occasion to go on record again with respect to my position concerning all the un-American organizations and groups and activities that infest this land in its day of peril.

"We are so dumb we are fairly numb in our insensibil'ty to what we have tolerated to be done to us. It is time to speak out about some of these things we see and know. The people have a right to be told, and should be told what is being done to them, and for one, I do not propose later to be held accountable for not having done my best to advise them.

"So far as I am personally concerned, and as your Representative, it might as well be understood by 'fifth columnists,' 'parlor pinks,' 'fellow travelers,' 'pseudo liberals,' and all those 'lickspittle,' 'milksop' Americans who criticize me for being outspoken against them and their kind that I have no question as to what my duty is in the premises.

"My position can best be stated once for all, and for all time, in the words of Daniel Webster, which I have the presumption and determination to make my own, when he said:

" 'I mean to stand upon the Constitution. I need no other platform. I shall know but one country. The ends I aim at shall be my country's, my God's, and truth's. I was born an American; I live an American; I shall die an American; and I intend to perform the duties incumbent upon me in that character to the end of my career. I mean to do this with absolute disregard of personal consequences. Let the consequences be what they will, I am careless. No man can suffer too much and no man can fall too soon if he suffer or if he fall in defense of the liberties and constitution of his country.'

"The principles, methods, and aims of the Communists, their fellow travelers and sympathizers and supporters are the very antithesis of liberty and freedom and equality and justice under the law. Their scheme of government has no place in America anywhere, nor has any individual so inclined. That's plain talk, but true.

"Candor is a bitter pill for such people, however high they ride, to have to swallow, but millions of Americans agree with me and hold that the greed of this group and some individuals for money; their love of power; their obsession for experimentation; their egocentric monomania for publicity at the people's expense; and other things too numerous to mention, are responsible for the weakening of the moral fiber, the breaking down of morale and morals, the turmoil and the lack of confidence found in the body politic today. It is too bad, but too true, but not too late to correct it.

"The light of pitiless publicity should be mercilessly turned on the activities of these very people. They should be exposed. No

one should be overimpressed, awed, coerced, or cowed by the position any of these people happen to occupy, or by their delusions of grandeur, and, least of all, by their fantastic theories—social, economic, and paternalistic.

"The 'fifth column' has been at work here ever since Hitler made his plan to dominate the world. Right here in Vermont, my friends, there have been, and there are still, a few of those who under the egocentric impulse and the camouflage that they are 'liberals' are promulgating un-American ideas and theories clearly destructive of those fundamentals on which this State and the United States were founded.

"If they love some other country better than their own and what it affords, then they should go to that country or we should send them there. There is no neutral ground. It is either we or they.

"Every red-blooded American ought to join in heart and spirit with the cadets at West Point in their Sunday morning prayer when they say, 'Strengthen and increase our admiration for honest dealing and clean thinking, and suffer not our hatred of hypocrisy and pretense ever to diminish. * * * Endow us with courage * * * that knows no fear when truth and right are in jeopardy.'

"So today, as we observe the one hundred and fiftieth anniversary of Vermont's admission to the Union, we honor ourselves by recalling the deeds of valor, the sacrifices, the determination, and the farsighted vision of our ancestors who made possible for us all that we now enjoy.

"Anyone who is conversant with our early history must be impressed by the fact that the men and women who laid the foundations of our State meant exactly what they said and had the faculty to say what they meant—and in no uncertain terms. It is probably true that 'Vermont as nearly as any spot upon the earth's crust has been the scene of the most conspicuous action by men in all efforts to create, maintain, and advance a true independence of person and State and upon principles fundamentally included in the term "self-government." '

"In fact, the history of Vermont 'upon utmost analysis discloses that no people organized as a State have more nearly attained to perfect sovereignty or maintained it under their constitution and political methods. Vermont has been an extraordinary upbuilder of the Nation because of the intrinsic character of the people who compose it.'

"The question which now confronts you and me is, Will we carry on? Can we carry the load? Our responsibility is tremendous. Are we afraid? Of whom?

"These are critical days and troublesome times for those who love liberty. We come from a stock to whom the more abundant life only means one that we can carve out for ourselves without the dictation or interference of a paternalistic government. We may well remember that a typical Vermonter, Calvin Coolidge, once said that: 'The America which Washington founded does not mean we shall have everything done for us, but that we shall have every opportunity to do everything for ourselves.' That is 100-percent Americanism.

"The problems which confront us are too numerous to permit at this time even a cataloging, not to say a discussion of them seriatim. The question is, Where are we and where are we going? Who knows?

"Shall we quit? Never.

"It is our task to finish the job or to go down with all that has been accomplished, blotted out in a complete black-out. What a picture.

"We must go forward. We must turn our faces to the future, come what may. There must be no retreat.

"There is no such word as retreat in the vocabulary of a Vermonter.

"We might as well, each and all of us, invoke the spirit of Tennyson's Ulysses, who said:

" 'Come my friends,
'Tis not too late to seek a newer world.
Push off, and sitting well in order smite
The sounding furrows; for my purpose holds
To sail beyond the sunset, and the baths
Of all the western stars until I die. * * *
To strive, to seek, to find—and not to yield.'

"It is strange that Americans do not appreciate the fact that this world revolution now in progress will not stop short of America. It is incapable of stopping short of anywhere until it has conquered the world or been conquered by the world. 'Nobody can stay out of a world revolution. It can be resisted or accepted.' It cannot be ignored.

" 'There will be no second chance for us unless the revolution is beaten' has been well said, for it is true.

"So 'put the Vermonters ahead once more and close up the column.'

"It is no idle boast for us Vermonters to say as Americans that what we purpose that we perform. So today, imbued, enthused, and encouraged by the independence that is ours, and the thought of all that those who preceded us have made possible for us, let us go forward with determination to preserve, protect, and defend all that is ours, and to transmit to posterity our priceless privileges on a shield unsullied and without a stain.

" 'To what new fates, my country, far
And unforeseen of foe or friend,
Beneath what unexpected star
Compelled to what unchosen end?

" 'Across the sea that knows no beach
The Admiral of Nations guides
Thy blind obedient keels to reach
The harbor where thy future rides!

" 'I do not know beneath what sky
Nor on what seas shall be thy fate.
I only know it shall be high;
I only know it shall be great.' "

Address by the Postmaster General Before Democratic Editorial Association of Indiana

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ADDRESS OF HON. FRANK C. WALKER

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. Frank C. Walker, Postmaster General, before the Democratic Editorial Association of Indiana at French Lick Springs, Ind., on September 20, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want you to know that I consider it a great compliment to have been invited to address this fine organization of editors of Indiana, which has had for its guests some of the most notable figures in the public life of America. May I at the outset add a personal touch and say it is especially gratifying because it is here within the confines of your good State that I spent 3 of the happiest years of my life. It was here at Notre Dame during these years where I received a goodly part of my early education and served as a sort of reporter on South Bend and Indianapolis papers. Because of this background, I feel that it has made it easier to discuss with you directly and personally a dominant issue of national concern, upon the outcome of which depends the welfare of our country.

The responsibility which American editors and publishers have to convey information to the public is correlated to the responsibility which the President and his administration have—to chart a course, to establish a direction for the active progress of our people.

It is a striking evidence, too seldom noticed, of our really effective democracy that the responsibility for the welfare of our people should rest not exclusively on one group or political party; nor even upon the elected officials of government. From the early days of our Republic, the press of this country has grasped keenly its privilege, and its obligation, to the people. Our press, at its best, has been developed not as an adjunct of government or an ally of any self-seeking pressure group. It has attained unparalleled distinction as the conscientious expression of free men for whom truth was sacred. The telling of that truth was, and is, the ultimate justification for the freedom of the press.

The hard-working editors and writers of the American press are scientists searching for facts—scientists tracing our currents of opinion—and recording the events of human action. Like true scientists everywhere they are more devoted to the cause of truth and public welfare than to their own individual concern.

As the living channels of information and well-springs of opinion, newspapers are the pedagogs of the public mind. They furnish the information, they impart the knowledge, upon which intelligent judgment must be founded. They furnish a platform for public discussion, for an interchange of opinion, for the expression of opposing views.

To interfere with this function, to inhibit it in any way; to intimidate the security of its freedom by any kind of pressure, would be to undermine one of the bulwarks of the democracy of this Nation.

But as the press is charged with responsibility for telling the truth, as the truth may be known, it is not equally charged with fixing national policy. That is the obligation of the Government, and, in a singular manner, of the President of the United States.

In the arena of action rather than of argument, his moves are decisive for us all. His tactics are ours; by our choice, by our election, and by virtue of our democracy which consents to authoritative action without suppressing individual argument.

A President, loved by millions of his fellow citizens for his proved love of them, needs no defense against rash accusations. To a man who is pained by the suffering of the poor and humble; to a man who delights to share in the simple pleasures of ordinary Americans, the horror of a possible war has been an agonizing burden on his soul. Indeed, it was his very dread of war that sharpened his extraordinary perception of its approach. He saw it afar off. In foreseeing it, he was almost alone; in striving to prevent it, he was almost unaided.

Events of the past 2 years have moved so rapidly and have taken such frightful and tragic turns that few of us have paused to consider what has gone before the outbreak of this war that now directly engulfs more than a billion and a quarter persons—a war which each day is slowly but inevitably deciding who shall dominate more than three-quarters of the earth—a war which is deciding what fundamental philosophy shall regulate the hearts and minds of men, women, and

children everywhere in relation to the home, the church, and the state.

May I remind you of the successive steps our President took as he wisely and consistently fixed our policy? In May 1933, 2 months after he took office—yes, 6 years before the war began—President Roosevelt focused the eyes of the world upon the causes of the growing unrest when he said they could be traced to—

First, "the desire, disclosed or hidden, on the part of governments to enlarge their territories at the expense of a sister nation," and

Second, "the fear of nations that they will be invaded."

At that very time in Europe and Asia, in our own hemisphere—indeed, in the world—this Nation stood practically friendless.

Through many years nothing had been done to make this Nation a good neighbor or to encourage other nations to be good neighbors. But at the very outset of his leadership, President Roosevelt, thoughtful and informed in international affairs, recognized the implications in existing world conditions, and promptly—8 years ago—urged all nations of the world "to translate their professed peace policies into action," because without such concerted action "the fear of aggressive war was justified." Yes; 8 years ago—more than 6 years before the fall of France—the President said, "Modern weapons of offense are vastly stronger than modern weapons of defense. Frontier forts, trenches, wire entanglements, coast defenses—in a word, fixed fortifications—are no longer impregnable to the attack of war planes, heavy mobile artillery, land battleships called tanks, and poison gas."

Eight years ago—more than 6 years before the fall of Warsaw—he urged "the elimination from possession and use of the weapons which make possible a successful attack." Even though his appeals fell upon deaf ears, 8 years ago—with the help of his able counselor, Secretary of State Cordell Hull—the President sought to make friends for this Nation throughout the world, to the end that the Nation might enjoy the security and tranquillity which come to a good neighbor among good neighbors. He alone led us into the paths of friendship—all the while encouraging neighbors to seek the ways of peace.

When his appeals failed, and when the grim significance of the failure of other nations to follow the ways of peace became clear, the President once more cautioned the people of this country, in March 1934, when he said "that activities vital for national defense cannot be sacrificed for passing advantage." On January 4, 1935, the President said to Congress, "I cannot, with candor, tell you that general international relationships are improved. New strivings for armament and power rear their ugly heads." In October 1935 he said, "War is a potent danger at this moment to the future of civilization." And, on Armistice Day of that year, he added, "the dangers that confront mankind as a whole are greater to the world, and therefore to us, than the dangers which confront the people of the United States by and in themselves alone." Again—6 years ago—the President declared, "America must and will protect herself. Defense is our accepted policy and the measure of that defense is and will be the amount necessary to safeguard us against the armaments of others." Five years ago, the President spoke as follows: "The Americas must take cognizance of a world situation that has in it elements that lead to the tragedy of a general war." "If there are nations that wish us not good but ill, they know that we are strong; they know that we can and will defend ourselves and defend our neighborhood."

Even though the President was a man of peace he did not believe that the Nation should allow its defenses to become impaired. From the day that he first heard the faint rumblings of thunder on the distant horizon, the President set about rebuilding the American Navy and revitalizing the United States Army.

As early as 1933, he earmarked $250,000,000 for naval construction. Thirty-two fighting ships were laid down. All of these vessels have since been completed and are now operating with the fleet. The following year the Vinson-Trammell Act authorized the building of the Navy up to treaty tonnages. The Congress appropriated funds for 20 fighting ships in 1935, 22 in 1936, and 30 in 1937. In 1938 the Navy was authorized to exceed treaty tonnages by 20 percent, and early in 1940 came the 11 percent blanket increase. Later in the same year came the supplementary 70 percent increase and at last the two-ocean navy was to become a reality.

During the first 8 months of 1941, 213 naval vessels of all kinds were completed or placed in active service, including 2 giant 35,000-ton battleships, 9 submarines, and 12 destroyers. In these 8 months 436 new keels have been laid, including those for 2 battleships, 13 cruisers, 18 submarines, 2 aircraft carriers, 57 destroyers, and 91 patrol craft, not to mention 81 auxiliaries and 172 district craft.

The speed with which naval construction in this country is now proceeding has been made possible to a large degree through plant and yard extensions, which were undertaken several years ago in keeping with the Roosevelt policy of building up the American Navy. Today we have the largest navy in the world.

There has been an accompanying increase in the air forces of both the Army and Navy, not great in numerical terms until the last 3 years, yet because of the President's policy there has been developed the best military aircraft in the world here in the United States. That his policy has succeeded is best proven by the record of American planes in the war to date. The airplane expansion program advocated 3 years ago is now bearing fruit at the rate of more than 1,500 airplanes a month with a goal set by the President of 50,000 planes a year by mid 1942.

Through the years the President continued his search for peace and gave every assistance and encouragement to all others who sought to save mankind from destruction. Animated by a desire to collaborate in a movement for peace, in 1939 he appointed a special envoy to the Vatican.

On April 14, 1939, he addressed a message to Hitler and Mussolini—a message of peace and good will designed to bring all of Europe's great nations together around the council tables in an effort to avoid the impending disaster of war, reduce armaments, guarantee the security of frontiers, and consummate agreements on international trade.

Even when the forces of might were on the march he sought to bring the aggressor nations to a peaceful conference. In August of 1939, a few days before the outbreak of the war, he again asked Hitler to mediate his differences with Poland. But once again his plea fell on deaf ears.

And when the threat to this Nation became a cold reality the President promptly supplemented his measures for our defense with alien registration, selective service, acquisition of new strategic bases, lease-lend, and the Atlantic patrol.

Now it seems to some of us that, respecting the war, too little attention has been given thus far to action and too much to argument. We need not attempt to pass judgment on the merits of the contemporary debate concerning our relation to the war. On such a vital issue, public and private discussion is necessary if our democracy is to survive. Inevitably, the argument has aroused heated emotions; and in questions of life and death, when emotions are not aroused, humanity is dead. So long as we have a choice, and if we have a choice, we are pledged to the hate of war. If it is an issue that does not affect our vital security and our political continuance, we are stanchly neutral.

So long as we had a choice, the interventionists and the isolationists, and other groups (pinned with somewhat misleading labels) performed a service by the diffusion of their views, even when these views were partial and dictated by emotional sympathies and dislikes. The so-called isolationist, at his patriotic best, fortified the deep American desire (a desire upon which this Republic was founded) to be free from the devious and discouraging entanglements of European power politics. Through a long line of Presidents, from Washington to Roosevelt, ours has been a fixed policy of no foreign alliances.

The so-called isolationists have served to arouse us, if we needed to be awakened, to the sanctity and the preciousness of human life and to the horror of shedding blood in quest of lustful power or in the vanity of an arbitrary interference.

On the other hand, the so-called interventionists saw the war as an ultimate menace to the security of this Nation and this hemisphere. They feared for the effect upon this Nation, and upon the world, of a triumph of force; they saw a world dominated by Hitler as a world destroyed, as a society corrupted. They were interventionists because they saw the world as a tight, small thing; they saw humanity itself as one thing, and they viewed national boundaries as but weak barriers to a rampant aggressive evil. With varying convictions and from various motives they urged us to active, participating resistance lest the spreading fire of a consuming wickedness should destroy us.

So long as the war was a German war, a British war, a French war, or an Italian war, it is no criticism of anyone to say that some opinions were colored by racial and religious backgrounds and by harsh memories of an historic past. Quite understandably, the Jewish people longed for the overthrow of the arch-enemy of their very life; Christian peoples desired the suppression of the vicious Paganism propagated by the Nazi or Communist regimes. The Irish people saw no reason for assisting Britain in a political or economic combat; the Americans of German descent or of Italian descent protested lest the scales be weighted against the nations of their forefathers, whose gentle, cultured ways and sturdy virtues had enriched their own life heritage, as, indeed, they have enriched America. These and many other aspects, frankly and clearly, entered into our divergent opinions so long as the war remained (if it ever was) a war in which we could be neutral.

But it is a curious fact that the action of that war has outdistanced the argument about it. And it is no less curious, while deeply significant of our will to peace, that all of us have been aware of that action while we were still arguing, as if we could control the circumstances that might bring about our involvement in the war. We were aware that this Nation was arming on a scale so vast as to defy description; we were aware that the war had entered forcibly into our everyday calculations. During the past 2 years, every city, every town, village, and farm throughout this Nation has been profoundly altered in the conduct of its daily affairs; we have pledged our generation, and also the next, to a tremendous burden of financial obligation and of economic sacrifice. We were aware of the action of the war.

The great issue of our lives, if not of our speech, has been the war. Our instinct has outmarched our reasoned deliberations. Our instinct has kept pace with the march of Hitler.

We did not wish war—we do not wish war—but we know now that the war is upon us; it is upon us through the necessity of defense. We did not go out to meet it, but

like a hurricane it has swept over the seas challenging our freedom, jeopardizing our national and soon, our individual lives.

As Chief Executive of the United States, prayerfully mindful of his grave responsibility, President Roosevelt has declared that the time has come when the Americas themselves must now be defended and stand their ground against assault upon their sovereignty and freedom. The time has come to say to the inhuman seekers of world domination by the sword, "You seek to throw our children and our children's children into your form of terrorism and slavery. You have now attacked our own safety. You shall go no further."

This is no action of intervention. It is no action of isolation. It is not an action selected by choice; it is an action compelled by circumstance. It is an action of inescapable defense against a creeping monstrosity of terror.

As action, it has the character and value of a fact; as a fact, it is, for all of us, a turning point from discussion to complete, united effort. The action of the war has been met by the counteraction of the Commander in Chief of the United States.

There has ben some who said that former actions of our President were leading us into war without due provocation. There were some who asserted that our President was seeking out an occasion to project our people into the conflict. There were some who said that he was being influenced in his judgments by the blandishments and praise of other nations.

The plain fact of the matter is that the actions of the President throughout the years from early 1933 to this very moment bear witness to a remarkable insight and a prophetic struggle carried on by him before most of us had heard the roar of guns or knew the direction of their firing.

The one who did know; the one who counseled us and cried out a warning to the world, the one who watched the facts and not the controversy; the one who, astonishingly, has resisted aggression, yet avoided active combat—that man, our President, now declares that the action of the war immediately threatens our vital interests and our national security.

We are poised on no arbitrary adventure; we are alined by no artificial choice. But we stand embattled before an insane and fratricidal tyranny that strikes, with the lawlessness of a maniac, to enslave the world.

To that tyranny our President has said, "You shall go no further." And at his summons we, all of us, stand ready, watchful, waiting.

Effect of Defense Program on Small Business

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ARTICLE BY HON. ROBERT M. LA FOLLETTE, JR., OF WISCONSIN

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Defense Program Threatens Extinction of Small Business," written by me and published in the Progressive of August 30, 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Progressive, Madison, Wis., of August 30, 1941]

BOB LA FOLLETTE SAYS

DEFENSE PROGRAM THREATENS EXTINCTION OF SMALL BUSINESS

The small businessman—a vital segment of industrial America—is being sacrificed on the altar of national defense. An economic pincers movement more powerful and destructive than the giant industrial monopolies have ever been able to muster is being fostered by the Government itself. We face a paradox of depression and unemployment in the midst of defense prosperity. We are threatened with the permanent extinction of small business.

The two jaws of the Government pincers are priorities and defense contracts. Priorities are depriving nondefense industries of raw materials necessary for their existence. Defense contracts have gone for the most part to big business. The result is that small business which is denied materials for normal production must shut down, while big business gets defense contracts to replace normal production.

Already more than 300 items are on the priorities critical list, running the entire alphabet from acetone to zinc. Practically all the industrial raw materials, especially metals, are now included, as well as such varied consumers goods as wool blankets, men's underwear, tent stoves, and field glasses. Numerous raw materials, including aluminum, copper, nickel, zinc, chromium, magnesium, tungsten, borax, and resin have already been subjected to strict allocation by O. P. M.

Contract allocation bungled

Present very conservative estimates are that upward of 5,000 small plants face complete idleness in the near future and unemployment directly attributable to priorities may exceed 2,000,000 people. The magnitude of these figures can be appreciated best with these comparisons:

The sharp industrial recession at the end of 1937 involved the lay-off in manufacturing of only about two-thirds as many employees. The upswing in manufacturing employment between June 1940 and June 1941, due both to the direct and indirect effects of the multibillion defense contracts, afforded additional employment for only 1,700,000 people. All manufacturing activity in June 1941 employed less than 12,000,000 people. The major defense industries, according to O. P. M., employed less than 2,500,000.

Of course, the theory of the defense program is that defense production will supplant civilian curtailments and that priorities will entail but a transitory crisis. Such optimism, however, is not warranted. The key to the situation—the allocation of defense contracts—has been bungled by the administrators. While paying lip service to the small industrialist, they have awarded almost three-fourths of the dollar value of all defense contracts to 56 giant corporations.

Present situation is crucial

As of June 1941, four corporations—Bethlehem Steel, New York Shipbuilding, General Motors, and Curtiss-Wright—had received almost one-fourth of the dollar value of defense supply contracts; with almost a billion dollars worth of supply contracts going to the top corporation—Bethlehem Steel. At the other end of the American industrial structure tens of thousands of small industrialists have not shared appreciably in defense contracts and are now being barred from obtaining sufficient materials for their normal civilian production.

Normally the small and medium plants, employing less than 500 people each, produce about 60 percent of our manufacturing output. These are the plants that are being liquidated by the defense program. A manifold economic waste is involved, not only in the vast production capacity unutilized, the idle men and idle machines, but also in the impairment of efficiency in the wholesale shuffling of economic factors to conform to the abnormal allocation of contracts. It should not be overlooked, as reported to the T. N. E. C. by the Federal Trade Commission, that small and medium-size corporations are the most efficient producers, that the major advantage of size is in sales and market tactics.

For 60 years the small business man has been fighting an up-hill battle against the unfair competition of trusts and monopolies. Government antitrust laws, when enforced, have aided him. Crocodile political tears have been shed over his troubles by this administration. But now, with eyes turned in another direction, the administration's defense policies are selling him down the river to big business.

The present situation is crucial. The future implications are even more serious. A heavy responsibility rests on those administering the defense program that past mistakes may be corrected before it is too late.

ROBERT M. LA FOLLETTE, JR.

Explanation of Priorities

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

RADIO INTERVIEW WITH DONALD M. NELSON

Mr. LUCAS. Mr. President, on September 22, 1941, Mr Donald M. Nelson was interviewed by Mr George Hicks, on a radio program donated by the Firestone Tire & Rubber Co. to national-defense interests, explaining the meaning of priorities in the new national-defense set-up. I ask unanimous consent that the interview be printed in the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

The ANNOUNCER. On this Office for Emergency Management defense report, we hear from one of America's foremost businessmen called into the service of his country by the President of the United States. He is Mr. Donald M. Nelson, Executive Director of the Supply Priorities and Allocations Board.

Mr. HICKS. This is George Hicks speaking. Here in our Washington studio Mr. Donald M. Nelson, who holds not one but two of the most important posts in America today—Executive Director of the Supply Priorities and Allocations Board, and Director of Priorities,

Office of Production Management, is going to discuss on this program some phases of the work he and others are doing in defense of America. Mr. Nelson—this business of priorities—I think a great many of our audience must feel, as I do, a little vague as to the meaning of priorities. We hear a lot about them, of course.

Mr. NELSON. I don't doubt that, and I think you will hear a lot more about them in the future.

Mr. HICKS. Why is that, Mr. Nelson?

Mr. NELSON. Because priorities are going to become more and more important in the daily lives of the average man and average woman in the United States.

Mr. HICKS. Isn't this priorities system the Government has set up rather difficult for the average person to understand?

Mr. NELSON. No; there is nothing very dark or mysterious about it. Naturally, there are a good many issues involved. It touches practically every phase of our national economy. But the underlying idea is as simple as a, b, c.

Mr. HICKES. How would you define priorities then, Mr. Nelson?

Mr. NELSON. It is just seeing that first things come first. That means that those things this country needs for its defense—materials for planes and tanks and guns and ships—get a prior rating; the right-of-way over things that this country can safely do without.

Mr. HICKS. I wonder if you would explain that more fully for our audience, Mr. Nelson.

Mr. NELSON. I'll try to put it simply in this way: Our peacetime economy was geared for peacetime needs—so many tons of steel for bridges, so many tons of rubber for automobile tires, tennis balls, rubber boots, etc.; so many bales of silk for women's stockings and men's neckties; so many tons of aluminum for kitchen pots and pans. Only a very small amount of those peacetime materials went for military needs. Then suddenly we were confronted with an emergency that called for an immediate expansion of our military and naval equipment.

Mr. HICKS. I can understand how that would change the picture.

Mr. NELSON. It changed that whole peaceful picture practically overnight. Steel was needed for ships, rubber for Army trucks, silk for parachutes, aluminum to build planes. We had our choice—either to continue manufacturing millions of rubber boots and tennis balls or devote that rubber to Army tanks; either to cut down the number of aluminum percolators in our kitchens or cut down the number of planes we needed; either to supply our wives with silk stockings or our aviators with parachutes. We couldn't do both.

Mr. HICKS. You refer, Mr. Nelson, to these shortages that developed?

Mr. NELSON. Exactly.

Mr. HICKS. I think a great many Americans are puzzled on that score. We've always gone under the impression that here in America we had materials galore.

Mr. NELSON. That's true. We have always had plenty for our peacetime needs, and in some materials enough to supply our armed forces, too. But remember, a great many of our most essential raw materials that we took so much for granted in the good old carefree days—things like cork, rubber, tin, silk, to mention only a few that everyone knows about—those came to us from overseas in ships. Many of those ships are now being used for war purposes, and many of those ships are now at the bottom of the sea.

Mr. HICKS. Would you say then, Mr. Nelson, that this shortage of ship led directly to shortages of material?

Mr. NELSON. It is one important factor. But it is not the whole story. We Americans have been careless and wasteful of the things we had. We dug into our piles of raw materials with no thought of the future—no idea that an emergency might arise that would tax every available resource we had. That emergency is here now and we must stop wasting. We must conserve what resources we have.

Mr. HICKS. Iron and steel, for instance?

Mr. NELSON. Yes. And steel is a good example of what we are up against in this choice between what we'd like to have and what we must have. Just the hull of a 35,000 ton battleship alone takes as much iron and steel as 24,000 automobiles. That means that, if we are to have that battleship we can't use that metal for those 24,000 pleasure cars. The battleship comes first. We can't have our cake and eat it, too.

Mr. HICKS. I think our audience is beginning to see the meaning behind the expression, "First things first," Mr. Nelson.

Mr. NELSON. It means that we've all got to tighten our belts a little and do without some of the things we're used to. We've got to cut down on our free-for-all consumption of essential materials. We've got to stop manufacturing those extra cars and extra coffee percolators. We've got to distribute the steel and the aluminum to the places where they are most necessary. And that is where our job comes in.

Mr. HICKS. The Supply Priorities and Allocations Board?

Mr. NELSON. Yes. We're the traffic cop in this emergency. Not always a pleasant job but vitally necessary if he is to keep traffic from getting snarled and bottlenecked at the crossing. As national traffic cop we must give the go-ahead signal to the ambulance that is answering an emergency call and the stop signal to the pleasure cars that are just out for the ride. In other words, we are giving the ambulance—and by that I mean all the essential materials for defense—the prior right-of-way.

Mr. HICKS. How's that done, Mr. Nelson?

Mr. NELSON. By controlling raw materials—allowing to defense industries what they need and restricting those materials to industries less essential to defense.

Mr. HICKS. Doesn't that, Mr. Nelson—alloting materials such as steel and rubber to one manufacturer and cutting down on the supply to another manufacturer—doesn't that work hardships on a good many people?

Mr. NELSON. It does in some cases. It takes a great deal of cooperation on the part of everyone for this priorities plan to succeed. It means sacrifice on the part of the manufacturer and the consumer. We cannot avoid that. We try to make this control as fair and reasonable as possible, keeping in mind always that this country's military needs must come first. That is a must, not an if or a perhaps.

Mr. HICKS. How about the consumer you speak of, Mr. Nelson—the plain, everyday American who is not a manufacturer? How are priorities going to affect him as an individual in his daily life?

Mr. NELSON. The answer to that question is not going to please everyone. But I am going to answer it plainly and definitely. Some automobile driver is not going to get that new car he has been planning on. His wife is going to have to do with her old set of aluminum kitchenware. Priorities are going to take away silk hosiery from his daughter and the bicycle his 12-year-old son gets won't have shiny chromium trimmings. Our priority system is going to reach into millions of homes and take the things this country needs for defense.

Mr. HICKS. Now that you've made the reasons clear to us, Mr. Nelson, I don't believe most of us will object to making those sacrifices.

Mr. NELSON. They are very minor sacrifices compared to the sacrifices and deprivations the people of this country would face if, for any reason, we should fail in this defense effort. We would get priorities then, but they would be dictated to us and we would have no choice in the matter. We're not going to wait for that to happen. In the final analysis, we are saving and doing without now so that we'll have weapons to fight for something well worth saving—something we cannot do without. And by that I mean this great country of ours.

The Neutrality Act

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ARTICLE BY WALTER LIPPMANN

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Walter Lippmann on the Neutrality Act. I may point out that when the present Neutrality Act was enacted in 1937—the act which has since been amended—I was one of six United States Senators who voted against it then and I have been consistently against it since. I stated at the time that it was impossible for a nation to legislate peace as much as we would like to do so and that in times of international crisis a nation should not be handicapped by laws of its own making.

Mr. TOBEY. The Senator also will agree that the Neutrality Act was enacted by the Congress under the whip and spur of the present President of the United States and his administration?

Mr. BRIDGES. It was; and it is interesting to note that of the six United States Senators who at that time voted against it five were members of the minority party, and one was a member of the majority party, and all that was said at that time by the minority members who opposed the enactment of the neutrality law has since been proved to be correct, and the very individuals who insisted upon the enactment of the neutrality law and supported it most vigorously are now asking for its repeal. I agree with their present views but wish they had seen the situation as I did in 1937.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of September 25, 1941]

TODAY AND TOMORROW

(By Walter Lippmann)

THE NEUTRALITY ACT

On January 31, 1917, the German Ambassador delivered a note to the Secretary of State announcing that beginning the next day "in a zone around Great Britain, France, Italy, and the eastern Mediterranean * * * all ships met within the zone will be sunk." This announcement, which caused President Wilson to break off diplomatic relations with Germany, is the substance of our present Neutrality Act. The simple truth about the Neutrality Act is that it has made the illegal policy of Germany in the other war the statutory law of the United States in this war. The zone which in 1917 Germany closed to our ships is under the Neutrality Act now closed to our ships by domestic legislation; the suspension of international law on the high seas is under the Neutrality Act accepted as a fact. Thus the United States, which had asserted its rights on the sea, legislated away the rights for which it had victoriously contended, and placed upon its own statute books the prohibitions of Admiral Tirpitz.

That this was an extraordinary thing for a great nation to do is admitted in the preamble of the law itself, which states that "by so doing the United States waives none of its own rights and privileges to which it and its nationals are entitled under the law of nations * * * and expressly reserves the right to repeal, change, or modify this joint resolution or any other domestic legislation in the interests of the peace, security, or welfare of the United States and its peoples."

The first great war which broke out after the enactment of the Neutrality Act was the very great war between Japan and China. This was in the summer of 1937. The law has never been applied to this war, and the isolationists who sponsored the law have never seriously asked that the law be applied. So American ships continue to carry goods, including weapons of war, both to Japan and to China. There are no barred zones in the Pacific into which American ships may not enter. Though for 4 years there has raged a bloody war in Asia, the Neutrality Act is not in force.

Why? Because Japan, as a matter of self-interest, chose not to call the war a "war" but only an "incident," finding it convenient to receive American war supplies; because China, as a matter of self-interest, chose not to declare war against the invader, finding it convenient to receive American war supplies; because the United States chose not to recognize that the war was a war, finding it expedient, and also profitable, to continue to trade Thus in the Pacific during the greatest war ever waged in the Orient, the Neutrality Act is nonoperative and traditional American rights are still in effect.

We are then in the remarkable position of nullifying our own recently enacted law because it suits us to do so and it suits the belligerents to let us do so. But any moment either Japan or China could by issuing a declaration of war compel us to enforce an American statute which as a matter of policy and self-interest we prefer to nullify.

Thus we have placed in the hands of foreign governments the power to determine whether we may continue to violate our own domestic laws in order to enjoy our rights under international law, or whether we must enforce our domestic law and then surrender our international rights.

Two years later war broke out in Europe, and the law which had been nullified in the Pacific was immediately put into effect in the Atlantic. Not only did we forbid our ships to go to the belligerents—to Germany, France, and Britain—but we forbade them also to go to Holland, Belgium, Sweden, Denmark, and Finland—all of them then neutrals. We also forbade our ships to go to Eire. On the other hand, we allowed them to go to Italy, which was then still nonbelligerent. The reason for this discrimination was that American ships passing to the northern neutrals were within range of the German submarines, which sink at sight, whereas ships passing to the southern neutrals were within range only of the British and French Navies, which did not sink at sight but observed the rules of international law.

Thus we placed ourselves in the remarkable position of withdrawing from waters where war was waged lawlessly and ruthlessly and of continuing to enter waters where war was waged lawfully and humanely. In the Pacific we were exercising our rights by grace of the fact that Japan found it expedient not to make a formal declaration of war against China. In the Atlantic we were exercising our rights only outside the reach of the German Navy. When Italy entered the war we ceased exercising our rights in the Mediterranean, where the British Navy though at war had recognized our rights, because the Italian Navy would probably follow the German policy of sinking at sight.

This policy must have created the impression in many minds, perhaps even in Hitler's, that we had deliberately decided as a matter of national policy to submit to force.

But that did not end the progress of American humiliation. The zones which we had closed to American ships and opened to absolute lawlessness were not large enough to suit the Nazis. So they proclaimed a much larger war zone in the North Atlantic—in fact one which surrounded Iceland and extended to Greenland. Having been taught to believe by our neutrality law that what Germany declares to be her purposes will in the end become accepted as American law, the Nazis have been preying on ships well outside our own self-imposed combat zone. It just happens that their combat zone is bigger than ours, and therefore, according to Berlin, it is legal to sink ships there without warning

But even that is not the end of it. In the case of the *Robin Moor*, an American ship was traveling outside the German war zone, outside our own combat zone, in fact on the high seas. This ship was stopped and sunk, and its crew and passengers set adrift in mid-ocean. And what was the justification of this extension of the area of lawlessness? We have had it from some of our own Senators—that the *Robin Moor* was carrying contraband of war and, therefore, her crew and passengers had no rights which Germany was bound to respect or that the United States ought to presume to defend.

There may be room for differences of judgment as to whether what is left of the Neutrality Act is now of practical importance, and what as a matter of fact it is useful to do about it. The law is nullified in the Pacific. In the Atlantic it is not observed by Germany and in fact not by the United States.

But there is, I think, no room for a difference of opinion that the neutrality law has proved itself to be an act of national self-debasement, a mortifying submission to force, without logic, without honor, and without value even to achieve the purpose for which it was originally designed.

A Private's Viewpoint

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ARTICLE BY PVT. JAMES L. HOWARD, JR.

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD an interesting article, written by Pvt. James L. Howard, Jr., which appeared in the Camp Edwards Digest, Camp Edwards, Mass. Mr. Howard is a resident of my State.

I think Members of Congress, particularly those who have been greatly disturbed by rumors of unsatisfactory conditions in the Army camps, will find this article interesting and very encouraging.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATE ANSWERS PRESS INDICTMENT OF MORALE

I read last night the article in the New Bedford Standard Times, which purported to show that morale at Camp Edwards is "low and unhealthy." It quoted statements from privates and officers alike that the soldiers were "framed" into the service, that there were "stupid junior officers," that the training was "sloppy," and that the townspeople were hostile toward the soldiers.

If I were a civilian and read that article, I might say, "Well, finally they're telling the truth. After all these rumors I've been hearing, it's about time someone had the guts to give us the real story about Camp Edwards."

But I'm not a civilian. I'm a soldier. I've been here since January. And I think I have a clearer conception of life at Camp Edwards than a reporter who spent only 2 days at camp—and yet says he interviewed "200 draftees and 50 officers." (He must have been interviewing 24 hours a day.)

I have no doubt that this reporter heard every one of the rumors he printed. I also have no doubt that he came down here with one mission, "to dig up the dirt in Edwards."

Anyone who snoops around a town of 28,000 people can find rumors about everyone from the mayor to the street cleaner—if he goes about it in the right way. And the same goes for a camp of 28,000 soldiers.

Just give a soldier a chance to gripe, just give him the right conversational lead, and he'll tell you a swell story. It's the fashion. It's just as much a military custom as saluting—and 10 times more enjoyable.

But, remember one thing the next time you hear any Army grouse: consider the source. As a rule, the larger the complaint the more insignificant the source it comes from.

If this article in the Standard Times were more than merely a composite grouse, I would not resent it. But for a reporter who obviously knows nothing about military procedure to take these grouses and represent them as the whole situation at Camp Edwards is a malicious falsification of facts. It is more than that. It is a definite morale depressor

and as dangerous as any deliberate "fifth columnist" activity.

First, concerning the statement that we selectees were "framed" into the service.

There are many of us selectees who make statements like that. It gives us a martyred feeling—puts a sort of invisible halo around our head.

But I think that most of us realize, way down deep, although we would never say it, that our military service has but one purpose: To preserve the way of life which we cherish in this country. It is impossible for us to listen to the radio or to read the newspapers without being aware of the destruction and chaos taking place in Europe; about the muzzling of our personal liberties, suffering, and torment. The press and radio tell us every day that It Can Happen Here. It is not necessary to digress on the plight of France or the 13 other nations that Hitler has conquered or the reason that they have been conquered: Unpreparedness. Every soldier knows that. And every soldier knows if we are going to preserve our way of life, there is one price we must pay—constant military preparation and training.

To this Nation the draft is something new, a sacrifice not brought about because of our shortcomings, but because of the bestiality of aggressor nations. It is so new that there are some of us who resent it without thinking of the reason for it.

I am not being idealistic. I am being ruthlessly practical. I realize that I am not a separate individual, free to do anything I please, but a member of society. And the good of society is my good.

I know the sacrifices that I am making during my services, and I can appreciate the sacrifices that other soldiers are making. True, some of us gave up good jobs, others had to postpone marriage. But one fact still remains; we have a job to do, and we've got to do it. So if we "cry-baby" occasionally, remember that we're only human. Way down under, we realize the necessity for what we are doing.

Concerning the "stupid junior officers," some of them obviously have to lean rather heavily on the top sergeant during their first few months of duty. But recall this: All of them are college graduates, all of them have to go to officers' training school, and all of them have to demonstrate to a board their ability to lead men.

A top sergeant with 11 years' experience may resent taking orders from a rosy-cheeked lieutenant fresh out of college, but the sergeant should not forget that if he had the qualifications, he could be a lieutenant himself.

As for officers drinking in the mess hall and the barracks, I have no doubt that there are cases of insubordination as mentioned by the reporter in his article. But such cases are the exception rather than the rule. In any stratum of life there is, inevitably, personal bickering. To publicize this is more than to wash dirty linen in public. It is to destroy the enlisted man's respect for the officers.

We have been taught in the Army to salute the insignia which an officer wears and not the man himself. That is very hard for civilians to understand, but it has been found by long experience to be the most efficient way to conduct the Army.

We have been taught to obey orders, without question or doubt. That, too, is hard for the civilian to understand. Yet, if you consider that the Army is the largest single organization this country has yet produced, you will see that for an individual to take matters into his own hands without consulting a superior would lead to considerable confusion.

Any unwarranted publication or rumor that tends to disrupt the soldier's confidence in his superiors is going to besmirch the uniform that the officer wears, not the officer himself. Any unwarranted statement by an officer to a newspaperman will reflect on the officer's rank, not on the officer. Such statements accomplish nothing constructive and much that is destructive.

If training of the men at Camp Edwards is sloppy, as the writer accuses, and if he has any improvements to offer, the Army will welcome them, and act on them. But a civilian who is criticizing the Army should always remember that he is a civilian, and that his concepts might not be the same, had he the responsibilities and perspective of a high-ranking officer.

Concerning the statement that the townspeople are hostile toward the soldiers, this strikes me as the most untrue of all. Civilians have never, to my knowledge, shown anything but a friendly interest and a desire to help Camp Edwards soldiers.

If ever they show a discrimination against a man in uniform, it is because of what he may do personally and not because he wears a uniform. Obviously, there is a small minority of soldiers who feel that a uniform entitles them generally to raise hell. In that case, any civilian resentment is purely personal and not against the Army.

But I will make one criticism of civilians. They are sympathetic with the soldiers, but they are not sympathetic with the Army. Rather than being sympathetic to the soldier because of his sacrifices and respecting him for what he is doing, they pamper him because they think an injustice has been done him. They nurse his gripes. They take a perverse delight in trying to find that things are not going as well as they might in the Army.

You know as well as I do that there are unpleasant duties in the Army, that soldiers get depressed, that they sometimes resent higher authority.

But remember: We soldiers are no hired troops called in to fight your battles. We are part of you. It is your battle just as much as it is ours. You are out there furnishing us with the materials with which we are arming ourselves.

We must have more than your material aid if we are going to achieve our ends together. We must have your sympathy and understanding of what we are striving to do. With that, I think, we cannot fail.

The Daily Drift

EXTENSION OF REMARKS
OF
HON. H. H. SCHWARTZ
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

EDITORIAL FROM THE WYOMING EAGLE

Mr. SCHWARTZ. Mr. President, the Wyoming Eagle is one of the important newspapers of the Rocky Mountain area. I desire to have incorporated in the RECORD an editorial from that journal dealing with the President's address in particular and our foreign policy in general.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wyoming Eagle of September 13, 1941]

THE DAILY DRIFT

The close of the second week in September finds the United States poised on the brink of a "shooting war." The isolationists say we have been "on the brink" for more than a year. Their reaction to the President's Thursday night speech probably will be that "now we're all the way in."

As to the address to the Nation and the world, it is the consensus of opinion that it is one of the best Mr. Roosevelt ever has delivered. It was fearless, it was to the point and as his secretary, Stephen Early, had previously announced, it left no questions unanswered. Mr. Hitler and Mr. Mussolini now know definitely that they can go so far and no further.

Shoot first and talk about it later. This is the new policy of our Government. The Navy has been ordered to destroy any German or Italian warship found in any waters "we deem necessary for our defense." That is a comprehensive definition. This country considers all waters over which aid is transported to Britain as necessary for our defense—if we can believe all that has been said in behalf of the lend-lease law. It can be stretched to include the Red Sea over which United States ships are carrying supplies to the British in Egypt. And as time goes on, the inclination will be to extend the area in which the American Navy will be expected to shoot on sight.

The American people, we believe, will welcome this stiffening of our foreign policy. It has been disheartening to know that food and guns and munitions which we have produced at great cost and sent to the aid of beleaguered democracies were being sunk by enemy raiders. What price aid to Britain if the much-needed materials were destroyed before they arrived at their destination? Nobody wants war although a few seem to desire peace at any price demanded by Adolf Hitler.

It would be absurd to assume that every isolationist is actuated only by partisan or selfish motives. Some of them undoubtedly believe, in all sincerity, that in some mysterious fashion we can preserve our way of life and keep out of war if the Axis Powers conquer the rest of the world. They may sincerely believe that once the Axis has instituted its new order in Europe, Asia, and Africa, it will not bother about the existence of liberty-loving nations in the Western Hemisphere. It may be their idea that the conquerors would turn benignant, and forget and forgive our having delayed and made more difficult their conquests by becoming the arsenal of democracy. But mistaken beliefs and false hopes never saved anybody.

Unquestionably, there were honest Tories during our Revolutionary War—men perfectly sincere in their theory that Britain's might would overcome Washington's ragged patriots, and that our country's future would be brighter as a British colony than if we went on our own, even if we were successful. Their sincere beliefs may have been as harmful to the cause of independence as Benedict Arnold's deliberate treason, though the honest Tory may have acted as he thought right, while the traitor sold out his country.

There were conscientious appeasers in Lincoln's day—northern men who believed that Abraham Lincoln preferred war to peace, men who would have compromised with the Confederacy even at the price of seccession. But the fact that these men believed they were right and Lincoln wrong adds to Lincoln's greatness in that he pursued his own concept of right against the bitterest of vindictive opposition. Their opposition made the preservation of the Union more difficult,

it prolonged the agony of the Civil War, even though they may have been honest in their opinions.

The President's course has proceeded without deviation for 2 years, in the face of protests and prophecies of dire disaster from the isolationists. They were scared when he asked for and obtained the repeal of the neutrality law, which repeal enabled us to sell munitions and general supplies to Great Britain under certain restrictions. They were frightened when we passed the lend-lease bill, after England had exhausted her dollar exchange; they were panic-stricken when we established our naval patrol, and agonized when we occupied Iceland.

In each of these acts they saw a challenge to Hitler to begin hostilities against us; but if it were a challenge, it was never accepted, for the obvious reason that until he had completed his conquest of Europe he did not dare add the forces of the great Republic to his active enemies.

Now the order for the Navy to shoot on sight will invoke further blasts from the isolationists, further prophecies of dire disaster. But however honest they are in their beliefs, we believe they are of the type that would have ordered the Minute Men to disperse at Bunker Hill in preference to engaging in a shooting war, and those who would have evacuated Fort Sumter without firing a shot.

However, though the President has been splattered with epithets, of which "warmonger" is about the mildest, he has avoided our country getting into war for 2 tense years, and that is perhaps the most skillful bit of statesmanship of the century.

Resolution of Southeastern Theatre Owners' Association

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

RESOLUTION PASSED IN CONVENTION AT JACKSONVILLE, FLA.

Mr. HENDRICKS. Mr. Speaker, recently I received a resolution passed by the Southeastern Theatre Owners' Association, which was passed in convention in Jacksonville, Fla. Because of the fine attitude of this organization and the splendid tone of the resolution I wish to include it in the RECORD:

Whereas our country and our kind of world are today subjected to one of the most vicious assaults in all history by those who have made sabotage, espionage, and deception the chief instrument of their evil policy; and

Whereas it has been the policy of the dictators who hurl such assaults, not only to strike from the outside but to bore from within the body politic of their enemies; and

Whereas a nation is no stronger than its spirit and its unity and the morale of the people: Now, therefore,

We, the Southeastern Theatre Owners' Association, do hereby denounce all those agencies and efforts designed to undermine the foundations of our institutions, to produce dissension and confusion amongst our people, to break down the morale of our citizens, and to paralyze the will and the mind of this Nation to defend itself and remain a great and free land: Be it further

Resolved, That we, the Southeastern Theatre Owners' Association, do further commend and endorse all those governmental agencies such as the Federal Bureau of Investigation, the intelligence units of the Army and Navy, the State, county, and municipal police officers, and all civic and patriotic organizations who have made it their purpose to ferret out these sinister and insidious agencies and all others who are giving aid or comfort to our dictator enemies and trying to destroy the safety and security of our land; be it further

Resolved, That we heartily endorse the courageous and worthy American leadership of our great President, Franklin D. Roosevelt, in his heroic defense of our country, our continent, and democracy of the world; be it further

Resolved, That we do call upon the President to strengthen and add to those Federal agencies which are engaged in fighting against the despised "fifth columnist," the Trojan horse, and other un-American influences which have been gnawing at the vitals of our country; be it further

Resolved, That we, the Southeastern Theatre Owners' Association in convention assembled at Jacksonville, Fla., September 9, 1941, do call upon the public to lend all possible cooperation to Federal, State, and municipal agencies as well as to all worthy patriotic organizations endeavoring at this crucial time to defend our land, our homes, and all that we love; be it further

Resolved, That copies of this resolution be sent to the President of the United States, to each Member of the House and Senate, the Federal Bureau of Investigation, and to the press.

Government Expenditures and the Public Debt

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

LETTER AND STATEMENT FROM THE UNDER SECRETARY OF THE TREASURY

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from Hon. D. W. Bell, Under Secretary of the Treasury, together with the accompanying statements:

TREASURY DEPARTMENT,
Washington, September 10, 1941.

The CHAIRMAN,
House Committee on Appropriations,
Washington, D. C.

MY DEAR MR. CHAIRMAN: By direction of the Secretary and in accordance with the arrangements made as outlined in his letter of January 31, 1941, I am enclosing herewith the following statements:

Statement No. I. General Budget summary—receipts and expenditures, showing (1) Budget estimates for the fiscal year 1942 and actual figures for the fiscal year 1941, and (2) actual figures for the first 2 months of each of the fiscal years 1941 and 1942.

Statement No. II. Effect on the public debt of financing the deficit, showing (1) estimated amounts for the fiscal year 1942 and actual figures for the fiscal year 1941, and (2) actual figures for the first 2 months of each of the fiscal years 1941 and 1942. This statement shows the extent to which the net deficit has been met through borrowings and reductions in the Treasury's cash balance. It also shows the debt at the beginning and the close of each period.

Statement No. III. Statutory debt limitation, showing the amount of the debt outstanding which is subject to the debt limitation and the balance of the borrowing authority; i. e., the amount of additional debt which may be issued pursuant to existing limitations.

Statement No. IV. General-fund balance, showing an analysis of the general-fund balance and the changes therein during the period. This statement sets forth the balances at the beginning and the close of the period classified as to working balance, increment on gold, and seigniorage. It shows how the general-fund balance was affected by (1) borrowings, (2) excess of receipts or expenditures in trust accounts, etc., and (3) the net deficit as set forth in statement No. I.

Statement No. V. Obligations of corporations and credit agencies guaranteed as to principal and interest as of August 31, 1941. This statement shows the contingent liabilities of the Government; i. e., the outstanding securities issued by corporations and credit agencies which are guaranteed by the United States as to principal and interest.

Statement No. VI. Combined statement of assets and liabilities of governmental corporations and credit agencies, as of July 31, 1941, based upon the latest official reports received by the Treasury. This statement shows the total assets of such corporations and agencies, the liabilities (including reserves), and their net worth. The liabilities are segregated according to obligations guaranteed by the United States and obligations not so guaranteed. The net worth is classified as to the amounts of the Government's proprietary interest and of the proprietary interests not owned by the Government. The total amount of interagency interests of all corporations and agencies included in this statement is also shown.

Very truly yours,

D. W. BELL,
Under Secretary of the Treasury.

I. General Budget summary[1]*—Receipts and expenditures*

[On basis of daily Treasury statements; i. e., checks paid by the Treasurer of the United States. In millions of dollars]

Classification	Full fiscal years		July 1 to Aug. 31	
	Budget estimates,[2] 1942	Actual, 1941	Actual, fiscal year 1942	Actual, fiscal year 1941
Receipts:				
Income tax	5,420.0	3,469.6	142.3	87.3
Miscellaneous internal revenue	3,135.0	2,966.9	537.0	583.5
Taxes under Social Security Act	847.0	788.2	214.1	170.5
Taxes upon carriers and their employees	145.0	136.9	6.5	7.6
Customs	390.0	391.9	71.3	48.9
Return of surplus funds from Government corporations		319.2	2.4	7.4
Other	177.0	195.8	35.8	28.3
Total receipts	10,114.0	8,268.5	1,009.4	933.5
Less net amounts transferred to Federal old-age and survivors' insurance trust fund	712.0	661.3	199.9	155.0
Net receipts	9,402.0	7,607.2	809.5	778.4
Expenditures:				
Departmental [3]	725.0	[4] 778.5	132.1	[4] 139.5
Agricultural program [5]	1,202.0	1,126.3	134.1	164.2
National defense:				
War	6,940.0	3,635.5	1,087.1	170.6
Navy	3,950.0	2,216.8	754.7	205.9
National defense funds for the President	353.0	[6] 103.1	30.6	.3
Selective Service	32.0	17.5	4.9	
United States Maritime Commission [3]	350.0	43.8	3.3	19.0
Defense aid (lend-lease)	3,500.0	21.4	103.3	
Federal Security Agency	69.0		32.6	
National-defense housing (Federal Works Agency)	225.0	[4] 42.0	44.0	
Other agencies	231.0	(7)	23.6	(7)
Total	15,650.0	6,080.1	2,084.0	395.9
Interest on the public debt	1,275.0	1,110.7	33.4	40.0
Federal Loan Agency	9.0	11.5	.7	2.2
Federal Security Agency	872.0	[4] 944.0	178.9	177.0
Federal Works Agency [8]	1,134.0	1,673.9	227.0	301.2
Tennessee Valley Authority	40.0	[4] 51.2	14.2	[4] 3.1
Veterans' Administration	569.0	552.7	92.0	92.1
Transfers to trust accounts	268.0	234.6	153.1	138.7
Return of surplus funds from Government corporations		[9] 329.0		[9] 30.0
All other	425.0	[4] 476.1	77.6	[4] 100.3
Total expenditures [10]	22,169.0	12,710.6	3,127.1	1,524.2
Net deficit (excess expenditures over receipts) [10]	12,767.0	5,103.4	2,317.6	745.8

[1] Figures in this statement have been rounded to nearest millions and will not necessarily add to totals.
[2] Revised June 1, 1941.
[3] Figures for the fiscal year 1942 and corresponding period last year, have been revised by transferring expenditures of the U. S. Maritime Commission from the departmental classification to national defense. The expenditures for the Maritime Commission include expenditures heretofore classified as emergency ship construction. The figures for Maritime Commission are net and include receipts credited to the construction loan fund.
[4] Includes national-defense expenditures augmenting regular activities.
Not including departmental expenditures of Department of Agriculture.
[6] Reflects adjustment to give effect to sec. 5, act of October 14, 1940 (54 Stat. 1127), by merging funds allotted to Federal Works Agency from allocations made by the President to the War Department for national-defense housing with funds appropriated to Federal Works Agency for the same purpose.
[7] Expenditures included in totals for "Departmental," "Tennessee Valley Authority," "Federal Security Agency," and "All other." See note 4.
[8] Exclusive of national defense housing activities shown above.
[9] Credits, deduct.
[10] Exclusive of debt retirements pursuant to sinking fund and other appropriations.

II. Effect on the public debt of financing the deficit[1]

[On basis of daily Treasury statement. In millions of dollars]

Classification	Full fiscal years		July 1 to Aug. 31	
	Budget estimates,[2] 1942	Actual, 1941	Actual, fiscal year 1942	Actual, fiscal year 1941
Net deficit (statement I)	12,767.0	5,103.4	2,317.6	745.8
Changes in cash accounts during period:				
Add: Increase in general fund balance during period	[3] 663.4	742.4	239.6	562.9
Total	12,103.6	5,845.8	2,557.2	1,308.7
Deduct: Excess of receipts over expenditures in trust accounts, etc., during period	37.8	[4] 148.1	597.7	371.0
Total financed by increase in public debt	12,065.8	5,993.9	1,959.5	937.7
Add: Public debt at beginning of period	48,961.4	42,967.5	48,961.4	42,967.5
Public debt at end of period	61,027.2	48,961.4	50,921.0	43,905.2

[1] Figures in this statement have been rounded to nearest millions and will not necessarily add to totals.
[2] Revised June 1, 1941.
[3] Decrease, deduct.
[4] Excess of expenditures, add.

III. Statutory debt limitation as of Aug. 31, 1941

[Under sec. 21 of the Second Liberty Bond Act, as amended. In millions of dollars]

Limitation		65,000.0
Deduct:		
Gross public debt outstanding Aug. 31, 1941	50,921.0	
Unearned discount on United States savings bonds (difference between current redemption value and maturity value)	1,188.4	
	52,109.4	
Less: Debt outstanding not subject to statutory limitation	575.6	
Total		51,533.8
Balance of borrowing authority		13,466.2

IV. General fund balance [1]

[On basis of daily Treasury statements. In millions of dollars]

Classification	Full fiscal years		July 1 to Aug. 31	
	Budget estimates, 1942 [2]	Actual, 1941	Actual, fiscal year 1942	Actual, fiscal year 1941
Balance in general fund at beginning of period:				
Working balance	1,884.6	1,162.8	1,884.6	1,162.8
Increment on gold	143.2	142.8	143.2	142.8
Seigniorage (silver)	605.4	585.2	605.4	585.2
Total	2,633.2	1,890.7	2,633.2	1,890.7
Increases:				
Borrowings—net increase in public debt	12,065.8	5,993.9	1,959.5	937.7
Net receipts, trust accounts, etc	37.8	[3] 148.1	597.7	371.0
	14,736.8	7,736.5	5,190.4	3,199.4
Decreases: Net deficit (statement I)	12,767.0	5,103.4	2,317.6	745.8
Balance in general fund at end of period	1,969.8	2,663.2	2,872.7	2,453.7
Analysis of general fund balances at end of period:				
Working balance	1,195.9	1,884.6	2,120.0	1,720.4
Increment on gold	143.7	143.2	143.2	142.8
Seigniorage (silver)	630.2	605.4	609.6	590.5
Total	1,969.8	2,633.2	2,872.7	2,453.7

[1] Figures in this statement have been rounded to nearest millions and will not necessarily add to totals.
[2] Revised June 1, 1941. [3] Net expenditures—deduct.

V. Obligations of corporations and credit agencies guaranteed as to principal and interest as of Aug. 31, 1941

[In millions of dollars]

Corporation or agency	Limit of authority	Outstanding liabilities [1]		
		Total	Matured [1]	Unmatured
Commodity Credit Corporation	2,650.0	905.5	0.2	905.3
Federal Farm Mortgage Corporation	2,000.0	1,269.5	.1	1,269.4
Federal Housing Administration	[2] 4,100.0	17.0	.1	16.9
Home Owners' Loan Corporation	[4] 4,750.0	2,417.4	8.5	2,408.9
Reconstruction Finance Corporation	7,394.4	2,101.5	.1	2,101.4
Tennessee Valley Authority	[5] 61.8	----------	----------	----------
U. S. Housing Authority	[6] 800.0	226.3	----------	226.3
U. S. Maritime Commission	[7] 200.0	----------	----------	----------
Total	----------	[8] 6,937.2	9.0	6,928.2

[1] Exclusive of obligations owned by the Treasury.
[2] Funds have been deposited with the Treasurer of the United States for payment of all obligations guaranteed by the United States, representing outstanding matured principal amounting to $9,000,000 and interest of $2,600,000.
[3] Limit of authority to insure mortgages. This amount may be increased by $1,000,000,000 upon approval by the President. Debentures may be issue and tendered only in exchange for insured property acquired through foreclosure.
[4] The Corporation was authorized to issue bonds for an amount not to exceed $4,750,000,000 to be exchanged or sold to obtain funds for financing home mortgage loans or for the redemption of any of its outstanding bonds. Its authority to make loans expired on June 13, 1936, and the above limit may only be increased for the purpose of retiring its outstanding bonds by an amount equal to the amount of the bonds to be retired, which would not affect the net amount outstanding after June 13, 1936.
[5] Exclusive of $8,300,000 issued on the credit of the United States and held by the Reconstruction Finance Corporation.
[6] Represents gross limit of borrowing authority. The corporation has issued obligations totaling $495,256,000, leaving a balance of borrowing authority amounting to $304,744,000.
[7] Limit which may be outstanding at any one time with respect to the insuring of mortgages and the issuance of debentures.
[8] The total amount of assets of these corporations and agencies is in excess of the total amount of liabilities, including obligations guaranteed by the United States. See statement VI.

VI. Combined statement of assets and liabilities of governmental corporations and credit agencies, as of July 31, 1941

[In millions of dollars]

Corporation or agency	Assets		Liabilities			Net worth	
	Exclusive of amounts due from Government corporations and agencies	Due from Government corporations and agencies [1]	Obligations guaranteed by the United States [2]	Due to Government corporations and agencies	All other (including reserves)	Proprietary interest of the United States	Other
Commodity Credit Corporation	1,200.1	----------	908.1	----------	190.1	101.9	----------
Federal Farm Mortgage Corporation	1,462.3	3.8	1,279.1	1.5	85.5	100.0	----------
Federal Housing Administration	86.7	----------	16.8	----------	3.9	66.0	----------
Home Owners' Loan Corporation	2,487.4	100.0	2,429.2	----------	50.1	108.1	----------
Reconstruction Finance Corporation	1,992.4	1,091.7	2,104.1	16.7	424.0	539.3	----------
Tennessee Valley Authority	419.8	1.3	----------	56.9	18.3	345.9	----------
U. S. Housing Authority	463.1	----------	227.1	92.0	6.1	137.9	----------
U. S. Maritime Commission	462.9	78.9	----------	----------	333.9	207.9	----------
Federal land banks	2,223.4	10.3	----------	.7	1,798.5	212.8	221.7
All other	3,815.5	181.4	----------	847.9	1,027.9	1,917.9	203.2
Subtotal	14,613.6	1,467.4	[3] 6,964.4	1,015.7	3,938.3	3,737.7	424.9
Less: Interagency interest shown above	----------	−1,467.4	----------	−1,015.7	----------	−451.7	----------
Total	14,613.6	----------	[3] 6,964.4	----------	3,938.3	3,286.0	424.9

[1] Includes capital stock and paid-in surplus of Government corporations and agencies.
[2] Includes principal and accrued interest. [3] Excludes $148,800,000 held by the Treasury.

NOTE.—The foregoing figures are compiled from latest reports received by the Treasury Department from the respective corporations and agencies. The amounts covering obligations guaranteed by the United States differ from those shown in table V for the reason that they are stated in this table as of July 31, 1941, instead of Aug. 31, 1941, and include accrued interest.

Dangers From Within

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

ADDRESS OF HON. E. E. COX, OF GEORGIA, AT ATLANTA, GA.

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I made last Thursday at Atlanta, Ga.:

My friends, our perils are as great today as they were when Washington's unshod soldiers were leaving their bloody tracks in the snows of Valley Forge, and the uncertainties that confronted General Washington were no greater than those that face us at this hour.

The liberties of the people are being threatened by "the two encroaching seas of arbitrary power and lawless anarchy" and thus far the people have not manifested the spirit to do much about it.

We are told that we are at war, and that the safety and security of the Nation is imperiled by the aggressions of dictators across the seas. This we accept as a fact and it is for this reason that I want to see emphasis taken off of reform and put on defense. It is for this reason that I would like to see this softening process to which the people are constantly subjected come to an end, and it is for this reason that I want all this Pollyanna talk about making a Utopia out of this country cease, for cities with streets of gold and rivers flowing with milk and honey are to be found alone in heaven. This is a matter-of-fact world and its problems must be dealt with in a matter-of-fact way.

The aggressions of the mad dictators across the seas do threaten our future, and they must be driven back, but this threat is not so great and so dangerous as those that arise within the Nation itself. The movement to strangle free competitive enterprise that has made this Nation great has been pushed far along the way. Those who have been striving to destroy the economics of the country and change it to a collectivist system have found their way into positions that carry enormous powers. Many whose business it is to protect the country have seemingly entered into the marriage state with those who have made it their business to destroy it. We are at this hour engaged not only in the wars across the seas, but we are in the midst of a political and economic revolution here at home.

There is nothing to be gained by closing our eyes to the plain facts of the situation. Under the guise of national defense, under the excuse of establishing priorities here, price controls there, and prohibitions somewhere else, we see the economic structure of the country being torn to pieces. No one expects business to be conducted as usual, but we ought to be sensible and profit by the experience of other peoples of the world and our own past. We should not commit the same blunder that England has committed; that is, we should not destroy the small business enterprises of this country.

Every person who has ever set himself up over his people has begun his campaign, first, by trying to make the wage earners discontented with their lot; second, by strangling small business; third, by taking over big business.

It is vastly easier for those who want to take over the control of the American economic system to capture a few great businesses in which all industry has been concentrated than it is to capture thousands of small businesses. This is so because when industry is concentrated in the hands of the big operators, it is a comparatively simple matter for the bur-aucrats in Washington to arouse the people against what they call big business.

Business has not always been wise in this country. Too often has it been selfish and stupid. But this does not mean all business. The vastly greater part of business is honest, and want to do the right thing. On the other hand labor leaders and racketeers have been both selfish and stupid. But this does not mean all labor. The vastly greater number of laborers are honest at heart and want to do the right thing. It is the self-seeking, greedy, racketeering labor leaders who are leading the rank and file of labor to ruin American business and to operate against their own best interest.

It is said that for several years we have had a political administration that has been openly hostile to business and notoriously too indulgent of the racketeers in labor. Irrespective of what you might think, it is a fact that the labor record of the administration is one of which America cannot feel proud.

I have always held to the view that to strike against the Government in times of emergency—an emergency bringing into play the war powers of the President is lawless insurrection. To strike against the national defense, against the young men who have been drafted into the Army to soldier for the country, against their loved ones back home, against all the people, is sabotage and treason and should be dealt with as such. It is a despotism which, if not stamped out, will take us the way of poor France. There is a complete parallel.

I hold no brief for big business, but I do hold a brief for my country. I have not a private interest to protect, but I have a public duty to perform. The Russianizing of America would not affect me greatly, but it would ruin the country.

It is business that devises and invents and risks its money to manufacture goods and find the market for them. It is business that pays the wages which give the American men and women economic security. Destroy the business structure in this country and you will have destroyed the economic security of every man, woman, and child in this country. Make it impossible or unwise for savings to be risked in business investments and you will have destroyed the mechanism which devises jobs and finds the money to pay the wages of the workers.

A great peril that faces us today comes from the fact that it is a very simple and easy matter for bureaucrats in high places of power to utilize the powers which come into their hands through the exigencies of the national preparedness to throttle and to suffocate small business of this country.

We find that the power of priorities can be used to punish or to kill any business. One individual by a stroke of the pen can deny to any business its supply of raw materials or its light and heat and power or its quota of transportation service.

We are preparing now to establish price control. Just how it is possible to establish price control in this country presumably to head off inflation without establishing control over wage rates at the same time, is beyond my comprehension.

Leon Henderson, when asked by a member of the Appropriations Committee of the House of Representatives, if it was possible to establish effective price control without also exercising control over the prices of raw materials, wages, and all other factors of cost, made answer in terms that it is not possible to establish an effective price control without having the authority to establish control over every element that enters into production cost—and that certainly includes wages.

More recently we read in the press that Mr. Henderson says that wages ought not to be controlled along with prices, for undoubtedly wage increases will be continuously demanded by the workers in the future. If this is true, then the establishment of price control can operate to do but one thing, and that is to strangle business and small industry in America.

It has been an outstanding characteristic of the so-called Defense Mediation Board that it has given organized labor practically every demand that has been made. The Mediation Board's method of settling strikes is to grant labor all of its demands and to compel the employer to comply. That isn't mediation. That is connivance between the Federal Government and private labor unions to hold up and to rob American business and American industry.

Do not misunderstand me, my fellow citizens, I want American working men and working women to have a living wage and even a better than living wage. I want American working men and women to have the highest, the best, the most healthful, and the most comfortable living and working conditions it is possible for them to have. And that is why I say that the welfare of the working people is not being served by those who would crush out and strangle and suffocate business and industry in this country.

There are those in Washington and all over the United States in fact—thinking men and women who have watched developments over the years—who believe that we are headed for a radical socialist government and that the reds in and out of the Government are being used to hurry on that day.

All over this country, in every hamlet and village, in every little community, small factories are being closed by denial of necessary raw materials, power, and transportation, and credit—factories which have been operating for years; factories on whose pay rolls communities have depended for economic security and progress; factories in which the employees have grown gray, are closing up and those employees are being rendered jobless. By whom? By the very bureaucratic fumblers who have pretended to be labor's friends.

For the past several years the working people of America have been told by the Communists, and the Pinks and the Labor Socialists, "Let us run the factories; let us command the business of the Nation, and you will have better jobs and better wages." What has been the real result? Labor, through the National Labor Relations Board, the Wage Hour Board, and the bureaucrats at Washington, have had practical control of business in this country. What has been the result I ask? The result has been strike after strike. Strikes called not to get an increase of wages, not to better working hours of wage earners themselves, but strikes to broaden and cement the power and to fill the pocketbooks of racketeering labor leaders. American labor finds itself today facing the closed shop, which means that no working man, free, white, and 21 can go sell the energy of his brains and his brawn in a free market. He must first get the consent of a labor racketeer; he must first pay a tribute of whatever price that labor racketeer may establish for his right to work at all; he must submit in many cases to having such dues and assessments as are levied against his wages by these labor racketeers taken from his pay envelope by his employers before his hands ever touch it.

Talk about the Bill of Rights. Talk about the inherent right of life, liberty, and the pursuit of happiness. Talk about freedom of contract. Those rights for the working man are being wiped out in this country.

The greatest menace that threatens this country now is the vast, far-reaching, the incredibly tremendous power placed in the hands of a few men that can be exerted secretly against the business structure of this country. They are not men who submit their policies or their views or their past for the approval or disapproval of the people. They are men who never ran for office; they never stood before the people to declare their policy; they have no responsibility to the people, but they are men who never met a pay roll in their lives, who never conducted a successful business for 15 minutes, whose whole concept of business is theoretical instead of practical, and whose attitudes are entirely hostile to the free enterprise system.

That is why I am here to warn you businessmen against these dangers. If you want to know how arrogant, how irresponsible, and how dangerous bureaucrats can be, go to Washington and try to get some perfectly just, simple question decided, or some right granted and see how quickly some petty bureaucrat, some man with a 5-cent intellect, clothed with a $5,000,000,000 power, will look at you with an accusing eye and say, "Don't you know we are at war now?"

Do you believe that statement? I say to you that a short while ago a delegation of Democratic and Republican Representatives went to Leon Henderson's bureau to plead for important factories in their districts, fully capable of performing national-defense work, were told in cold and measured terms that it was an effrontery for them to dare to come down to Mr. Henderson's bureau and even suggest that they wanted to intercede for those factories.

If we call the roll of the men who are in positions of the highest power, there would not be among all of them as many as you could count on the fingers of one hand, who have been successful in business; who have met pay rolls; who have built up factories; who have originated and provided jobs and wages for workingmen and women.

Most people outside of Washington are accustomed to think of William Knudsen, Mr. Biggers, Mr. Batt, and Mr. Stettinius, businessmen of that sort, as being in charge of the national defense and as determining the powers of priorities and price control and commandeer. They are not. When you get down to the bare facts you will find it is Sidney Hillman, Dave Saposs, Walter Reuther, a group of C. I. O. partisans, Leon Henderson and people of their kind who are in control.

There has not been a time in all the history of this country when business has been abused, manacled, leg-ironed, and then accused of not doing its part as has been the situation in the past several years.

It is time for American citizens to look at the facts. It is time for American citizens to rise up and let the administration know that there are good and loyal American citizens that can be had to run the national defense. We do not need imported agitators from Russia, Lithuania, Austria, or elsewhere.

To read the lists of those in power makes an American wonder what has happened to us. Get down to the family names of those in power and you can't even pronounce them. They are foreign names. Call up the departments in Washington and you can scarcely understand what is spoken over the phone because of the foreign accents. The ranks of the Government workers are filled with people who do not speak better than broken English. It is in the ranks of those people that we find the greatest hostility to American Government, to constitutional procedure, and free enterprise.

Despite all that you have heard for the past several years, despite the whole philosophy of most of these bureaucrats in Washington, I want to say to you that success is not a crime; it is to be desired.

Failure is not a virtue; it is to be avoided.

Wealth in itself is not evil; it should be put to good use. Poverty in itself is not good; it is a misfortune.

Honesty, intelligence, thrift, ability, and initiative should be encouraged.

Incompetency, extravagance, idleness, and inefficiency should be discouraged.

The American way to national prosperity and security is not in the limitation of opportunity for some; it is in equality of opportunity for all.

Business can be big without being bad; it can be bad without being big.

Big business naturally requires closer scrutiny than small business because of its greater power for good or evil.

Ninety-nine percent of American business is honest and law abiding. It must be preserved and encouraged. The crooked 1 percent should be eliminated without penalizing the honest 99 percent.

Business can succeed under proper governmental regulation; it will fail under governmental domination and competition. Prosperity and security in this Nation lie in free enterprise fairly conducted.

The welfare of finance, industry, agriculture, and labor is in mutual cooperation. It depends upon prosperous consumers.

Our Republic functions at its highest efficiency only under an administration wholly sympathetic to constitutional government.

Control and regulation by a political bureaucracy mean tyranny and retrogression. Self-government by the people assures freedom and progress.

Experience and caution are to be preferred over experimentation and rashness in Government.

America is still sound. We can recover prosperity, we can stay out of trouble, we can put our unemployed back to work in private industry at good American wages without giving up a single essential liberty or privilege.

By achieving these goals we can render ourselves and our posterity secure, and make free constitutional government the strongest incentive to other peoples to give up the ways of war and to follow the paths of peace.

Let us read carefully the signs of the time. Let us consider the trends. Let us remember that when the national preparedness has been achieved and when the wars end, as sometimes they must end, America must go on living and working. Not only must America go on living and working after the national preparedness has been achieved and the wars have ended but America must go on working and living in a world that will have been exhausted by senseless, useless destructions of war. America will have to go on living and working with every other country in the world trying to get on our W. P. A. The propaganda now being fed to us is nothing to the appeal that will lie in the propaganda to get us to feed the other peoples of the world, to rebuild their shattered industries, to give them the money and the machines and the goods to get started in a normal peacetime life again.

I say to you that America cannot police the world. Neither can America support the world. Nor can America undertake to pay for all the wars in the world and then to pay for all the rehabilitation of the destruction wrought by those wars everywhere in the world.

America must go on living and working after these wars are over, because no people anywhere in the world can possibly exist and endure on a steady diet of war and defense work. The way of war is the way of destruction. The way of peace is the way of construction and progress.

Let me say to you in conclusion, my friend, that it is going to take the best there is in the sons and daughters of those pioneers who carved this great Nation out of the trackless plains and trailless forests of this continent to survive the shocks that inevitably will come to us—the economic shocks, the sociological shocks—when finally this awful madness of war has exhausted itself and men and nations prostrate start to struggle back toward the beacon of liberty and peace.

On the hills of Gallilee 2,000 years ago a great Man said to the multitude: "What profiteth a man if he shall gain the whole world and lose his own soul?"

I ask you now, What shall it profit America if we try to take the four freedoms to peoples everywhere in the world and lose them here at home? What shall it profit us or the world if we seek to take economic security to peoples everywhere in the world and lose our own economic security in the process? What shall it profit us or the world if in trying to rebuild the war-shattered nations, we ourselves fail because the foundations of our land of freedom and of our constitutional government have secretly been eaten away by the insidious gnawing of alien agitators, who are willing to crush themselves to push down the pillars of our free Government?

In God's name, as Americans, as sensible men and women, let us look these facts in the face, arouse ourselves, demand of our Representatives in Congress that they prevent these things and see to it that those in high places in Government who are using their powers under the guise of the national defense to throttle and to strangle business in this country, to rob the people of their economic security and their freedom; demand of their Representatives that they scourge those wreckers from the ranks of official life even as Jesus of Nazareth scourged the money changers from the temple.

The St. Lawrence Seaway and National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ARTICLE BY HON. ROBERT M. LA FOLLETTE, JR., OF WISCONSIN

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an article, The St. Lawrence Seaway Is Vital to Our National Defense, written by me and published in the current issue of the magazine Look.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From current issue of Look Magazine]

THE ST. LAWRENCE SEAWAY IS VITAL TO OUR DEFENSE

(By Senator ROBERT M. LA FOLLETTE, JR.)

THIS UNITED STATES-CANADIAN PROJECT WOULD GIVE US WARSHIPS, TRANSPORT, POWER

The United States has set out to construct, for this hemisphere, military and economic defenses so strong that no foe will dare to test them. Awaiting the approval of Congress is one of the most important steps toward this goal—the St. Lawrence seaway and power project.

Three fundamentals for the defense of this hemisphere are (1) sea power, (2) mobility in military operations, and (3) productive resources. To increase our sea power, we must build ships—quickly. To attain mobility, we must expand and diversify our transportation services. To convert our vast resources into defense materials, we must have ample electrical energy.

In all three fundamentals the St. Lawrence seaway would give us a tremendous boost.

A WATER HIGHWAY CROSSING HALF THE CONTINENT

The St. Lawrence project would provide a 2,450-mile deep water highway from Superior-Duluth, at the western end of Lake Superior, to the mouth of the St. Lawrence River. An agreement on the project was signed by the United States and Canada in 1934, and again this past March. It calls for deepening certain channels between the Great Lakes and the international section of the St. Lawrence (where ocean shipping now begins) and for building several new canals and locks. To control the flow of the St. Lawrence, and to generate electricity for both the United States and Canada, a 2,200,000-horsepower dam would be thrown across the river at Massena, N. Y. The project would take about 4 years to complete. Its total cost to the United States would be $295,000,000.

43 CRUISERS ARE WAITING

Our decision to build a two-ocean navy and to rebuild our merchant marine has created an urgent need for shipyards and skilled shipbuilders. All of our ocean shipyards are working at capacity, with backlog orders that will keep them humming for 2, 3, and 4 years. They will be unable to deliver some of our new cruisers and destroyers until 1947. Meanwhile, many shipyards on the Great Lakes are idle or working only part time. To be sure, 10 submarines are being constructed at Manitowoc, Wis., and several other Great Lakes yards hold contracts for small escort vessels, mosquito boats, and the like. But this is far from "all out" defense. On the American side of the Great Lakes right now there are facilities for building 30 cruiser-size ships at the same time. On the Canadian side are facilities for 13 more. Other shipyards on both sides could be building destroyers and commercial ships.

Why aren't we making use of these facilities? Simply because large ships cannot now pass from the Great Lakes to the Atlantic Ocean. The St. Lawrence seaway would give all but battleships and aircraft carriers the deep draft passage (27 feet) they need for this journey. If the project were started now, the big ships we need could also be started now. By the time the ships were finished, the seaway would be ready to take them out to the fleet.

Besides shipyards and ways, the Great Lakes offer experienced yard managers and skilled ship workers. This region also produces many of the materials and much of the machinery needed for shipbuilding. The cost of materials—delivered to the shipyard—constitutes more than half the total cost of building a ship. Hence, the closeness of the Great Lakes yards to the steel plants of Buffalo, Cleveland, Gary, and Chicago would make it cheaper to build ships in them than in many of our coast yards.

Furthermore, because of our new fleet and air base at Newfoundland, Great Lakes shipyards would be less vulnerable to enemy attack than any others on this continent.

PREPARING FOR A WAR OF MOVEMENT

As the defense program shifts from planning to production, our transport facilities—the very essence of military mobility—will feel a tremendous strain. Already our eastern railroads are pressed to near capacity. Some roads have failed to maintain their equipment in recent years. Many companies that formerly supplied railroad equipment are now devoted to the production of tanks, gun carriages, and other armament. Before long, middle western farmers and manufacturers may find rail facilities for moving their products at a premium.

Moreover, authorities predict that by 1945, come war or peace, our transport requirements will have grown enormously.

It is inexcusable for us not to relieve this pressure on our railroads by every means possible. The St. Lawrence seaway would add

16,000,000 tons annually to United States and Canadian freight capacity.

A SPARK FOR DEFENSE INDUSTRIES

In New York State and in Canada, industries now producing such vital defense materials as aluminum, ferro-alloys, chemicals, and abrasives—all of which require large amounts of cheap power—are already facing a power shortage. The Federal Power Commission warns us that by 1945, despite planned additions to generating capacity, this shortage will be acute.

Only a comparatively few regions of the country are blessed with water resources that can be harnessed to supply electricity. In most areas, power shortages can be overcome only by building steam generating plants. Factories that produce equipment for such plants are now booked up with orders for many months ahead. Under these circumstances, development of the St. Lawrence water power would be the speediest and, in the long run, the cheapest method of making up New York State's power deficiencies.

THE FUTURE WE ARE DEFENDING

When this war is over, no matter what its outcome, the United States will face a tough foreign-trade problem. Europe is sure to be unified economicaly, under either British or Nazi control. In either case, when our industries go back to making consumer goods, we shall have to compete with products made by cheaper labor abroad. If we wish to maintain our living standards, we must be able to meet this competition without reducing wages. Everything that contributes to economy—to cheaper power, adequate transportation, etc.—will help us. The St. Lawrence seaway would be an impressive contribution toward this end.

The seaway is neither a sectional nor a partisan affair. True, it would be of primary benefit to the 45,000,000 people in the Great Lakes area. But I think we have learned that the only way a nation can gain lasting prosperity is by increasing its ability to produce and consume. This, in turn, means giving every part of the Nation an opportunity to make maximum use of its natural and human resources.

We have come to understand that high power costs for aluminum factories in New York State, or high transport costs for grain growers in the Middle West, ultimately reduce the markets of shoe manufacturers in New England, of fruit growers in California and Florida, of cattle ranchers in Texas. We learned these lessons at great cost. Action, now, on the St. Lawrence project is one way to show that the lessons have had some effect.

Resolution of Connecticut State Industrial Union Council

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

LETTER AND RESOLUTION FROM T. R. MOLLOY

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD a letter which I have received from Mr. T. R. Molloy, president of the Connecticut State Industrial Union Council, C. I. O., and with it a resolution which was adopted by the council supporting the President's recent radio address.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

CONNECTICUT STATE INDUSTRIAL UNION COUNCIL, C. I. O.,
Waterbury, Conn., September 18, 1941.

Senator FRANCIS MALONEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MALONEY: The executive board of the Connecticut Industrial Union Council, C. I. O., at its meeting September 13, endorsed in full the President's recent radio address.

I am enclosing a copy of the statement that was unanimously adopted at that time.

Sincerely yours,

T. R. MOLLOY, *President.*

The Connecticut State Industrial Union Council, C. I. O., as the true descendant of people's organizations which fought for American independence in 1776 and founded this Nation, hereby goes on record in support of the recent radio address of President Roosevelt.

The council states its belief that the President expressed the sentiment of the majority of the American people. Organized labor, above all, will continue to back fully all steps aiding in the defense of this Nation by helping to crush Hitlerism: Be it

Resolved, That this statement be transmitted to President Roosevelt, Connecticut Congressmen, and the press.

Influence of Racial Groups on Administration

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

ARTICLE BY DOROTHY THOMPSON

Mr. SCHWARTZ. Mr. President, we have heard a great deal lately as to the extent, if any, which certain racial groups are supposed to be influencing action by the administration. In that respect I desire to offer for publication in the RECORD a recent article by Dorothy Thompson appearing in the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of September 13, 1941]

ON THE RECORD

LINDBERGH'S CLAIM THAT JEWS ENDANGER UNITED STATES BY CONTROL OF MEDIUMS MOLDING THOUGHT CONTRADICTED

(By Dorothy Thompson)

The remark to end all remarks on the Jewish question was made by Mark Twain, who said, "The Jews are members of the human race—worse I can say of no man."

However, Mr. Lindbergh and the Charlie McCarthys of the America First Committee in the Senate subcommittee "investigating" the movie industry have neither the wit, logic, nor humanity of Mark Twain. Mr. Lindbergh, therefore, managed in one breath to express his sorrow for the persecution of the Jews in Germany while advocating their persecution here if they exercise the same rights as other citizens.

Following the line taken in Washington against the movies, he says that the "British, Jewish, and administration groups" are the only important interventionists in this country, and that "the greatest danger to this country lies in the large Jewish ownership and influence in our motion pictures, our press, our radio, and our Government."

Leaving Mr. Lindbergh's motives aside, what is the plain factual truth about his statement? Is it a fact that Jews are the leading interventionists in the United States? Is it a fact that they have large ownership or influence in the motion pictures, press, radio, and Government? And, if they have ownership, is there any ground for thinking that their racial origin determines the way they use their influence?

THE INFLUENTIAL INTERVENTIONISTS

I have written down a list of the most prominent and influential interventionists in the United States, in Government, radio, journalism, the press, and public life, including the two pro-interventionist organizations, the Committee to Defend America by Aiding the Allies and the Fight for Freedom.

In the Government: President Roosevelt, Cordell Hull, Henry L. Stimson, Frank Knox, and Col. William J. Donovan. In organized public activity: Herbert S. Agar, ex-Senator Ernest Willard Gibson, Bishop Henry Wise Hobson, James B. Conant, Wendell Willkie. Among the more influential radio commentators: Raymond Swing, H. V. Kaltenborn, Elmer Davis, Walter Winchell, William L. Shirer. Among journalists: Leland Stowe, H. R. Knickerbocker, Edward C. Taylor, Edgar Mowrer, John Gunther, Vincent Sheean, John Whitaker, William Stoneman, Quentin Reynolds, and the editor of Foreign Affairs, Mr. Hamilton Fish Armstrong. Among columnists: Walter Lippmann, Jay Franklin, Raymond Clapper, Samuel Grafton, and myself.

Of these 30 names, who would certainly be the first people to be suppressed, exactly 2 are Jewish. The others are racially of Dutch, British, Irish, and German extraction—there are three of pure German extraction to three of Jewish. Four of them—maybe more—Roosevelt, Swing, Hamilton Fish Armstrong, and Edgar Mowrer, are descendants of the oldest American families extant.

Well, are the Government, movies, radio, and press saturated with Jewish influences?

BANKS OWN FILM INDUSTRY

The only Jew in the cabinet is Mr. Morgenthau. The policy-making bodies in foreign affairs are the President, the State Department, the Army, and the Navy. Jews are almost nonexistent in all these departments.

There are a great many Jewish executives in Hollywood. Jewish enterprise, which has never commanded really great capital in this country, was the first to see a latent big industry in the moving picture; they were the pioneers. But, if I am correctly informed, most of the present ownership is in the hands of banks, and there are very few Jewish banks in America. None of the big three is Jewish: Chase National, Guaranty Trust, National City.

Radio is owned by tens of thousands of stockholders in several corportaions. Does Mr. Lindbergh want to go over the lists and expropriate the stock in Jewish hands? He's got precedents for it in Fascist countries. Mr. Sarnoff, a young radio wizard, was discovered by Owen D. Young and became president of R. C. A. N. B. C. has its own president

and he has never been Jewish. Of 26 directors and members of the advisory council two are Jewish. C. B. S. has a Jewish president but not a Jewish majority on the board. Mutual is a cooperative system in which one of the stockholders is the rabidly isolationist Chicago Tribune.

PUBLIC DECIDES ON RADIO

Radio commentators have only one trouble with the broadcasting companies: They are not permitted to editorialize, and they are supposed to avoid controversy. Since the America First Committee considers even facts controversial if the facts don't help the America First Committee, and since the America First Committee organizes boycotts and letter-writing campaigns to sponsors, the lot of the radio commentator is hard. But if the public does not like the commentator, he goes off the air. Here again, the public decides. And the most influential commentators are not paid by the networks but by sponsors. Does Mr. Lindbergh think no Jewish firms should be allowed to advertise?

Mr. Lindbergh's reference to Jewish influence falls completely wide of the mark when it comes to the press. There is an amazingly small amount of Jewish ownership of newspapers. The big news services—Associated Press, United Press, and International News Service—are not Jewish. The largest chains are Scripps-Howard and Hearst—not Jewish. The New York Times is Jewish owned, but has an overwhelming gentile editorial board. Of the 11 most powerful interventionist newspapers in the country, only 1 is Jewish owned.

POLICY WOULD CONTINUE

The most powerful interventionist weekly press is the Luce press. Not Jewish. The two monthly magazines with the strongest interventionist editorial policy are the Ladies' Home Journal and the Atlantic Monthly. Not Jewish.

In fact, if every American Jew died tomorrow it would make not the slightest difference in the policy of the movies, the radio, the Government, or the press—unless, of course, Mr. Lindbergh and his followers could fill whatever positions were left vacant from the lists of the America First Committee.

There are precedents for that, too, in Fascist countries.

But first he would have to deal with some of us who are not Jews.

Economic Suggestions by Elbert Eastman

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, September 25, 1941

LETTER FROM ELBERT EASTMAN, OF PORTLAND, OREG.

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter bearing on economic questions, addressed to me by Mr. Elbert Eastman, of Portland, Oreg., under date of August 5, 1941.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., *August 5, 1941.*

Hon. CHARLES L. McNARY,
United States Senate,
Washington, D. C.

DEAR SENATOR: The other day the Oregonian published a leading editorial entitled "Planning a New World." It was thought-provoking. It started out with the question, "What if the Allies should win the war?" Then it referred to the years 1923–25 and the report of the Brookings Institution which said:

"That is, without increasing the manpower or increasing the capital investment, industry could turn out goods at a vastly augmented rate—a situation very dispiriting to capital and labor alike, in that both found themselves with huge surpluses."

Then the editorial goes on to say that now the surpluses are used for defense purpose and then it asks, "What of the plants expanded for defense purposes; what of the men in uniform and those in defense industries?" etc.

Now, Senator, these are very serious questions and it is the duty of Congress to formulate committees with experts to make findings and to give out those findings to the press of the Nation, that the people may discuss them, and thus public opinion will demand the correct solution, or at least the solution the people want.

And as every progressive economist will point out the following in brief is a solution if Congress and the Nation has the courage to bring about the change: Let American industry produce to its highest capacity; raise wages to the highest level; cut the working day to 6 hours; cut the working days to 200 out of the 365 per year; put all over age 60 on a decent pension. If we do this and then issue money, based on production and levy taxes so that the money will come back to the source of issue and then destroy it as fast as it is turned back to the Government in the form of taxes so as to balance the issue and prohibit inflation, we will then get the products of production in the hands of people who will use them and we will have an equalized prosperity. Along with this should come Government ownership and operation and exploitation of all natural resources. The old theory of "competition is the life of trade" is archaic. It is a farce. Competition is rapidly fading under monopolies—witness the telephone company, chain stores of a thousand varieties, railroads with the same rates, etc. We must plan for this new world the Oregonian speaks of and it must be done through cooperatives, helped, aided, and abetted by the Government of the people, by the people, and for the people. That means we must plan for this new world through the city governments, the county governments, the legislatures, and through Congress. And since the natural resources are owned by all the people and Congress represents all the people, we, the people, must look to you as our guide.

And now as to the foreign policy, trade agreements and trade restrictions, tariffs, and foreign investments: The principle should be adopted that if an American goes in business in a foreign country he should become as a citizen of that particular country, abiding by all its laws and regulations and not look to the United States for protection, and that same rule should apply to any person that comes to this country to do business. In other words this Nation should have no investments in foreign countries. If our countrymen invest in foreign countries they should look to that particular country for protection and not to the United States. If we adopt that policy we will have no trouble with foreign countries. And again, if our standard of living is so high in this country that we cannot compete with other countries which ship in their goods, then we should produce for us alone and buy from them at a high price if we need their goods—for we can always buy from them if we pay enough. For instance I remember years ago the farmers went to Congress and wanted the tariff taken off wheat sacks so the price would come down. What happened? The American manufacturer moved his factory to India where he manufactured with cheap labor and shipped wheat sacks in duty free, but the farmer paid the same price. Our leading packing plants have established packing plants in Argentina and Uruguay where they buy cheap grass-fed beef and pack it with cheap labor and ship it to this country thus hamstringing the cattle grower of United States. A high protective tariff shutting out all products that we can produce here is the remedy. Then we should ship in duty-free products that we cannot raise or produce such as coffee, tea, silk, camphor, rubber, etc. The world cannot accuse us of selfishness for we will sell to them without duty what we have. If they will not buy then produce for use here. If we produce too much cut the working day, increase the pensions, and raise wages. Let the machine do the work, and put them to work at full capacity.

ELBERT EASTMAN.

St. Louis Labor Union Pledges National Unity

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

RESOLUTION ADOPTED BY THE CENTRAL TRADES AND LABOR UNION OF ST. LOUIS AND VICINITY

Mr. COCHRAN. Mr. Speaker, there is no organization in the United States more loyal than the Central Trades and Labor Union of St. Louis and vicinity. It has time and again gone on record with the parent organization, the American Federation of Labor, in support of the President's foreign policy. It has likewise been one organization that has cleaned its own house when it was found that undesirable persons sought to control or were in control of affiliated organizations.

It is with pleasure that I call to the attention of the Congress a resolution passed by this organization September 23, and include same as part of my remarks. The resolution follows:

ST. LOUIS, MO., *September 23, 1941.*

Hon. JOHN J. COCHRAN,
Washington, D. C.

DEAR SIR: The following resolution was adopted by unanimous vote at the last meeting of our Central Trades and Labor Union held September 16.

Respectfully yours,
CENTRAL TRADES AND LABOR UNION
OF ST. LOUIS AND VICINITY,
By W. M. BRANDT, *Secretary.*

RESOLUTION IN SUPPORT OF GREAT BRITAIN AND ALL COUNTRIES FIGHTING HITLER AND HITLERISM

Whereas President William Green and the General Council of the American Federation of Labor have expressed the support of our organization to the fight of Great Britain

and all countries fighting Hitler and Hitlerism, and

Whereas our Central Labor body has expressed a number of times its hatred of Hitlerism, and its devotion to the cause of democracy, and

Whereas as workers and trade-unionists, we are particularly conscious of the brutality and degradation that is brought down upon us by Hitlerism, as we have witnessed so clearly in the murder of our brother trade-unionists in Norway, and

Whereas as devoted citizens of our country, we know that our national security is threatened by the Hitler military machine; therefore be it

Resolved, That our Central Labor body goes on record in the support of the policy laid down by President William Green and that we pledge our untiring efforts to maintain national unity in support of the policy expressed by the President of our country, Franklin Delano Roosevelt; and be it further

Resolved, That copies of this resolution be sent to President Roosevelt, President William Green, the Congressmen and Senators of Missouri, and to the press.

Resolution of Louisiana Coalition of Patriotic Societies

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

RESOLUTION ADOPTED BY BOARD OF DIRECTORS ON MONDAY, JULY 28, 1941

Mr. BOGGS. Mr. Speaker, the work of destroying subversive activities and creating patriotism and good citizenship has been nobly carried on in my native city of New Orleans for many years by the Louisiana Coalition of Patriotic Societies.

This group, made up of representatives of civic, patriotic, veterans, and similar organizations, has been most effective and has prevented the scourge of subversion which has struck many other sections of our Nation.

Recently the board of the society adopted a splendid resolution in support of the foreign policy of this Government and I am herewith incorporating it into the RECORD.

Whereas the Board of Directors of the Louisiana Coalition of Patriotic Societies has complete confidence in the able leadership of the President of the United States in his determination to prepare our Nation for complete national defense; and

Whereas the Board of Directors of the Louisiana Coalition of Patriotic Societies has observed with profound misgiving the acts and utterances of various public figures and legislators tending to delay and hinder our national-defense preparations and to disunite the citizenship of our country at a time of crisis: Be it

Resolved, That the Board of Directors of the Louisiana Coalition of Patriotic Societies approves and endorses the policy of the President of the United States and his administration with regard to national defense and calls upon the elected representatives of the people and upon all citizens to lend their best efforts to the support of the President of the United States and his administration in all matters pertaining to the defense of the United States of America: Be it further

Resolved, That copies of this resolution be transmitted to the President of the United States and to the Senators and Representatives of the State of Louisiana in the Congress of the United States and to the press.

Sapientia et Doctrina (Wisdom and Knowledge)

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

ADDRESS BY THE VERY REVEREND ROBERT I. GANNON, S. J., PRESIDENT OF FORDHAM UNIVERSITY

Mr. MARTIN J. KENNEDY. Mr. Speaker, the centenary celebration of Fordham University was another notable event in its history. The world of culture and scholarship gathered at Rose Hill to march in procession to honor Fordham on this its one hundredth birthday, and to acknowledge the leadership and attainments of President Gannon.

The citizens of my city, New York, are proud of Fordham and, because of their love for this fine, Catholic institution, they, regardless of race, color, creed, or formal training, have adopted it as their alma mater.

I ask the Members of the House to read the centenary address of Father Gannon, which is a masterpiece of rhetoric and a challenge to the thinking men and women of America.

The address follows:

What was said and done on the feast of St. John the Baptist, 1841, when a new little college opened its doors here in the open field, we shall, unfortunately, never know No program was printed for the occasion. The Reverend Mr. John McCloskey, our first president, and afterwards the first American member of the Sacred College of Cardinals, probably drove up from Mott Street, dismounted, stiff and dusty, at the old stone steps, noted the deathly stillness of the country and cried: "Isn't the heat insufferable". At least that is the sort of speech great men really make on great occasions, and this was a great occasion—greater than anyone knew. Everyone hoped, of course, that the new venture would have some considerable success. Father McCloskey dreamed of a time when there might be two—even three hundred students here, and his superior, the young Coadjutor Bishop, was perfectly sure that his college would soon outdistance Georgetown and always be the most important Catholic institution in the country, because, after all, he had not had the pleasure of founding the others. But still, if some angel of God could have pierced the fog of the future, year after year for a hundred long and crowded years, could have shown them from the back steps of that Old Manor House over there the brilliant and distinguished gathering which honors us today. John Hughes would have cried: "This is Europe! This is Paris! Our vision is looking back, not forward. This is the Paris of the thirteenth century". Imagine his astonishment at seeing you here, a thousand men and women in doctors' gowns, half of you teaching here in this university city, half of you come as delegates from the important seats of learning all over the world. While here in our midst, he would see the ruler of our State as an honorary member of the faculty. Here most reverend bishops and archbishops, chief among them our own beloved Son and Father in Christ, and here a special representative of the Holy Father, the apostolic delegate

As for us of the Centenary year, though quite as gratified as our Founder would have been, we are not as much surprised by either your numbers or your splendor. We take for granted, after all these years, the growing spirit of fellowship and understanding amongst educators that has brought felicitations from so many and such great institutions of learning. We take for granted too, the fact that you have come in your wedding garments "In vestitu deaurato circumdati varietate" and rejoice especially in this latter fact because it is your splendor rather than your graciousness that opens up the following train of thought.

Here in the United States, side by side with the youthful, bounding spirit of research, we are all aware of a certain nostalgic hoarding of older glories. Prior to the Civil War, this hoarding was rather of substantial things, of educational ideas and traditional curricula All our American institutions of learning were still within striking distance of the trivium and the quadrivium, so that every college student in the city of New York knew silver from golden Latin and could recognize the Attic spirit in literature. He was even held responsible for the elements of logic and was never allowed, even in debate, to derive conclusions through an illicit process of the major. On the other hand, academic robes had not appeared as yet on this side of the Atlantic. Old Sir J. J. Thompson, the physicist and Master of Trinity, frequently enjoyed telling us that he had himself witnessed the American premiere of caps and gowns at the opening of the Johns Hopkins University, and used to add good natured but typical British comment at our expense.

With the rise, however, of a secular and scientific spirit, with the growing predominance of German influence on our leading institutions, extraordinary changes of opinion occurred with regard to the essential subject matter of an education. So that now if one of our first graduates, Bishop Rosecrans, for example, were to examine the mental content of a modern college student who had majored, let us say, in traffic problems or in hotel management, he might in his simplicity, mistake an arts man for an apprentice. But as though in compensation for the change of what our forebears would have called essential, there has been a decided growth of interest in medieval pageantry. Bachelors' gowns are now being worn in Freshman, high school, grammar school. Specially tinted hoods have been devised for the most unexpected branches of learning. Long processions, led by a mace, wind their way across campuses where not a word of Latin is spoken, to amphitheaters where not a word of Greek is understood. Schools of methodology where credits are amassed by future creditors are being housed in arched and groined gothic dreams that would have inspired a Jowett or a Newman. Cynics may derive what conclusion they will. To us simpler folk, this wistful glancing backward is a heartening sign. It means that more people than we realize are still aware that education, especially higher education, has a two-fold function; that its aim is not only to increase knowledge, but to preserve it; that it must, therefore, always be not only progressive but conservative, in the original meaning of the words progredi and conservare; that where in isolated cases, familiar to us all, it is merely forging ahead and has lost all contact with the precious past, it

must risk a liberal damnation and become (some courage is required to use the awful word) reactionary. It must, that is, double back on its tracks until it can pick up the golden thread once more.

As if to echo this two-fold function of increase and preservation, someone endowed this University many years ago with our only endowment, an excellent motto for the official seal: "Sapientia et Doctrina", wisdom and information. The "Veritas" on Harvard's seal is simpler and embraces just as much. The "Yahveh" of Yale is simpler still and all-embracing. But "Sapientia et Doctrina" carries with it a suggestion of analysis and emphasis that makes it a specific thing, a definite educational ideal. For it stresses Wisdom before Information and helps to answer the ageless question: "How much information is it wise for one generation to have?"

Now everyone knows, in a general way, what is meant by Wisdom, even though he may not be able to give the Scholastic definition straight from the treatise on the speculative intellectual virtues. He may never have thought of it as a "knowledge of conclusions through first causes", involving as that does, the First Cause of first causes, but he does know that there are thoughtful people here and there who have lived long and unselfishly, who have been through danger and suffering who have had their little moments of triumph, their hours of disillusionment, their days and nights of silence and spiritual growth. He knows of harassed men who can pause in their incredibly busy lives to say, with the simplicity of children, "I believe that character not wealth or power or position, is of supreme worth. I believe that love is the greatest thing in the world". He knows that such people have a quality that enables them to realize values, to weigh motives and to understand how God works through His creatures. Although this quality in greater or less degree may sometimes glow in the mind of a self-taught man, or even in the mind of a man who cannot read or write, he knows that there are short cuts in its acquisition. There is much that a wise and loving father can give to an admiring son. There is much that one generation can hand down to another through that great, deep, wide channel of tradition, the Liberal Arts, especially through the wisdom studies—theology, philosophy, history and literature. For these are the studies that bring us closest to the ideal of knowing conclusions through first causes, of understanding how God works through His creatures

As with individual man, so with groups of men, whole generations of men. Some we find who lay more store on Sapientia, some who find Doctrina more important. In the past millennium, for instance, we can discern a kind of watershed somewhere in the middle of the 15th and 16th centuries. On one side the stream of inspiration seems to be flowing from the past. On the other, strangely enough, from the unseen future. The latter of course, appeals to us as obviously preferable, because we are of the 19th and 20th centuries. We have been brought up in an evolutionary atmosphere that leads us to expect, contrary to human experience, always better and better things. We are still hypnotized by the charm of the very latest, the most advanced, convinced as we are that to march forward is alway to improve our condition, even though we march from a fertile field into a trackless waste; even though we march straight over a cliff. This modern tendency has of course produced great changes in the lives of men. We are fond of boasting that there has been more progress in the fifty years just passed than in the previous five hundred. But progress toward what? We have undoubtedly been rocketing toward some part of space with terrific and accelerated speed, but when we get there, are we sure that we shall find it worth the journey? We are progressing undeniably, but with every step we grow more conscious of increasing instability.

Even those very ends for which we have sacrificed so much health, culture and comfort, are being blown from the face of the earth. It is true that killing people off is a more complicated business than it used to be, but are we not cleverly solving all the complications?

When we come, at length, to examine the cause of our unprofitable speed, it seems to lie partly at least in our graceless and unseasonable youthfulness. It may be embarrassing to admit that 2,400 years after the age of Pericles we are suffering from a dangerous and recurrent adolescence, but the sad truth is that when the intellectuals of the last few centuries successfully cut off our past, they cut off, to a great extent, our only source of maturity, Wisdom, and condemned us to play the role of brash and ignorant children who despite the yesterdays of which they know so little.

For seeking inspiration from the past is not peculiar to a primitive people, nor does it normally mean that a generation lacks confidence in itself because of small achievement. Rather, it indicates a degree of disillusionment which belongs to years of discretion. Like older men, maturer civilizations have a haunting suspicion that there were heroes before Agamemnon. Rome was in her prime, already showing her wrinkles in fact, when the poet wrote of her the line once at the top of every schoolboy's copybook: "Moribus antiquis res stat Romana virisque". And Troy was all but finished when the warning came from Apollo: "Antiquas exquirite matres". Greek philosophers and scientists built upon the wisdom of the East. The Romans built upon the Greeks. In the high noon of the Middle Ages, Sentences and Summas organized, enriched and modernized Plato and Aristotle and the early Fathers of the Church. And even in the proud, self-conscious Renaissance, when Doctrina began to surge ahead exuberantly, Wisdom studies and veneration for tradition were long in dying.

In fact they are not quite dead even now, though information at the expense of Wisdom has become the earmark of our modern schooling. We realize with concern that too many of our Principals and Supervisors and University Faculties have been false to their high trust. They have become infected with a dangerous—because exaggerated—experimentalism that seeks, like communism, its real parent, to begin a new world, not by building on, but by obliterating the old. Worse still, the people as a whole, educators, parents and students have yielded little by little to the insidious kind of pragmatism which applies the yardstick of immediate utility to every subject in the curriculum. As a result, the wisdom subjects are giving way all along the line to the merely informational. Theology went overboard many years ago. Philosophy flourishes in outline form as a species of cultural history. Metaphysics has become a Roman Catholic aberration. Literature, while still conspicuous in the catalogs, has become in practice more and more the science, or the bones of literature. Of all the Wisdom subjects which linger today, waging a losing fight with practicality, History alone seems to hold its ancient place. But even here, it is not the more important philosophy of history that is regarded with such favor, but the enormous mass of information which constitutes its material cause.

Largely as a by-product of this worship of utility, we are faced by the problem of overspecialization. The same processes which have met with such success in modern American industry have now been applied of late with strange results to the intellectual world. A kind of assembly line has been introduced into our universities, where each of our busy educators, like a factory hand, knows only one operation. One cuts, one fits, one pads, one makes the buttonholes. A Dean, a Registrar, a Department Head, a struggling Instructor. A strange life that, making intellectual buttonholes for the clothing of the mind! Of course in education as in industry, the result of our efficiency is a very much cheaper suit. But the method has distinct advantages.

It certainly increases the sum total of information in the world and simplifies considerably the staffing of an intellectual factory. It is so much easier to find a thousand brand new, shiny minds that know all about some particular fragment of knowledge than to find one great, mellow mind, broad and deep, the kind of mind that was once regarded as the normal goal of a liberal education, the kind of mind still sought by Christian Humanism as it strives, in the felicitous phrase of the distinguished editor of Thought, "to develop the intellect, the conscience and the taste in the light of both reason and revelation; with the force of both passion and grace". There is consequently every sign that Doctrina is on the increase. Soon we shall have the universe completely tabulated, and no one will know what it means.

In the midst of our Celebration today, therefore surrounded by distinguished representatives of all that is best in modern thought, we cannot banish the formless fear that this glory of ours is a touch of autumn coloring, reminding us that another winter is at hand. Some pessimistic observers look rather for another ice age that will end our particular cycle of civilization. Would that we could blame some individual tyrant for its approach. Would that we could say "There is only one enemy to destroy, one 'Rattlesnake' to scotch. If Democracy but attacks him now, with so many supertanks and flying fortresses, vigor will return to our Christian principles. Our Churches will be holy and our homes will be chaste again. There will be respect for marriage vows and love for children. Prosperity, hand in hand with social justice, will enter on the scene and educational institutions will return to educational pursuits". But no one so deludes himself except for political purposes. We all know that the present crop of dictators in the world is a symptom, not a cause. We all know that poor old Europe was already sick unto death long before she decided to end it all with an overdose of modernity. Sometimes we read in Sunday supplements that we are sinking back again into the Middle Ages. Shades of Canterbury and of Chartres!

For years past we have been sinking forward into a thoroughly modern chaos, a scholarly and documented chaos, worthy of our most Liberal and Progressive thinkers For years past our universities of Europe and America have been hacking away at the twin foundations of their own house. Like men gone mad with pride they have recklessly attacked Christianity and Hellenism as though they could by some legerdemain preserve Western Civilization and still destroy the two great traditions on which it rests For years past wise men have been warning them that if they did not desist from their crazy undermining operations they would bring the roof down on all our heads. Now they have done it. Let us then put the blame exactly where it belongs. This annihilating war of ideas which is closing our hectic chapter of history comes to us straight from the lecture halls of Europe and America. It would have come sooner or later in any event. Our brilliant professors who are long on Doctrina and short on Sapientia would surely have found some method of destroying us, even though the rulers of the modern world had happily died in their baptismal innocence. As it is, our educators prepared the way for intellectual slavery by giving us, in place of education—bewilderment. In place of Wisdom, and at the expense of the sources of Wisdom, they spread

before their students more undigested information than the human race has ever had before, much more than the human race knows how to use at the present time. They produced a glut of facts to which we are not at this time entitled, for no age is entitled to more facts than it has wisdom to assimilate.

Now that the harm is done, however, no one would have us declare a moratorium on information. But as Universities our role must be the gradual restoration of Wisdom to the world. We must push forward in every line of modern research with continued and breathless devotion, but like the athletes put out the light. For the new world that will be born of all this pain must be, "a brave new world", but not brave with the bravery of a dehumanized machine. We want no heroes of the Soviet type to shape our futures for us; reckless heroes who are ready to throw away their lives in defense of indefensible principles which they never understood in the first place. We want the enlightened bravery of Christian Humanism. Our children's children, in this brave new world which we may never see, must realize that they are men, angels, as well as animals; men with powers of imagination, reason, will and capacities for unselfishness that verge on the sublime; men whose fathers often reached the heights before them and left inspiring records for them to read, in Philosophy, in History and in Literature; men who are above all, God's own children, to whom theology should be an alphabet. Far from despairing then, in the growing darkness, the universities of the world should be inspired by the glorious realization that they were never more needed than today because the Liberal Arts were never more necessary, Wisdom never more precious.

We cherish in our archives a long and affectionate letter from His Holiness Pope Pius XII Gloriously reigning, in which he reminds us that our future is rich in promise because we cherish the priceless inheritance of the past. In urging us to be true to the traditions, the principles, the ideals of Fordham, which are the traditions, principles and ideals of Christian Humanism, he assures us that in doing so we shall not only be serving God and Country, but shall likewise be meriting for ourselves an incorruptible crown which shall be ours for Eternity.

Municipal League of Michigan Urges Completion of Great Lakes-St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

RESOLUTION OF THE MICHIGAN MUNICIPAL LEAGUE

Mr. DONDERO. Mr. Speaker, the Municipal League of Michigan consists of many cities and municipalities within the State organized for the purpose of improving government and administration through cooperative effort. I believe it represents a fair cross section of public opinion within the State.

Recently at a State convention held at Traverse City, Mich., September 12, 1941, the league passed a resolution urging adequate water transportation for the people of the States in the Great Lakes section through the creation of the St. Lawrence waterway, as proposed by the President and his predecessors in office.

In order that the people of the country may know the sentiment and opinion, at least of a majority of the citizens of the State of Michigan, under leave to extend my remarks in the RECORD, I include therein copy of the resolution thus adopted by the league:

Whereas the State of Michigan is primarily an industrial State whose productive activities are vital to national defense; and

Whereas the State of Michigan, among other States bordering upon the Great Lakes, relies greatly upon the existence of adequate water transportation: Therefore be it

Resolved, That in order to make the products of Michigan farms and industries and those of the other States bordering upon the Great Lakes readily available to our Nation and to the democracies of the world, the delegates of the Michigan Municipal League, in convention assembled this 12th day of September, 1941, do petition the Senators and Members of the House of Representatives in Congress to give their support to legislation which will make available such adequate water transportation through the creation of the St. Lawrence waterway proposed by the President of the United States and many of his predecessors in office.

Addresses Republican Women's Club

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

ADDRESS OF HON. WILLIAM G. MILLER

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address recently delivered by the Honorable William G. Miller, formerly a Member of the House from the State of Connecticut:

It was with a great deal of pleasure that I accepted your invitation to speak to this group of Republican women. Two weeks ago I addressed a meeting of the Republican women of Middlesex County. While attending that meeting I learned that Miss Byrne had set a goal of 50,000 members for the Republican women's clubs in Connecticut. That you will reach and exceed that goal I have no doubt. Oh, I learned a lot at that Middlesex County meeting. Miss Anna Mae Surtoski reported as chairman of your new speakers' bureau. For a long time I have felt that the party should have not only a speakers' bureau but also study groups. Your organization is leading the way, and I sincerely hope that the Republican men, both young and old, will follow your commendable example. We need men and women who will prepare themselves and go out to present the truth to luncheon clubs and to organizations of all kinds. Too many men will say they haven't the time to study the problems of government and to prepare addresses that will give the people of Connecticut the truth about developments in Washington. My answer to such men is just this: If the businessmen of Connecticut, both large and small, fail to do something toward improving our present situation, they will soon find that they have nothing but time left; their business will have been destroyed or taken over by Uncle Sam, and free enterprise will be a thing of the past.

I believe it was Lincoln who once said, "Give the people all of the facts and they will find the correct solution." There never has been a time in our history when it was so important that we get the truth, the whole truth, and nothing but the truth. It is my contention that for the past few years the administration in Washington has not given us the truth. They have not been frank with us; they have not taken the people of the country into their confidence.

Washington is full of illegally appointed publicity agents sending out reams of propaganda. Millions of dollars are being wasted in the preparation of movies picturing the alleged glories of New Deal agencies. We still finance Mellet's clipping bureau, costing the taxpayers a million and a half dollars a year. This bureau was started with $50,000 taken from relief funds. It now receives an annual appropriation from Congress. Millions of dollars are spent each year sending out tons of speeches printed and delivered at taxpayers' expense.

If the American people knew the truth about what is going on in Washington, they would certainly elect a Republican House in 1942 and a Republican President in 1944.

For example—and it's a little thing but indicative of the loose way in which millions of our tax dollars are being spent—in the recent $8,000,000,000 deficiency appropriation bill for national defense there was an item of $200,000,000 to be spent by the President during the emergency for any unforeseen need that might arise. There was no serious objection to that item, although it should be recalled that out of the last $100,000,000 appropriated for that purpose the President turned $1,000,000 over to the Army engineers for taking borings on the St. Lawrence River, a project that could hardly qualify as an emergency national-defense measure; however, a proviso was added to the paragraph appropriating $200,000,000 stating that not more than $4,000,000 was "to be spent by the President without voucher." We have successfully fought previous wars, but never before have we given to anyone the right to spend $4,000,000 without at least submitting a voucher to the Treasury Department.

Speaking about getting the truth, is there any reason under the sun why we should not have the facts relating to the alleged oil and gasoline shortage along the eastern seaboard? It is admitted that there is no shortage of fuel oil or gasoline in the United States; it is claimed that the shortage in the East is due only to lack of tankers. Mr. Pelley, president of the Association of Railroads, issued a statement setting forth that there are 20,000 empty tank cars standing idle on the tracks of our American railroads. At the same time Mr. Ickes claims that he cannot find out how many tank cars the railroads have idle.

It is claimed by the administration that it was necessary for us to give Great Britain 70 tankers so that her war machine would be amply supplied with gas and oil. Recently it has been suggested that we may have to part with more of our tankers for the same purpose; yet an official of one of the largest oil companies issued a statement (published under a London date line) in which he points out that 300 tankers will provide for Britain's war needs. He also points out that at the outbreak of the present war Britain had 500 tankers and that she now has 900, including those obtained from the United States and European countries overrun by Hitler.

A committee of the United States Senate is now trying to unearth the true facts, and as a result of that committee's investigation I expect that we shall soon know the truth.

I predict it will be proven that with proper handling there would be no shortage. Is there any reason why we should not have had the truth without going to the expense of a senatorial investigation?

Millions of our citizens would like to have the facts, the truth, about the need for the recently enacted law extending the period of training for the selectees now serving in our Army. If the administration in Washington had told the men in service, the Congress, and the country the plain truth, there would have been very little opposition to a reasonable extension of the period of training. Instead of trying to make us believe that it was being seriously proposed by anyone that two-thirds of our Army should be discharged at once, the President had issued a statement something like this:

A year ago we thought it would be possible to draft, equip, and train a million men in a year's time and return them home as trained reservists, but we have found out that it has been impossible to carry out such a program. In the first place, it took longer to build the camps than we thought it would; this is borne out by the fact that these camps have cost us twice as much as was first estimated. After we had the camps ready we discovered that we did not have, nor could we get within a year, the material necessary for your proper training. Due to this lack of material and equipment, although you have spent a year in the Army you have had little more than a 13-week hardening-up process or basic training. The President could have gone on and said, rather than send you home untrained, we are going to extend your term for another year; but if we find that we can get the needed equipment, we will send you home in less than the additional year.

Perhaps it would be asking too much to expect the administration to issue such a statement, for that would be to admit a mistake in judgment, and, with the exception of admitting that changing the date for Thanksgiving was a mistake, I cannot recall any such admission by President Roosevelt. It would also be an admission that our national-defense procurement program has been badly bungled from start to finish. Instead of being frank in admitting the error, the President misled the country by saying that it would be dangerous to discharge two-thirds of our Army at this time, and that those who refused to support his proposal were trifling with the country's safety. This was just another attempt to lead us to believe that every Member of Congress who follows his orders and sits on the Democratic side of the House of Representatives is a statesman, and that everyone on the Republican side is just a politician, caring nothing for the country's safety.

Just what is the truth? What was proposed by the minority in the House of Representatives? They proposed that the service of the National Guard and Reserve officers be extended, but that those who had been drafted for 1 year's training, along with those who had volunteered for 1 year, be discharged to the Reserve when their year was completed. Would that have meant discharging two-thirds of the Army? Not at all. It meant that 50,000 men would be discharged in October of 1941, about 60,000 in November, and on up to the maximum of 123,000 in March of 1942. As fast as these men were sent home, new recruits would be brought in to take their places.

Since this draft-extension bill was signed by the President, the War Department has come out with an announcement that they are going to discharge 200,000 men almost at once—more than would have been discharged in any one month if the minority's proposal had been adopted. It has been said by some New Deal spokesman that those who voted against the administration's bill were voting against the judgment of both the President and the Chief of Staff, General Marshall. I have read and reread the hearings on this bill when it was before the House Military Affairs Committee, and I fail to find that General Marshall testified that the minority's proposal meant discharging two-thirds of our Army. He did say—and no one can disagree with him—that it would not be safe to discharge two-thirds of the Army.

Because of a commendable desire for unity, there are those who say that we should not dicuss nor argue about the administration's foreign policy or national-defense proposals. With such a contention I disagree. There is a proper time for debate and discussion of foreign policy under our form of government, and that is while the policy is being formulated; however, after the various measures introduced in Congress to carry into effect our foreign policy have been adopted and signed by the President, it is our duty to support those measures. For example, take the lease-lend bill. Regardless of what anyone may have thought of its provisions, once it has become law it should be supported by all of us. That does not mean that the next lease-lend bill, soon to be sent to Congress and providing for another $5,000,000,000, should not be scrutinized carefully.

It has already been suggested by administration spokesmen that no reference should be made to Russia in the new lease-lend bill; that its benefits be made available to Great Britain, China, and two or three other small countries still able to resist aggression. Is that being frank with the country? Not at all, when at the same time it is pointed out that there is no need of bringing Russia into the debate in Congress, inasmuch as the President can order the Reconstruction Finance Corporation to loan Russia all the money she may need without further authorization by Congress.

If we, as a party, are to take on the task of giving the people of Connecticut the truth, we want to continue a fearless type of leadership. Oftentimes we hear it said that it isn't safe to discuss this or that for fear someone's toes will be stepped upon. If it's the truth, the people should have it.

I have heard it said that the Kearny, N. J., situation should not be discussed for fear some friend of organized labor might misunderstand. Members of organized labor in the United States, whether they be members of the C. I. O., the A. F. of L., or the railroad brotherhoods, are, first of all, loyal Americans. The rank and file of organized labor does not approve of the President's illegal action in taking over the Federal Shipbuilding & Dry Dock Co. at Kearny, N. J.

Last June the shipbuilders operating along the Atlantic seaboard entered into an agreement with the C. I. O., in which they increased wages to the extent of $223,000,000. It was also agreed between the shipbuilders and the C. I. O. that there would be no strikes or lock-outs during the next 2 years, and that any disputes that might arise would be referred to a mediation board. A dispute did arise between the C. I. O. and the Federal Shipbuilding & Dry Dock Co. Thirteen different points were in disagreement. The company and its employees readily reached an agreement on 12 of the 13 points. The thirteenth point, to which the company could not agree, required the company to discharge any employee who for any reason refused to pay his dues to the C. I. O. As a practical matter, that meant that any loyal American trying to bring up his family decently would lose his job if he refused to pay his dues to a C. I. O. local, even though he knew that that particular local was communistically controlled.

I have referred to the illegal action of the President. Congress recently refused to pass a bill which would have given the President power to take the action that he has taken at Kearny, N. J. The only possible provision of law under which the President may have acted is a provision in the Burke-Wadsworth bill, which provides that the President may take over a given factory if a particular company refuses to accept a Government contract at a reasonable price. Certainly there was no question of industry's refusing to accept a contract in Kearny, N. J. The issue there reduces itself to this one question: Does the Constitution of the United States mean anything today? Is the Government to take over industry and make this a Fascist state, or are we to continue the free-enterprise system under which we have prospered for more than a hundred and fifty years?

There are many other matters about which our people should have the truth. I wish there was time to discuss the omnibus river and harbor bill soon to be considered by Congress. That bill rates deep and serious study, involving as it does the spending of more than a billion dollars on projects, most of which have no possible connection with national defense. The expenditures authorized in the bill are only a starter for many of the projects. For example, the St. Lawrence seaway item authorizes $265,000,000, while it is estimated that before it can be completed it will cost more than a billion dollars. I urge you to study the St. Lawrence waterway project, because I consider it the greatest threat to the prosperity of Connecticut and New England ever considered by Congress. This omnibus pork-barrel bill also contains, in addition to the St. Lawrence project, most of which is in Canada, several comparatively small projects—the Florida ship canal, the Tombigbee River project, or, as one Member of Congress expressed it recently, just about every river and harbor project ever thought of except the Passamaquoddy project.

The Republican Party has a job to do if democracy is to survive here in the United States. While giving lip service to economy in nondefense spending, this Congress has appropriated millions more for the various departments of government not connected with national defense than was appropriated last year. Every one of these appropriation bills has been signed by the President without a word of protest or warning. Your speakers' bureau has its work cut out for it, but I know that with your demonstrated enthusiasm you will successfully compete with the gigantic propaganda agencies now operating in Washington.

American Molasses Co.

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

LETTER FROM CHARLES W. TAUSSIG

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

AMERICAN MOLASSES CO.,
New York, August 25, 1941.

Hon. HALE BOGGS,
Representative from Louisiana,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN BOGGS: In your speech in the House of Representatives on July 17, 1941, you made the following statement: "The American Molasses Co. has interest in at least two Cuban sugar mills."

This statement is incorrect. The fact is that the American Molasses Co. has not at this time, nor has it had at any time, any

interest directly or indirectly in any Cuban sugar mills.

I would appreciate it if you would make a correction of your statement for the record.

Sincerely yours,

CHAS. WM. TAUSSIG.

Nominating State of Washington

EXTENSION OF REMARKS

OF

HON. HARRY SAUTHOFF

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. SAUTHOFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard L. Neuberger from the Progressive of September 20, 1941:

[From the Progressive of September 20, 1941]

NOMINATING STATE OF WASHINGTON

(By Richard L. Neuberger)

SPOKANE, WASH.—People often speculate on which State has the most progressive delegation in Congress. All sorts of nominations have been put forward. Now I am going to propose mine. First, let me point out, however, that I do not refer to one or two individuals who are progressives or liberals but to the general tenor and viewpoint of the entire delegation.

For example, Wisconsin has BOB LA FOLLETTE, Oregon has CHARLES MCNARY, Nebraska has GEORGE W. NORRIS, New York has ROBERT F. WAGNER, and Massachusetts has LAWRENCE CONNERY and ARTHUR HEALEY; but these men are merely a few among many in their respective delegations. For all-around liberalism give me the delegation which represents the State of Washington.

Perhaps other readers of the Progressive have a different idea. If so, let's hear it by all means. If you think some other congressional delegation should get the prize for general service on the progressive battle line, send in your nominations. In the meanwhile I'll go through the Washington personnel, Senate as well as House, and tell why I pick that State.

CONSISTENTLY LIBERAL AND PROGRESSIVE

On domestic issues the members of the Washington delegation are consistently liberal and progressive. They disagree considerably so far as foreign policy is concerned. Of the eight men in the delegation, five opposed extending the service of Army selectees and three supported it. By and large, every member of the delegation has taken a consistently forward-looking attitude on most of the major questions of the day.

Here are the Washington representatives in the National Capital, listed by the length of their service:

HOMER T. BONE, senior Senator: He has been a leader in the public-ownership movement since 1908, and is one of the men responsible for the fact that his home city of Tacoma has the lowest light rates in the United States. Once he was mysteriously defeated for Congress when, on election day, the local streetcar system broke down and the people in the working-class districts were unable to get to the polls. A militant and dynamic speaker, he has spoken innumerable times in behalf of public-power proposals. He is a close Senate associate of GEORGE W. NORRIS. Now BONE is leading a determined crusade for an agency in the Columbia River Basin similar to the T. V. A. He voted against extending the service of draftees.

MON C. WALLGREN, junior Senator: He is a businessman who sees all sides of political and economic questions. A jeweler in the town of Everett, WALLGREN served in the House from 1933 until 1940. Last year he was elected to the Senate by an overwhelming vote. He is known throughout America as a conservationist, and pushed legislation through Congress setting aside the great "rain forest" of the Olympic Peninsula as a national park. WALLGREN has supported practically all New Deal proposals and has high standing at the White House. President Roosevelt personally favored him to succeed Lewis Schwellenbach, now a Federal judge, in the Senate. WALLGREN voted to extend the service of draftees.

SMITH SPEAKS FOR PENSION GROUPS

MARTIN F. SMITH, Third Congressional District: In the House of Representatives the largest lumbering area in the United States is represented by MARTIN F. SMITH, who enjoys the support of both A. F. of L. and C. I. O. lumber workers. The huge Bonneville Dam project is in SMITH's district, and he has led many attempts to extend the scope of Bonneville's service. He also is a spokesman for many old-age pension groups and served in the World War. He has been particularly effective in supporting such worth-while New Deal agencies as the Farm Security Administration and the C. C. C. He is an attorney of note. SMITH voted against extending the service of Army men.

HILL CHAMPIONS THE FARMER

KNUTE HILL, Fourth Congressional District: The administration's bill for a Columbia River power bureau in the Department of the Interior has been introduced by KNUTE HILL, one of the most progressive Members of Congress. He lists himself in the Congressional Directory as a Progressive Democrat. HILL was formerly an officer in his State Grange and has led many fights for better treatment for the farmer. The colossal Grand Coulee Dam, greatest power project in the world, is in his district. HILL has taught school and practiced law. He supports President Roosevelt's domestic program, but is a determined critic of his foreign policy and spoke frequently against extending the service of draftees.

JOHN M. COFFEE, Sixth Congressional District: Like all the other members of the Washington delegation, JOHN COFFEE is a Democrat. For the past 2 years he has raised his voice constantly in the House against the abortive policy of sending oil and scrap iron to Japan, to be used to bomb and mutilate the people of China. At last the administration has adopted his views. COFFEE is a specialist on labor legislation and represents the city of Tacoma, which has given him the biggest majorities it ever gave any Congressman. He enjoys the confidence of President Roosevelt, who addresses him as "Dear John." COFFEE is chairman of the Pacific Coast Conference of Liberal Democrats in Congress. He opposed extending the service of selectees.

LEAVY SAVES DAY FOR COULEE DAM

CHARLES H. LEAVY, Fifth Congressional District: Practically all liberal citizens in the Pacific Northwest are hoping that Congressman LEAVY soon will be a Federal judge. He served with distinction on the Washington superior bench and has been one of the most able Members of Congress ever to come from his State. On the strategic Appropriations Committee he has kept funds in motion for Grand Coulee. Twice when it seemed that the money for Coulee might be stopped Representative LEAVY stepped into the breach and turned the tide. Now, with Coulee power needed for aluminum plants, he is hailed as far-sighted and prophetic. He has a consistently liberal record on all questions touching labor, power, and agriculture. A supporter of the administration's foreign policy, he voted to keep the draftees in service.

WARREN G. MAGNUSON, First Congressional District: The greatest city in the Northwest is represented by youthful, good-looking WARREN MAGNUSON. He once belonged to the teamsters' union himself and is noted as a champion of labor. He also is chairman of the Alaska-Puget Sound Highway Committee and is playing a leading part in obtaining authorization of that vital project, an undertaking essential to war and peace alike. MAGNUSON is a lieutenant commander in the Naval Reserve and recently served a tour of active duty. He is a brilliant orator and some day probably will be Governor of Washington. Democrats already are grooming him for that post in 1944. He voted against extending the service of draftees.

HENRY M. JACKSON, Second Congressional District: Tyro of the highly progressive Washington delegation is 28-year-old HENRY M. JACKSON, who was elected last year to fill the House seat vacated when MON WALLGREN jumped to the Senate. JACKSON has yet to prove himself, but has voted with the progressives on virtually all domestic questions. He has made a good impression in his district by holding hearings in numerous counties on issues of importance to those particular localities. He is a lawyer and attended Stanford University. He voted for the bill extending the service of Army men.

That's my nomination for a liberal congressional delegation. What's yours?

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

QUOTATIONS FROM THEODORE ROOSEVELT'S CYCLOPEDIA

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I offer the following quotations taken from the Theodore Roosevelt Cyclopedia, a collection of approximately 5,000 quotations from Roosevelt's speeches and writings recently published by the Roosevelt Memorial Association:

AMERICANISM

Americanism is a question of principle, of purpose, of idealism, of character; not a matter of birthplace or creed or line of descent (1908).

RELIGIOUS TOLERANCE

Discrimination against the holder of one faith means retaliatory discrimination against men of other faiths. The inevitable result of entering upon such a practice would be an abandonment of our real freedom of conscience and a reversion to the dreadful conditions of religious dissension which in so many lands have proved fatal to true liberty, to true religion, and to all advance in civilization (1908).

FOLLY TO HIT SOFT

There is no use in saying that we will fit ourselves to defend ourselves a little, but not much. Such a position is equivalent to announcing that, if necessary, we shall hit, but we shall only hit soft. The only right principle is to prepare thoroughly or not at all. The only right principle is to avoid hitting if it is possible to do so, but never under any circumstances to hit soft. To go to war a little,

but not much, is the one absolutely certain way to insure disaster. To prepare a little, but not much, stands on a par with a city developing a fire department which, after a fire occurs, can put it out a little, but not much (1916).

"SPEAK SOFTLY AND CARRY A BIG STICK"

Boasting and blustering are as objectionable among nations as among individuals, and the public men of a great nation owe it to their sense of national self-respect to speak courteously of foreign powers, just as a brave and self-respecting man treats all around him courteously. But though to boast is bad, and causelessly to insult another worse, yet worse than all is it to be guilty of boasting, even without insult, and when called to the proof to be unable to make such boasting good. There is a homely old adage which runs: "Speak softly and carry a big stick; you will go far." If the American Nation will speak softly, and yet build, and keep at a pitch of the highest training a thoroughly efficient Navy, the Monroe Doctrine will go far (1903).

THE LABOR PROBLEM

The labor problem is a human and a moral, as well as an economic, problem; * * * a fall in wages, an increase in hours, a deterioration of labor conditions mean wholesale moral, as well as economic, degeneration, and the needless sacrifice of human lives and human happiness; while a rise of wages, a lessening of hours, a bettering of conditions mean an intellectual, moral and social uplift of millions of American men and women (1913).

THE STRIKE SITUATION

The strike situation in the United States at this time is a scandal to the country as a whole and discreditable alike to employer and employee. Any employer who fails to recognize that human rights come first and that the friendly relationship between himself and those working for him should be one of partnership and comradeship in mutual help no less than self-help is recreant to his duty as an American citizen, and it is to his interest, having in view the enormous destruction of life in the present war, to conserve and to train to higher efficiency alike for his benefit and for its, the labor, supply. In return, any employee who acts along the lines publicly advocated by the men who profess to speak for the I. W. W. is not merely an open enemy of business but of this entire country and is out of place in our Government (1915).

Regulation of Consumer Credit

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

RESOLUTION TO MARRINER ECCLES, CHAIRMAN, FEDERAL RESERVE BOARD

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution to petition the Federal Reserve Board to give labor a voice in its regulation of consumer credit:

To the Honorable MARRINER ECCLES, chairman:

Whereas on July 9, 1941, and again on September 16 there appeared in the CONGRESSIONAL RECORD detailed statements of fact concerning the social and economic unsoundness and the outright oppressiveness of conditions in the licensed loan-shark racket; and

Whereas in the interim between the two statements an Executive order was made directing the said Federal Reserve Board to act in the public interest; and

Whereas, acting under said order, the said Board has disregarded the interests of labor; and

Whereas its actions have totally disregarded the bad practices which force and encourage many millions of the Nation's laborers into debt entanglements, from which they are unable to extricate themselves; and

Whereas the economic fabric to be whole must protect, in the public interest, these millions of laborers from vulturous profiteers; and

Whereas it is the sworn opinion of the Price Administrator that "This is the time for people to get out of debt, to restrain credit, and save by buying defense bonds; hence create a backlog of demand to be released at a happier time"; and

Whereas the total amount of indebtedness in small loans is approximately $2,000,000,000; and

Whereas approximately $1,000,000,000 of this $2,000,000,000 octupus is in the hands of licensed loan sharks that have in their clutches 8,000,000 laborers and defense workers; and

Whereas these licensed business concerns do and are permitted to charge rates of discount on marginal balances which their oppressive practices force on the workers—rates of discount the lowest of which is 31 percent and the highest of which is 72 percent, with a norm of 55 percent annual discount or the billion which they are licensed by the Federal Reserve Board to loan out; and

Whereas the loan sharks to justify such outrageous profiteering deceitfully cover up in supervision and management charges enormous income that is exempted from taxes; and

Whereas the apathy of the Federal Reserve Board in countenancing such mulcting and milking of such a large segment of the Nation's workers of a million dollars a day; at a time when the administration urges and there is a need for private economy, and a patriotic duty to conserve all wealth, and lastly an official duty that rests upon the shoulders of the Federal Reserve Board to act in the premises; and

Whereas the Federal Reserve Board has barred all of labor's representatives from the Board's discussions and consideration of its rules and regulations which vitally affect millions of the Nation's laborers; and

Whereas these 7,000,000 workers are inarticulate voices in the wilderness of debt enslavement: Therefore be it

Resolved, That in the interest of justice and in consonance with democratic principles the Federal Reserve Board should permit a representative of these borrowers to sit at the council table with the Board in all of its deliberations and discussions relating to rules or regulations affecting labor.

Mr. Willkie in New Hampshire

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 24, 1941

NEWS ITEM FROM MANCHESTER (N. H.) UNION-LEADER

Mr. PLUMLEY. Mr. Speaker, public opinion on the international situation appears to be crystallizing in New England much more rapidly than in the rest of the Nation, though the trend is growing more distinct everywhere. In that connection, it is interesting to point out the note sounded by the titular head of the Republican Party, Mr. Wendell L. Willkie, in a recent address in New Hampshire, in which he praised the stand taken by Senator STYLES BRIDGES and our colleague, Representative FOSTER STEARNS, of that State. Mr. Willkie's words will bear reiterating in the form in which they appeared in the news columns of the Manchester (N. H.) Union-Leader on September 1, 1941:

Wendell L. Willkie, Republican standard bearer, struck out today at the isolationists and lauded Senator Styles Bridges, Congressman Foster Stearns, and Gov. Robert O. Blood "for asserting leadership of the type the Republican Party should follow."

"I could not come to New Hampshire," Willkie said, "without expressing my praise of and support for the position and leadership on international questions taken by your able Senator STYLES BRIDGES.

"FOSTER STEARNS, another Republican and Congressman from this district, has rendered equal service in support of this same position which is the growing sentiment of Republicans all over the United States.

"The impression that the Republican Party represents isolationism," Mr. Willkie continued, "has arisen because of the votes of the majority of Republicans in Congress. If one examines the positions of Republican Governors and the views of the rank and file, a different conclusion will arise."

Farm Prices

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, one of the most dangerous proposals ever made, so far as the farmers of the Nation are concerned, is that of giving to a Government bureau or Government agency the right to fix a ceiling over farm prices. If that is done, it will likely mean ruination of the people in the cotton-growing States, and it will also likely mean ruination of the wheat growers and the corn growers and other farmers in other sections of the country.

If farm prices were raised to a real parity with prices of other commodities, cotton would be selling today at 32 cents a pound, wheat at $2.19 a bushel, and corn at $1.32 a bushel. This estimate was borne out by farm leaders in a meeting recently held in Memphis, Tenn.

I hope every Member of this House whose constituents till the soil will let the country and the Congress know that we are going to oppose any such effort to hold down the price of the crops the farmers have to sell, and at the same time raise the prices of everything the farmer has to buy.

Let farm prices continue to rise until agriculture is placed on a real parity with

industry—32-cent cotton, $2.19 wheat, $1.32 corn, and other crops in proportion.

Then the farmers of the Nation can enjoy their just measure of real prosperity.

Air Power and National Defense

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. HILL of Washington. Mr. Speaker, under leave to extend my remarks and include therein an article appearing in this morning's Times-Herald, I wish to say that this article shows conclusively the necessity, the feasibility, and the desirability of a separate and distinct air department in our executive branch of the Government. The present war shows the wisdom of such a policy as evident in England, in Russia, and in Germany. With an adequate air force our country would be impregnable and safe from any attempted invasion by any dictator or group of dictators. Let us spend a reasonable amount of our defense appropriations for such a sane and logical defense program.

The article is as follows:

[From the Washington Times-Herald of September 25, 1941]

IN THE NEWS

AIR POWER CAN KEEP US SECURE FROM INVASION

On March 27, 1938, your columnist wrote in a signed editorial:

"The way to defend the United States of America from attack in any form by any hostile power is with airplanes.

"The way to halt and hamper an invading army is with airplanes.

"The way to destroy an attacking fleet is with airplanes.

"The way to defend our coasts and our interior cities, too, from the most destructive hostile armament of all—a force of bombing airplanes—is by a force of defensive airplanes larger and better and more effective than that of the invaders.

"The next war will be fought in the air and won in the air.

"Of course, auxiliary defense forces will be necessary.

"It is not contended here that airplanes alone could completely defend this widely extended and varied country and coast line to the best and fullest advantage.

"But airplanes will be, and must be, the main arm of defense, and the immediate arm of defense, and the determining arm of defense.

"They are the modern arm of defense and of destructive offense.

"They are the quickest to build, and the cheapest to provide, and the easiest to operate."

Of course, your columnist does not possess the knowledge of a military expert.

All he has is a little common sense, and not overmuch of that—reminding one of the irate husband who said to his sweet and gentle spouse:

"All I want of you is silence, and mighty little of that."

And mighty little of it is what he got.

However, this is a digression.

Let us return to our muttons.

It is agreed that your columnist is not a military expert.

But Lt. Col. Thomas R. Phillips is a most distinguished expert.

He is a member of the General Staff of the United States Army—a military expert in the service of the Army.

Mention has already been made in this column of an article by Colonel Phillips published in the current issue of Army Ordnance, a military journal.

Further details are herewith printed.

In his contribution to this journal, Colonel Phillips presents his views to his professional associates under the title of "Air Power and Coast Defense."

The conclusion of Colonel Phillips is that the time has passed when the United States could be invaded by any enemy from across the seas.

The treatise is a convincing argument for an adequate national defense, based mainly upon an overwhelming air force.

Of course, Colonel Phillips is one of the younger members of the general staff, with a mind accessible to modern ideas.

It is hardly to be expected that the ancient order of military bureaucrats and back numbers will accept Colonel Phillips' conclusions.

Yet those conclusions were foreshadowed by Gen. William L. Mitchell 20 years ago, and have been amply confirmed by the varied experiences of the present war.

The attitude of the antediluvians, however, is shown in the opposition voiced by our somnolent Secretary of War to the proposal of Congress to vote a medal to General Mitchell as posthumous recognition of his farsightedness in realizing and predicting the effectiveness of the airplane in the destruction of naval vessels and in the defense of the Nation.

Recognition of General Mitchell's progressiveness would have been, in the view of the mossbacks, a reflection on their own power of vision—or lack of it.

Therefore, their own reactionary attitude will probably be maintained in spite of convincing argument and established fact.

Nevertheless Colonel Phillips, deriving his findings from his own training and experience and from actual operations in the war zones, presents his argument with telling effect.

He says:

"The bomber has made the American coast impregnable to invasion.

"This is the most important military fact that can be deduced from the European war."

Colonel Phillips voices a warning that this country is about to undertake a huge scheme of coastal fortifications, at an enormous cost, which aviation has already rendered largely obsolete.

"A great program of harbor-defense construction is proposed and is partially under way," he observes.

"One wonders if this program has been devised with full realization of the ability of air power to perform many functions of harbor-defense installations.

"The United States is about to build harbor defenses to make the country secure for 50 years to come.

"Is this really looking forward or are the harbor defenses being provided to cover the 50 years which have just passed?"

Colonel Phillips concretely illustrates his thesis by discussing our defense position in the Gulf of Mexico and Caribbean Sea.

He says:

"In the July-August 1941 issue of Army Ordnance * * * General Hagood gave a 13-point program for coast defense in which $200,000,000 would be spent.

"There was little to cavil at in this program except that it appears to have been based on the obsolete missions of coast defense.

"For example, General Hagood recommended new harbor defenses in the Houston-Beaumont area of Texas with special reference to the protection of the oil fields. * * *

"This proposal obviously was intended to prevent a sea-borne invasion from capturing the oil fields, since they are not close enough to the coast to be bombarded.

"Air power not only has made such an operation impossible, but new American defenses closing the gaps into the Caribbean through the Greater and Lesser Antilles will make this sea, through which the Gulf ports of the United States must be approached, a trap which no hostile naval force or transports would dare to enter.

"The West Indies, if fully exploited to close the Caribbean, furnish complete protection for the American Gulf coast.

"Not only are no new harbor defenses needed, but those now in existence have little further reason for being maintained."

Even more: The same defense arrangements, now being established on the islands, would, according to Colonel Phillips, preclude an air invasion of the South.

"Not only do American defenses along the Antilles protect the Gulf Coast," Colonel Phillips remarks, "but they also secure the northern shores of Venezuela and Colombia, the Panama Canal, and the eastern coast of Central America and Mexico."

In other words, no Old World power could obtain and hold the land bases necessary to launch and sustain an aerial attack upon us.

In time of peace, of course, this country, in order to uphold the Monroe Doctrine, would prevent the establishment of such bases by any European or Asiatic country.

If, in time of war, such bases were started, our air and naval forces would simply obliterate them at their beginning.

However, Colonel Phillips does not argue that all existing land fortifications should be dismantled, or that no new land defenses should be erected anywhere.

On our mainland, exposed harbors and naval shore stations need to be guarded against naval bombardments and raids—not against invasion.

Likewise, our new insular defense posts and seaplane bases "are subject to naval bombardment during raids and must have seacoast guns to keep enemy raiders beyond range."

Also—

"Against some of our foreign possessions an attacking naval force might be able to bring superior air power on carriers; hence all the old missions of harbor defense apply with full force to them."

But these strategic considerations no longer apply as of old to the mainland of this country, Colonel Phillips insists.

"Even if the United States had no harbor defenses, it would be impregnable to invasion," he asserts.

"And this still would be true if our Navy were inferior to that of an invading power.

"Land-based air power has made the United States impregnable to sea-borne invasion.

"If this country takes advantage of the defensive powers given to it by the bombardment airplane, its impregnability to military invasion is assured in the foreseeable future."

Moreover, with our great industries engaging in mass production of military aircraft, we can be invincibly armed, believes this expert, long before we can be attacked on our shores.

"Doubt as to the availability of air power can be dismissed so far as the United States is concerned," Colonel Phillips explains.

"We shall always have it in the future in ample quantity, and instead of a dozen or

two dozen guns defending a harbor we shall have 2,000 or 4,000 bombers ready to be concentrated for the defense of any point, not of harbors alone but of all the beaches and all the coasts."

The accuracy of Colonel Phillips' analysis of "Air power and coast defense" seems to be unquestionable since it is based upon data accumulated from actual experiences of the European war.

Therefore the bogey of hostile armies descending upon us and blitzkrieging our cities into ruins ought to vanish forever if we are properly prepared in the air to defend our coasts and country against any invading fleets of ships or planes.

Hitler Cannot Conquer the Human Spirit

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

EDITORIAL FROM THE ABERDEEN (S. DAK.) AMERICAN-NEWS

Mr. CASE of South Dakota. Mr. Speaker, under permission granted by the House, I place in the RECORD an editorial written by J. A. Bailey, of the Aberdeen (S. Dak.) American-News, which says in an inspiring way what many Americans have believed as to the eventual outcome of the present world struggle. The editorial follows:

[From the Aberdeen (S. Dak.) American-News]

For a long time, even during the dark day immediately following the fall of France we have clung tenaciously to the conviction that Hitler would lose this war.

The oft-voiced contention of some of the leading isolationists that there was not a chance for Great Britain to survive never carried complete conviction as far as we were concerned.

Now with Hitler facing a winter on the violent battlefields of Russia their contention loses most of the force it once had.

Corroborating the views of this writer is Roger W. Babson, the noted economist and prophet, who in a letter to the editor states in detail his reason for believing Hitler will finally go down to defeat.

He cites the facts that Great Britain still has control of the seas; the latent manpower of the British Empire, China, and Russia, totaling a billion souls who can be trained and united; the tremendous industrial producing power of the United States when really awakened; and, finally, the great superiority of these nations in natural resources compared with Germany, Italy, and Japan.

Far more important in his mind, however, is the spirit of those who are fighting for freedom and justice. The "still, small voice" in the human soul is more powerful than horses and chariots or than tanks and bombers.

As a sick man turns to God for help, says Babson, so will the people of the innocent nations which the Germans today hold in brutal subjugation.

The Gestapo can take the arms away from these millions; they can confiscate their writings and imprison those of them who speak for freedom and justice.

The German military machine, even if multiplied a hundredfold, cannot prevent the Dutch, Greeks, Danes, Norwegians, Belgians, Balkans, and other innocent peoples from praying. Ultimately these millions will unite in doing this—silently, and unbeknown to their enemies.

These prayers, added to the material sacrifies and efforts which all of us must make, will bring victory. The two combined have never been known to fail.

"All nations are now praying that their armies may be victorious," Babson says, "but such prayers may be selfish; and if so, are of no avail. Both sides in every war ask God to give them victory. This has not amounted to much. Today, however, a great third group of victimized neutrals are involved whose prayers will count. The great spiritual awakening which I have long been forecasting is coming. It may be born, however, not in the American and English churches, as I had hoped but in the souls of the downtrodden millions of Europe, Asia, and Africa. Yes; I am a radiant optimist as to the ultimate outcome of this war and the better world which surely is to follow."

The Cloakroom

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

Mr. LAMBERTSON. Mr. Speaker, Wally is O. K., but between the two I'll take Queen Elizabeth.

Secretary Wickard was embarrassed when asked if he intended to lease-lend food to England—yet it is in this new L-L bill.

It is fitting that a committee which provides such vast quantities of shooting equipment for the democracies should have as its chairman a man named CANNON.

The Roosevelts and Windsors agree on love and war—they both favor shooting and in order to encourage marriage they think divorces should be made easy.

If the Lone Eagle had flown over the British Embassy, the big, long, red almshouse up Massachusetts Avenue way, Thursday he could have spotted his warmakes No. 1.

A part of the billion to feed Britian is earmarked for garden seed—and lo for over 13 years I have been unable to get any for my undernourished constituents.

Mr. Wickard told the committee the farmers are sold on this being our war. My check on this during the last 5 weeks in the First Kansas District was that it was only the Willkie-New York City bankers.

What has become of Harry Hopkins? And what has become of the Russian aid bill? All witnesses swore Harry never was actual lease-lend director. The new bill makes no reference to the Communists and their aid in the bill is denied by all. Another subterfuge is planned under broad powers to the Chief.

The President's demand for speed on the new bill articulates his disdain for congressional procedure and helps prove the military dictatorship trend. Testimony reveals that next summer would be the earliest possible for production under this bill if labor cooperates. Our old billions are not half processed yet.

The Injustice of the 49-Cent Wheat-Quota Penalty

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

SPEECH OF OSCAR B. SMITH

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Oscar B. Smith, of Frankfort, Ind., delivered for the Indiana Marketing Quota Protest Association:

The chief complaint against the wheat-quota penalty is that it was placed on excess wheat just prior to harvesting and at an increase over what was stipulated at seeding time. The 15-cent penalty agreed upon at seeding time was not objectionable so long as we must tolerate the A. A. A., but it did become objectionable when it was increased to 49 cents after the wheat was ready for harvest. The rules were changed in the middle of the game, which is unfair, undemocratic, and un-American. This nauseous juggling is in itself enough to condemn the entire program, but below the surface of things conditions are much worse. According to the 1930 census, there were 1,208,091 wheat farms in the United States. Of these, approximately one-third signed A. A. A. contracts during the first 3 years of its operation, and this one-third represented 78 percent of the acres growing wheat. In other words, two-thirds of the farms growing wheat represented only 22 percent of the wheat acreage. The vote of the referendum in favor of the quotas was 453,569, or only 37.5 percent of the wheat farmers registered in the 1930 census. The vote in the referendum against the quotas was 106,061, or 8.8 percent of the wheat farmers of the 1930 census. Therefore only 46.3 percent of the wheat farmers voted, and when we consider that this includes the landlords and tenants, the number of farms is smaller than shown by their percentage. The percent of farmers that voted "yes" is practically the same percentage of farms that make up 78 percent of the acreage. By setting a minimum of 15 wheat acres as a qualification to vote, the result of the election was a foregone conclusion, and it therefore applied to only the large operators. The small farmer was exempted from the penalty and so was disfranchised in the referendum. The penalty did not apply to him, but he was affected by the law, and by not applying to him the argument was that he should not vote, and therefore he could not vote against the principle. Yet the referendum was called the will of the majority. The law providing the 49-cent penalty became effective May 26, 1941, and the referendum was held 5 days later. Does anyone believe that all these farmers were fully advised during this 5-day period?

MARKETING QUOTA PENALTIES

The small operator was discriminated against in the referendum, and excess producers are discriminated against in the markets. With his excess he can either pay the 49-cent penalty, store it under bond, or give it to the Government for relief purposes. Canadian wheat comes into our markets under a tariff of only 42 cents, and therefore places the American farmer at a disadvantage. That is not an all-compelling argument against the penalty provision, but it is a perfectly sound objection to the present policy. The Canadian farmer can pay the 42-cent tariff, take back American money, exchange it for his own money, and have 10 to 20 cents more per bushel than the American farmer with a few extra bushels of "hot wheat." If the American farmer had been imposed with a compulsory acreage reduction and then had violated it, then he could be properly penalized, but not otherwise. Cotton is subject to a quota penalty of 6.9 cents per pound, yet foreign cotton comes in duty-free. If a quota penalty is placed on corn, the penalty against the American farmer will be 35 cents per bushel, while Argentine corn will only carry an import tariff of 25 cents. This duty figured in an Argentine peso, worth only 20 percent of its normal value, becomes negligible after it reaches the American market. A bill has only recently been introduced to place a quota penalty on potatoes of 1¼ cents per pound. Other bills are, no doubt, in the making to further regiment the American farmer, and when independence is legislated and administered out of the American farmer, the independence of our great Republic is indeed imperiled. A United Press dispatch of June 19, reads in part as follows: "Administration and farm organization officials today planned a new omnibus farm bill to carry out a long-range program of agricultural self-sufficiency. Details were developed at a conference of farm leaders summoned by Secretary of Agriculture Claude R. Wickard. They expect to introduce it at this session of Congress. * * * Details of the bill have not been completed, but Wickard said it will provide a further reduction in wheat acreage, perhaps to 50,000,000 acres, compared with present A. A. A. allotments of 55,000,000. * * * The proposed legislation would include provisions for marketing agreements regulating the sale of 'all products which the farmers vote to include,' Wickard said."

SURPLUSES

All these allotments, marketing agreements, quotas, penalties, reciprocal treaties, and the like are necessary, we have been told, to regulate our overproduction and huge surpluses. We have been told that our overproduction of wheat has given us a present inventory on hand of 660,000,000 bushels. Page 23 of the 1940 Statistics of the Department of Agriculture show that from 1930 to 1939, inclusive, the United States produced 7,474,500,000 bushels of wheat. Distribution for the same period was 7,551,100,000 bushels. This distribution was used for seed, farm feed, commercial feed, and exports, including flour. Therefore, during this period, we produced 76,600,000 bushels less wheat than we distributed, proving that we are on an import basis. During the entire year of 1940 our total feed-wheat imports were 314,894 bushels (feed wheat is that which is unfit for human consumption). The first 5 months of 1941 saw 2,394,000 bushels of Canadian feed wheat pour into our United States markets. It is now being delivered f. o. b. Baltimore, Md., for 15 cents per bushel ($5 per ton) cheaper than the corresponding grade of United States wheat. As a result, 95 percent of the poultry-feed manufacturers are now using Canadian feed wheat in their scratch-grain feeds. They have switched over on assurances that there will be a continuing supply of the cheaper Canadian feed wheat. Estimates are now that there is a 60-day supply of this feed wheat in Atlantic seaboard storage, which came in under a 5-percent ad valorem tariff (approximately 5 cents a bushel). United States farmers are begging for storage space, and are told that they have overproduced, but cheap foreign wheat takes our eastern storage space and the poultry-feed market away from the penalty-taxed citizen farmer. I say give the penalties to the foreign producer and the protection to the American farmer. Canadian hogs and pork products are now being imported into the United States at a greatly increased tempo. The first 3 months of 1941 saw these imports increase 910 percent over the corresponding period of 1940. In 1940 we imported 227,000 dozens of eggs, but on July 21, 1941, one New York company alone contracted with Argentina to import 360,000 dozens from that country during the next 12 months.

YEARS OF BUMPER CROPS

Yes, my friends, we are getting on an import basis and getting there fast. Apparently we must import to create a United States produced surplus, and all for the sake of the A. A. A. program. What a fantasy. Our greatest corn crop was in 1920 and the next largest was in 1906. The yields of 1932 and 1937, which were supposed to have created such large surpluses of corn, favorably compare with the yields of 1896 and 1905. The all-time record yield of wheat was in 1915, and cotton reached its peak production in 1926, yet in all those years of bumper crops the surplus problem solved itself. Why? Because the farmer was receiving his proportionate share of the national income. The 1-1-7 ratio of the iron laws of economy was functioning properly. Wealth was created at its sources—namely, the soil, the air, and the water—and of these the soil created 70 percent of the total. During those years true wealth was paid for in its cash equivalent. A dollar of farm income supports $1 in pay rolls and $7 of national income. Overproduction, underconsumption, and lack of purchasing power are synonymous terms.

CONSUMPTION OF SURPLUSES

What are the true facts imaged forth by the picture? The statistics of 1939 and the Bureau of the Census show that we produced 8.2 bushels of wheat per capita from 1900 to 1905. This per-capita production has gradually dropped until in the period from 1930 to 1935 we produced 5.8 bushels per person, and from 1935 to 1939 we produced 5.9 bushels per person. By the same token we find that world production of wheat has fallen from 2.27 bushels per capita in 1911–15 down to 1.82 bushels per capita in the period of 1932 to 1939. Production itself has remained fairly constant, and in the United States it has not kept pace with our growing population which has increased 40 percent since 1900.

THE SOLUTION OF THE PROBLEM

I have been asked times without number if the penalty can be avoided on excess wheat. The law plainly states that it may be stored under bond, given to the Government for relief purposes, or the penalty paid, and the National Marketing Quota Protest Association does not advise breaking the laws by sundry methods. Our hope lies in declaring the quota penalty unconstitutional thereby throwing out the A. A. A. Our ambition aims at putting these paid penalties in escrow thereby placing them in the same category as the old hog-processing tax. This hog-processing tax refund, by the way, has recently passed the Senate and I counsel all farmers to hold their processing receipts a while longer as the House of Representatives will surely take action on it shortly. Our other aim is to nullify the A. A. A. by appropriate legislation, and have something really constructive to take its place. The most promising of such legislation thus far introduced in Congress is the Massingale bill H. R. 1101. This bill is the 1941 streamlined version of the original McNary-Haugen bill. It will give the American market to the American farmer at an American price, by establishing full market parity on all farm products. It will stop all this nonsense of allotments, quotas, penalties, foreign dumping, and the like. It will do away with the necessity of continuous borrowing, and permit us to earn our way. I have no objections to industry receiving a defense contract on a 10-percent-cost-plus basis, but I do insist on the same treatment for the American farmer.

FARM BUREAU ATTITUDE

It is to combat these evils and to adopt a constructive program for agriculture that the National Marketing Quota Protest Association was formed. Its founder, Mr. Lamont O'Harra, of Newcastle, Ind., has been a member of the American Farm Bureau since its inception and had hopes that his parent organization would give the farmer his rightful place in the Nation's economy. Shortly after the wheat-quota referendum was held he telegraphed Mr. Hassell Schenk, president of the Indiana Farm Bureau, as follows:

"Did our organization support the increase on excess wheat from 15 cents to 49 cents per bushel? Did our organization endorse the manner in which the wheat referendum was conducted?

"(Signed) LAMONT O'HARRA."

To which he received the following wire:

"Farm Bureau initiated and secured passage A. A. A. amendment increasing loan value to 85-percent parity. See my article in July Hoosier Farmer. Please drop in at our office your earliest convenience.

"(Signed) HASSEL E. SCHENK."

Still not satisfied, Mr. O'Harra on July 17, 1941, sent the following wire to Mr. Ed O'Neal, president of the American Farm Bureau:

"What steps is our Farm Bureau taking to secure reduction or removal of 49-cent penalty on excess wheat?

"(Signed) LAMONT O'HARRA."

And the next day there came the following reply:

"American Farm Bureau is opposed to removing present penalty on excess wheat. Noncooperators can avoid penalty by storing excess wheat and can obtain Government loan and 12-cent storage allowance. Notwithstanding penalty noncooperators are enjoying better net return due to price increase resulting from 85-percent load program.

"(Signed) ED O'NEAL,
"President, American Farm Bureau Federation."

Mr. O'Neal probably means "loan program" instead of "load program" but so far as the Federal Treasury and the taxpayers are concerned I prefer his telegram as is. The price increase came with the German invasion of Russia, but suppose the "load program" did put 5 cents in our pockets. It came back later and took away 49 cents. Why does not the Farm Bureau support full market parity as a floor under farm prices, instead of an 85 percent ceiling? Why does the Farm Bureau take credit for securing passage of the 85-percent parity loan, and shirk its responsibility of its part in putting on the 49-cent wheat penalty which is part and parcel of the parity-loan law? Why does the Farm Bureau object to the American farmer feeding his excess wheat, when Canadian wheat is overflowing our markets? The CONGRESSIONAL RECORD of July 29, 1941, reports the following wire from Mr. O'Neal to Senator ALBEN W. BARKLEY:

"Respectfully urge you oppose amendments to H. R. 5300, particularly proposals to reduce penalties to noncooperators or permit them to escape penalties by feeding excess wheat,

as these proposals would break down program."

Commenting, Senator ELLISON D. SMITH said, "Certain farm experts farm the farmer and do not farm the land."

And so my friends it remains for the National Marketing Quota Protest Association to come to the rescue of the American farmer. It is joined in this struggle by the National Grange, the National Farmers Guild, and the National Hog Processing Tax Recovery Association. The American farmer must make his protests loud enough, and not be deterred by threats, bickerings, and name calling. The American farmer must not be abashed by A. A. A. motor caravans touring the country under the guidance of leeches taking a free ride on the back of the farmer. Our investigation shows that 54 of these tourists have a wheat allotment greater than that which was allotted to the entire State of Indiana. Farmers must not be deterred by smear campaigns staged by the A. A. A. as reported by the Associated Press from Detroit July 22, as follows:

"A regional director of the Agricultural Adjustment Administration said here last night that protests over wheat quotas and regulations arose from misunderstandings or came from areas heavily populated by farmers of German ancestry. In a talk broadcast from Detroit, Harry N. Schooler, director of the A. A. A.'s north-central region, asserted: 'It is significant to note that whenever there is a concentration of farmers of German ancestry one finds this agitation to overthrow the work of the Department of Agriculture.'"

Of all the unnecessary, unreasonable, and absolutely false assertions I ever heard, this surpasses them all. Agriculture is the backbone of our Republic, and if farmers cannot assemble publicly and express themselves without having their actions labeled as subversive, then is our Republic tottering and the constitutional right of petition becomes a mockery. I call Mr. Schooler's attention to the American Legion endorsed pamphlets of the Constitutional Educational League of New Haven, Conn., and there let him read the names and communistic affiliations of those directing the destinies of the A. A. A. Anyone reading these lists is convinced that the ultimate aim of the A. A. A. is to Sovietize American agriculture.

So to maintain a free America, farmers must gird themselves as never before to resist regimentation and the loss of their identity. It is to this end that we pledge ourselves through the National Marketing Quota Protest Association.

Texas Iron Ore

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

ARTICLE FROM THE MINEOLA (TEX.) MONITOR

Mr. BECKWORTH. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD a short statement concerning Texas iron ore which recently appeared in the Mineola (Tex.) Monitor.

The statement is as follows:

[From the Mineola (Tex.) Monitor]

TEXAS IRON ORE

War's effects are not always bad. The disruptions brought by the stress and strain of conflict and the short cuts taken to fill emergency needs sometimes bring about beneficial developments that otherwise would have lagged due to the inertia of peacetime routine procedure. Texas iron-ore resources may turn out to be such an example. For many years it has been known that this State has great iron-ore deposits in east Texas, and to less extent in the central mineral region of the Burnet-Llano area. Over a long period, beginning before the Civil War and extending through 1909, there was intermittent production in Marion, Harrison, Cherokee, and other east Texas counties. But there was no coal adaptable to the making of coke. When the charcoal furnaces of east Texas could no longer compete with the growing iron industry of the Pennsylvania-Ohio-Great Lakes region, Texas furnaces closed down.

Vast new fuel resources have been discovered in oil and gas deposits, and some authorities now contend that these can be used in the economical production of iron and steel. There is a possibility also that improved methods have made Texas lignite available for the production of coke. A small plant has been built near Longview for production of iron by the Madras process, utilizing gas, and it will make its first run within 2 or 3 weeks. There is a less advanced project in Rusk County.

Wartime demands will undoubtedly take all iron that can be produced at present. If it is to be a mushroom industry to die after emergency demands have passed, it will be of little economic consequence to Texas. But many authorities believe that, once the force of the inertia of established industry in the North is overcome and Texas iron production is started, it will become a large and permanent part of the Texas economy. If wartime demands can "prime the pump" for the latent Texas industry, another New Birmingham may arise to a happier destiny than the one which rose above and then sank below the tops of the tall east Texas pines.

Air Power and Coast Defense

EXTENSION OF REMARKS

OF

HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 25, 1941

ARTICLE FROM ARMY ORDNANCE BY LT. COL. THOMAS R. PHILLIPS

Mr. BARRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lt. Col. Thomas R. Phillips, published in the current issue of Army Ordnance:

Even if the United States had no harbor defenses, it would be impregnable to invasion. And this still would be true if our Navy were inferior to that of an invading power. In spite of this, a great program of harbor-defense construction is proposed and is partially under way. One wonders if this program has been devised with full realization of the ability of air power to perform many functions of harbor-defense installations. The United States is about to build harbor defenses to make the country secure for 50 years to come. Is this really looking forward or are the harbor defenses being provided to cover the 50 years which have just passed?

The argument by which coast defenses are sold to the public is very much like the argument of the book salesman. It is not the books he is selling, but rather an education for the child. Harbor defenses are supported by the argument that they will prevent invasion of the United States. Actually they never were intended to prevent invasion. If the need for harbor defenses depended upon their ability to protect the United States from invasion, it would be very simple to prove that no harbor defenses are necessary. Land-based air power has made the United States impregnable to a sea-borne invasion.

The attempted counterinvasion of Norway by the British supplied the factual proof of the well-established theory that sea-borne invasions are impossible against land-based air power. This particular operation took place under the most favorable circumstances possible for the British: The Norwegians welcomed their coming and desired their help; the British did not have to contend with any harbor defenses nor enemy forces when they made their landings at Aandalsnes and Namsos—there was nothing to oppose them until they had marched a considerable distance into Norway, where they met advanced detachments of the German Army; nevertheless the invasion failed.

Prime Minister Churchill gave as explanation for this failure "intense, continuous bombings of the bases at Namsos and Aandalsnes which prevented the landing in those small fishing ports of any large reenforcements and even of artillery for the infantry already landed. It therefore was necessary to withdraw the troops or to leave them to be destroyed by overwhelming forces. The decision to withdraw was undoubtedly sound. The withdrawal of these 12,000 men—less than a division—was accomplished with very great skill and, I must add, very good luck."

In other words, nothing but the "intense, continuous bombings" prevented the success of the British counterinvasion of Norway. There were no harbor-defense guns to fire against the British nor were any German troops at the harbors to give the slightest opposition to the landings. This was purely a victory of air power over a sea-borne invasion which had no aerial support.

On the German side, the means to repel the invasion were quite inadequate. Germany had occupied the airdromes at Oslo and Stavanger. Oslo is 325 miles from Namsos and 200 miles from Aandalsnes. Stavanger is 260 miles from Aandalsnes and 420 miles from Namsos. Thus the German air forces operating against the British invasion bases had to operate from considerable distances. Not only that, but they were very limited in numbers—to the numbers that could be placed on four rather inadequate airdromes—and were engaged primarily in supporting the ground operations of the German troops who were driving through the Norwegian valleys in an effort to reach the British.

Another factor of great importance in favor of the British was the short distance that the expeditionary forces had to go to reach Norway and the fact that their ships could approach the Norwegian coast beyond range of German bombers closely enough so that the final run to the coast could be made in darkness and without fear of bombing. Bombing was possible only after the ships reached the harbors.

It might be thought rash to conclude from a single example that impregnability to a sea-borne invasion could be considered as proved. The British effort in Norway was a very special case, however, in which every factor, except readiness, perhaps, favored the invader. If the conditions under which an invasion would have to be attempted against

the United States are visualized, it will be seen that the problem of invading this country would be infinitely more difficult than was the British problem of landing troops in Norway. Leaving aside naval interference, imagine a convoy of 40 or 50 troopships crossing the 3,000 miles of the Atlantic Ocean toward the United States. The departure of such an invading force could not be kept secret. Our defending bombers would start attacking it a thousand miles from the coast. The attacks would grow in intensity as the convoy approached. The invasion might not be stopped before it reached the coast, but it would be badly damaged.

Imagine, then, this convoy attempting to come into a harbor and remaining practically stationary for days in narrow waters with the entire bombing force available to the United States working on it. The picture is incredible. The invasion would be doomed. No military leader would ever think of making such an attempt. The presence or absence of harbor defenses along the American coast would be of no importance whatsoever against a sea-borne invasion, as long as we possess ample land-based air power.

It may be argued that naval vessels have not been driven off the seas within bombing range in the North Sea and the Mediterranean, and that convoys are operating occasionally even in the English Channel. The reasons that this is possible will be considered in more detail later. It suffices for the present to note that these ships are subject to bombing raids for relatively short periods of time, that they first must be discovered, and that they are not tied up at docks nor subject to bombardment for long periods. None of these favorable factors applies to an effort to unload troop transports nor to the continuing supply and reenforcement of troops already landed. In Norway, the British landed their first troops but could not reenforce them once the bases were discovered and watched and bombed constantly.

What leader would be willing to risk thousands of men packed like sardines in a transport under the bombing conditions that can be visualized? Churchill would not. And if these transports had to come across an ocean to be met with enormously more intense bombing, no leader would consider it. The whole business of invasion across the sea against ample land-based air power no longer is in the book of possibilities.

Almost no other event in the history of warfare equals this in importance. For the United States, particularly, the conclusion is transcendental. It makes it possible for this country to insure not only its own continental territory from invasion but, by the provision of a suitable air-base and airways system, to insure the impregnability of all North and South America. If this country takes advantage of the defensive powers given to it by the bombardment airplane, its impregnability to military invasion is assured in the foreseeable future.

The successful German invasion of Norway through its principal harbors—Oslo, Stavanger, Trondheim, Narvik—has been cited to prove that had Norway been supplied with adequate harbor defenses, or if those defenses had not been tricked into impotence, Norway could not have been invaded by the Germans. To quote one protagonist: "The salient fact was that the Germans went on in unopposed, tied up at the docks, put their men and supplies ashore, and proceeded to overrun the country." From this was deduced proof that had the Norwegian harbor defenses functioned effectively, the invasion could not have succeeded. Historically, however, most landings on hostile shores have been made away from harbors, and the troops have proceeded overland to capture from the rear the harbor defenses and the cities they protected. Norway did have harbor defenses, and good ones, at Trondheim and Oslo. It was easy to trick them, and once the Germans were within the harbors, these defenses no longer had any value.

Much more important was the fact that Norway had no air force. Had a Norwegian air force been in existence, it would have been able to block the German invasion of Norwegian harbors just as effectively as the German air force later blocked the British invasion of Norwegian harbors. And this would be true whether or not Norway had any harbor defenses. In the case of the ports distant from Germany—Trondheim and Narvik—an ample Norwegian air force would have made German operations in these ports impossible. They were too distant for hostile operations to be protected by German air power based in Denmark or Germany. Even Oslo is 200 miles from the Aalborg airport used by the Germans in Denmark, and a small air force should have been able to best much larger German fighter forces that might have been used to protect the landing in Oslo. The Norwegian harbor defenses were made impotent by false messages or treachery. Within an hour, their usefulness had vanished because German forces had passed them. The air forces might have been tricked for a short time, but since air bases usually are back from the coast, their impotence would have been of short duration.

Air power has still another advantage as a defensive force. This is its ability to assemble and concentrate its entire power for operations against a single point. Harbor defenses are immovable, and the individual forts can give no assistance to the forts 50 or 200 miles away. But all the bombing planes in the nation can be concentrated so as to apply their power at the single threatened point, and this concentration can take place with almost incredible rapidity—in a day or two at the most.

Harbor defenses never were intended to prevent invasion, although they have an incidental mission of providing artillery support to the defense against landing attacks within range of their weapons. There are plenty of good reasons for constructing harbor defenses, but the prevention of invasion of our shores is the least of these and is only incidental to the others.

The ability of air power to prevent invasion is the question of air power versus sea power. The present war has shown apparently contradictory results in the struggle between air and sea forces. The contradictions have been apparent only. In general, they can be explained by the time available for bombing, the distance over which bombing operations must be conducted, the number of bombers available, and the weather.

Prime Minister Churchill stated one time that 200 or 300 bombs must be dropped to insure hitting a naval vessel. This could mean a single trip by 100 to 250 planes or 10 trips by 10 to 15 planes or 100 to 150 trips by a single plane. If it were 15 planes making 10 trips 500 miles from the base, 10 days would be required to let this air force drop enough bombs to insure a hit on the naval vessel. It can be seen that effective bombardment of naval vessels either requires a great enough number of planes to insure hits in one or two trips or else that the target ships should be stationary in a harbor where they can be bombed on many successive days by a smaller number of planes, if these were all that were available.

Naval vessels are much harder to hit than merchant ships or transports. Warships are armored, are usually of very high speed and capable of dodging, and have a tremendous number of antiaircraft guns to interfere with the bomber's aim. Thus, although 200 to 300 bombs may have to be dropped to attain a hit on a naval vessel, merchant ships, which act as transports and are the carriers for invading forces, probably would not require more than a quarter as many bombs to hit them.

Prime Minister Churchill explained the failure of the British Fleet to operate in the Skagerrak on German communications to Norway as follows: "But immense enemy air strength, which can be brought to bear on our patroling craft, makes this method far too costly to be adopted. Important forces would have to be employed in order to maintain a steady surface patrol and the losses which would have been inflicted on the patrol from the air would undoubtedly very soon constitute a naval disaster." In other words, the British patroling vessels would have had to remain on duty in the Skagerrak subject to continuous bombing by immense air forces. The operation was impossible and the British were correct in not making the effort.

Prime Minister Churchill's objections to operating in the Skagerrak were abundantly proved when the British Fleet operated under similar conditions in attempting to prevent the invasion of Crete. After the loss of four cruisers and seven destroyers the fleet withdrew. Here the real factors in the question of air power versus sea power were demonstrated in one operation, namely, immense bombing forces and the fact that the ships would have to remain subject to bombing.

Malta also shows the impossibility of a fleet remaining within range of large bombing forces. It is only 60 miles from Italy and is untenable as a fleet base. The fact that the British still hold it is of minor importance. It is no longer a base—it is just a piece of land. On the other hand, Gibraltar—750 miles from Italy—hardly has been bothered by bombing. The distance is too great for bombardment operations to be carried on with the necessary mass and continuity. Gibraltar is protected from massive and continuous bombing by distance.

Convoys operating in the North Sea, the English Channel, and the Mediterranean gain partial protection from the time element. By making use of darkness to pass the more dangerous areas, the convoys are within effective bombing range too short a time to be disastrously endangered, unless massive bombing forces are on hand to operate against them. There have been many ships lost and other ships injured, but the damage has not been great enough to prevent occasional passage. Scapa Flow, 300 miles from Norway, has been made untenable as a fleet base by the bombing threat. In this case, Germany has a sufficient number of bombing planes based closely enough to make the danger of remaining at the base too great for the possible military advantages that would be obtained.

In the Mediterranean, Italian air operations originally appeared to give the lie to all these contentions. Failure of the Italian air force to be more successful in preventing British convoy and fleet operations close to Italian and Libyan coast was one of the major mysteries of the war. The British even penetrated the Adriatic (at night), December 19-20, 1940, and bombarded the Albanian seaport of Valona without aerial interference by the Italians. It is now apparent that Italian air power was not operating in sufficient mass in these waters to perform its missions effectively. When it was reenforced by German squadrons, the last British convoy to pass through suffered such extensive losses that no more convoys have been attempted. The war has shown one fact conclusively—air power dominates sea power in narrow seas and near the coasts.

Was not the insufficiency of Italian air power in the Mediterranean one of the inherent weaknesses of air power? And if air power is depended upon, are we not apt to find that it may be unavailable at the critical time? Harbor defenses are so comforting. The big ugly muzzled guns are always there, ready and waiting—a definite assurance of protection for one little spot for all time. Doubt as to the availability of air power can be dismissed as far as the United States is concerned. We shall always have it in the future in ample quantity. And instead of

a dozen or two dozen guns defending a harbor, we shall have 2,000 or 4,000 bombers ready to be concentrated for the defense of any point, not of harbors alone, but of all the beaches and all the coasts.

Harbor defenses in the past were constructed to perform the following functions: First, to permit movement of our naval forces in and out of harbors; secondly, to protect harbor facilities and ships in the harbor from naval gunfire and torpedoes; thirdly, to prevent enemy ships from entering the harbor; fourthly, to furnish incidental support to defense against landing attacks within range of the defense guns.

What has air power done to these missions? If a hostile fleet cannot remain on guard outside a harbor to prevent the exit or ingress of our own fleet because of the threat of bombing, then no harbor defenses are necessary for that purpose alone. Except for hostile air power the British Fleet might have been maintained close to the Skagerrak or to the Kiel Canal or to Heligoland. This mission of harbor defenses is ended. Air power can perform this mission far more effectively than guns ever could, since guns never had the necessary range to provide ample maneuver room for a fleet leaving a harbor.

Protection of ships and harbor facilities from naval gunfire and torpedoes is still as necessary a function of harbor defense as ever. The European war has shown that ships can stay within bombing range at night long enough to make raids on short installations. The French and British both raided Italian shore installations and escaped with minor damage. The British have raided the Dodecanese and the Libyan coast and have escaped without serious injury. The British bombarded the German-held airdromes at Stavanger from cruisers for several hours. Thus the experience of the European war seems to prove that air power is not yet sufficiently strong to prevent raids and naval bombardments. Harbor defenses must be provided for this purpose.

Whether or not air power can deny enemy ships access to harbors and adjacent waters depends upon the nature of the harbor. In such a harbor as Puget Sound, where hostile ships would have to steam 300 or more miles to get in and out, and where they never could be lost sight of in the narrow waters, air power should suffice to entrap the raiders. They might get in, but they never could get out. In the case of shallow harbors easy of access, the problem would be similar to that of a naval raid: some guns would be required to prevent a raid, but air power would be ample to prevent the continued use of the harbor.

The question of the ability of air power to prevent invasion already has been discussed. Harbor defenses never were built primarily with that end in view, and this question certainly needs no consideration in their construction in the future. This affirmation, however, applies only when the defensive air power is immeasurably superior to that which can be brought against it. The case of a German invasion of Great Britain across the narrow English Channel is different from an invasion across the ocean, since, in the former case, the invader's air force can operate from land bases. Against some of our foreign possessions an attacking naval force might be able to bring superior air power on carriers; hence all the old missions of harbor defense apply with full force to them.

In the July-August 1941 issue of Army Ordnance (vol. XXII, No. 127, p. 46), General Hagood gave a 13-point program for coast defense on which $200,000,000 would be spent. There was little to cavil at in this program except that it appears to have been based on the obsolete missions of harbor defenses. For example, General Hagood recommended new harbor defenses in the Houston-Beaumont area of Texas with special reference to the protection of the oil fields. Beaumont and Houston are inland ports with narrow channels leading to them. No naval force or transports could live for 24 hours in these channels under bombing attack.

This proposal obviously was intended to prevent a sea-borne invasion from capturing the oil fields, since they are not close enough to the coast to be bombarded. Air power not only has made such an operation impossible, but new American defenses closing the gaps into the Caribbean through the Greater and Lesser Antilles will make this sea, through which the Gulf ports of the United States must be approached, a trap which no hostile naval force or transports ever would dare to enter.

The West Indies, if fully exploited to close the Caribbean, furnish complete protection for the American Gulf coast. Not only are no new harbor defenses needed, but those now in existence have little further reason for being maintained. And not only do American defenses along the Antilles protect the Gulf coast, but they also secure the northern shores of Venezuela and Colombia, the Panama Canal, and the eastern coast of Central America and Mexico.

On the other hand, many new seacoast-gun installations for the protection of factories and bases from naval bombardment might very well have been recommended. Naval air-patrol stations will be constructed at many new points in continental United States and the Caribbean Sea; since these are for seaplanes and are close to the coast, they are subject to naval bombardment during raids and must have seacoast guns to keep enemy raiders beyond range.

Naval bombardments and raids are much more probable now and will be waged against many objectives that would not have been attacked in the past. International law formerly exercised some control against the bombardment of open towns, even though factories were engaged in producing war materials in them. Bombardments once were restricted, but air warfare now has broken down all scruples. Today, any factories or facilities of military value close to the shore are apt to be bombarded from the sea. These will have to be protected along with all new naval shore stations. Thus, many new harbor defenses are required, but at different points than commonly visualized. On the other hand, a number of the old harbor defenses constructed for now nonexistent missions do not need modernizing. There is no need to destroy them since their maintenance on a caretaker's status and eventual occupancy in time of war by the National Guard does not represent a serious drain, and they still aid in preventing naval raids.

Can we depend upon the present ability of air power to provide for certain of the functions of coast defense, or will conditions change so rapidly that air power will not be able to fulfill them in the future? Possibly naval protection against aerial bombing is at its lowest point at the present time. Most naval vessels now in commission were built at a time when aerial bombing was not a serious threat. The result is that they are poorly protected and not very effectively armed against it. Naval protection may improve so greatly that bombing will not remain a serious threat, at least against battleships.

However, even if this takes place, the present relationship between air power and sea power will not be changed. Transports and small naval vessels will continue to be vulnerable, even though they may be better armed in the future. On the other hand, bombing accuracy may improve fast enough to overcome advances in protection. Here again, the present relationship may be modified slightly, but the fundamental factors are not likely to change. The only foreseeable change is that improvement in bombing accuracy and the availability of large numbers of bombing planes may make naval raids less likely, hence there will be a smaller requirement for coast-defense protection against them.

Air power has not superseded coast defenses, but it can perform some of their functions more effectively than guns ever did. On the other hand, the increase in naval air installations on the shore, together with acceptance of bombardment of nonmilitary installations as legitimate targets, makes more harbor defenses necessary for their protection. Any harbor defenses constructed or modernized should take into account the ability of the bombing plane to perform certain of the old missions.

The bomber has made the American coast impregnable to invasion. This is the most important military fact that can be deduced from the European war. If new harbor defenses are to be constructed, let them be built with our eyes on today and tomorrow and not on yesterday.

Addresses Convention of Woman's Auxiliary, American Legion

EXTENSION OF REMARKS

OF

HON. HATTIE W. CARAWAY

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ADDRESS OF HON. JOSEPHUS DANIELS

Mrs. CARAWAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Josephus Daniels, American Ambassador to Mexico, at the convention of the Woman's Auxiliary of the American Legion at Milwaukee, Wis., on September 17, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is not on record a higher or more deserved tribute to the women of America—the women who make up the Legion Auxiliary and their patriotic sisters—than was paid by President Wilson in appreciation of their chivalric contribution to the winning of the World War.

In person he spoke to the Senate near the end of the war urging that the ballot be given to women. He based his appeal not alone upon their fitness for the exercise of suffrage but insisted particularly their distinguished and sacrificial service during the war called for the highest recognition by their Government. It is well today to recall this illuminating incident in this emergency when the daughters and sisters are emulating the example of the women in 1917-18. The patriotic service of American women in that era made a complete convert of Woodrow Wilson to the equal right of women to a voice in the Government under which they live.

I am not here to detail the value of what the women did in those high and hard days. Their record shines with that of their brothers who gave the decisive strength which brought victory to the forces fighting to make the world safe for democracy. If the high goal has not been obtained, the fault lies in the fact that statesmen lacked the wisdom to garner the fruit of valor and consecration. Except on the actual field of battle and on the iron decks of the ships, women followed everywhere the leadership of Anna Howard Shaw and Carrie Chapman Catt, members of

the woman's branch of the Council of National Defense. There was no dearth of woman's tenderness where fighting men needed their ministrations; no lack of skill in the labor of women in every department of government where they stepped in to fill the places of their brothers as they donned the military uniform and went forth to battle; no delay in providing hostess houses, where soldiers and sailors found the nearest approach to the delights of home; no lack of generosity and organization to supply the needs and comforts for men in barracks, in training, and on the fighting front in France and on the high seas. The sentiment expressed by a patriotic woman who asked for a job in the Navy gun factory, "I wish to do something that will make me truly enlisted in the war, making guns or torpedoes," was not different from other women who wanted a job where all their strength was required.

In addition to these varied enlistments of womanhood in the World War, I have intimate knowledge of the debt owed by the Navy and the country to the patriotic Yeomen (F), the women who became an integral part of the naval personnel, performing important work efficiently and sharing with their sailor and marine brothers full participation in the hardships and benefits, including the bonus, a grateful country gave to all who went down to the sea in ships or contributed ashore to the carrying on in wartime. A ship, feminine in all our languages, demanded a woman's benediction as the assurance of favoring winds and prosperous voyages. There were 12,982 of these yeoman (F) marinettes and nurses, and I defy any organization to produce more capable and beautiful young women or to devise a more becoming and natty uniform.

Following the Armistice, and because the country needed the unerring instinct and wisdom of women in its national housekeeping, and as appreciation of the part women had played in winning the war, the woman suffrage amendment was ratified. Then women ceased, politically, to be the superior of the male sex and became their equal. I am one of those who long advocated the granting of equal suffrage, and I am one of those who decry the propaganda that there has not come within these few short years that purification of government which many advocates of suffrage predicted would follow woman's participation in the affairs of government. If women have not yet proved equal to high expectations in the elevation of government to higher standards, the answer is that it was not reasonable to expect that they could repair the many defects which male voters had engrafted on the body politic in the long years when they alone controlled the processes of Government. Women voters at first naturally were timid about demanding large recognition and few offered for office. They acted as if they must serve their apprentice days in learning the ropes before asking to be entrusted with high official stations. As time has gone on, however, we have seen women of ability and poise win distinction in high public stations. Women Senators and Representatives in Congress, member of the Cabinet, diplomatic officials, wearers of the judicial ermine, leaders in important positions in emergency agencies, and other public stations have demonstrated the old truth that there is "not a place in heaven or earth without a woman in it." Not even the barber shops now are exclusively for males. Everywhere men and women are equals in promoting measures to bless their country.

You do well at this session of your convention to emphasize continental solidarity. Too long have the men and women of the United States denied themselves the privilege and benefit of close association with their neighbors to the south. And too long have Americans south of the Rio Grande, like those north of the dividing line, had their eyes turned too exclusively toward Europe. In our schools we have studied French and German, forgetting that Spanish is the prevailing language of nearly every Republic in this hemisphere, and Latin Americans have been more at home in the mastery of the language and customs of the European continent rather than with the tongue of the dwellers above the Rio Grande. This barrier of language, plus the lack of communications and transportation, have stood in the way of the intimate relations which should exist between all the dwellers of the Western Hemisphere. Fortunately the last two are rapidly becoming the handmaidens of all the 21 Pan American republics, and more Spanish speaking people are learning English today and more English speaking people are learning Spanish than in all the preceding centuries. In all schools on this continent both these languages should take precedence over all others. The removal of the barrier of inability to converse with our nearest neighbors will wipe out misunderstandings and disagreements and make continental solidarity in brotherhood as in defense. The evidence that the spirit of neighborliness is in flower recalls a golden legend long cherished by Mexicans.

According to the best authorities, San Ysidro was plowing in his garden one spring day. He looked up and beheld an angel, who said to him: "The Lord wants to see you, Ysidro. Come with me." He answered that he was busy. "I can't go now. You tell the Lord that I am late in getting my corn planted and that I'll see him when I have finished." The angel retired, but soon another heavenly messenger appeared in the field and said: "The Lord wishes to see you immediately, Ysidro, and directs me to say that if you do not come at once. He will send hot winds and drought that will wither your corn." Ysidro, dripping with perspiration in the hot sun, continued plowing, pausing to send back the message: "I've seen hot winds and droughts many a time before. They don't bother me. I can bring water from the river. Tell the Lord I can't come now, but I will see Him when I have finished planting my corn." Not long afterward another heavenly courier with stern mien tapped Ysidro on the shoulder and said: "I am commissioned to tell you that the Lord does not like your attitude and sends word to you that unless you come with me right now, He will send a plague of locusts to devour your corn from the top and a plague of cutworms to eat its roots." Ysidro did not stop plowing, but sent back the answer: "That does not frighten me. I've had plagues before but by the use of fire and hoeing and hard work, I've harvested my corn all right. You tell the Lord I'll finish my plowing tomorrow and will see Him when my work is completed."

The messenger from the skies disappeared, and before the fourth messenger descended he had finished several furrows. This last angel had the appearance and bearing of authority. As he flapped his wings and walked along the furrows to keep step with the stubborn plowman, the angel spoke sternly: "The Lord isn't going to argue with you any more, Ysidro. He commands me to tell you that if you do not come with me without a moment's delay He will send you a bad neighbor."

That threat terrified San Ysidro. He called "whoa" to his mule, stopped him short and wrapped the reins around the plow handle. The look of his eyes showed that fear had taken possession of him. "The Lord says unless I come He will send me a bad neighbor does He? I cannot stand that infliction. Life isn't worth trying to live with a bad neighbor. You tell the Lord I can stand hot winds, and droughts, locusts, cutworms, and all kinds of plagues. I can endure anything but a bad neighbor. I'll go with you right now," and he stopped short in the middle of the row, not even waiting to unhitch the mule from the plow.

I bring to you the message that south of the Rio Grande, men and women committed to the good-neighbor policy, surrendering nothing of sovereignty, are united with the United States in the unbreakable bonds of cooperation for the preservation of the independence of each country and in devotion to the permanence of government by the consent of the governed. Not yet, either in the United States or in other New World countries have we fully apprehended, but one and all are pressing forward to the goal of "All for one and one for all."

The heart's desire of Americans, North, Central, and South, today is compressed in this aspiration: "God made us neighbors; let understanding and a common unity, and justice and equality make and keep us friends."

National Unity

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ADDRESS OF HON. JAMES E. MURRAY, OF MONTANA

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an address I recently delivered at Helena, Mont.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, I have been invited to address you in the interests of national unity and national safety. This is not a political meeting in any sense; it is a meeting of plain citizens of Montana, without regard to racial, religious, or political affiliations. It is a meeting of loyal citizens who love their country and who wish to preserve it in a war-mad world. I have accepted this invitation and have come here because I feel that it is my duty—as it is the duty of every loyal citizen—to defend and protect our country from its enemies or traducers, whether they work as wily, underhanded "fifth columnists" or as open enemies of the Nation.

The people of the United States stand today as the greatest force for liberty, for peace, and for justice in the whole world. They are opposed to war and they are striving to save our country and the world from the threat of Nazi domination and slavery. We are facing at this moment a great world crisis. Our country, I need not tell you, is in imminent peril. No citizen of the United States should have the slightest doubt about the fact that the future of our country as a great, free democratic Nation rests upon the loyalty, unity, and cooperation of the American people. It rests upon our ability to overcome the subtle influences of foreign propaganda seeking to undermine American morale. It rests on the extent we may be able to unite our people and effectively organize our military and economic forces to meet the ugly threats directed at us from across the Atlantic and the Pacific.

In the face of these dangers which threaten us any person who seeks, by devious and un-

dishanded methods, to mislead, confuse, or disunite the people of this country for selfish political motives, or because of hatred or spite against our Government or the President of the United States, is the most dangerous enemy this country can have. There has been, as we all know, a steady and persistent effort to confuse this country on problems of national defense and foreign policy. To hear some of the sensational attacks being made on our Government by fanatical and deluded political partisans one would be led to think that our national foreign policy is a purely personal arrangement of President Roosevelt's. Through this propaganda the people are being told that our foreign policy, under the direction of President Roosevelt, has been influenced by international bankers and British propaganda. This despicable effort to discredit the Government of our country has been in operation for some time. The whole purpose of this scheme is to confuse the American people in matters vitally affecting our national safety and security.

These propagandists represent the President of the United States as a warmonger—as an Anglomaniac designing not to protect and defend the United States but to use the great wealth and power of the Nation to aid Great Britain and other European countries defending against Hitler in a war in which, they assert, this country has no concern. The President and other officials of our National Government have been held up to public ridicule and condemned. They have been pointed to as tools of international Jewish bankers who are supposed, in some occult manner, to be responsible for the Nazi plan of world conquest. A great German propaganda machine which was located in New York City until recently spent millions of dollars in spreading this mendacious propaganda in America. In Washington even United States Senators and Congressmen, until it was suppressed, were receiving weekly large packages of this Nazi propaganda

Many well-meaning people in this country have been deceived and misled by this propaganda. At mass meetings held throughout the country, innocent people have been brought together for the purpose of condemning our American foreign policy. At these meetings, bundists, Christian frontists, Roosevelt haters, and "fifth columnists" have crowded the halls to hiss and boo the name of the President of the United States and slander his efforts in the defense of the Nation. They have sought to block every step to carry out the will of Congress to extend aid to the European nations victimized by Hitler's merciless aggression.

The very existence of this Nazi scheme to confuse the American people on these questions should be a warning to all sincere, intelligent citizens. It should have no other effect than to unite the American people solidly back of our Government in support of our national policies.

Many people fail to understand that the present foreign policies of the United States are the result of the deliberate action of Congress. Shortly prior to 1939, we had established in this country a policy of absolute isolation. The isolationists, backed by a pressure group of innocent but deluded crusaders, had dominated Congress and forced this ill-considered policy of absolute isolation on the country, beginning with the first neutrality legislation of 1935. I do not question their motives We may concede sincerity, but it is clear today that they were victims of illusions dangerous to our country.

If that policy had not been repealed at the outset of this war, it would have resulted in making America virtually an ally of Hitler and would have insured the defeat of Britain and the complete conquest of Europe. Upon the outbreak of the war in Europe, however, that policy was quickly recognized as a snare and a delusion. It was absolutely contrary to the traditional foreign policies of our country. When the war broke in 1939 it was immediately brought under revision in Congress. In that body it was condemned in measured terms as having encouraged Hitler in his plans for world conquest.

There is no doubt but that the isolationist stand we took did influence Hitler. History will certainly record that the American isolation policy, which proposed to cut off the supply of war materials to Hitler's victims in Europe, virtually gave Germany the green light to let loose her dogs of war upon an unprepared world. Thus our isolation policy guaranteed Hitler that he could arm to the teeth and march his Nazi hordes against his unoffending and unprepared neighbors, with the assurance that we would immediately cut off his victims from American military supplies. Can anyone justify such a policy of asininity?

At the commencement of the war in Europe we quickly saw the dangerous and unneutral operation of that isolation policy, and Congress, after full debate, by an overwhelming majority, repealed it and passed the new neutrality legislation of 1939, authorizing this country to sell war materials to all countries invaded by aggressor nations, under certain requirements. This was in the interests of justice and international decency. Isolation was a policy in the aid of Hitler. It was against our interests and against the interests of the whole civilized world.

The isolationist policy was again repudiated when Congress passed the lease-lend bill authorizing and directing all possible aid to Britain and other nations defending against the aggression of Hitler.

Thus, as I have demonstrated, Congress has totally repudiated the isolation policy and has adopted a foreign policy of giving all possible aid to those countries struggling to block Hitler's march of world conquest.

It was also that same isolation policy, imposed upon this country by well-meaning people pathetically lacking in statesmanship, that delayed the United States in preparing to defend itself in this world crisis. The prolonged delays in Congress, due to the bitter struggle to overcome the established isolationist policy put the United States far behind in the program of national defense. For years these misguided isolationists in Congress have voted against all efforts of our Government to build up our national defenses They opposed and defeated all attempts to adequately expand our military, naval, and air forces, while Hitler was at the same time engaged in building the greatest military machine of all time. It was not until after Hitler started his ruthless Nazi hordes marching in Europe, raining death and destruction on the unsuspecting isolationist countries of Poland, Norway, Holland, and Belgium, that the American people and the Congress in Washington were able to see and understand the dangers inherent in the philosophy of isolationism. It is now fully demonstrated that we live in a world that is interdependent. If peaceful nations are to survive in this world, they must stand together against the brute forces of militaristic nations bent on aggression. The Congress at the outset of this war recognized these truths, and, as I have already pointed out, quickly repudiated and set aside the policy of isolation.

It will be seen, therefore, that the Congress of the United States finally came to see the danger of isolation and is responsible for the present foreign policies of our country. If Congress had not acted, the United States today would be completely cut off from the balance of the world. It still would be sitting supinely by, pursuing a pusillanimous policy of isolation and permitting Hitler to overrun Europe and set himself up as the master of the world. The Congress of the United States changed that ill-advised policy because it recognized its dangerous effect on our own safety and security. It feared the Nazi program of world conquest. It recognized that our vital American interests and future safety were at stake in this epoch-making world revolution.

Why, then, let me ask, is all this abuse leveled at President Roosevelt on these questions relating to foreign policy and national defense, when, as I have shown, the responsibility for these policies rests completely on the Congress of the United States? The Congress acted in accordance with constitutional methods, and those who attack our foreign policy are in effect striking at the very base of our American system. They are, in effect, innocently serving as "fifth columnists" for Hitler and using President Roosevelt as a scapegoat. The answer is that they dare not attack Congress, but they can abuse, misrepresent, and slander Roosevelt. That is American politics operating in its basest form. They purport to set themselves above the Congress of the United States. Those who follow that course are undermining our democratic system. They are unconsciously serving as Hitler's tools in America, entitled to Nazi medals for subversive activities.

Now, my fellow citizens, I have fully demonstrated, and it must be clear to every informed person in this country, that our foreign policy and program of national defense is absolutely sound and has the full sanction of the Congress of the United States. The American people are well-nigh unanimous in supporting it as essential to our safety. Nevertheless, we have this small but vociferous group in the country who continue to attack the President and seek to disparage and discredit every move the national administration is making to carry out our national policies. They wholly ignore the fact that Congress has acted in establishing the course our country is to follow, and they continue to hamper, harass, and oppose the President and the officers of the Army and the Navy in every vital move necessary to make effective our national defense. There is, of course, not the slightest warrant in logic or reason for these attacks upon the President, or on the members of his Cabinet, or the officers of the Army and Navy, who are cooperating and carrying out these policies established by the Congress of the United States. This is indeed a strange paradox we are witnessing in American politics.

Now, in all that I am saying I do not wish to be understood as attacking the sincerity of anyone They may all be sincere, but it is becoming plain to us all that they are as dangerous to our country as hired protagonists of Hitler. I say I do not question the sincerity of those who are opposing our national policies. They have a right to oppose them, if they conscientiously believe they are wrong. I do charge, however, that there is not the slightest justification for any citizen to place his untrained, unexperienced judgment against the combined judgment of the Congress of the United States. The Congress of the United States is cooperating with and supporting our State Department, our War Department, and our Navy Department, in the defense of our country. Everything that is done is the result of careful study by the military and naval experts of these departments, under the direction of the Chief of Staff of the Army and the Chief of Naval Operations, and the President of the United States, as Commander in Chief of our armed forces.

I do not question the motives or sincerity of anyone who offers a legitimate criticism of the President or the foreign policies of our country, but I do question the intellectual balance and poise of those who arbitrarily seek to set themselves above the Congress of the United States and the voice of the majority. They are victims of illusions and imagine that they know more than the Congress of the United States and the experts of

the Army and the Navy. They assume that they alone are loyal and patriotic and that all others are warmongers and anglophiles.

In the face of this confusion in our country, we are in a dangerous situation. Therefore I have accepted the invitation to come here and make this appeal to my fellow citizens. My appeal is an appeal to reason and common sense. I appeal for American unity and cooperation. I ask our citizens to set aside all feelings of hate and partisanship and come to the defense of our country. Every thinking citizen regrets that in this dangerous crisis there should be the slightest variation of judgment on the vital problems of national defense and foreign policy.

Disunity and opposition can only breed confusion. This weakens the national morale and brings discredit and contempt upon our country in the eyes of the world. Every attack on the President and our foreign policy brings encouragement to Hitler and his codictators. No one contends that these vital problems should not be subjected to the greatest scrutiny on the part of the Congress and on the part of the people of our whole country, but when Congress has acted under our democratic system, as it has in this instance, following full and free debate, and has established the course we are to follow in this war-mad world, it is time to pause and consider the danger we are inviting by continuing baseless political opposition. It must be clear to every intelligent patriotic citizen that, with the enemy virtually approaching our gates, we are faced with chaos and destruction, if we fail to promptly close our ranks and present a united front.

It should also be clear to everyone that, in view of the action of the Congress, clearly fixing the course we are to follow in this world crisis, there can be no basis for this continued bitter and irresponsible opposition.

The turn of the war today involves the greatest peril this country has ever faced. The present attack on Russia is a step further in Hitler's plans for world domination. If he succeeds in defeating Russia, he will have acquired unlimited supplies of raw materials and agricultural products. If he defeats Russia he will have access to bases in Siberia across the straits from Alaska.

On the other hand, if Russia holds out a few months longer, and it looks now as though Russia may even defeat Hitler, then Britain and the United States can rapidly increase the production of planes and war materials, and there will be an opportunity to bring about the ultimate and complete defeat of Hitler.

Every recognized authority on air power now concedes that this war will be finally won in the air. While the other countries of the world were sleeping or engaged in domestic wrangling, Hitler has prepared his mightly military organization with all possible speed. He built up the most powerful fleets of air bombers the world had ever known. These air forces have accounted for all his spectacular victories. They carried his armies to speedy victories in Norway, Holland, Belgium, and France. They quickly bombed the Balkans into submission and drove the British out of Crete.

Hitler's air forces are now being concentrated on Russia, but he is meeting with serious trouble in his battle with Stalin. He has spread out his forces all over the European Continent. He is far behind his schedule of victory. He has the Russian bear by the tail and can't let go. It is now recognized that he can never invade Britain or break the British blockade. If the Russians hold him in check during the year, the British, with American airplanes, will soon be able to wrest from him the supremacy of the air.

With giant American and British bombers, they will pulverize German industry, German ports, and German cities, just as he has been bombarding and destroying British ports and cities during the past year. The Germans will then see the handwriting on the wall and peace will loom on the horizon, a peace that will be based on justice.

Let no one be misled—the greatest danger confronting our country today is not the danger of being invaded by a foreign power but the danger of being destroyed from within. Lack of unity and cooperation among our leaders in political life will slowly but surely undermine national confidence and national unity. It destroyed France and will destroy America, too. Already sabotage is suspected in several sections. Incidents of this kind will surely increase, if the full range of demagogery and unlicensed abuse of the President and our national policies continues. If we are to escape the dangers presented by this world revolution, we must have a united country. Our people must be united behind our Government and behind those lawfully authorized to conduct our national defense.

Hitler and his codictators have been led to believe that this country is divided. That is the real explanation for the recent moves of the Japs in the Pacific. Germany and Japan are both banking on the failure of the United States to achieve unity. They have their ears to the ground listening to political brawls in America.

Let me warn the country, with all the vigor I possess, that the time has come when our Government must have a united people back of it. Only a united nation, a united people can be successful in carrying out our program of national defense. The whole world is in torment, while peace-loving nations are being overrun, and their entire productive efforts are being made to serve the purpose of Hitler in his program of world conquest.

The complete unity of America would be the severest blow that could be administered to Hitler. It would electrify the whole world, and this war could be ended without a shot being fired by an American soldier. United we stand, divided we fall.

But, my friends, we are told by some of our politicians that we are helping Great Britain. We are told that the British are not free from sin. All the past crimes and wrongs perpetrated by Britain are conjured up to convince us that we should have no interest in extending aid to the hard-pressed people of Britain. The answer is that Britain's record in this world revolution is wholly irrelevant, just as the record of Russia is irrelevant. If they can defeat Hitler, it is our duty to give them our support. Mistakes, crimes, and harsh oppression can be unearthed in the history of all nations. But, my fellow citizens, the present situation presents a cold-blooded question, What does the best interest of the United States call for? No American citizen should permit his personal feelings regarding a foreign nation, his personal hate of another country, to interfere with his loyalty to the United States. Our first allegiance is to our own country.

We are engaged here in defending the United States against the threat of Hitler. Any man who allows misguided hate of Russia or of England to influence his conduct in regard to our own country is a poor American. The unfortunate people of England or Russia are not responsible for the past wrongs or mistakes of their rulers. For my part, I have no hate in my heart against the people of England or Russia. I stand tonight with the President and my Government in all its efforts to aid these countries as a means of defending our own country. As citizens of this country, we are all bound to support and defend our Government. We are all obligated to bear true faith and allegiance to our country without mental reservation or evasion.

For my part, I am supporting the Government of the United States and offering no sympathy to its enemies or traducers. I am upholding the arm of the President and backing up the entire national-defense program, seeking to have Montana play a noble and patriotic part, not an ignominious one in this hour of danger. I feel that if I took any other course, I would be recreant to my oath of office, false to my State, and false to my country.

Inflation, Its Dangers and Remedies

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ADDRESS OF HON. ROBERT A. TAFT, OF OHIO

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Ohio [Mr. TAFT] to the Pennsylvania Savings and Loan League, Harrisburg, Pa., on September 26, 1941, on the subject Inflation, Its Dangers and Remedies.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A. THE DANGER OF INFLATION

The Congress has now under consideration a bill authorizing the Federal Government to fix prices not only for commodities of all kinds, but for all services connected with the process, distribution, storage, installation, repair, and negotiation of the purchases or sales of commodities. Up to this time Mr. Leon Henderson, without the shadow of legal authority, has been issuing orders purporting to fix prices and threatening all kinds of Government action authorized for other purposes against those who disobey his illegal orders. Up to date the price-fixing program has been a kind of legal blackmail. Certainly legislation of some kind is preferable to the present confused and illegal program.

I have always been bitterly opposed to Government fixing of prices and wages, because I believe if adopted as a permanent policy it must lead to complete Government regulation and control of all economic processes, to a totalitarian state. But as our experience during the World War proved, that need not be the result, if it is adopted as a strictly temporary measure.

While I do not approve the arbitrary powers requested in the present bill, I have come to the conclusion with hesitation and distaste that some form of temporary price fixing is made necessary by the defense program. We undoubtedly face a crisis from which serious inflation is almost certain to develop. With the tremendous defense program and the operations under the Lease-Lend Act, the deficit for the year which ended July 1, 1941, was more than $5,000,000,000. In the year ending July 1, 1942, Government and lease-lend expenditures are likely to total $25,000,000,000, and our taxes, even with the current tax bill, are not likely to exceed fourteen billion, so that there will be a deficit of about $10,000,000,000. In effect the Government prints that amount of money and pays it out for labor and materials. Most

of that money finds its way into the hands of people who spend it at once for the purchase of nondefense goods of all kinds. Even allowing for a reasonable sale of defense bonds to the recipients of Government money, it is likely that five to eight billion dollars of purchasing power is going to be created out of thin air. That will expand production to its physical limit not only in defense activity, but in nondefense activities. The inevitable result will be a shortage of goods and a steady rise in prices. We have seen that rise begin already. If no action is taken, it is likely to equal the increase during the World War when prices rose more than 100 percent.

The immediate dangers of inflation are obvious. The Government will have to pay more for all the various materials needed for defense. Even more important, the general market price rise will affect every individual in the United States and increase the cost of living. That, in turn, will force another rise in wages and a further rise in prices in an unending upward spiral. Such a change in the price level is a tremendous hardship on wage earners, and even more on those who draw fixed salaries, and on widows and others living off the investments made from past earnings. It decreases the value of all savings. It creates a tremendous hardship on insurance policyholders and on private colleges and other institutions paying their expenses from endowment funds.

But even these obvious dangers are less than those which will occur after the war is over. At best we face a dangerous reaction when the defense program tapers off. If prices have risen to unnatural levels and distorted all commercial relationships, that reaction will be all the more violent. History seems to show that the more excessive the boom the greater the depression. That means tremendous unemployment, hardship, injustice, bankruptcy for countless businesses, and a condition which may well threaten the permanence of all our institutions.

We face two great problems today. How can we prevent inflation during the present emergency? The restraint of inflation today should reduce the seriousness of the post-war crisis but cannot possibly prevent that crisis. What plans can we make to meet the crisis after the war? How can we avoid those fallacious panaceas so dear to the heart of the New Deal economist?

B. REMEDIES FOR INFLATION

Of course, the best way to prevent inflation is to reduce the Government deficit, which is the real cause of the danger. That can be done on the one hand by reducing expenditures, and on the other by levying more taxes.

Up to this time almost nothing has been done to reduce nondefense expenditures. Those of us who have hammered on economy have achieved little positive success. Secretary Morgenthau has talked about the necessity and possibility of cutting at least a billion dollars from nondefense expenses. His policy, however, has been contradicted by the President, who continues to send in demands for the same appropriations and resists any effort on the part of Congress to eliminate or reduce the activities of Government departments, particularly of the New Deal agencies like the W. P. A., N. Y. A., and C. C. C.

The tax bill which has just been passed, however, provides for the creation of a Congressional Budget Committee of six Senators, six Congressmen, Secretary Morgenthau, and the Director of the Budget. That committee was suggested by Senator BYRD. Its success depends on the cooperation which is received from the President and from Congress. I feel quite confident that if the President, through the Director of the Budget, supports a substantial reduction in nondefense expenses, Congress will back him up. But it must be remembered that the President is not only President, but also leader of the Democratic Party, and that the Democratic Party has an overwhelming majority in both Houses of Congress. As long as the President indicates his sympathy with continued spending and his department heads protest vigorously to Congress regarding the slightest reduction in their appropriations, it is not reasonable to believe that the Democratic majorities will oppose his known wishes, no matter what Secretary Morgenthau says. There must be a real desire on the part of the President to economize, and a willingness to use the veto power.

The Budget Committee furthermore should secure a substantial reduction in defense expenditures. Up to date we have necessarily regarded these as sacred. But there is no doubt today that a vast amount of waste has occurred, and an intelligent control of the purse strings can reduce the cost of the vast defense program without reducing in the least its effectiveness. The present request for lease-lend appropriations should be most carefully scrutinized.

In the field of taxation we have just passed a bill which will produce at least three and one-half billion dollars in taxes. That is not enough and work has begun on another bill. While I disapproved of some of the provisions of this bill, I do feel that in a general way its burdens are equitably distributed. Roughly speaking, one-third of its burden falls on individual incomes. This is a direct check to inflation, because it leaves every family less money to spend on nondefense articles. It thereby reduces the demand for many commodities, and reduces the pressure so likely to increase prices. The reduction of exemptions and increase in rate will not be a great hardship, however, because wages are steadily increasing, and there will be few indeed in the lower brackets who will not be better off in 1942 in spite of the increased taxes. The reduction of exemptions increases the tax-paying class to about 13,000,000 families out of the total of 30,000,000 families in the United States. It still imposes no burden on the low-income group who are least able to pay; but these are reached by many of the excise or sales taxes which are estimated to raise a billion dollars. Two-fifths of the new money is raised from additional corporation taxes. All corporations must now pay 30 percent of their net income, plus excess profits at rates up to 60 percent additional.

I note that yesterday Secretary Morgenthau advocated the confiscation of all corporate earnings over 6 percent of the invested capital. This seems to me a most unwise and demagogic proposal even for a wartime program. Many businesses, especially small businesses, have a small invested capital. They have succeeded because of the ability, ingenuity, and diligence of those who operate the business. Perhaps they have been profitable because of exceptionally satisfactory service to their customers. Perhaps they have devised efficient systems of doing business which others have not yet followed. In strict accordance with the American principles of free enterprise, they have been rewarded for their ability over and above rewards received by lazy, incompetent, or stupid operators in the same line of business.

If we allow only a 6-percent return on capital invested, without any consideration for the normal profits which were made in time of peace, then we are going to destroy many businesses altogether, and prevent the growth of many others. We are going to crucify small business particularly. We are going to destroy all incentive to improve business conditions and service to the public. Furthermore, corporations are only groups of stockholders who have invested their money. Many investors have bought stocks on the basis of earnings. In fact, prices of stocks are seldom related very closely to invested capital, which is a long and complicated calculation. Stockholders of this kind would not receive 6 percent on their invested capital, but perhaps only 2 or 3 percent. Furthermore, no corporation is in a position to distribute all its earnings, so that the average stockholder would get a smaller percentage of the company's invested capital than 6 percent. Then he would have to pay a high personal income tax on what he does receive. Many New Dealers have been inspired for a long time with the theory that profits are wicked and represent a form of extortion from the public. They can't seem to see that most profits represent the savings in operation which are effected by ability, ingenuity, and diligence. Certainly we wish no one to profit from the war. Certainly we wish to prevent inflation. But inflation is going to result a great deal more from increased spending and the printing of Government paper than it is from permitting the continuation of peacetime profits, now subject in any event to greatly increased normal taxes. Certainly we need taxation and more taxation, but the confiscation of profits will simply kill the goose that lays the golden egg.

Of course, inflation can occur as it did in the twenties, through the increase of private credit as well as through the increase of public credit, represented by Government deficit. It is not likely that the increase in private credit will even compare with the great volume of increased Government debt, but nevertheless, it is increasing. Bank loans today are $3,450,000,000 greater than they were 12 months ago. On the 1st of last January the Federal Reserve Board recommended that it be given increased power over bank reserves, and I introduced a bill to carry out that recommendation. The administration has completely ignored this proposal for 9 months, but today there are some signs that the conflicting forces in the administration intend to proceed with legislation along the line I suggested. Certainly it should not be too easy for any business to borrow money, particularly for nondefense purposes, with the resulting increase in purchasing power and demand for commodities which result from an increase in bank loans.

Another instrument of inflation is the increase of consumer installment debt. To the extent that outstanding installment credit is greater than it was a year ago, it represents an inflation of purchasing power. It is somewhat difficult to get exact figures on credit of this kind. The Federal Reserve Board estimates that outstanding installment debt has increased about $1,000,000,000 in a year; and the Federal Reserve Board is now regulating installment credit, although it seems to me that their legal power to do so is extremely doubtful. I am not greatly concerned about this increase, because so large a proportion of it is represented by automobiles, refrigerators, electrical equipment, and the like. The supply of these articles is going to be substantially cut by priorities, because there is not enough material to make them. If automobile production is cut 50 percent of what it was a year ago, I believe there will be a reduction for that reason in the total volume of installment credit, instead of an increase. Probably, however, the Federal Reserve Board should be given increased power to deal with this subject.

Finally, inflation may be at least retarded by Government price control. This power cannot prevent inflation, nor can it prevent a gradual rise in prices, but it can slow up the process and perhaps eliminate the possibility of run-away prices. If it is going to be effective, it seems to me absolutely essential that farm commodities be included. On the other hand, farm prices have been abnormally low compared to industrial products, and a larger increase should be permitted in farm prices for that reason.

There has been a great deal of demand that wages be also fixed. I do not think that the Government can or should fix wages. Even if wages are not included, I believe that price control can be effectively carried out for a few years, although it should certainly be accompanied by a general effort on the Government's part to stabilize wages. The deliberate policy of increasing wages, which has been followed up to this time, should be abandoned for the time being.

Of course, if wages do increase, prices will have to be gradually increased to conform to the increased cost of production. The idea that wages can be increased over a long period without an increase in prices, by decreasing profits, is completely untenable. Temporarily, however, I believe that inflation can be checked by the control of commodity prices.

The bill which has been presented is subject to serious criticism. It gives the President the price-fixing power, and therefore delegates to him the power which Congress itself ought to exercise, the designation of the agency to do the job. A commission like the Interstate Commerce Commission ought to be set up, appointed by the President and confirmed by the Senate, and every industry should be given a hearing on the justice of the action which is proposed. The bill should be confined to basic commodities and authorize the methods which were successful during the World War. I shudder at the idea of permitting the Government to require licenses, with arbitrary power to shut down a business if regulations are violated. We should rely on a criminal penalty to be prescribed by a court in accordance with the severity of a violation.

C. THE POST-WAR CRISIS

One of the great purposes of controlling inflation at the present time is to prevent the crisis which will certainly develop when the defense program is gradually reduced to a very small proportion of what it is today. Inevitably that will throw many men out of work. It will reduce purchasing power. It will cause a drop in prices and the development of many surpluses. It will precipitate a financial depression which might be even worse than that of 1932. If such a depression occurs again, it may be difficult to preserve at all the American free enterprise system. It may be difficult to preserve democracy itself, for if we who believe in free enterprise can't devise a system that will give men employment when they wish to work, the people may well come to the conclusion that they better try some other system.

On the other hand, the remedies that will be proposed to deal with the situation may be even worse than the depression. I am deeply concerned about the economic philosophy which prevails in Washington today. It is exactly the same as that which produced the vast Government deficits of the past 9 years. It is exactly the same which has persecuted business, large and small; which has discouraged saving; and turned to bureaucratic regulation to solve every problem. It is the same old theory that Government deficits are a blessing in disguise. To my mind the greatest danger which we face after the war is that in order to prevent depression, we will plunge into a tremendous spending program for domestic purposes. Every expansion of Government activity will be encouraged, largely on the ground that spending is a virtue in itself.

This is no imaginary fear. Read the remarks of the National Resources Planning Board sent to the Congress by the President on March 17. That Board outlines the vast program of public works. I quote from the report:

"The barrier that stands between us and the attainment of what we have looked on as the American standard of living is in part a psychological barrier. It is the notion that only through a vast national abstinence can we provide needed capital, improvements or public works; that if we wish to provide these things, we shall have to 'tighten our belts,' that is, reduce our standard of living. We have too long burdened our thinking with those false analogies drawn from a simple economy of scarcity * * * as a current and dramatic example, the decision by the Congress and the Executive to do the things required in our defense program has set in motion a connected series of forces which will in time go far toward attaining the goal of full employment. Given our resources, equipment, techniques, and skills, only that decision—only that courageous implementation of the will to do—was required to release the log jam of idle plants and idle men."

The National Resources Planning Board does not even mention the fact that besides the "courageous implementation of the will to do," we had to increase the Government debt $15,000,000,000 in 2 years. It is apparently quite prepared to go ahead increasing that debt at the rate after the war.

Mr. Eccles has very much the same theory. In his article in the August Fortune he blames the unemployment during the past decade on the failure of the Government to spend enough money, although it increased the deficit some $20,000,000,000 during that period. He says:

"Throughout the decade, however, we remained in a state of semidepression, because we were not willing to have the Government supplement private enterprise with a sufficient amount of activity and expenditure to employ our idle manpower and resources * * *. Had we been able to see clearly in the past decade—had we turned our immense productive machinery to making the things of peace as we are now obliged to use it to produce the things of war—our standard of living would have exceeded anything the world had ever seen. We could have afforded it—indeed, the tragedy of the period is that we thought we could not afford it."

Evidently Mr. Eccles also thinks that after the war deficits of $10,000,000,000 a year can and ought to be continued.

Mr. Henderson likewise said very much the same thing over the air last spring.

But unlimited Government borrowing and spending to produce prosperity is, after all, only one feature of the general New Deal philosophy which threatens to direct our post-war course. It includes also a complete discouragement of saving by individuals and business. It includes a continued subsidy to those groups considered by the New Dealers to be underprivileged, particularly if they have votes. It includes hostility to all private business which dares to be profitable. Saving by individuals is to be discouraged except temporarily in wartime when they are to be encouraged to save in order to hand their money over to the Government for war purposes. A deep-seated prejudice exists, however, among the New Deal economists against saving in the form of life insurance, against saving in your building and loan associations for the construction of homes, against saving by individuals for investment in business. The staff of the Temporary National Economic Committee spent much time and effort in trying to prove through Professor Currie and Professor Hansen that there was grossly excessive saving in this country even today. The Government is first to discourage and prevent saving, then to tax away all the savings it can. And finally, if it cannot prevent saving in any way, it is to borrow these savings and use them for Government expenditures. That is the essence of the theories of Mr. Mordecai Ezekiel.

Men like yourselves who are engaged in the building and loan business realize that this theory is completely destructive of the whole theory of free enterprise as it has been developed in America. We ought to begin to combat it now. We ought to develop plans of our own for solving the post-war problem.

We have in the United States a tremendous plant, thousands of cities with millions of buildings, residences, factories, skyscrapers. We have a great railroad system and a great utility system. We have millions of improved farms. Every stick and every stone represents money that somebody saved, and invested with the idea of providing a home for his family, an income for his old age, education for his children or a provision for his widow after his death. All of the great physical improvements which characterize civilization today are the result of saving. It may be true that at some periods there has been excessive saving. I think it may have been true in 1928 and 1929, but in the long run the danger is far more in failure to save. Human nature resists the postponement of present enjoyment and provision for a distant future.

In my opinion the claim of the New Dealers that there is too much saving today is based on completely unsound calculations. They include in the savings the setting aside of depreciation, which is not saving. They underestimate the tremendous wear and tear on existing plant. They fail to see that New Deal policy has checked the sound investment of savings so necessary to progress and prosperity.

The first objection to the Government-spending and discourage-savings theory is that it will not do the very thing which it promises. Our experience in the thirties shows that with average Government deficits of three billion a year prosperity could not be restored. Of course, temporarily a large amount of Government spending can stimulate business activity. It is doing so today. But certainly no one will advocate that we continue the manufacture of goods that are not needed in time of peace. No one will claim that we can go on indefinitely borrowing money and taxing people to produce goods which the people either do not want or are unwilling to buy. It is a remedy which cannot be continued more than a short time without bankrupting the Nation and impoverishing the people. Undoubtedly it could postpone the development of the depression after the war, but only for a short time. Then the depression which would occur would be even greater and more violent and more dangerous than if it developed immediately after the war.

Certainly in the first 8 New Deal years we gave the spending theory as good a trial as any spender could ask. We increased the debt by twenty-five billions and it did not solve our problem. We discouraged savings and reduced interest rates, and we left 10,000,000 unemployed. No depression in the history of the country ever lasted so long.

For 150 years this country operated on principles of thrift and investment, private enterprise, home building, and sound government fiscal policy. No nation has ever prospered as this Nation did in such a short period of time. Why depart now to a philosophy which is absolutely the opposite of everything justified by American experience?

Not only has the spending theory failed to accomplish its purposes, but its inevitable result will be a complete socialization of industry. Gradually all of the capital is acquired by the Government. Individuals cease to save, and that which has already been saved is transferred to the Government by inheritance taxation or other capital levies. In seeking new methods by which Government money may be spent, we encourage the extension of Federal activity into private business and into every field now occupied by State and local government. Sooner or later the indefinite extension of debt and unlimited increase in taxes destroys all savings and in a general financial collapse wipes out what is left of individual initiative, independent enterprise.

The best features of the New Deal have been those humanitarian measures extending assistance to the poor families of the Nation

through relief, old-age pensions, unemployment insurance, housing, and medical care. There is no doubt that as the American system developed there were many families which did not share in the general improvement in standard of living and earned too little to assure what we have come to consider a reasonable existence. Either we must find the way to increase the income of these families or we must by taxation provide assistance from the earnings of more fortunate families.

But as a producer of prosperity and a cure for unemployment the spending of Government money in relief activity was a tremendous disappointment. For some reason the payment of Government money to the consumer does not seem to stimulate the economic machine to increased activity. It merely increases the production of consumer goods by a small percentage and puts very few more people to work. Our experience seems to show that if we wish to speed up the economic machine we must stimulate production first and sell its products to the people by advertising. The only way to build up activity apparently is to stimulate the processes of saving money and investing it in new business, in homes, in durable goods of all kinds, in stocks and bonds and securities which in turn can be used for building and the development of industry. Under socialism the Government would theoretically do all of this saving and investing. As a practical matter, however, Government tends inevitably to bureaucracy and seldom develops the initiative which can be developed by millions of individual Americans. The whole theory of Government spending and the discouragement of private saving has checked progress before the war and can easily destroy it after the war.

Even in continuing and extending relief pensions, unemployment insurance, housing, and medical care we must be exceedingly careful to work out the program in such a way that it will not destroy the steady growth of production. We must be exceedingly careful not to destroy basic principles of American success. We should never by Government hand-outs place any man in a better position than the friend or neighbor who has earned his own way. For example, the man who receives an old-age pension to which he has not contributed has an income of $360 a year. Contrast the man who has spent his whole life saving $10,000. Under most State laws he will receive no old-age pension, and he will have a hard time getting an income of $360 a year from his savings of $10,000. If the biggest bum in town is as well off at the end of his life as the most diligent artisan, it will not be long before we have a Nation of sluggards. It is necessary to give old-age pensions, but the income of those who have saved some property of their own should also be supplemented so that they will still have the rewards of their diligence and self-denial.

In the utterly confused housing program of the New Deal we find the same injustice. A man who lives in one of the new Government housing projects is likely to be very much better off than the man who has saved his money and built his own home in the next block where he is subject to all the taxes of local government.

This country has succeeded because our system paid a man to work and work hard. It pays him to develop his ingenuity and his ability. It has been based on incentive and reward. Perhaps those rewards have been excessive in some cases and not always strictly in accordance with merit, but they have made the wheels go round for the benefit of all other Americans.

It is my belief that the only way to cure unemployment is to restore a just system of incentives and rewards modified by Government assistance to the more unfortunate.

Today every possible handicap has been placed on private business, but the stimulation of prosperity and employment can only come by encouraging every man to try his hand in some business of his own. It can be done by removing Government restraint and regulation. The Government should be a policeman anxious to see only that private restraints and monopolies do not interfere with the development of small business and new enterprise.

One inevitable accompaniment of the whole New Deal economic theory is a discouragement of home owning. Government housing projects contemplate a leasing of apartments which can never be owned. Houses were built in Tugwelltowns with the understanding that they should never be sold to any individual. Fortunately, the effect of the F. H. A. has been to recognize again the value to any nation of home ownership. The whole Federal housing policy must be restudied and consolidated. It must be worked into a consistent scheme of assisting the poorer families without discouraging private enterprise. It must be based on an ideal of a nation of home owners.

It is a pleasure to talk to the savings and loan associations of Pennsylvania because no institution can be more typical of the American system. You represent and encourage the whole theory of saving. You stand for home ownership to which the savings are applied. No one should be more interested in preventing inflation today. No one should be more interested than you in preserving our whole system after the war is over. No one should be more interested than you in combating openly and consistently, day and night, year in and year out, philosophies of government spending which can only lead to destruction of those institutions which are loved by you and me and the great majority of the average people of America.

Smaller Business Looks Ahead

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ADDRESS OF HON. HAROLD H. BURTON, OF OHIO

Mr. AIKEN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by the junior Senator from Ohio [Mr. BURTON] before the Greater Cleveland Council, Smaller Business of America, Inc., at Cleveland, Ohio, on September 23, 1941, on the subject Smaller Business Looks Ahead.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America's great need is for clear thinking. This calls for accurate statements of facts and clear reasoning. America's great danger is from confused thinking. This easily arises from inaccurate statements of facts, the mixing of separate problems, and loose reasoning.

One general phase of present-day conditions that is in the greatest need of clear thinking is that of the smaller businessman. The smaller businessman usually knows well the facts as to his particular business and analyzes clearly the problems of its internal management. If general conditions were favorable to him and were not constantly changing, this mastery of his personal affairs might be enough.

However, at least since the beginning of the depression, conditions have been so unfavorable to him and have been changing so rapidly that a mastery of the internal management of his business has not been enough. Today he must know the governmental regulations directly affecting his business. In addition, because the smaller businessman long has been the forgotten businessman of the Government, he must initiate steps to call his Government's attention to the needs of smaller business, and to the practical effect upon smaller business of governmental regulations carefully drafted to regulate big business, but thoughtlessly made to apply to small business as well as to big business.

I shall deal briefly with the general situation and then with its relation to smaller business. The first part of my statement might be called America Looks Ahead; the second, Smaller Business Looks Ahead.

As America looks ahead, let us look first at the distant future. Is there hope for America and hope for the world? Is there a chance that our standard of living will be maintained or even improved? Or are we at the end, for the time being at least, of all substantial human advancement and therefore must we stop to divide up the wealth and the work that we have among constantly increasing numbers of people who make up our Nation and the world? If we have reached the end of the discovery of all new wealth, it might be necessary to give the second answer and it might be necessary for us at once to direct our thinking to the permanent regimentation of our existing resources and to our diminishing individual shares in those resources.

I do not believe this is the fact. If we permit ourselves to look forward to the resources and the markets of the world as a whole, there is real wealth available in abundance. There is likewise great undiscovered wealth closer at hand than this. Right here in America, though there may not be great undiscovered gold mines or great regions of fertile public land to be settled, there are, in effect, "acres of diamonds" close at hand to be discovered by the limitless inventive genius of man. It is but necessary to recall recent discoveries in the fields of electric power, of chemistry, and in the amazing realms of atom cracking to realize that if we are but permitted to remain at peace and to develop the treasures close at hand we will find that we are merely beginners in the creation of the standards of living of the future. We need but mention the Diesel engine, aviation, and the radio, plastics, and the soybean to realize that within the span of a single generation the creation of new forms of wealth has passed the bounds of earlier imagination. It was not long ago when it was a rule of our own Patent Office that time should no longer be wasted in examining applications for patents submitted either for perpetual motion machines or for flying machines. Both were thought to be impossible.

I believe, therefore, that we are justified in continuing to think in terms of possible abundance rather than in those of inevitable scarcity. We should continue to encourage and protect initiative and free enterprise.

But, before we enter upon the happy, distant, possible future, we must face the unhappy actual present. As America looks ahead she is faced by an extraordinary immediate obstacle. It is the kind of an obstacle that faced our pioneer ancestors when, in addition to the natural hazards of climate and agriculture, they found themselves suddenly attacked by a pack of wolves. For the moment it was necessary to drop everything else and defend themselves. It was necessary to erect stockades and to so order their daily lives that the wolves no longer would try to attack or so that the wolves would surely be beaten off if they did attack.

AMERICA'S PROBLEM TODAY IS DEFENSE

Today America's immediate problem again is that of defense. Today only the strong can be safe. The Nazis are waging a relentless, lawless, boldly announced campaign to conquer the world. Their army sings, "Today Europe is ours—tomorrow the whole world." They follow no rules but the rules of force. We wish it were not so; we know that such a policy can lead only to the destruction of the world's standard of living and happiness; but nevertheless the fact is there. The outlaws are attacking, and we must drop our problems of peace until this man-made hazard is overcome. We cannot gamble with the safety and the very life of our Nation. It is the inescapable responsibility of this year and next to make America safe both from without and from within.

To make America safe from without we must meet the danger on the scale that it presents. The attack is on a far greater scale than ever before has been tried. Some 15 peaceful, prosperous nations have fallen before it. We have decided, practically unanimously, in America upon a policy of adequate defense. Congress has appropriated the necessary dollars for a good start, but those appropriations are not guns. We have made a good start, but as yet our production of modern antiaircraft guns is negligible. We have made a good start, but, as yet, our production of heavy tanks is negligible. We have a good one-ocean Navy of about 325 major naval vessels. We have made a good start on a two-ocean Navy of about 700 major vessels, but it will take 4 or 5 years to complete it. We have made a good start, but as yet our production of combat planes is about 700 a month, while the Nazis' production is between 2,000 and 3,000 a month. Our ammunition is not ready, and this time the loaded French 75's that we borrowed 24 years ago are no longer there to be borrowed.

The lend-lease law has been adopted by this Nation as the key to additional time, while we continue to prepare. It has helped us to gain that invaluable time. Our first responsibility, therefore, is to understand this law clearly. It involves no alliances with any government. It implies no support of the internal policy of any nation other than our own. America's duty under it is to America. What it does do is to authorize the President to supply materials and supplies to any nation, if—but only if and when—the President deems the defense of that nation vital to the defense of the United States. It is part of our program of defense.

SUCCESS OF OUR DEFENSE IS DETERMINED WITHIN AMERICA

The success of our defense actually is being determined within America. We could choose no more favorable place for a test than on our own famous industrial assembly lines, and that is where the test is to be made. Agriculture, labor, industry, capital, and government share the obligation to create those assembly lines and keep them going and producing the defense we need. It is our obligation to unite, work, produce, play a little, laugh a little, grouch and kick a little, but put the work through faster and better than anyone else in the world has ever done or than anyone else can now do. We must make ourselves too strong to justify the risk of an attack upon us. If attacked, we must win, and Generalissimo Chiang Kai-shek has said, "The more we sweat in peace, the less we bleed in war."

If we are to have a future worthy of our past, and worthy of our ideals, we must preserve the freedom of our 48 States, our insular possessions, the Western Hemisphere, and our ideals. At the same time, knowing the suffering, waste, and folly of war, we owe it to America to do our best to win this war without fighting it, and that is our immediate defense policy.

HIGHER TAXES

That policy must be paid for. It means increased taxation now and in the future. If we could afford to pay for all of it as we go, that would, in the long run, be the best policy. We cannot do this. Even now our defense program is costing nearly twice what our war program cost in the World War. From April 1917 through April 1919, we paid an average of about a million dollars an hour; today in the early stages of all-out defense we are paying nearly $2,000,000 an hour, and the program as it stands will call for nearly $4,000,000 an hour by this time next year. If we were actually fighting the war, it would be nearer to six or eight million dollars an hour. This means tremendous taxes and even greater indebtedness. The fair distribution of this taxation, the limitation of every possible unnecessary waste of governmental expenditure, becomes a vital part of the over-all program. Taxes should be imposed as far as possible in proportion to the ability to pay and the war profits, if any, should be turned back to the Government Treasury in war-time excess-profits taxes.

SCARCITY OF MATERIALS, MACHINES, AND MANPOWER

There cannot possibly be enough materials, manufacturing equipment, or manpower to provide both our nondefense standard of living of pre-war days and also our defense requirements. This compels us to divide our materials between defense and nondefense requirements, and even to establish priorities within those general subdivisions. The necessity is obvious. The difficulties of administration are equally obvious.

In addition to the need for the declaration of priorities due to the shortage of materials, there is the need for regulating the prices of materials, products, and labor, if we are to avoid runaway inflation.

If there develops an unregulated shortage of any kind of desired articles there will be a natural competition for them. If some people have larger resources than others, and are permitted to do so, they will offer higher prices both for defense materials and civilian supplies, and they will obtain the goods. This will force up the cost of living. This soon will bring an irresistible demand for higher wages and salaries, and so the price of goods and the price of labor will go up, although the goods sold and the labor done may be exactly the same as before. This is inflation. It means that the real wealth and the real labor is the same, but that it costs more dollars. In other words, the dollar buys less. If inflation comes slowly and the general price level rises gradually over many years, this makes no great difference; but when it comes fast, runaway inflation spells temporary tragedy.

The seriousness of the tragedy is in proportion to the speed and extent of the inflation. If prices suddenly go up and the value of money therefore suddenly goes down, those who receive fixed incomes, those who receive the proceeds of insurance policies, those who live on their cash savings, and those public-welfare institutions, like hospitals and colleges, that are supported in part from the proceeds of endowments, suddenly find that their income may be the same in numbers of dollars but that in actual value it amounts to little. With such a result, down goes our standard of living, lost are our savings for rainy days, and gone is the stability of our individual lives. It is our clear responsibility to use every means possible to forestall and prevent such a collapse in the value of our money. We should cooperate to this end and be patient and helpful in supporting a vigorous, bona fide effort to protect us against this tragedy.

STOP INFLATION BY STOPPING GOVERNMENTAL EXTRAVAGANCE

To stop inflation calls for stopping governmental extravagance, it calls for heavy taxation of incomes, it calls for converting earned incomes and real savings into Government bonds, it calls for a governmental declaration of policy against the issuance of worthless paper money, against the further devaluation of the gold dollar, and against the excessive issuance of bonds to banks in return for the issuance of credit by those banks. Finally, and most of all, it calls for widespread regulation of the prices payable for materials, products, and labor.

Turning from this general picture, let us then see how this will affect smaller business.

SMALLER BUSINESS LOOKS AHEAD

Until recently, and in fact for the most part even now, smaller business apparently has been completely forgotten in Government planning. It does not fit easily into state socialism. It is built upon individual courage and initiative. Smaller business won its own way to the front when, a few years ago, representatives of it were called informally to Washington and, to the surprise of those who called them, insisted upon thinking for themselves and speaking their own minds. The cause of freedom in America is deeply indebted to those who took the initiative on that occasion.

TODAY ONE IMPORTANT COMMITTEE OF THE SENATE TO AID SMALL BUSINESS

Today there is at least one important special committee of the Senate directly studying this problem and, while many may be familiar with its work, it is of such possible importance to the consideration of our problem that I wish to review briefly its accomplishments to date. It is called the Special Committee to Study Problems of American Small Business. It was authorized by Senate Resolution 298, approved October 9, 1940. It consists of Senators MURRAY, of Montana; MALONEY, of Connecticut; ELLENDER, of Louisiana; MEAD, of New York; STEWART, of Tennessee; CAPPER, of Kansas; and our own ROBERT A. TAFT, of Ohio. Its clerk is Charles G. Daughters, who long has been devoted to the cause of smaller business. Its legal counsel is Crichton Clarke, who some years ago succeeded Louis D. Brandeis as counsel for the American Fair Trade League. It has the following six-point program:

1. A subcommittee which includes Senator TAFT is studying the vital question of smaller business capital.

2. Another subcommittee is studying discriminations in transportation.

3. The committee, as a whole, is making a separate study of the problems related to large-scale advertising and the effect of the control of mediums of general publicity and propaganda by big business.

4. Crichton Clarke is preparing a report on the effect of trade diversion caused by such activities as the use by big business of loss-leaders and profitless sales.

5. He recently has completed his report upon the interpretation of the Sherman Antitrust Act by the Supreme Court as affecting smaller business.

6. Charles G. Daughters is studying the possibilities of a cooperative program for smaller business education in connection with the Department of Commerce and the business colleges of America.

SENATE SMALL-BUSINESS COMMITTEE HAS ISSUED SEVEN PUBLICATIONS

Seven publications have been issued. These are:

1. Tentative Industrial Classification of Small Business. This is to help the committee analyze the scope of its problem and it divides small business into 164 classifications.

2. A Report on the Proposed Federal Reports Act of 1941. This was issued June 22 in connection with the introduction into Congress of S. 1666 and its companion bill H. R. 5180. This bill attempts to relieve small business and big business also from the unnecessary multiplication of Federal reports. Through the Director of the Budget it seeks to eliminate repetition of reports, reduce their cost and minimize the burden of their preparation. Relief in this field will

be welcome whether or not anything else is accomplished.

8. Small Business Problems of the Nursery Industry.

4. Small Business Problems of the Tire and Rubber Manufacturers and Retailers.

5. Report by Crichton Clarke on The Supreme Court in Relation to Small Business and the Sherman Act.

6. An excellent Small Business Bibliography, which not only lists available material, but contains an informative brief analysis by Dr. W. H. Gilbert of the Legislative Reference Service of the Library of Congress covering 15 major headings under which he classifies the problems of smaller business.

7. I understand that there is another publication, which I have not seen, and that it lists some 3,000 of the problems presented by about 2,000 representatives of small business in answer to questionnaires sent to them.

THIS COMMITTEE A STARTING POINT TO DEVELOP FEDERAL LEGISLATION

Obviously this committee provides an excellent starting point from which to develop Federal legislation that may be needed. Ohio is fortunate in being represented on the committee from its very beginning last fall by Senator TAFT, who has taken a great interest in the subject.

The one piece of legislation already introduced on behalf of the committee, seeking to reduce the number, expense, and burden of Federal reports from small business, is a simple illustration of the value of this committee even in its first few months of operation.

DISTRIBUTION OF DEFENSE CONTRACTS

Probably the most pressing problem of small business today is that related to the distribution of defense contracts. This apparently was completely neglected during the first year of the defense program. The Nation is suffering today from this neglect and probably will not recover from it without paying some serious penalties. I am glad to report, however, that in the past two weeks important progress has been made. There has been created a new division in the defense program called that of contract distribution. It is headed by Floyd B. Odlum, a competent businessman whom I have known personally from the beginning of his career more than 25 years ago. He is a clear and fearless thinker. He is a good organizer. He is anxious to render a competent public service in a businesslike way to the Nation and particularly to the small businessmen of the Nation. I conferred with him and with Leon Henderson and a number of Senators on this subject on September 18, the very day I left Washington.

ODLUM ESTIMATES 2 TO 4 MONTHS TO ORGANIZE SERVICE

Mr. Odlum estimates that it will take 2 to 4 months to organize the needed service. He is devoting every moment to this organization work. Pending completion of this organization, he endeavors to meet emergencies, but he does not wish to establish new offices until he is able to fill them with the right men and place them in the right places with the right kind of help, so that when the small businessman comes there to do business he will feel that not a moment of his time is being wasted. He hopes to establish these offices not in the marble halls of the Federal Reserve bank buildings where the gates close at 4:30 and where many small businessmen feel ill at ease in attempting to carry on business in their usual manner. He expects to establish 200 or more offices in industrial centers of the Nation at places where every man who may wish to do business with the Government on defense contracts may do so with reasonable convenience. He hopes to staff these offices with men having actual industrial experience, and even with men competent to give to each small business some of the technical guidance on defense contracts that each big business has on its own staff. This is to help avoid mistakes and to save time and money, both for the Government and for small business.

ODLUM HOPES ARMY AND NAVY WILL BREAK DOWN CONTRACTS INTO SMALLER UNITS

He hopes to induce the War and Navy Departments to break down their primary contracts into smaller units. Where that is not practicable, he hopes to increase the distribution of the work through subcontracts, in the hope of using existing facilities, speeding up production and keeping up employment in small industries that have been forced out of nondefense production. He hopes particularly to protect industries in communities that depend upon one or two small industries. In Floyd Odlum small business has a friend interested in doing the best possible service for the preservation of small business, both for its own sake and for the sake of the stability of our country. It will be impossible for him to do a completely satisfactory piece of work, but if small businessmen are sympathetic with him they will find that he will be able to do as much as they would be able to do themselves, if they were in his place.

SMALLER BUSINESSES MUST HAVE THEIR OWN INDEPENDENT ORGANIZATIONS

Finally, this brings us to the obvious need of small business emphasized by your own organization, and doubly emphasized by the call for help which is being issued by the new Director of the Division of Contract Distribution. There must be active associations of small businessmen through which they can act quickly and effectively. Small business cannot receive the representation it needs through industrial organizations or chambers of commerce, unless there be maintained special groups or divisions within these which will devote themselves primarily, rather than secondarily, to the interests of small business.

If there is to be not merely freedom of speech, assembly, press, and worship, but also the vitally important but less easily defined freedom of opportunity—which has been the key to America's development—small business and its friends must lead the way to preserve that freedom. This calls for clear thinking not only upon the internal problems of the individual business of each small businessman, but also upon the policies of his Nation and of his world and especially upon the place of small business in our future society. America is engaged in the defense of civilization. America's best weapon is her example.

Closed-Shop Drive Threatens National-Defense Program

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

STATEMENT OF HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. BRIDGES. Mr. President, yesterday, for release this morning, I issued a statement relative to the current delays in the national-defense program, particularly the part the National Defense Mediation Board is playing in imposing the will of certain labor agitators on the Nation. The statement which I issued has brought a denial from a spokesman for the Board. This anonymous spokesman is quoted as saying:

The Board's record speaks for itself.

There is no record so far as the public is concerned. The only releases have been censored, publicized releases. Many newspaper reporters, including such men as Arthur Krock, of the New York Times, and others, and many of the public, have made futile attempts to obtain pertinent material which they know exists, and which is not made public. I know of no greater service the Board could perform at this time than to make available to the American people the public transcripts of the proceedings before the Board in every case they have heard thus far.

I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me relative to the closed-shop drive and the work of the National Defense Mediation Board.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As a member of the Senate Military Affairs Committee who has supported the administration defense-preparations program unreservedly, I am deeply concerned over a situation which is seriously impeding the progress of that program and threatens to do it further incalculable harm.

I refer to the present attempts of John L. Lewis and attempts of certain other labor leaders which are to follow, to deny workers, especially in defense plants, the right to work unless they pay dues to various unions, and to enforce their will by widespread defense-plant strikes if necessary.

The plan with which Mr. Lewis and others are now seeking desperately to chain unorganized workers is the age-old closed shop disguised under such innocent sounding titles as "Union maintenance," etc. What the plan contemplates in plain language is just this: Employers are to be forced, under penalty of having serious strikes or their plants seized by the Government, to agree to discharge any employee who does not join a union and pay his dues promptly.

Work on this Nation-wide program is just now getting under way, but the hope of Mr. Lewis and others is that by taking advantage of the defense situation they will spread their control over workers in all large industries, such as aviation, steel, and motors, and exact tribute from every one of them in the form of union dues—dues, by the way, which are spent without any public accounting.

Currently a drive is being made for closed-shop control of the so-called captive coal mines of the steel industry. At present they are operated as open shops. Earlier a similar drive was made against various shipbuilding companies, including the one at Kearny, N. J., which the Government seized. These cases, and other smaller ones, I am convinced by evidence at hand, have been mere trial balloons for the major drive to come when Lewis and others feel they have laid their lines sufficiently well to strike hard. If questioned, Mr. Lewis, who usually is frank about his efforts to entrench himself in his job and otherwise add to his personal fortunes regardless of the crudity of his methods, probably would admit the broad scope of his program.

I have, however, other indisputable evidence that a national drive is rolling. Chester Wright, author of a Washington labor letter and a close confidant of Mr. Lewis and other labor leaders, recently advised his clients as follows:

"A national drive to enforce the closed shop is under way. A drive for the closed

shop in every industry and in every plant is the immediate objective of organized labor wherever the issue can be forced without endangering past gains.

"C. I. O. will join the check-off with closed-shop demand.

"A. F. of L. unions generally do not want the check-off, but they will ask for the closed shop, stimulated somewhat by C. I. O. success.

"That is the coming big labor issue in defense industries. It is the one on which strikes will hinge."

Aiding Mr. Lewis in launching his part of the program, possibly under a mistaken impression that he is performing a patriotic service, is Mr. W. H. Davis, Chairman of the National Defense Mediation Board. Employers who have appeared before the Chairman report that he has told them in private conferences that they should agree to practically any terms, such as the closed shop, that Mr. Lewis proposes, as only through such acquiescence can Mr. Lewis be prevented from calling strikes and stopping defense work. When it has been suggested to Chairman Davis that he try to induce Mr. Lewis to yield on some of his demands, Mr. Davis, I am informed, has replied that such appeals would be futile, as Mr. Lewis is a very determined man who will not compromise. Protests at the glaring unfairness of this attitude by a member of a Government board have brought only a response stressing that defense work must go on and indicating that in the interest of "defeating Hitler" employers and unorganized workers should submit to Mr. Lewis' lash and make the best of the situation.

The work of the Mediation Board generally to date has been a pretty sorry chapter of defense history. Initially, the Board's composition was wrong. Four members were named to represent labor, four to represent employers, and three to represent the public. It quickly became evident that the so-called public representatives were swinging their weight in most cases to the union side. Quick to seize advantage of this situation, certain C. I. O. leaders began to threaten wholesale strikes and then hold them in abeyance only if the cases were certified to the Board. The Board docket soon was cluttered with cases promoted by confident C. I. O. leaders. They seldom were disappointed with results. Almost every employer who came before the Board had two strikes on him at the start, especially if he had tangled with the C. I. O.

Rules adopted by the Board providing for the transaction of business in secret and the refusal of the Chairman to make public minority reports in cases of great public interest soon caused public suspicion to be cast on every Board action.

The first big blow-off came with the North American Aircraft Co., of Inglewood, Calif., last May. This plant, engaged in carrying out vast defense contracts, was taken over by the Army, as ordered by the President, while negotiations in a C. I. O.-promoted strike were in progress before the Board. A minority of workers and Communist- or Nazi-inspired leaders had compelled the plant to close and were keeping it closed. The plant was subsequently returned to its owners, but not until they had accepted in toto the proposition of the C. I. O. leaders and the orders, sometimes euphemistically called "recommendations," of the Defense Mediation Board.

Not only were the union leaders not penalized by the recommendations of the Board for their behavior in the North American case, but they came out of it with everything they wanted, including a "maintenance of membership" or closed-shop contract.

Then came the Kearney shipyards case. There the union leaders pulled a strike in violation of a freshly signed master agreement not to strike for 2 years in return for substantial increases in wages and other considerations. It was common talk that the strike did not have the support of the majority of the men in the yards. I do not know that this has been proved, one way or the other. No proof ever was presented that a majority did support the strike.

At any rate, the issue was the closed shop, or a variation of it, a maintenance-of-membership contract. The employer refused to be a party to this device to compel men to remain members of the union and to pay dues against their will. So the Board, acting on an opinion approved by a union and a public member of a panel of three, recommended the closed-shop clause. The only alternative was the loss of the property by the owners. When they refused to accept the closed-shop clause, the Navy, by order of the President, took the plant over.

All efforts to obtain a copy of the dissenting view of the employer representative on the panel, Mr. C. E. Adams, have proved futile. Chairman Davis just will not give it out. Mr. Arthur Krock, of the New York Times, stated in his column of September 25 that he had sought vainly to get a copy of the Adams letter. Chairman Davis has dodged and evaded and has flatly refused to make public the Adams opinion and reasoning. It does not agree, apparently, with the philosophies of Chairman Davis and certain C. I. O. leaders.

This brings us up to the latest and current maneuver in the closed-shop war on the defense program. Two weeks ago John L. Lewis ordered the workers in the coal mines owned by the steel companies to strike and intimated that he was ready to call out other members of the United Mine Workers, if necessary, to enforce his desires. The entire output of these captive mines goes to the steel companies for use in making steel. They are integral operating parts of the process of steel making. An interruption to these mines is an interruption to steel making and hence to the whole defense program.

The sole issue in this strike of Mr. Lewis' in a critical defense industry is the closed shop. He does not even pretend that there is another issue. It is estimated that 95 percent of the workers in the mines are already members of Mr. Lewis' union. While there is no doubt that he would welcome the few thousand who remain out for reasons of their own, if they could be chained to the oars of his galley by a closed-shop contract, that is not the real reason for this one-man promoted captive-mine strike.

Mr. Lewis' effort to invoke the closed-shop clause in the captive-mine situation is to soften up steel companies for the big national closed-shop drive. The mine controversy has been brought to the Defense Mediation Board promptly. Chairman Davis, after backing away from the closed-shop issue in some inconsequential cases while the after heat of the Kearney case was on him, is again loyally allied with Mr. Lewis in this key case to get the closed-shop wedge into the steel companies. Mr. Lewis' act is to be adamant and Mr. Davis' act is to persuade or force the companies to give in because Mr. Lewis will not budge and production must go on. It is not an inspiring spectacle for the boys in Army camps who have been drafted away from their good jobs, their comfortable homes and friends to fight and perhaps die at a pay of $21 to $30 per month. When they and others are making great sacrifices they cannot understand the justice of Mr. Lewis' cash-and-carry collection methods.

After sundry meetings between employers and Mr. Lewis set before a Board panel consisting of Chairman Davis; Hugh Lyons, regional director of the C. I. O.; and Walter C. Teagle, an employer representative, in which employees protested against vigorous efforts of the chairman to impose Mr. Lewis' will upon them, the conference has adjourned until Tuesday, October 7. If the employers do not yield to Mr. Lewis' demands at that time, it is confidently expected that a majority report of the panel, signed by Chairman Davis and the C. I. O. representative, will recommend that the mine owners accept the closed-shop contract in accordance with Mr. Lewis' demands.

Meantime Chairman Davis is experiencing a good deal of difficulty in trying to remove the bad odor from the closed-shop clause. First he and certain other fellow Board members tried to conceal the fact that they were promoting the closed shop by calling it "union maintenance" and other sweet-smelling names. This did not go so good, because a closed-shop clause under any name proved just as odiferous as ever. In fact, an official Labor Department publication says all closed-shop clauses are identical.

In the Monthly Labor Review of October 1939, under the general subject of closed shop and check-off in union agreements, on page 832, an article describes "membership maintenance" as a "modification" of the closed shop and says: "This arrangement insures the union against membership losses. As in the closed shop, union members who lose their standing with the union would be discharged."

Another allegation about the closed-shop clause which has been giving Chairman Davis headaches is that an employer who signs such an agreement violates the Wagner Act. The specific question is whether signing a closed-shop contract is a violation of section 8 (3), which prohibits discrimination by an employer to encourage or discourage membership in a labor organization.

President Roosevelt on September 11 last addressed a letter to Chairman Davis asking him about this situation and closed with this paragraph:

"May I suggest that you and your associates consider this question—if necessary, with the members of the National Labor Relations Board—in order that the Government may avoid any conflict in its position."

On September 17 Chairman Davis replied to the President's suggestion that he take the matter up with the members of the N. L. R. B., and enclosed an "opinion" by the general counsel of the N. L. R. B. confirming Mr. Davis' stand that the membership maintenance agreement was legal under the Wagner Act. Mr. Davis closed his reply to the President with this statement:

"I think it is clear, therefore, that there is no conflict between the recommendations of this Board and the National Labor Relations Act."

The impression was given by Chairman Davis that the supporting opinion was the result of having acted upon the President's suggestion to "consider this question—if necessary, with the members of the National Labor Relations Board, etc." Mr. Davis failed to say in his letter to the President that the opinion was only a personal view of the general counsel of the N. L. R. B. and that there was no evidence of it having been endorsed by the members of the N. L. R. B. Nor does it appear that Mr. Davis told the President that the opinion was so qualified in a covering letter from the general counsel to Mr. Davis.

Whether this was an oversight or further evidence of zeal by Mr. Davis to promote the closed shop, I do not know. I cannot judge intent, but the result must have been to mislead the President, as it did others who read Chairman Davis' press release, in a critical matter affecting a policy of Government and the property and livelihood of thousands of people.

Here is one pertinent paragraph of the general counsel's letter. I am supplying the single quotes:

"'While neither the legislative history of the Wagner Act nor the decided Board or court cases deal with the problem directly,' there is nothing in either which in my view casts doubt upon the validity of such con-

tracts under the act, but, on the contrary, both indicate, as stated in the memorandum, that such contracts are within the express language of the proviso."

Chairman Davis and other promoters of the closed shop also have been striving desperately to create the impression that Congress in passing the Wagner Act gave approval to the closed shop. The facts are that both Senate and House committees which handled the bill declared emphatically in their reports on the measure that it did not seek to impose the closed shop on industry and that employers would not even be asked by Government to accept closed-shop contracts. It was generally agreed that the bill was doomed if it did provide in any way for imposing the closed shop on industry. Realizing this fact, proponents of the act took great pains to deny over and over that there was any such intent or that it would have such an effect.

Even Mr. John L. Lewis said to the Senate Committee on Education and Labor during the hearings on the bill:

"The united mine workers * * * does not have to go out and ask for anything that will compel men to join the organization. We do not want that."

Mr. Lewis seems to have changed his view since he was trying to get the Wagner Act passed.

Senator Wagner said on the floor of the Senate: "This bill does not establish the closed shop or even encourage it. * * * The virulent propaganda to the effect that this bill encourages the closed shop is outrageous. * * *"

The report of the Senate Committee on Education and Labor which accompanied the bill reassured critics in this positive language: "Propaganda has been widespread that this proviso attaches special legal sanctions to the closed shop or seeks to impose it upon all industry. This propaganda is absolutely false * * * the bill does nothing to facilitate closed-shop agreements."

The report of the Labor Committee of the House was equally vigorous:

"The proviso to the third unfair labor practice, dealing with the making of closed-shop agreements, has been widely misrepresented. The proviso does not impose a closed shop on all industry; it does not give new legal sanctions to the closed shop. * * * And it should be emphasized that no closed shop may be effected unless it is assented to by the employer."

As an appendix, I am attaching more complete quotations from the record of the hearings, the reports of the committees, and the debates on the closed-shop question. There can be no doubt that Congress never intended to approve the closed shop in any way at any time.

Despite the efforts of Mr Lewis to take advantage of the country's crying need for help in its defense program and set himself up as labor dictator of the Nation, and despite the earnest efforts of Chairman Davis to help Mr. Lewis achieve his selfish ends, I cannot believe President Roosevelt is going to permit this outrageous thing to happen. The President has led and is leading this Nation in a fight for freedom—the right to live our own lives as we see fit. To this cause we have dedicated our wealth, our efforts, our lives, and the lives of our sons. We are ready to make any sacrifice that we may be free men, undominated by Hitler or any other dictator.

Of what avail is it to us, then, if while we are busy defeating a Hitler, another dictator, a Lewis, or any other labor boss who refuses us the right to work unless we pay him tribute, assumes control of our destinies?

Must the defenseless worker who does not want to pay tribute to the professional labor organizer have him boosted on his back by a Davis while bent over trying to earn the cost of keeping off a Hitler?

Right here let me state my lifelong position on labor matters and the rights of the worker.

I have always, in public and private life, defended the right of the worker to organize, to bargain collectively, to strike legitimately, the right to picket lawfully and peacefully, and to protect the interests of himself and his family in any other fair and legal way. At the same time I have insisted, and shall continue to insist, on the right of every worker, whether a member of a union or not, to work whenever and however he chooses. Further, I deny the right of any labor leader, any government, or any enemy of our Government to deny any free-born citizen this privilege.

Frankly, the defense-production program has been badly slowed up, due chiefly to the desires of certain labor leaders for more power as well as the cleverly manipulated schemes of Nazi workers and other subversive elements. Fortunately, however, this condition can be remedied by one national leader. That man is President Roosevelt himself. He cannot only restore order in defense industries but also prevent further serious displacement of production by taking the following steps:

1. Operate the seized Kearny, N. J., shipbuilding plant on the Regular Navy open-shop principle free of control of any labor leader.

2. Decline to make the refusal of employers to accept closed-shop contracts a ground for further seizure of plants.

3. Reorganize the personnel of the National Defense Mediation Board so that the so-called public representatives will be truly representative of public and not C. I. O. opinion and insist on giving full publicity to all Board proceedings.

4. Prohibit the calling of any strike in a defense plant unless it is approved by a majority vote of workers employed in the plant at a secret ballot election held under Government supervision.

With perhaps one exception, the placing of the power to call strikes in the hands of the workers themselves, this suggested program can be put into effect without special legislation. If legislation is needed to place the calling of strikes into the hands of workers, the President can get it easy enough. As a member of the Senate Committee on Education and Labor I now pledge him my support for such legislation, and I am sure that a vast majority of all Members of Congress would pledge him their help.

The only argument offered at any time against regulating labor organizer promoted strikes is that you cannot compel a man to work at the point of a bayonet. The plan of having the workers decide for themselves by secret ballot if they desire to strike supplies a perfect answer to that argument. Permitting a man to say whether he wishes to continue working instead of putting his fate in the hands of a leader to whom strikes mean profits is not interferring with his rights. Rather, it is restoring to him a God-given right which has been taken away from him—the right to control his own destiny. So I predict that all workers who actually toil—such as the 20,000 Pennsylvania miners who now are striking against paying increased cash tribute to John L. Lewis—would welcome an opportunity to vote their convictions on striking. The only protests against this plan will come from labor leaders whose private bank accounts would be adversely affected by its adoption, and Mr. Davis, who apparently thinks that battles are won by surrender.

Friends with whom I have discussed putting this strike-control plan up to the President say he never will accept it because of the opposition of John L. Lewis and other labor leaders. Let me say that if this is the case, it is no good reason why this simple, effective step should not be taken. If placing the power to call strikes in the hands of workers will speed up defense production, the wishes of neither labor leaders, Nazi sympathizers, nor any other person who is obstructing the defenses of the United States, should be given the slightest consideration.

The safety and security of America must come first.

APPENDIX

Mr. WAGNER. While outlawing the organization that is interfered with by the employer, this bill does not establish the closed shop or even encourage it. The much-discussed closed-shop proviso merely states that nothing in any Federal law shall be held to illegalize the confirmation of voluntary closed-shop agreements between employers and workers. This insertion is necessary to prevent repetition of those mistaken interpretations which have held that Congress intended to outlaw the closed shop when it enacted section 7 (a) of the Recovery Act.

I hold no brief for or against the closed shop, but there are some who believe that it is a device which at times may be necessary to advance and preserve the living standards of employees. It is legal in many States, and there is no reason why Congress should make it illegal in those places where public policy now sustains it.

The virulent propaganda to the effect that this bill encourages the closed shop is outrageous in view of the fact that in two respects it actually narrows the now existing law in regard to the closed-shop agreement: In the first place, while today an employer may sign a closed-shop contract even with a minority group, the bill provides that he shall be allowed to negotiate such an agreement only with an organization which represents the majority of employees in the appropriate collective-bargaining unit covered by such agreement when made; secondly, the bill is extremely careful to forestall the making of closed-shop agreements with unions that are interfered with or dominated by the company, or with any organization that has been tainted at any time in the past by practices which are now declared to be unfair. The closed-shop agreement is to be allowable only when an organization has been free from its inception. (CONGRESSIONAL RECORD, May 15, 1935, p. 7570.)

Mr. WALSH. First of all, it does not require or request any employee to join any organization of any kind, shape, form, or character. Secondly, it does not seek to encourage or bring about the establishment of any labor organization under any employer where there is now none. It makes absolutely no change whatever in existing law, so far as the relation of employers and employees are concerned, except in those limited respects that relate to collective bargaining and the right of employees to organize without interference by employers. What the law now is with respect to the relations of employees with each other remains as it is * * * (CONGRESSIONAL RECORD, May 16, 1935, p. 7658.)

Mr. WALSH. * * * That, standing alone, would make an employer commit an unfair labor practice if he required his employee to be a member of a union. The Senator understands that, of course. The reason why an exception has been made to the rule is that there are already contracts existing, permitted and authorized by certain States, permitting employers to make contracts with employees limiting their personnel to the members of a particular union.

That practice is quite common among the plasterers and the bricklayers and other masons. All this bill says is that no employer may discriminate in hiring a man, whether he belongs to a union or not, and without regard to what union he belongs; but if an employer wishes to agree and make a contract of his own volition with his

employees to hire only members of a company union or of a trade union, he can do so.

The provision in the bill makes it possible for an employer to say, "I will hire only company union men"; but the agreement must be voluntarily entered into and not forced upon him. Or he can say, "I will hire, as I do now and as the unions exist now, only members of trade unions."

In other words, if there were not this exception, what we should do by this bill would be merely to pass a law allowing closed shops. However, it is provided that the employer must give his consent. Even though nine-tenths of his men insist on their demands, the agreement must be voluntary, and it can be made only if he voluntarily gives consent. (CONGRESSIONAL RECORD, May 16, 1935, p. 7674.)

Mr. WILLIAM GREEN. Positively not. And we would not deny to a worker the right to say whether he wanted to belong to a union or stay out. We want him to have his free choice.

* * * * *

Senator WALCOTT. And you want to also, do you, leave him entirely free to his individual choice, whether he should belong to any union or not?

Mr. GREEN. Absolutely. (Hearings before the Senate Committee on Education and Labor on S. 2926, 73d Cong., 2d sess., pt. I, pp. 79–80 (hereafter referred to as "hearings"), Mar. 15, 1934.)

Senator BORAH. Do the unions ever undertake to say to a corporation whom they shall employ?

Mr. JOHN L. LEWIS. Whom it shall employ?

Senator BORAH. Yes.

Mr. LEWIS. I have no knowledge of such policy.

Senator BORAH. What I mean is, do the different labor organizations ever undertake to impose upon the corporations their union?

Mr. LEWIS. Oh, they ask for the recognition of their unions; yes. They ask for everything.

Senator BORAH. Of course they ask to be recognized, but do they ever undertake by strikes or otherwise to force the corporation to employ——

The CHAIRMAN (Senator WALSH). A member of the union?

Senator BORAH. Yes.

The CHAIRMAN. They sometimes require, do they not, a member of the union to be employed in some trade-unions?

Mr. LEWIS. I have no doubt that certain contracts provide for employment of none but members of the union, the so-called closed-shop contracts.

The CHAIRMAN. It is particularly true in the building trades, is it not?

Mr. LEWIS. I do not have specific knowledge of the building trades, but I do know that such contracts are in existence. May I say, however, that in the mining industry we do not press that point. In large areas of the mining industry every miner belongs to the united mine workers, but we do not press that consideration as a matter of contract. We think that the average man who works for a living would like to join a union and have the services of that union to protect him in his daily employment.

* * * * *

Before that time (the passage of the N. I. R. A.) we told committees of the Congress that if you would pass legislation that would give these men freedom of action they would of themselves join the union. They join an organization because they know enough to know that the union is a beneficient influence for a man who works with his hands because it can protect him better than he can protect himself as an individual, and it does not need the impassioned pleadings of a fervent orator to convince the modern American workman that it is to his advantage to join a union; he will join a union and avail himself of its influence and its privileges if you give him conditons that will enable him to do it.

The same is true in the iron and steel industry. There is no particular organization right now in the iron and steel industry. Why? Well, because the steel companies imposed a plan of company union on the men, because they prohibit them from joining other unions, and because the men are not free. They maintain an espionage system, they discharge them if they join the union, and there is no organization there. But give the workers in the iron and steel industry freedom from certain ghastly company unions that are imposed upon them and they will join to a man the legitimate unions of this country. They are trying to protect themselves through the modern practice of collective bargaining and increase their wages and improve their working conditions.

Now, the United Mine Workers, which is one of the standard organizations of the country, of course, does not have to go out and ask for anything that will compel men to join the organization. We do not want that. All we ask is freedom of opportunity for the individual and we know he will join the United Mine Workers, and we know he will pay his dues, and that is demonstrated by the fact that now, as I sit here, we have between 600,000 and 700,000 United Mine Workers of America in the bituminous and anthracite coal industry, practically all there is. (Hearings, pp. 151–152. March 16, 1934.)

Senator BORAH (speaking to John L. Lewis). The American workman has the absolute right to choose where he shall work, whether he shall be in a union or out of it, and corporations have no right whatever to interfere with his voluntary choice. (Hearings, p. 155. Mar. 16, 1934.)

There is nothing in the bill which requires any employee to join any form of labor organization.

* * * * *

In cases where employees choose to belong to an organization, there is nothing in the bill to compel an employer to make a closed-shop agreement with that organization or to consent to a deduction of pay to meet the dues of that organization (i. e., the check-off). These matters are left to the parties to settle by the orderly process of collective bargaining, and free from suggestion, much less direction, from the Government. (Report of the Senate Committee on Education and Labor on S. 2926, printed in the record of the hearings on S. 1958, the later draft of the Wagner bill in the 74th Cong. Hearings, p. 23.)

The proviso that follows the fourth unfair labor practice (NOTE.—Section 8 (3) of the N. I. R. A as passed, but which governs the whole act as well as other statutes) is not intended to require any employer to enter into an agreement conditioning employment upon membership in any labor organization. * * * This proviso is not a mandate, but is a permissive exception made necessary by other provisions of the law. If this proviso were not in the bill a willing employer and willing employees could not of their own accord agree that thereafter a person seeking employment should be required, as a condition of employment, to join the employees' organization.

* * * * *

The committee is of opinion that if employers and employees of their own accord, in a voluntary spirit of cooperation, want to require persons thereafter seeking employment to belong to an organization; they ought generally to be allowed to do so. (NOTE.—In the original drafts of the bill the closed-shop proviso was effective as to new employees only. Employees already employed could not be required to join a union.) (Report on S. 2926, record of hearings on S. 1958, 74th Cong., 1st sess., p. 26.)

Senator WAGNER. Furthermore, the terms of the bill do not compel or even encourage a man to join any union. Nothing could be more false than the charge that a gigantic closed shop would be forced upon industry. The much-discussed closed-shop proviso merely states that nothing in any Federal law shall be held to illegalize the consummation of closed-shop agreements when they are sought by the majority of the employees in the unit to be covered by them when made. * * *

I hold no brief for or against the closed shop. * * *

The CHAIRMAN (Senator WALSH). Is that provision changed from the bill of last year?

Senator WAGNER. It is in most respects similar to last year's.

The CHAIRMAN. As I remember, it provides that by agreement employers and employees may decide to maintain the closed shop, and only by agreement.

Senator WAGNER. It must have the support of at least a majority of the workers. (Hearings on S. 1958, 74th Cong., 1st sess., Mar. 11, 1935, p. 41.)

Problem of the closed shop

The proviso attached to the third unfair labor practice deals with the question of the closed shop. Propaganda has been widespread that this proviso attaches special legal sanctions to the closed shop or seeks to impose it upon all industry. This propaganda is absolutely false. * * * The bill does nothing to facilitate closed-shop agreements or to make them legal in any State where they may be illegal; it does not interfere with the status quo on this debatable subject, but leaves the way open to such agreements as might now legally be consummated, with two exceptions about to be noted.

The assertion that the bill favors the closed shop is particularly misleading in view of the fact that the proviso in two respects actually narrows the now existent law regarding closed-shop agreements (Final report of Senate Committee on Education and Labor to accompany S. 1958, 74th Cong., 1st sess., dated May 1, 1935, Rept. No. 573, p. 11.)

The proviso to the third unfair labor practice, dealing with the making of closed-shop agreements, has been widely misrepresented. The proviso does not impose a closed shop on all industry; it does not give new legal sanctions to the closed shop. All that it does is to eliminate the doubts and misconstructions in regard to the effect of section 7 (a) (NOTE.—of N. I. R. A.) upon closed-shop agreements and possible repetition of such doubts and misconstructions under this bill, by providing that nothing in the bill or in section 7 (a) or in any other statute of the United States shall illegalize a closed-shop agreement between an employer and a labor organization, provided such organization has not been established, maintained, or assisted by any action defined in the bill as an unfair labor practice and is the choice of the majority of the employees, as provided in section 9 (a), in the appropriate collective-bargaining unit covered by the agreement when made. The bill does nothing to legalize the closed-shop agreement in the States where it may be illegal; but the committee is confident that it would not be the desire of Congress to enact a general ban upon closed-shop agreements in the States where they are legal. And it should be emphasized that no closed shop may be effected unless it is assented to by the employer. (Final report of Labor Committee, House of Representatives, to accompany S. 1958, 74th Cong., 1st sess., dated June 10, 1935, Rept. No. 1147, p. 19.)

Nor does the majority rule in itself establish a closed shop or encourage a closed shop, that being a matter of negotiation and agreement requiring the assent of the employer, as discussed above. (Same, p. 21.)

Education in a Democracy

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ARTICLE BY HON. JOSEPH ROSIER, OF WEST VIRGINIA

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the junior Senator from West Virginia [Mr. ROSIER] entitled "Education in a Democracy." The article was published in the West Virginia School Journal of September 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the West Virginia School Journal of September 1941]

EDUCATION IN A DEMOCRACY

(By JOSEPH ROSIER, Member U. S. Senate)

There is much discussion these days about democracy and what it means to the people of our Nation. Those of us who have worked in the field of public education and have been devoting our lives to the development of our public-school systems feel that the American public school has done much for the development of our American way of living; and it is the outstanding achievement of our democratic form of government.

Our educational system is based upon the theory that general intelligence among the masses of our people is essential for the existence and perpetuation of our democratic institutions. The level of intelligence among our people will depend entirely upon the educational privileges which the young people enjoy. I think it was Emerson who once made the statement that "America is another word for opportunity."

That statement comes more nearly being true in our country than in any other today, but it is far from being a realistic fact for all of our people. In our modern civilization success and achievement depend very much upon the amount of education which the individual has received. We must not overlook the fact that large numbers of young people in our country, for various reasons, are denied the privileges of education adequate for their complete mental development. Someone once made the statement that the greatest human tragedy is "that a young person capable of high intellectual development should live and die in ignorance, and without the opportunity of growth in his highest capacity."

The ideal back of the establishment and promotion of the American public-school system has been that we shall have, in this country, an open stairway of opportunity for every young person of ability where he may climb, round by round, from the lowest grade in the elementary school to the highest courses in college and university.

We have probably done more to make that ideal a reality than any other nation, but the fact still remains that a large proportion of our young people find it impossible to ascend that stairway on account of the handicaps imposed by poverty and lack of opportunity.

In a democracy it is recognized that native talent and ability are not confined to the children of any one group or class. Leaders in our national life have been discovered and developed from many groups. It is the pride of our people that men have reached positions of great leadership and power in our American life from very humble beginnings. Men high in public affairs, who have sprung from humble ancestry and economic conditions, have often been referred to as illustrations of what may be achieved by an individual in this land of freedom and opportunity.

A democracy cannot survive unless it has trained and competent leadership to direct and control its affairs. In our country we do not have a ruling class brought up with the idea that they are born to govern and must be trained to control our Government. Our Nation, in an idealistic way, is a government of the people; and, in a very wide sense, it has realized its ideal. It is not an idle statement to say that any boy in our country may become President. It is true that very few ever will attain that eminence, but this is one of the few nations in the world where young people, without regard to class or wealth, may aspire to the highest positions of leadership in the State and Nation. In this land of freedom the greatest stimulus to the individual has been the consciousness that he may aspire to leadership among his fellow men.

In surveying human values the educator believes that the greatest loss sustained by our Nation is found in the lack of opportunity and the failure of development of those young people who have capacity for intellectual and spiritual growth. In times of great national crises the talent and the ability of a group of great leaders educated in our free institutions may be worth all that the Nation has spent for the education of its entire population. Our national history is replete with the names of men who rendered great service in the preservation and perpetuation of our institutions, and whose leadership was made possible by our American system of education.

We must never lose sight of the fact that citizenship in this country is a real possession of each individual, and that the collective exercise of this right provides the foundation for real democracy.

In view of these facts no one can overemphasize the importance of providing the best possible educational opportunities for the children of all of our people. There was a time when education was largely a matter of family and community responsibility. As our civilization has developed and life has become more complex we have learned that there are many localities which cannot provide the educational privileges that will enable their children to compete in life with those of more favored communities.

Our democracy will be preserved by raising the general average of intelligence among all of the people. We destroy the very foundations of national unity in a democracy when, owing to economic and other considerations, young people in some neighborhoods enjoy far greater educational privileges than those in less favored localities. In the struggle to build up a real democracy through the development of our school system we have shifted the support of public education from the smaller local units to larger units and to the States, and we hope the Nation will soon recognize its obligation to aid our educational system.

Many States have found is impossible to provide equal educational opportunity for all of their children, through local units; and so, slowly but surely, States are recognizing their obligations to provide adequate educational facilities for all of their children, without regard to the economic conditions in the communities where those children live. It is reasonable to hope the time may come when our Nation will recognize its responsibility for aiding in securing equality of educational opportunity for all of our people. The future existence of our American form of government, and our way of life, is absolutely dependent upon the intellectual and spiritual development of all our people.

The democracies of the world are threatened with a so-called "New Order" that would substitute for individual freedom a totalitarian authority which would subordinate the lives of people to the control of an overlord. Our Nation is recognizing its responsibility for the preservation of the rights of a free people under a democratic form of government controlled by the people themselves, and not by any supreme power.

We are engaged in a great effort for the preparation of our national defenses, so that we may repel material aggression and preserve the liberties of our people and of those in other democracies. In this period of stress, democracy and its type of government will meet their supreme test. There will be a strong temptation to subordinate those agencies and institutions which have been established in our country for the development of our spiritual and intellectual powers. Wars put a great deal of emphasis upon material force, and those who conduct them are inclined to minimize the powers of the human mind and spirit.

The totalitarian leaders have declared that democracies are ineffective and lacking in the coherent power to maintain themselves in a world of material forces. It is the duty of our Nation to demonstrate to the aggressors that a democracy can organize all of its powers for the achievement of a great purpose, and for the preservation of that freedom which has been gained through generations of struggle. The educator holds to the opinion that the development of the individual for the exercise of his freedom is essential to the very essence of democracy. The framers of our Government placed much emphasis upon citizenship, and all that it implies. They clearly recognized the fact that a government of the people could not be maintained unless it is supported by sovereign citizens of intelligence. The founders of our Republic early recognized the value and importance of an educated citizenship in the building up of our form of government, and our American institutions. More than 100 years ago, under the leadership of a great American, Horace Mann, was begun the movement for a system of public education that would provide an intelligent citizenship for the support of our American Government, and the development of our way of living.

It would be a calamity if, in carrying out our efforts in a great program of national defense, we should overlook the continued support of all our agencies for education. This Nation must depend upon the intelligence of the masses of our people. It is only in this way that we can preserve our form of Government. So, in our program of national defense, we must build more and larger battleships, more efficient airplanes, and larger and more powerful armies. But, back of all of these projects, we must continue our great program of education. This is important, not only that democracy and the freedom for which it stands may be preserved, but it is more highly important that we may have an intelligent people to cooperate with the leaders of our Government.

Aside from any contribution which education may make to our national defense in this emergency must be considered the difficult problems which our Nation and people will confront when this emergency has passed. The social, political, and economic problems with which we must deal after we have passed through our present emergency, will test the supreme ability of our people and their leaders. For this reason, even though expenditures for national defense reach towering

proportions, there should be no relaxing in the support of our systems of education. In fact, in view of the trying situations which will confront us after the emergency is over, really greater efforts should be put forth for the training and education of our people.

Students of history are convinced that, in the long run, the destinies of nations are in the hands of great intellectual and moral leaders. From time to time nations and peoples have been menaced by selfish and aggressive leaders who thought that the minds and souls of people could be controlled by material force. History disproves that theory, and is filled with evidences that aggressors in the affairs of nations have never achieved any permanent or lasting success. For this reason, in all of our program of national preparedness we should not overlook providing the widest possible opportunity for the development of our great intellectual and spiritual powers.

We give the highest possible recognition to the church and all of the agencies that it has developed for the improvement of the minds and the hearts of men. We give full credit to all of those humanitarian efforts that have been put forth for the amelioration of the condition of our people. We believe firmly that our system of universal education is the very foundation of our modern democracy.

We do not believe that a great nation can be built with masses of people groping in ignorance. As a democratic nation, we are launched on the great enterprise of building and perpetuating a government of all of our people. That freedom can be effective only as the rights of freemen are exercised with intelligence and judgment.

So today, in the midst of a world struggle, our Nation stands out among the nations of the world as the defender and protector of those who believe in the freedom of men. A great teacher has said that, "We shall know the truth, and it will make us free." Our Nation is built upon the theory of freedom of knowledge and freedom of inquiry and discussion. No program of national defense should overlook these principles which are the very essence of our form of government and way of life. A free people, with free minds, must continue to have ever-increasing opportunities for study and investigation of their own problems. Unless these freedoms are guarded and preserved, it would be futile to oppose the aggressors of the world today.

National Americans All Week

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

STATEMENT BY HON. ADOLPH SABATH, OF ILLINOIS, CHAIRMAN OF THE HOUSE RULES COMMITTEE, ANNOUNCING HIS ACCEPTING CO-CHAIRMANSHIP OF NATIONAL AMERICANS ALL WEEK

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the statement issued by the Honorable ADOLPH SABATH, chairman of the Committee on Rules, of the House of Representatives announcing his acceptance of the co-chairmanship of National "Americans All" Week.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The main problem confronting the American people today is the defense of our national existence against the menace of Hitlerism. One of the elements essential for this defense—just as important as tanks and battleships—is a united people.

There are more than 14,000,000 Americans who were not born in the United States. They came here from Austria, Spain, Germany, Czechoslovakia, Poland, France, Greece, Italy, England, Russia—those countries whose independence is now destroyed or imperiled by Hitler's schemes for world domination. Because of their loyalty to this country and their sympathy for the people of their native lands, the foreign-born wholeheartedly support every measure for the defeat of Hitler.

The foreign-born recognize that only the military defeat of the Nazi army will break the shackles which enslave their native lands and will remove the peril to the existence of their adopted America.

By their toil in the factories and in the fields, by the service they and their sons are rendering in the armed forces, the foreign-born are contributing of their utmost to our Nation's defense. By their hatred of tyranny and their devotion to freedom—for which they came to this country—the foreign-born have enriched our democracy and bolstered our determination to render all possible aid to the opponents of Hitler.

However, technical difficulties and unnecessary delays in the naturalization process interfere with the full participation of the noncitizen in our national endeavors. Discrimination against Americans of foreign birth in public and private employment deprives us of greatly needed labor and creates disunity at a time when national unity is essential to the security and defense of America. These barriers to unity must be eliminated because they are grist to the mill of appeasers and fifth columnists in their efforts to undermine our national safety and to prevent fulfillment of our common desire to put an end to Hitlerism.

Our national security can be safeguarded only if every person in the land—native- and foreign-born, citizen and noncitizen—is enabled to participate in its defense. Every obstacle to that goal must be removed.

In order to break down the false barriers of birth and citizenship that tend to divide the people and to eliminate unnecessary delays in the naturalization of noncitizens, the American Committee for Protection of Foreign-Born is conducting a National "Americans All" Week beginning October 21. This celebration will culminate in the national observance of the fifty-fifth anniversary of the dedication of the Statue of Liberty on October 28.

More than 100 prominent individuals in all walks of American life have united to sponsor this tribute to the contributions made by the foreign-born to the building of America and to their vital role today in our fight against Hitlerism. Together with the noted author, Louis Bromfield, I have accepted to serve as co-chairman of the committee of sponsors for National "Americans All" Week.

The supporters of Hitlerism in our own country would aid his schemes for world domination by dividing our people into native- and foreign-born. Therefore, they spread discrimination, promote unfounded suspicion and hysteria against Americans of foreign birth.

We hope that National "Americans All" Week will serve to convince the American people of the need for sympathetic understanding and action to eliminate undemocratic treatment of the foreign born as one of the steps necessary for the establishment of national unity. We know that once existing discriminations and difficulties are eliminated, the foreign-born and their organizations will be encouraged and enabled to redouble their efforts for the defense of America.

We urge that the people of the United States and their organizations unite in local community meetings and ceremonies during National "Americans All" Week as a fitting demonstration of our determination to establish unity of all Americans and to defend our country.

Southeastern World's Fair

EXTENSION OF REMARKS

OF

HON. FRANCIS MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ADDRESS BY MR. JUSTICE WILLIAM O. DOUGLAS

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a very able and interesting address delivered by Mr. Justice William O. Douglas, under the auspices of the Atlanta Civitan Club, at the Southeastern World's Fair, Atlanta, Ga., September 26, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the easy-going days of an earlier period the occasion which we celebrate today might have slipped by unnoticed. Earlier generations were concerned only with normal peacetime duties of the citizen. But in this day of world tension and turmoil the taking of the oath of American citizenship is a significant and historic event. Your duty as citizens becomes your duty to act in the noble tradition of free men and women. For today the world has taken sides: The sons of freedom are alined against the hosts of tyranny.

Those who take or renew their oaths of American citizenship this day cast their lots with the cause of free men. They join the ranks of those who pledge their lives and their fortunes against the destruction of our democratic institutions by the ugly forces which strut across the world.

In making that choice you take the same conscious risks that those earlier patriots did who forged the destinies of this Nation. You sign the Declaration of Independence in your own hand just as surely and with the same calm and grim determination as did those who signed it in 1776.

That document was no mere academic dissertation on freedom. The men who signed it knew that they must succeed or be marked for the hangman's noose. They knew what they were doing. You remember how John Hancock, as he signed his name in the big, bold handwriting which you see in copies of the Declaration today, remarked, "George III will be able to read that without spectacles."

When you raise your hand today in the oath of citizenship, our modern tyrants likewise will see it without spectacles.

Today Hitler's Mein Kampf condemns democratic institutions to destruction and their adherents to death or enslavement. His record of accomplishment on that score speaks for itself.

To think that we Americans have acquired immunity is to assume that a highwayman is not interested in the richest and most prosperous person who travels the road.

How the world came to be in the position where it now finds itself is at present a rather academic question. While germane to post-war problems, it gives no clue to protection against the hurricane which now sweeps the oceans. When the Nazi youth sing, "Today we are masters of Europe, tomorrow of all the world," they do not add "except America."

And so it is that this day the oath of citizenship has peculiar and special importance. It is a compact among free men that the tyranny of this age, the so-called wave of the future, will not engulf us. We do not fear to look into the future. We know it is ours.

The rights of citizenship are not automatically guaranteed. Each generation must underwrite them anew.

Freedom of speech, freedom of worship, freedom of assembly in groups like this, freedom of opportunity, the right to read the newspaper of your choice, the right to listen to any radio program you choose, the sanctity of the ballot, the right to say whatever you wish to whomever you wish within the bounds of human decency, protection from unreasonable searches and seizures, the right of jury trial, these freedoms in final analysis depend on the will of the people. For in the end our machinery of government is nothing more nor less than the instrument by which the citizens convert their will into action.

That is our great strength, for by that means we can build our civilization along changing lines and meet the exigencies of each generation through evolution rather than revolution.

But these freedoms have been labeled by their enemies as our weakness. Dictators say that the very existence of these freedoms makes us an easy target for internal dissension and revolt.

At the same time they have endeavored to blind us to our own self-interest. They would like to have us say to ourselves that we are strong and that no tyrant can conquer us, and then have us sit back and pursue our normal course.

They would like to have us believe that we already are so invincible that we need have no fear. They would like to have us believe that no one would dare attack us.

Knowing our aversion toward war, they have used every available means to make "war" and "defense" synonymous. They have tried to invest our defense effort with all the immorality associated with war. They have tried to make us hate the defense effort and to hate ourselves for engaging in it.

They have played endlessly on our traditional longing for peace. They know that our way of life is not a "will to war." Hence, they would have us withdraw unto ourselves. For a "do nothing" American policy is part of the pattern of Nazi internationalism.

The medley of voices which arises when America expresses its opinion is a great asset. Through the free electoral process all citizens become willing and eager participants in our great national programs. But foreign influences seek to turn each protestation against a domestic injustice into a condemnation of our free institutions. They aim to magnify each of our complaints into an irreconcilable difference of opinion among us.

In that way dissension is sought. We are encouraged to look for motes in each other's eyes; it is hoped that we will be suspicious of our neighbor's motives; it is hoped that we will be convinced that a Nazi triumph will make up for democracy's failings.

But America has fast been seeing through this international trickery.

Democracy is not faultless. We are not blind to the imperfections in the civilization we have built. We know that we are not perfectionists, that much must be reconstructed anew along more just and equitable lines.

America has come to realize, however, that if this generation and unborn generations are to have the chance, the opportunity, to evolve a better society, its free institutions must be preserved. Under the evil eye of a Gestapo no such opportunity exists. Then all hope is lost; the mind and the body are enslaved.

Thus the efforts of those who would immobilize us were not successful. They did not lull us into the dream of self-confidence from which, as recent European history shows, there is no awakening.

Nor were we confused by that much-abused word "peace." Through a vast preparedness program we have sought to purchase insurance against the day of aggression.

We have done all those things because we know that were the rest of Europe and Africa to fall tomorrow, there would be no peace for us.

We know that we could not do business with Hitlerism without bartering away our precious liberties and living constantly under the pressure of blackmail.

We know that we could not safely send our ships to sea.

We know that we could not devote our productive facilities to normal peacetime ends.

We know that we should be forced to double and redouble a thousandfold our military preparations.

We know that we would have to reconstitute our economy and abandon many of our liberties to compete with the Nazi system.

That would be the meaning of peace for us under a Nazi victory.

These are the lessons which the tragedies of Europe have taught us.

And so it is that America, through the smokescreens of conflicting emotions, is seeing more clearly than ever before just where the lines of this world conflict are drawn. In spite of dangerous distractions designed to strain the bonds of our unity, Americans will not be divided into two or more irreconcilable groups.

In the first place, tolerance, and freedom, and civil rights are not debatable issues in America. They are the principles upon which this Nation was founded. They are the principles which unite us and have made it possible for us to make one Nation from many nationalities. They are the very meaning of America. On these issues America stands united.

In the second place, somewhere between the English Channel and Chesapeake Bay the great overwhelming majority of Americans have always kept hoisted the old flag of Revolutionary War days—Don't Tread on Me. On that point all Americans stand shoulder to shoulder. There they reach their common denominator. In final analysis, the question of whether at any particular time we are in danger of being tread upon is a very limited one. Any debate on that score is one of facts and figures involving a military and naval judgment. But when national survival is at stake, shrewd America takes no chances. A difference of judgment as to whether we are safe is reason enough to make certain that we are absolutely safe.

It is just because we cannot take any chances that we are getting down to the serious business of preparing our vast lines of defense—to the business of building more planes, more ships, more guns than the world has ever seen.

This is not an easy task. It is not an easy one even for America, with her untold resources and her great wealth of the world's finest scientists, engineers, and craftsmen—English, Italians, Germans, and Russians; Protestant, Jew, and Catholic. It means that we must do without, and that we must toil more than ever before and that we must give up many things which we have come to regard as necessities.

The American people are not alarmed and will not be alarmed at the meaning—or the magnitude—of the task that confronts them. Once they see what the security of the Nation requires them to do they will do it whatever the cost.

That cost will be measured in many ways. It will be measured not only by dollars. It will be measured by more men, more work, more effort, and more ingenuity. It is a cost which must be borne by all of us, and which will come home to us in myriad ways. We shall feel it not merely in taxes, and increased cost of living, but in denying to ourselves the luxury of doing our jobs on a business-as-usual basis. This is and must be a total effort, whether we are workers in an airplane factory, farmers, housewives, business executives, Government officials. Whatever our job is, we must do it better and more efficiently and more economically than ever before.

Some will merely feel the pinch of higher taxes and costs—will have to put off buying a new car or a new refrigerator. Others will have to work harder and more zealously—will have to make some sacrifice of time and money. Some will be confronted with problems that will try their souls, and test their deepest devotion and patriotism.

These are not problems that can frighten America. They are not problems that can split it into factions and groups. This Nation, moulded in the heat of battle against tyranny, tempered by generations of struggle for the common good, is not a fragile thing. It has the power of millions of men and women who have the strength of freedom, of tolerance, and of the achievements of a new and youthful country, enriched by a fusion of many races and heritages.

Sacrifice and work will not deter America. Since a group of daring men set up a new and united Nation on this continent, it has been our recurrent task to build a newer and wider prosperity and freedom from the foundations that had served a past age. That is our job again today.

Never in its history has America failed to do a job when it was finally convinced that the job had to be done. And we can do this job. Our enemies may try to scare us out of doing it by telling us that they are sure we cannot get it done. But they are only telling us that because they themselves are deathly scared that we will get it done. Once we turn loose the enormous industrial power of this country in this age of machines, once we turn loose the innate determination of this country in a struggle where victory goes to the people who can hold on the longest, we can and we will defend America.

The shouldering of the responsibility to do that job is a privilege, not a chore, for its citizens. Today American citizenship is one of the few remaining symbols of human hope throughout the world. It is a prized possession. It is a sacred covenant passed on to you by the founders of this Republic.

I know that you, like them, will bring it new honor and new glory as you march forward under the banner of victory for freedom.

All Out for Defense

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ADDRESS BY WILLIAM S. KNUDSEN

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the

RECORD an address delivered by Mr. William S. Knudsen, Director General, Office of Production Management, before the Union League Club at Chicago, Ill., on September 22, 1941, on the subject All Out for Defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I wish to express my appreciation of the privilege of addressing you on the subject of All Out For Defense. With all modesty, I imagine that I can deal with the subject first hand. This is my 16th month on defense work, and I have seen it grow from practically an infant to adolescent size—gangling, shambling, with too many hands and feet, but with great potentialities for the near future.

First, why "defense," and why "all out." When I was first called to Washington last June, the defense program, as laid out, did not amount to much in man-hours. Events followed quickly however, the most important being the imperative demand for help to Britain. The American appropriations were increased steadily; the lend-lease program was passed—well, you know the story. We have today the biggest production program of any country in any time in history, with a time factor which can most correctly be described as "X."

Not to go back over the past too much, the general picture is as follows: The Services have placed over 20,000 supply contracts of $10,000 or more with a total value of over $14,000,000,000. New plants and additions to plants in the number of 2,750 and with a value of 4.8 billions of which 3.8 billions is Government financed, and 1 billion privately financed. There are still a number of plants projected with Government funds, these being principally explosives and ammunition plants, for which there are no private facilities available.

As to production, it can be split into four major groups: Planes, tanks, guns and ammunition, and ships. We have expanded every existing airplane plant in the country, and have either built or have under construction seven additional large plants, mainly on the bomber program. We have correspondingly expanded the motor facilities and all accessory plants necessary to round out the picture.

On tanks we have created seven sources, and feel that we can cope with any demands that may come through expanded requirements. On guns we have provided for the small guns with proper facilities for all demands. This also applies to ammunition. On the larger guns the quantities are proportionally smaller and require heavier equipment, but we are on our way. On ships the initial work is done. We have provided for 165 ways for merchant ships and the launching program calls for 131 ocean-going ships to be completed in 1941, and 561 to be completed in 1942. On Navy ships, which were started earlier, we are in somewhat better shape, although it should be remembered that Navy ships have infinitely more man-hours in each unit, due to the higher technical standard of propulsion and armament. While this gives, after a fashion, the high spots of the program, you must remember that there are thousands of items involved and practically every scarce material which constantly has a tendency to increase the critical list of these materials.

This brings me to the material question, which is perhaps the most important one in the program. The material requirements of the civilian economy in the United States, based on precious years of experience, were not large enough to cause any concern—in fact, in very few instances were they beyond 75 percent of plant capacity. However, with the advent of the defense program and the general increase of national income, they rose rapidly and, parallel with this, the defense program growing with leaps and bounds has increased the estimated over-all requirement on critical materials to an unprecedented degree. For a dozen of the major raw materials vital to defense the estimated increase in the 1941 demand over amounts consumed in 1939 ranges from 33 percent in rubber to 250 percent in brass. The 1942 requirements, taking our program as it is defined today—and it may well be drastically augmented—will call for increases over 1939 ranging from 45 percent in rubber to 314 percent in aluminum and 393 percent in brass. The necessary expansion to accomplish this manifestly cannot be accomplished within the time allotted, so we are forced to consider how we can fit the situation to our facilities after expanding these facilities to the limit within a reasonable time.

One of the first functions of the Supply Priorities and Allocations Board is to pass on these expansions and the reduction in civilian supply, and try to allocate the available material between defense and civilian supply, so as not to upset entirely the economy. On the other hand, to assume that we can fully take care of both when defense requirements are an unknown quantity is rather ridiculous.

This defense job is getting to be of such magnitude that we must be prepared to accept sacrifices in our daily life. We cannot have as good a time and be involved in a war, regardless of how far away the war may be at this particular time. When I talk to some of our fellows here who cross the ocean in 5 hours going east and 12 to 14 hours going west, I feel that the distance from theaters of war is shrinking fast, and that we cannot depend on distance any more. When we add to that the fact that a substantial amount of our critical materials is imported and dependent upon shipping, we cannot consider ourselves isolationists in that particular respect, anyway. We have a definite stake in keeping the sea open, even if we have to do it with a club.

My experience during the last year tells me that conditions change so rapidly from day to day, when war is going on anywhere in the world, that we must be set up to deal with them promptly and decisively, and to that end I believe the newly created Supply Priorities and Allocations Board can perform a real service. Previous to this, the only means our office had of obtaining requirements was when submitted by the services, when appropriations were being prepared, and such items as Treasury lend-lease and South American requirements came through piecemeal for clearance. This resulted in an immense amount of paper work, which in many cases was all out of proportion to the amount of goods involved. With definite requirement forecasts procured in advance, the clearance becomes superfluous, and work can proceed in an orderly way with distribution taking place after the finished articles are available. The early days of the program also presented many difficulties, because specifications varied between countries, and it took months of patient negotiations to get the product in shape to where in the main it was uniform and the differences confined to minor details. Even now, when shipping war materiel abroad, it has been proved to be absolutely essential to have American mechanics available at destination to handle the assembling and particularly the servicing of the equipment, in order to get the quickest and best use of it in the field.

The problems connected with the program have been many, and there will be still more as time goes on. To change our industrial picture to a munitions picture in a short time is a heavy undertaking, but I feel that I can sincerely say that after a year's work dating from the day of the granting of the major appropriations and program is under way, and it is only a question of getting and keeping its importance before our people in a way that insures its unqualified support—not only when things go bad or good abroad, but at all times, until the job is done.

The question of enlisting the small manufacturers in the all-out effort is an important one, specifically as in a good many cases priorities are going to cut in on the small manufacturer's supply of material. In the early days this was recognized, and the Defense Contract Service was set up to bring the smaller and larger contractors together. Also, on prime contracts for standard material requiring no special tools, contracts were split up in smaller units to spread the work more evenly over the country. There was, however, when material for civilian consumption was plentiful, no particular response to the effort. Manufacturers who had been used to subcontracting followed their regular policy, and some success was had getting the percentage of subcontracting increased. District offices were created in 36 cities to expedite subcontracting, and a definite campaign was put on, with the result that this department alone accounted for $97,000,000 worth of contracts for the month of August. I have to pay tribute to the men who have accomplished this with Robert Mehornay as leader, as they had nothing but their ability to sell to support them.

However, in September it became evident that with civilian curtailment entering into the picture heavily and unemployment in some industries becoming a stark reality, more effort was needed to get both prime and subcontracts spread to a still greater degree. The manufacturer who had been busily employed on civilian goods suddenly became a source of supply for defense, and the pressure for defense employment became intense. Therefore, by Presidential order the scope of the Contract Distribution Division was enlarged. Directives were issued to the Service Procurement offices to encourage subcontracting or smaller prime contracts. The Division was set up as an independent division under O. P. M., with Mr. Odlum in charge, and was definitely made responsible for getting more contracts, prime or sub, into more places. It was further instructed to give particular attention to localities where employment was affected by priorities, and was given, through the services, some leeway in the matter of cost and freight, so that negotiated contracts could take the place of the bidding system, and consideration given to prime contractors who were able to sublet a greater portion. I have every feeling that this will help to spread the work even at some loss in cost and time; it will have an immense value in getting the full use of the well-known American ingenuity in tackling the problem in so many places. It will create employment to offset the loss in the civilian picture, and will make a greater part of our mechanical workers feel that they are part of the defense program

This brings me to the last part of my discussion, and perhaps the most important part. From personal experience I know the value of having general approval of the object of any task and of the organization carrying it out. When we first arrived in Washington a year ago, there was, with the exception of our President and his immediate Cabinet, no great concern over American defense and aid to foreign governments. A short time after the fall of France, Dunkirk and the bombardment of Britain whipped up public feeling to the extent of fear that England would be conquered and we were next on the list. However, when Britain held out, the same people immediately swung around to the idea that if the Nazis could not cross 20 miles of channel they certainly could not cross the ocean. And finally in December Secretary Hull told a few of us what the situation really was, and it was bad, and we all

went out to impress all we could with the seriousness of the picture. When Hitler entered Russia we seemed to drift further toward wishing that Russia might win, rather than that we might speed up.

The first attempts at civilian curtailment were met with streams of protests from business and labor, and somehow a good many of us seem to feel that business can go on on a comfortable scale while we arm the United States and take care of a good part of the rest of the world besides with goods and munitions.

Here is where I have to get quite frank. I think it behooves us all to wake up. This armament program of ours is the biggest ever attempted within the time limits given. It is not up to us that make it to speculate on where the stuff goes or how much better off we would be if we didn't have to do it. It is up to us, and now I mean all of us, to get behind the President and our Government and see this job through, regardless of the sacrifices we have to make in our comfortable standard of living to accomplish just that. I take the liberty of emphasizing that work is the only thing that will accomplish this job, and those of us who cannot work can join a cheering squad for those who are working. I think we should all give of our strength and good will everything we have toward the program and its successful completion. Nobody knows right now how much farther we will have to go in armament manufacturing to accomplish our object, but every one of us knows that whatever is necessary America can do and do it quicker and better than any other nation on earth. When I think of what has happened to the world in the last 4 or 5 years and how a strictly military organization, created for the express purpose of conquest, sets out to turn the world into a shambles, with hunger and disease following in its wake, then I think it is up to America to take a hand and state its position to the effect that this sort of gangster stuff has got to be stopped and stopped for all time.

When millions of lives are lost and tens of millions of lives are ruined because of an insane ambition to get everything everywhere under one thumb, then I think it is up to us to help to stop it. And I know that everyone in this room is willing to go along on that proposition. I have often said that any country is as strong as its families. They are what we have to protect for the country's future, and by the everlasting God, let us get behind our President as a united country and get it done.

Joseph Rosier, Teacher-Senator

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ARTICLE BY MEDORA MASON

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Medora Mason, head of the department of journalism of Fairmont State Teachers College, entitled "JOSEPH ROSIER, Teacher-Senator." The article was published in the West Virginia School Journal of September 1941.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the West Virginia School Journal of September 1941]

JOSEPH ROSIER, TEACHER-SENATOR

(By Medora Mason, head of department of journalism, Fairmont State Teachers College)

Ability to promote and accept progressive advancement and to grow continuously are among the reasons West Virginia's most illustrious educator, Dr. JOSEPH ROSIER, president for 25 years of Fairmont State Teachers College, was appointed on January 13 to become a Member of the Seventy-seventh Congress of the United States.

Chosen by his long-time friend, the Honorable Matthew Mansfield Neely, Governor of West Virginia, to serve the remaining 2 years of the latter's unexpired term in the Senate, Dr. ROSIER, again, as in the past, heads the list of distinguished educators who have brought national distinction and honor to the teaching profession, as well as to the entire State of West Virginia.

From village schoolmaster to the presidency of the National Education Association and to the Halls of the United States Senate is a long and steep ascent, but Dr. ROSIER, who is, and always will be, "Uncle Joe" to thousands of men and women in all professions and businesses who have come in contact with him through the years, has climbed it quietly and unpretentiously.

Honors have come to him because he deserved them, and because he merited them, and not because he sought them. That is why the teachers of West Virginia, as well as countless others, always have admired and respected him, and have been proud and glad when he was chosen to lead them in high places. Someone said recently, "He never sought greatness, nor envied those who did achieve."

Whether as a youth teaching his first term of school at Cherry Camp Run in Harrison County, as the president of a fine teachers college, or as the president of great State and national teachers' organizations, Dr. ROSIER always has been cognizant of his duties and his responsibilities in whatever role he has been placed, and he has given the best possible service to all of them. That he will exercise the same type of leadership in his new position goes without saying.

A native of the State to which he has brought honor for so many years, Dr. ROSIER was born in the village of Wilsonburg, in Harrison County, the son of John Wesley and Rebecca (Miller) Rosier. He is a descendant of a long line of honorable West Virginia ancestors. Educated in the elementary schools of Harrison County, Dr. ROSIER began his teaching career in 1890. Thus for more than 50 years he has been actively engaged in the field of education. This will be the first time he has retired from it even for a temporary absence.

From a village school Dr. ROSIER went to the principalship of the Salem school, thence to the superintendency of the schools of Harrison County. It was there that his public career began in earnest. At the same time he was furthering his formal education and in 1895 received his B. Pd. degree from Salem College. Later he received an A. M. degree, and in 1933, after the National Education Association had honored him as its president, Marshall College conferred an LL. D. on him.

But West Virginia's newly named Senator did not acquire his education merely by going to school. From the very first he liked association with people in all walks of life, and he learned from them. When he was county superintendent, later as city superintendent in Fairmont, and after he became president of Fairmont State Teachers College, Dr. ROSIER made it his business to contact people of every status. He has talked and taught at county institutes in practically every county in West Virginia, and he still believes those old institutes were good, even though they are outmoded; he has talked in high schools all over this State and elsewhere; he has served the National Education Association for more than 30 years, and has attended its meetings all over the United States, and he has been an active member of Rotary, making contacts with all of its activities throughout the country, in an official capacity. Through these associations, and the very active life they entailed, Dr. ROSIER expanded his viewpoints, enriched his thinking, and deepened his knowledge of life. Those who know him are quite aware that he goes to the United States Senate with a mind which is open and alert to the ever-changing times.

Books, preferably biography, likewise have been one of Dr. ROSIER'S sources from which he has developed a philosophy of living. He has a fine library, and he has been instrumental in building up, at his own institution, one of the finest college libraries in the State.

Young people always have been a source of inspiration to Dr. ROSIER, and his close association with them throughout his lifetime may be one of the reasons why he has maintained a youthful and optimistic viewpoint and why he has been termed "progressive" in so many ways by so many people. Fairmont State College is known throughout the country for its fine student government. It has such a government because Dr. ROSIER believes in young people and in their integrity when they are given responsibility. The students at his institution consider him their warm and close friend and they already have given him much acclaim for the new honor which has come to him.

The same may be said of alumni of the institution and of the teachers throughout the State, who have received benefits through the years because of his wise counsel and his deep interest and activity in the behalf of education.

When Dr. ROSIER was president of the National Education Association in 1932, one of the most trying periods in the history of education in this country, Oliver Shurtleff, dean of instruction at Fairmont, said, at the dinner given the former in Fairmont to celebrate his election: "He is the 'great commoner' in education. He has been an inspiration to pupils and to teachers. To the teacher he brought out the beauty of teaching and the glory of the profession. In all of his work he has realized and emphasized the idea of responsibility. He has always been able to rise to responsibility. As leader of the largest professional organization in the country, he will not fail."

Nor did he. Dr. ROSIER carried the association through that trying year, and climaxed his activity with an outstanding convention in Chicago. That he will acquit himself through the next 2 years is as much to be expected as was the success predicted for him in that other important national job.

So much for the educational motif in this distinguished West Virginian's life—a life which he feels has been very full and very satisfactory, largely because he chose the profession of educator in preference to others in which there might have been more material reward.

Despite the fact that Dr. ROSIER always has been a stanch Democrat, this is the first political office he ever has held. Nor has he actively engaged in campaigns, other than to be definitely alined to the party of his choice. He has made no public speeches in

behalf of any candidates, but his advice and counsel have been sought and given on many occasions. His friendship with Governor Neely began more than 40 years ago when Dr. ROSIER was a springtime instructor at Salem College, and Governor Neely, who long since had been acclaimed in high places of the State's distinguished sons, was a student there. Since then they have been warm friends. It is enough to say, perhaps, that their political philosophy has coincided through the years, and that Governor Neely's appointment of the educator who is his friend and supporter was not a surprise to anyone who has followed their careers.

As governor of the one hundred and eighty-fifth district of Rotary International from 1939 to 1940, Dr. ROSIER proved himself a "good fellow" and friend. He made it his business to visit every club in the district. He laid down plans for their advancement; he adhered to the policies of Rotary; he published a fine monthly bulletin and he put on an outstanding convention at Parkersburg. In other words, he made Rotary his very definite business for that year, and those connected with it saw marked advancement.

As a public-spirited citizen, Dr. ROSIER has given of his time, his knowledge, his wisdom, and his substance through the years. He served Marion County as food administrator during the World War, and is a consultant on education for the Work Projects Administration. In Fairmont he has served the interests of the public library, welfare, hospital, and board of commerce groups, and has acted in an official capacity with many of these, as well as with Rotary, and with the church of his faith, the First Methodist.

As a public speaker he has appeared all over the United States at educational meetings, and has broadcast many times on national hook-ups. He has spoken to gatherings of illustrious intellectuals in the big cities of the Nation, and to small, humble groups tucked in the valleys and hills of West Virginia. To all of them he has given the same fine presence, the same wisdom, the same cryptic humor, and the same excellent philosophy which have made him an outstanding leader.

When he was a young man, working toward a degree, and beginning his public life, Dr. ROSIER married Iva Randolph, daughter of two prominent West Virginia families, the Randolphs and the Mereditha. She also was a young school teacher. Together they have lived quietly and without ostentation, working, rearing a family, traveling, reading, enjoying their lives together, and making and keeping hundreds of friends.

Their home in Fairmont is a cheerful, modest, comfortable one. It is there and at their summer home on the Tygarts Valley River, which Mrs. Rosier supervises, and where Dr. ROSIER goes to rest and relax, that they enjoy their grandchildren, and it is at the latter place they do most of their entertaining, largely among the faculty group and a few other close associates.

Their three children, all of whom are married and have children of their own, are Mrs. Hugh Simpson, of Canton, Ohio; Robert Rosier, and Mrs. Herndon Smith, of Fairmont.

Dr. ROSIER is devoted to his family and to his grandchildren, and they to him.

In conclusion, it may be said that simplicity, honesty, and fair dealing with everyone, perhaps above all, summarize everything which has been written, or could be written about Dr. ROSIER.

He has given his life to the public. In return he has been given the plaudits and the rewards of that greatest of critics. As a United States Senator he will continue to bring honor to the teaching profession of West Virginia and to the Nation.

Father of Public Power

EXTENSION OF REMARKS
OF
HON. GEORGE W. NORRIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

EDITORIAL FROM THE WASHINGTON SENTINEL

Mr. NORRIS. Mr. President, I hold in my hand an editorial dated August 29, 1941, from the Washington Sentinel, of Kirkland, Wash. The subject of the editorial is Father of Public Power. It has reference to the senior Senator from Washington [Mr. BONE]. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Sentinel, Kirkland, Wash., of August 29, 1941]

FATHER OF PUBLIC POWER

With the Northwest teeming with preparedness activity—with huge manufacturing enterprises vying for every kilowatt hour of the Northwest's giant hydraulic generators—come thoughts of the man whose vision was far out in front, who single-handed and alone blazed the trail for public power.

Politicians may safely, now, exploit the benefits of these great hydro plants; it was Senator HOMER T. BONE who conceived them; in the midst of uncertainty, doubt, and disapproval; and he blazed the electric trail at his own political peril.

Today with Bonneville at its peak, Grand Coulee scheduled to full capacity, and a large-scale development program for the Seattle Skagit plant almost certain, it all seems a dream—an electrical dream—in the light of what was and what might reasonably be expected to accrue, at the time Senator BONE first began to talk public power.

We wonder if even Senator BONE could have conceived then the great hydro development of today.

It is true that these harnessed waterfalls could not have materialized without the sympathetic understanding of the Roosevelt administration.

It is also true that a wartime expansion has brought a great capacity demand.

Yet industry will be drawn to the site of these great dams; obviously the waterfalls cannot be taken to industry.

In other words, will West expand at the expense of the East?

Now a controversy is raging over the form of administrative control; the development of a great electrical empire is no longer doubted or considered.

It is present.

An advocate of one certain form of authority (or administrative control) is Senator BONE, and it seems that as an insignia of a task well done he might be accorded the honor of setting up the electrical authority. Not to mention the knowledge he must have acquired as the principal builder of this great electrical empire.

Unconceived as has been the present rise of hydroelectric power, so may the future portray still greater and unexpected electrical advancements as well as industrial developments.

Batteries of humming giant generators, swift cascading waters at Coulee, Bonneville, Skagit, and other hydroelectric developments to come, may presage the future and greater happiness wrought by the Creator's gift to humankind; they must ever bear mute testimony to the vision of the man who conceived the magnitude of the blessing.

In the distant future, when greater electrical and industrial development must have occurred, the plaint of these humming generators and cascading waters must ever be the magic words "HOMER T. BONE."

National Newspaper Week

EXTENSION OF REMARKS
OF
HON. WILLIAM L. NELSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

Mr. NELSON. Mr. Speaker, we do well to observe Newspaper Week, October 1–8. In these disturbed days the country weekly and small-city daily represent the safest guide and best poll of public opinion. An old philosopher who knew folks said "Given light, the people will find their way." These words, true now as then, were uttered in tallow-candle days, yet they apply with equal emphasis to the present when lights of billions of candlepower streak the sky and almost shame the sun.

The great metropolitan daily, with readers numbering a million or more and whose managing editor is unknown and whose world is after all so very small, is too often out of touch with what is going on outside four walls. If we seek to learn what men and women are thinking, if we would listen to the heartbeats of humanity, we do well to leisurely travel Main Street rather than rush madly through Wall Street.

The country weekly and small-town daily not only represent the honest views of some local man, but the chances are that what the editor writes in his editorial columns is in harmony with the best thought of his readers. So the small publication, small in size but not in worth, is more than a publication. It is an institution plus a personality.

The editor of the kind I know is not easily swayed, is impervious to propaganda, and is absolutely unpurchasable. He dares tell the truth regarding public matters and, while never a snooper, will, when his suspicion is aroused, turn over a chip to see if there is a bug under it, and occasionally he finds one.

The hurried taker of polls may gallop along this way or that, sometimes with accuracy and at other times with mere acclaim, but for a real poll of unbiased opinion, including that of such 100-percent Americans as live at the forks of the creek, I prefer by far the pages of the small-town press. Here are to be found facts rather than wishes.

The country weekly, with its story of You All's House, like the small-town

daily, fills a permanent place in the lives of a free people. No metropolitan publication, no radio, no other source of publicity can replace it. Its editorial utterances are not for sale. Expressing community thought, standing for the upbuilding and betterment of homes, it is an influence far-reaching and helpful. The overstuffed daily may be glanced at and thrown aside. Not so with the country weekly, which tells the simple story of joy and sorrow, and which keeps us in touch with friends and acquaintances of the yesteryears. Its editor is not unknown. The paper reflects the views of an individual, rather than a company or corporation.

So, in these days of lurid headlines, too often misleading or printed to sell a special edition—or worse still, an idea—"We the People" in whom the fathers of the Constitution of the United States of America put their trust, a trust never betrayed, do well to observe Newspaper Week. There are nations where a free press is today unknown. Let us thank God that ours is not one of those.

Neutrality Repeal

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

ARTICLE BY MARK SULLIVAN

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Mark Sullivan entitled "Neutrality Repeal—Dodges Make Law Meaningless."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of September 26, 1941]

NEUTRALITY REPEAL

(By Mark Sullivan)

DODGES MAKE LAW MEANINGLESS

Movement for repeal of the Neutrality Act, or drastic revision, will get under way probably next week. President Roosevelt wants it. There is a drive on for it, and in Congress much assent to it.

The Neutrality Act makes certain things unlawful, among others, the following:

Unlawful for any American citizen or corporation to loan money or extend credit to a nation at war.

Unlawful for any American to sell war material to a nation at war, except for cash—never on credit.

Those are two main provisions of the Neutrality Act. Today they mean nothing. They may have had some effect for a year or so following enactment of the law (November 3, 1939). But in March of this year we enacted the lease-lend law. By this law our Government, as a government, extends practically unlimited credit to Britain; provides her with goods of all kinds (and the other nations on Britain's side). Obviously, when Britain can get abundant money and credit and goods from our Government as a government, she has no reason to wish to get them from our bankers and businessmen. In short, passage of the Lease-Lend Act was in effect repeal of much of the Neutrality Act. Repeal of these two provisions of the Neutrality Act would make no change in what we are doing.

In the Neutrality Act is another "unlawful." It is unlawful for an American cargo ship to go to any nation at war or even into a combat zone, which means the waters within 200 or 300 miles of a nation at war.

Superficially this provision of the Neutrality Act has real meaning. It prohibits American cargo ships from carrying our lease-lend materials to Britain; they must be carried in British ships or neutral ships.

The provision prohibits something, but does not wholly prevent it. For what do we do? American ships go through some devil-around-the-stump process by which they get under the flag of Panama. Then they carry lease-lend goods to Britain. Apparently even the United States Government does this. This seems to have been the recent case of the *Pink Star*—it was owned by the United States Government through the Maritime Commission, but was under the flag of Panama.

Repeal of this section of the Neutrality Act would be a repeal of a law in force, to be sure. But it would merely legalize what we are doing by indirect methods.

Yet another "unlawful" in the Neutrality Act is, "Unlawful for an American cargo ship to be armed."

This prohibition is sweeping, stringent. Even a ship that never goes near a war zone, one from California to Chile, must not be armed. The provision reads: "Unlawful * * * for any American vessel engaged in commerce with any foreign state to be armed, except with small arms (which may be) necessary for discipline aboard such vessel."

Repeal of this "unlawful" would mean something. But just how much? The administration wishes to arm American cargo ships. But what would that amount to? Any arming that could be done to a cargo ship would hardly amount to much more than an air rifle, as against a modern German submarine or raider. Probably the chief effect of arming American cargo ships would be symbolic, as a gesture of America's intention to protect its rights.

Ought we repeal the Neutrality Act? Many will answer on the basis of whether repeal would take us farther toward war. Would it? Not necessarily. For observe all those "unlawfuls." Every one of them is a prohibition put upon American citizens and upon ourselves as a Nation—so to speak—voluntary handcuffs. We have a perfect right to repeal prohibitions we have put upon ourselves. This can be no justified offense to the Nazis, no reason for them to regard us as more at war.

The real question is what we do after repeal. After we restore to ourselves freedoms of action we voluntarily surrendered, what do we do with the freedoms? At that point we can, if we want to, take steps toward war. And if we don't want to, we can refrain.

The immediate question, whether we ought to repeal the Neutrality Act under present conditions and whether to repeal all or only a part—all that is for Congress to decide. The law ought never to have been enacted. It is now seen to have been futile; it has not saved us from involvement in the war. Some of us felt at the time that it would be futile and knew quite well it was unworthy. Here was the most powerful nation in the world looking out upon a war arising in Europe. And this powerful nation was so hysterically eager to avoid involvement that it sought immunity by putting handcuffs upon itself and upon its own citizens by surrendering rights which it and its citizens and every neutral nation had possessed under international law from time immemorial.

Reclamation in the Great Plains

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ADDRESS BY HON. JOHN C. PAGE

Mr. ROBERTSON of North Dakota. Mr. Speaker, under leave to extend my remarks, I call the attention of the House to the address made by Commissioner John C. Page, of the Bureau of Reclamation, on Reclamation in the Great Plains, at the first annual convention of the North Dakota Reclamation Association at Minot, N. Dak., on September 23.

An appropriate additional title for this splendid presentation of the importance of water conservation and utilization in the West would be, Don't Forget the Drought. The Great Plains is mindful of the disastrous results of low rainfall during the 1935–40 decade and through the Reclamation program seeks insurance against future disasters of a similar nature.

Mr. Page calls attention to the service Reclamation is rendering the cause of national defense on the Pacific coast and elsewhere through expediting its power program. Similarly, Reclamation can assure adequate food supplies for domestic purposes and to feed the war victims of other countries.

This program should not be halted in the Great Plains or elsewhere.

The address follows:

The invitation to address the first annual convention of the North Dakota Reclamation Association was received by me with genuine pleasure. The formation of this organization is an event of major significance. The problems left by the scourge of drought and the dangers inherent in a disregard of the lessons of the past demand a continuing interest in irrigation. The leadership that has organized this association can arouse and maintain that interest.

The urgent need for an organization with the objectives of your association was foreshadowed 52 years ago by John Wesley Powell, director of the Geological Survey and the outstanding pioneer of water conservation. On August 5, 1889, before the North Dakota constitutional convention, Major Powell said:

"The State of North Dakota has a curious position geographically in relation to agriculture. The eastern portion of the State has sufficient rainfall for agricultural purposes; the western part has insufficient rainfall, and the western portion is practically wholly dependent on irrigation.

"In the western portion all dependence on rain will ultimately bring disaster to the people. They are unwilling yet, a good many of them, to admit it, but * * * they will have to depend forever on artificial irrigation for all agriculture. * * *

"Years will come of abundance and years will come of disaster, and between the two the people will be prosperous and unprosperous, and the thing to do is to look the question squarely in the face and provide for this and for all years."

The years of abundance are here today. In his letter asking me to attend your convention my friend, Harry E. Polk, wrote that for the first time in 15 years a common sight on the streets of Williston was a line of trucks loaded with wheat awaiting their turn to unload at the city's elevators. But some of you may remember when North Dakota and the entire Great Plains region were swept by a series of droughts. When the reclamation law of 1902 was enacted many sections of the semiarid areas were still suffering from the disastrous effects of the years of low rainfall from 1886 to 1895. Those were the years of disaster, and without irrigation they will come again.

In this early drought period the Reclamation Service was importuned to come to the aid of distressed areas in your State. The Missouri River pumping project was put under construction to irrigate 25,000 acres in Williams County. But just as the project facilities were available for service a wet cycle came on. The farmers of that region lost their interest in irrigation. The sole exceptions were those in McKenzie County served by our lower Yellowstone project.

Time passed and North Dakota farmers continued to depend on rainfall for their livelihood. Under the spur of wartime prices for wheat vast areas of the Great Plains—not only in North Dakota but to the southward—were broken to the plow. Forgotten was the admonition of Major Powell that irrigation alone could make agriculture permanently secure in this area of undependable rainfall.

The chain of events that conspired to force abandonment of the Missouri River project by the Bureau of Reclamation and defeat the expansion of irrigation in North Dakota had tragic consequences. Barely had the Bureau officially withdrawn from the venture in Williams County when a fresh series of dry years came on. Williams County from 1930 to 1940 saw more than one-fourth of its rural population driven out of their homes. But not so in nearby McKenzie County, the only irrigated region in North Dakota. Bolstered by a stabilized area of 15,000 acres, its farmers were far better able to weather the troubled years.

Forty-eight of the 53 counties in North Dakota lost population. For the first time in its history the State showed a decrease in the census of its inhabitants. The loss totaled 5.7 percent.

Farm families were unable to exist under these conditions. They fled the rural areas. Power farming curbed the market for farm labor and contributed to the debacle. Complete statistics are not available, but census records indicate that nearly 100,000 persons abandoned the farms of North Dakota. Nearly half of the farms in the State went through foreclosure proceedings.

Meantime your cities and towns, almost wholly dependent on agriculture, faced the impossible task of absorbing farm refugees.

The conditions which prevailed in North Dakota also affected the other four States to the southward in the Great Plains. Repercussions of the drought years were felt from the Missouri River to the Pacific and from the Canadian border to the Mexican boundary.

But while irrigation had been abandoned in North Dakota except for the strip along the Yellowstone in McKenzie County, the conservation of water to the westward had moved forward. From 1900 to 1930 the irrigated area in the 11 Pacific and Mountain States was more than doubled. Wherever irrigation expanded in the arid regions, however the land provided was a magnet for drought refugees. The pace of water conservation was inadequate to provide farm homes for the immigrants who streamed from the Great Plains. I cite two examples. In Fremont County, Wyo., where the Riverton project of the Bureau of Reclamation is located, the population increased nearly 60 percent in 10 years. Malheur County, Oreg., site of the Vale and Owyhee projects, gained more than 75 percent.

A more striking example of the results of irrigation developments exists right in the heart of the Great Plains drought area. I refer to Scottsbluff County, Nebr., where the economy of both the rural and urban areas is dependent on irrigated agriculture. The county as a whole, from 1930 to 1940, gained 18.3 percent and the city of Scottsbluff showed an increase of 41.15 percent. Meanwhile the population of the State as a whole decreased 4.7 percent.

These population figures indicate that the secure growth of the arid and semiarid region rests not alone on irrigated agriculture but upon the development and maintenance of family-size irrigated farms as contemplated in the National Reclamation policy.

This policy is emphasized in the Water Conservation and Utilization legislation—an outgrowth of the original Great Plains program which was designed to combat the ravages of drought in the Dakotas and Nebraska. The family-size irrigated farm is the heart of the far-sighted effort initiated 40 years ago to conserve the land and water resources of the West and provide for its growing population.

Today the normal activities of Federal reclamation—and they include the rehabilitation of the drought-stricken areas of the Great Plains—are directed at three objectives of equal importance. One is to anchor farm families in their present locations by the irrigation of unsuccessfully dry-farmed areas to support an increased number of inhabitants and stabilize the surrounding region, including the cities and towns. Another is to replenish or supplement depleted water supplies for established irrigated agricultural areas. The third is to provide new agricultural opportunities by irrigation developments where farm families who have been forced to migrate can become self-sustaining.

Despite improved climatic conditions, migrations westward from many sections of the country are continuing. Many of those uprooted are lured by prospects of industrial employment on the Pacific coast, but others are seeking opportunities to return to the soil. The demand for irrigated land is unabated.

A frequent question asked is why the Federal Government should be so concerned over the drought, the migrations, and the disruptions of the economy of the States of the Great Plains and those farther west. The answer is that the Federal Government has a duty and a responsibility with respect to the conservation and utilization of its water resources and its human resources, too. The Congress has acknowledged and confirmed this duty and responsibility.

But, if you will, you may regard this concern purely from the viewpoint of dollars and cents.

During the 8 years from 1933 to 1941 the Work Projects Administration and its predecessors expended more than a billion dollars of Federal funds in the six States of the Great Plains drought area—North and South Dakota, Nebraska, Kansas, Oklahoma, and Texas. In this same period North Dakota's allotments were slightly more than $100,000,000. Incidentally, they were 15 percent higher than the State's quota.

You are perhaps more familiar than I am with what relief has cost your local and State governments. I note that from 1936 to 1939 the expenditures for relief of State, local, and county funds totaled $23,111,346. There is no doubt that the load was too great for North Dakota and other individual States to handle.

But the drain on the United States Treasury did not stop with the Great Plains. The far western States, unable to provide employment for newcomers from the eastward, also turned to the Federal Government. In those same fateful 8 years more than one and three-quarter billion dollars were spent for Federal relief in the 11 far western States.

This total western expenditure of $2,800,000,000 can be contrasted with the total cost of the Federal reclamation program, including expenditures since 1902 and outlays now definitely planned. The entire amount involved in this forty-odd-year program is just about half this Federal relief burden.

As in its early days of the present century, the Bureau of Reclamation today still stands ready to aid the Great Plains and the West in meeting the problems incident to the drought and the maintenance of its population.

I have never forgotten my impressions of the intensity of the drought when I visited this area in 1936 as a member of the President's Great Plains Committee. Subsequently, we participated in a series of studies looking to ways and means of alleviating pressing conditions and of planning security through irrigated agriculture.

The Great Plains program inaugurated by the Interior Appropriations Act of 1940 was a concrete effort toward the pooling of the activities of Federal agencies concerned with drought problems. Under the President's instructions, the Bureau of Reclamation, the Department of Agriculture, the Work Projects Administration, and the Civilian Conservation Corps have worked together. The National Resources Planning Board has been exceedingly helpful. Your State authorities in North Dakota have been most cooperative.

The combined efforts of these agencies have evolved into the broad water-conservation and utilization program. This program is our program. It is highly important that we and you of the Great Plains take a common view of water conservation and reclamation. We must recognize that the areas to the westward are confronted by problems which to them are as critical as those which have driven 350,000 farm families from your rural areas. It is only through united effort that the West can present a solid front which alone can bring solutions of these problems.

Under the water conservation and utilization program, there have been authorized for construction 12 projects in 8 States. These projects aim at readjustment of 2,500 families now enduring a precarious existence. Not all of them can be placed on irrigated land, but more than a fourth of them will be given security by the stabilization that irrigation will bring to the surrounding areas.

Take, for example, the Buford-Trenton project being constructed by the Bureau of Reclamation in Williams County, where an earlier reclamation development was abandoned in the days of heavy rainfall. The Farm Security Administration, which is planning the settlement and operation of the project, estimates that 265 families will be benefited. Thirty-five families now attempting dry farming on the project land will be rehabilitated in their present locations, while 115 additional families will be resettled on irrigated farms. Another 115 families will receive new security through readjustments that will be possible in the surrounding grazing and farming area.

This number of families seems small compared to the number who have been uprooted by drought and other vicissitudes. But this is only the beginning. A full expansion of this program will not be limited to the mere 2,500 families already provided for. It spells security for 20 times that number—50,000 families, more than 200,000 American men, women, and children.

Estimates of the Farm Security Administration are that for each irrigated acre in these water conservation and utilization

projects in the Great Plains, 30 acres of grazing land can be made available for the support of the livestock industry. Thus the 13,400-acre Buford-Trenton project will extend its benefits to more than 400,000 acres.

It is a matter for satisfaction on the part of all agencies involved that the Buford-Trenton project is now ready to begin its service. A large part of the credit must go to the landowners. They were cooperative.

On the other hand, the Bismarck project has been stalemated. Indifference to the distress of neighbors and the desire to make a personal profit have delayed the start of construction. I regret this deeply. But I assure you that my regret, no matter how deep, will not shake my determination to help build a project of benefit to the entire community. I hope that through the influence of the North Dakota Reclamation Association it may be possible to avoid another Bismarck in the future.

With the progress made in the water conservation and utilization program so far, it is clear drought-stricken Great Plains and other areas may be rehabilitated. It can be shown that by turning relief labor into beneficial construction, Federal funds can be channeled into great and lasting good. Sixty percent of the costs of these projects goes into labor at the site.

Furthermore, the reimbursable feature of direct appropriations for declamation from the Federal Treasury—the backbone of the reclamation policy for 40 years—still holds true. It has not been abandoned. It is evidence of the good faith of the beneficiaries of reclamation developments.

Now let us turn a page and look at the future of a program I know is close to the hearts of every member of this association.

Within the limits of funds available, investigations are being pressed by the Bureau of Reclamation to uncover worthy projects that qualify economically under the provisions of the law. With the installation of power-generating facilities at Fort Peck Dam, now probable in 1943, the Bureau of Reclamation will be able to provide low-cost power for pumping at projects which may be constructed in North Dakota and Montana. Reports are awaited with interest on the investigations of two major pumping developments. Both contemplate turning the waters of the Missouri River into channels for the preservation of agriculture in western North Dakota. Preliminary reports on the North Dakota pumping and the Fort Peck pumping investigations indicate highly interesting possibilities which, if found economically feasible, will go far toward averting future consequences of critical droughts.

Other investigations include areas on Knife River, the Cannonball, Heart River, and the Little Missouri.

I can assure you that these investigations will be prosecuted not only in North Dakota but throughout the Great Plains and the areas to the westward. But the people of the areas affected must take a realistic view of what irrigation means to their communities and the State. It will not do to assume that the Bureau of Reclamation will recommend a project without the interest and cooperation of the citizens of the area to be benefited. The project must not only be desirable but also desired.

Assuming that the North Dakota Reclamation Association will interest itself in this aspect, I call your attention to the dominating factor in our national life today. The country has set itself to an all-out effort for the preservation of our way of life on this hemisphere, and all other activities must be subordinated to this end.

The construction activities of the Bureau of Reclamation are necessarily affected by this policy. What new construction work is undertaken will depend on its relation to national defense. The continuance of the construction of projects under way will rest to a large extent on the availability of labor, priority, and transportation facilities for equipment and materials.

Food supplies are a vital consideration in the national defense. The problem of feeding 132,000,000 people in the United States and the multimillions of war-torn countries must be met. Federal reclamation is called upon to aid in meeting this problem, just as it is coping with threatened power shortages on the Pacific coast and the Rocky Mountain region.

"Food will win the war and write the peace," says Secretary of Agriculture Wickard, speaking from San Francisco on September 8.

The great western livestock industry will need more hay and pasture to produce the meats and dairy products that only irrigated land can insure in the face of this emergency and all droughts to come.

Nutritious vegetables, both fresh and for canning, and certain fruits in the increased quantities necessary must come from land for which moisture is certain to be available in the growing season.

It is only through the Federal reclamation program that an increased output of foodstuffs can be assured west of the one-hundredth meridian. The 4,000,000 acres of irrigated land reclamation projects are now serving are already enlisted in the cause of increased production. Nearly 7,000,000 additional acres, half of which are now inadequately irrigated, will be given a secure water supply by projects under construction.

The Great Plains and other drought regions will receive their full share of attention in the advancement of this program.

Similarly the power to drive airplane factories and other industries producing critically needed equipment is coming from multiple-purpose projects of the Bureau of Reclamation. The present capacity of a million kilowatts in reclamation plants is being trebled under current plans.

Preparedness for peace is as vital as preparedness for defense. The Bureau of Reclamation, while giving all-out aid to national defense, aims to have in readness a shelf of feasible projects strategically located with respect to labor. We propose to speed the completion of construction work which may be temporarily delayed during the emergency.

Work for unemployed industrial workers, soldiers, and sailors, and settlement opportunities on irrigated land for many thousands of families will be the prime objectives.

The North Dakota Reclamation Association can participate in this program of preparedness. With us you can follow the advice of Major Powell. "Don't forget the drought" is an appropriate slogan for reclamationists in North Dakota as well as throughout the West and for the entire country. Maintaining public interest in irrigation as an insurance against ravages of droughts in the future will help the people of the Great Plains to "look the question squarely in the face and provide for this and for all years."

Administration of Foreign-Agent Registration Act

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 14, 1941

REPORT OF INSTITUTE OF LIVING LAW

Mr. VOORHIS of California. Mr. Speaker, every law passed by Congress requires a period of actual trial before it can become clear as to whether or not the law is adequately and effectively framed to meet all the contingencies it was supposed to meet.

In the case of the Foreign Agent Registration Act there is at present an obvious need of the most vigorous enforcement and the most effective bringing out of the facts about foreign agents which the act was intended to give to the American people.

The Institute of Living Law, a group of earnest and able lawyers and social scientists, has prepared a report on this matter which I believe merits the careful study of Members of Congress. What follows is a summary of this report:

THE ADMINISTRATION OF THE FOREIGN AGENT REGISTRATION ACT

THE PROBLEM OF PROPAGANDA

The Foreign Agent Registration Act requires agents of foreign governments that seek to influence American public opinion to disclose certain facts about themselves. Congress hoped thereby to deprive their work of the extra effectiveness arising from secrecy. The antidemocratic material that reaches our shores from foreign countries has behind it the well-knit, powerful force of the dictator-ridden states. But the pro-American counter-propaganda issued in this country is sporadic and disunited. This is as much of a disadvantage in this ideological struggle as if the dictators had guns and we had none; as if they had armies and we had only disorganized bands of farmers armed with clubs and scythes. Unless some effective defense is devised, democracy may be condemned by its best friends without the benefit of a fair trial upon its merits. Most Americans believe that all, however hateful their opinions may be, have the right to speak their minds. But it is contrary to our spirit of fair play for anyone to pretend to be disinterested, or to speak as an individual, and yet really to represent an ulterior interest. This explains why the first weapon chosen by our Government to combat the insidious propaganda of the dictators was, not the un-American weapon of suppression of the propaganda, but the American way—disclosure of its sources, methods, and purposes.

A desirable byproduct of full disclosure of this sort would be a degree of protection to those who, because they promote unpopular causes, are falsely attacked as foreign agents. Careful administration of the act would protect bona fide foreign agents themselves, as well. To those agents of foreign countries who wish to deal with us on a fair and open basis, the Foreign Agent Registration Act offers an opportunity to prove their good faith.

PROVISIONS OF THE ACT

The act seeks to make known to the American people the sources of foreign propaganda. It requires registration at the State Department of each "agent of a foreign principal." But the act specifically excludes diplomats, foreign government officials, traders, consular officials, and those engaged only in religious, scholastic, academic, or scientific pursuits. It requires that agents file not only their names but also their addresses, the names of their principals, copies, or descriptions of their agency contracts, and a statement of the form and amount of pay they receive. They must also file supplementary statements every 6 months describing their activities. Congress intended to give the Department of State power to "fill in the details" of legal requirements by its grant of power to the Secretary of State to prescribe rules, regulations, and forms.

THE INTENTION OF CONGRESS

Any judgment concerning the act's success or failure must be based upon the intentions of the people's representatives who framed and enacted the law. That intention may be learned both from the act and from statements made by them at the time it was under discussion.

This report undertakes neither to challenge nor to support the validity of all those purposes of Congress. But if Congress passed the act to get these things done, then the act ought to do them. This report merely analyzes the act and its administration in view of those purposes, and attempts to determine its effectiveness. The basis of our evaluation and of our suggested changes in the act and regulations is the answer to the following questions:

(a) Does the act, as administered, actually disclose the foreign agents intended to be disclosed, namely, promoters of racial and religious disunity, subverters of democracy, and foreign-policy propagandists?

(b) Does it obtain the kind of information that Congress wanted, including the identity of the agents; the principals backing such agents, including not only foreign governments but also private and political groups acting in their behalf, not only the nominal or pretended principals but also the real ones; the duties and relations of the agents to their employers; and the details of their propaganda activities?

(c) Is this information subjected to intense publicity, calculated to render the activities of such agents less effective?

In connection with all of these questions, the general inquiry must also be made whether any failure fully to achieve the purposes of the legislation is caused by faults in the act or by improper or inadequate administration and what changes in either regard will render it more effective

ACTUAL COVERAGE OF PROPAGANDISTS

An examination of the State Department files does not reveal the names of any of the Communist leaders in this country. Yet the Communist Party's organizational manual says:

"The decisions of the executive committee of the Communist International are binding for all parties belonging to the Commintern (Communist International), and must be promptly carried out."

Many notorious propagandists in behalf of Nazi interests are also omitted from the State Department's list. Examination of the lists themselves confirms the conclusion that they contain the names of very few of the foreign agents actually engaged in propaganda activities. About 300 agents are now listed in the public files at the State Department, but it is questionable whether any substantial minority thereof are actually engaged in the kind of propaganda that Congress wanted disclosed.

Certain specific faults in the law and its administration would prevent any enforcement, however vigorous, from being effective. The first of these faults is in the interpretation that the State Department has chosen to put upon the word "agent." The regulations provide that subagents, subsidiaries, and branch offices are not considered subject to the requirement of registration. Congress certainly did not intend to limit the registration requirement by any such nice legal distinctions. Even if Congress did intend to make such distinctions, commercial law would not support the Department's interpretation of the word "agent." This interpretation is effective to exclude hundreds of persons in the employ of registered and unregistered foreign agents.

LOOPHOLE FOR ASSOCIATIONS, ETC.

While the act blithely declares that the term "person" means "an individual, partnership, association, or corporation," the fact remains that our criminal law does not provide any procedure by which an unincorporated association (or, for that matter, a partnership) can be prosecuted or imprisoned; nor does it recognize any way in which an impecunious corporation can be punished effectively. Therefore, it seems that the Foreign Agent Registration Act could not be effectively enforced against an unincorporated association servicing a foreign master or against a corporation that took care to see that it had no funds available for attachment. If the statute required the officers of such an organization to file statements on its behalf, then they, at least, could be imprisoned or fined for its failure to register.

LOOPHOLE FOR CONSULAR EMPLOYEES, ETC.

Another series of loopholes may be found in those provisions of the present statute which exempt from the requirement of registration various classes of individuals who would otherwise be foreign agents in the strictest sense. Although the diplomatic representatives of a foreign government are, by customary rules of international law, exempt in their official capacity from civil and criminal jurisdiction in the country wherein they serve, consular agents and their staffs are not immune from such jurisdiction. Thus, it would be no infraction of the rules of customary international law for the United States to require that consuls engaging in propaganda activities register as agents of foreign principals. The elimination of these exemptions is important.

LOOPHOLE FOR PROFESSED TRADERS, ETC.

When the act exempts from registration requirements persons active in furtherance of the "bona fide trade or commerce" of foreign principals, or of "bona fide * * * scholastic, academic, or scientific pursuits, or of the fine arts," it lays down standards which are inapplicable to totalitarian states. It is of the essence of totalitarianism that commerce, education, science, and art, as well as business, must be subordinated to the interests of the state. These exemptions, therefore, do much to destroy any possible efficiency of the existing law.

ACTUAL DISCLOSURE OF INFORMATION

Congress intended that the act should require the filing, not only of the agent's name, but also of full and complete information about him with regard to his identity, his relationship with his foreign principal, and the nature of his activities. In this regard the State Department has not taken full advantage of the broad congressional authority to prescribe necessary rules and regulations. Documents defining the organizational set-up of corporations, associations, and partnerships are referred to in the prescribed forms but not in terms specifically requiring them to be filed. While the registration statements do require the names of officers and directors of corporations and associations and partners of partnerships, the names of "dummies" apparently would be sufficient even though the actual management might be in the hands of an employee or some persons bearing no formal relationship to the organization. One of the commonest and handiest of devices for obscuring the identity is to do business first under one corporate or associate name until it has been discredited in the eyes of the public, then to close up shop and open up shortly thereafter under a new corporate name. The only way to keep track of such shenanigans is to follow other bits of identifying information that may appear upon the public record. The State Department might have prepared cross-indexed, tabulated, and publicized such information. Instead, when the act was but a year in operation, it appealed to Congress to amend the law so that as soon as one such "front" is abandoned all the records concerning it may be withdrawn from public view. As a result, it would be very difficult for any private citizen to trace the relationship to each other of the various associations used by such "quick-change" artists to cover up their activities. The questionnaire requires a full statement as to contracts that are entirely oral but states no details as to the kinds of information required. The supplementary statement has no reference to changes that might have taken place in the agency relationship. Thus it would be quite possible for a foreign agent to have a contract for 363 days of the year which would never be revealed to the public at all under this statute. The State Department has ample administrative power to require full information about the sponsors of foreign propagandists as such. But it has seen fit to ask only the most elementary questions concerning the foreign nations, individuals, and organizations for which such agents act. Such questions as are asked certainly cannot reveal the kind of information that Congress desired about the identity and nature of both the foreign nation involved and the specific persons who are the propaganda agents' more immediate superiors. An examination of the material on file reveals that they certainly have not done so.

ACTIVITIES OF FOREIGN AGENTS

Naturally, the most important information required by the act, both from the point of view of public information and from that of law enforcement, concerns the details of the activities of such agents. It is worthless to know who an agent is or for whom he works or what he has agreed to do if we don't know anything about what he is actually doing. It is because of this very fact that Congress provided for the filing of a semiannual supplemental registration statement that is required to contain "such details required under this act as the Secretary shall fix, of the activities of such persons as agent of a foreign principal during the 6-month period." Under this broad authority what details have been required? It is almost incredible, but the fact is that none at all is required There is not a single question in either registration statement that would require a description of any of the foreign agent's activities during the period between statements.

ACTUAL PUBLICITY AND AVAILABILITY

It was not the filing of information but rather the turning upon it of "the pitiless spotlight of publicity" that was considered a deterrent to foreign propagandists. The first action that might be expected would be the preparation of a list of the registrants, giving all the basic facts about them, properly classified and indexed, with, perhaps, a summary or abstract of all the important parts. No such thing has been done. The list is prepared without indexes or classifications and (mirabile dictu!) not in alphabetical order. No word of description of the agents registered or of information about them except their addresses appears on this list. Apparently no efforts have been made by the Department to use the press, radio, and other channels in accordance with the intent of the framers of the act. No press releases on the act were issued during the 3 years that the act has been effective except one which merely assured the general public that registration affords no grounds for assuming that the registrant is engaged in unpatriotic activity.

ADMINISTRATION OF THE ACT

The lack of initiative of the office charged with enforcement of the act is high lighted by contrasting it with the recent action of the Post Office Department in holding up vast quantities of propaganda received from foreign countries, the mailers of which were agents of foreign governments.

The first task of the State Department is to promote the diplomatic interests of this country. It is not easy for one official of the State Department to deal on friendly terms with diplomatic representatives of foreign countries when some other official of the same Department is making trouble for their

propaganda agents. The administration of the act is not essentially a foreign affair at all. It is quite unnecessary to delegate this power to the office charged with management of our diplomacy. The State Department, less than any other department of the Government, believes in exposing its files to public view. The Secretary of State is the only important governmental official who does not make a regular report to Congress. Dominating the public relations of the State Department is the assumption that public comment, criticism, and participation in the conduct of foreign affairs is an unfortunate incident which cannot be wholly dispensed with in a democracy, but which should be restricted within the narrowest possible limits. The administration of the act devolves upon the Division of Controls within the State Department. For the performance of these and many other functions the Division of Controls has at its disposal a staff for which the total salary expenditure in 1940 was $52,815. Estimated requirements of this office for 1941 and 1942 run only slightly higher ($59,663 for each year). The bulk of these appropriations is expended for purposes other than registration of foreign agents and no single officer of the Division devotes his full time to such registration activities. Apart from any considerations of the capacity of the personnel employed in this Division, the notion that a $60,000 agency, on a part-time basis, can exercise any effective control over agents of foreign principals spending amounts hundreds and thousands of times as great is ridiculous. In a letter to Chairman SUMNERS, of the House Judiciary Committee, the First Assistant Secretary of State, Hon. Sumner Welles, took pains to point out, with reference to this act, that "the policy by which this Department was made the agency to receive registrations of this type was a policy initiated by the Congress and not by this Department." Here is a clear implication that the State Department does not want to be charged with the registration of foreign agents. To place upon the State Department and the Division of Controls the burden of administering a statute which they neither desire to administer nor have proper administrative facilities for administering is to invite the failures which have occurred. Our recommendation is that the implied request of the State Department to be freed from this responsibility be granted.

An objective analysis of the operations of the Foreign Agent Registration Act must convince any unprejudiced observer that the act has been rendered a dead letter, of no practical importance in exposing the propaganda activities it was designed to expose. Part of the responsibility for this failure may be attributable to deficiencies in the terms of the act itself, notably the long list of exemptions contained in the act, the failure to specify the kind of information to be supplied by registrants, the failure to provide effective sanctions against associations or corporations, and the permission to remove registration statements granted by an amendment which the State Department sponsored. These defects, however, might have been rendered comparatively innocuous if the act had been vigorously enforced. Chief responsibility for the fact that this act has become a dead letter must be laid at the door of the State Department. The Division of Controls, in that Department, has not been effective in carrying out the purpose of bringing correct information to the American people which the act was designed to effectuate. It has refrained from publicizing the information it has collected. The regulations issued by the State Department for the enforcement of the act make it inevitable that the information that Congress wanted is not collected. This result is reached by exempting the most dangerous propagandists from the requirements of the act, by omitting from the registration forms all questions relating to details of the agent's propaganda activities, and by inserting a series of loopholes which have the effect of facilitating evasion of the purposes of the act.

It is clear that if the purposes of the act are to be accomplished, the regulations under which it is administered must be drastically revised and responsibility for enforcement must be vested in an agency that is in a better position to carry out the objective of the act. Finally, the complete achievement of the purposes of the act will require certain minor strengthening amendments in the act itself.

Emergency Powers Relating to Business and Industry

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, September 29, 1941

COMPILATION BY HON. HARRY B. HAWES

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD a Compilation of Emergency Powers Relating to Business and Industry Granted the Executive by the Congress, prepared by Hon. Harry B. Hawes, which, I think, will be of great value to Members of the Congress. The Government Printing Office estimates that it will require three pages of the CONGRESSIONAL RECORD to print the compilation and that the cost will be $135.

There being no objection, the compilation was ordered to be printed in the RECORD, as follows:

COMPILATION OF EMERGENCY POWERS RELATING TO BUSINESS AND INDUSTRY GRANTED THE EXECUTIVE BY THE CONGRESS, WITH SPECIAL REFERENCE TO THE EMERGENCY POWERS GRANTED FROM MARCH 1933 TO AUGUST 1941

(By Harry B. Hawes)

EMERGENCY POWERS OF THE EXECUTIVE RELATING TO BUSINESS

Frequent inquiries from clients and correspondents relating to the emergency powers of the President have suggested this memorandum for the general information of businessmen.

Eliminating most of the emergency powers granted prior to President Franklin D. Roosevelt's election, and also the grants of military and naval emergency powers, the following may be found useful in general consideration of the subject.

The emergency powers granted the Executive fall into three classes: First, direct power; second, power qualified by ratification of the Senate; and third, power which, if exercised, requires appropriations from Congress.

The constitutional powers of the President may be summarized as follows:

Presidential constitutional powers are not enumerated in the statutes; they are derived from the Constitution with implied powers of execution.

The general powers of the President derived from the Constitution may be summarized as follows:

He has the administration of all Federal statutes, their execution, and the appointment and removal of Federal officers.

Congress may create public offices but all administrative officers are appointed by him.

He shall, from time to time, give Congress "information of the state of the Union." He may convene both Houses or either of them.

Subject to the approval of the Senate, he shall appoint ambassadors, ministers, and consuls.

He has the power, with the advice and consent of the Senate, to make treaties with foreign nations.

He is Commander in Chief of both Army and Navy.

Approximately 200 emergency powers have been granted our Presidents by the Congress prior to the election of President Franklin D. Roosevelt.

To review each separate power granted would be a voluminous work, too large for ready reference. In attempting brevity there is a possibility of omission.

Emergency powers relating to business granted the Executive prior to 1933

On October 5, 1939, the then Attorney General, Frank Murphy, directed the attention of the Senate to certain emergency powers granted to the Executive prior to 1933, and included those granted to the end of the Seventy-sixth Congress.

Act of June 19, 1912 (37 Stat. 138, sec. 2; 40 U. S. C. 325): The President is authorized to waive stipulations of the 8-hour law in public contracts "during time of war or a time when war is imminent."

Penalties are not to be imposed for violations which were "due to any extraordinary events or conditions of manufacture or to any emergency caused by fire, famine, or flood, by danger to life or to property, or by other extraordinary event or condition on account of which the President shall subsequently declare the violations to have been excusable."

Act of March 3, 1913 (37 Stat. 726; 40 U. S. C. 321): Employment of laborers and mechanics on public works for more than 8 hours a day is prohibited, "except in case of extraordinary emergency."

Act of June 3, 1916 (39 Stat. 204, sec. 86; 32 U. S. C. 39): Material of war, purchased by States from Army stores, may be requisitioned by the United States for use in the military service "in time of actual or threatened war."

Same (p. 213, sec. 120; 50 U. S. C. 80): The President is authorized, "in time of war or when war is imminent," to place orders through the heads of departments for arms or other required material with any factory, etc.; such orders are obligatory and must be given precedence over other orders at such times. Failure to give such precedence subjects the factory, etc., to immediate possession by the Government, and the manufacturer, etc., to imprisonment up to 3 years and a fine up to $50,000.

Same (p. 604; 10 U. S. C. 1362, 49:6 (8)): The President may demand, "in time of war or threatened war," that preference and precedence over all other traffic be given for the transportation of troops and war material.

Act of August 29, 1916 (39 Stat. 645; 10 U. S. C. 1361): The President is empowered to assume control of transportation systems for the transfer of troops, war material, etc. (See also act of Feb. 28, 1920; 41 Stat. 457 (c).)

Act of September 8, 1916 (39 Stat. 799, Nos. 805, 806; 15 U. S. C. 76, 77): The President may prohibit importation into the United States of articles from countries which prohibit, contrary to the law and practice of nations, the importation of any products of the United States.

The President may also withhold clearance of vessels of a belligerent discriminating unfairly against American vessels, etc., during a foreign war.

Act of March 4, 1917 (39 Stat. 1192; 40 U. S. C. 326): The President may suspend provisions of the 8-hour law as to contracts with the United States "in case of national emergency."

Act of March 4, 1917 (39 Stat. 1192–1193; 50 U. S. C. 82): The President is authorized, within certain appropriation limits, to procure ships and war material, commandeer factories, etc.

Same (p. 220, 50 U. S. C. 191–194): The Secretary of the Treasury may assume control, etc., over vessels, foreign or domestic, in United States ports.

Act of June 15, 1917 (40 Stat. 219, sec. 6, 220, sec. 1; 50 U. S. C. 36, 191): The President "in time of war or in case of national emergency" may designate places used for Army or Navy storage as places concerning which information is not to be published, in the interest of national defense; he may approve regulations concerning vessels in territorial waters, upon declaring that a national emergency exists "by reason of actual or threatened war, insurrection, or invasion, or disturbance or threatened disturbance of the international relations of the United States."

Espionage Act of June 15, 1917 (40 Stat. 221–223; 18 U. S. C. 25, 27, 31–38): The President is authorized: To withhold clearance of vessels, domestic or foreign, carrying arms, etc., to a belligerent; to detain privately owned armed vessels to prevent their use against a nation with which the United States is at peace; to prohibit sending out armed vessels for delivery to a belligerent, and to require manifests to be delivered before departure of vessels.

Act of July 2, 1917 (40 Stat. 241, ch 35; 50 U. S. C. 171): Immediate possession may be taken of land needed for military purposes at the commencement of condemnation proceedings "in time of war or the imminence thereof."

(Extended by act of April 11, 1918 (40 Stat. 518, ch. 51), to nitrate plants, etc.; and by act of July 9, 1918 (40 Stat. 888; 50 U. S. C. 172), to timber, etc.)

Act of October 6, 1917 (40 Stat. 385–389; 50 U. S. C. 121–133, 135–143): The manufacture, distribution, etc., of explosives in the United States is restricted.

Acts of October 6, 1917 (40 Stat. 394, ch. 95; 40 Stat. 422 No. 10 (1); 35 U. S. C. 42), as amended by the act of July 1, 1940 (54 Stat. 710, ch. 501; Public, No. 700, 76th Cong.): If it is found that the publication of an invention by the granting of a patent might be detrimental to the safety or defense of the United States, such grant may be withheld until the termination of the war.

Trading with the Enemy Act of October 6, 1917 (40 Stat. 411–426): Penalties are imposed for unlicensed (1) trading in the United States with an enemy or ally of an enemy; (2) transportation of an enemy to or from the United States; also, for sending out of, or receiving into, the United States any communication except in the regular course of the mail. Corporations are required to transmit to the Alien Property Custodian lists of stockholders believed to be enemies; the President may require property of enemies, etc., to be conveyed to the Alien Property Custodian (amended and broadened by act of November 4, 1918; 40 Stat. 1020); persons holding property, etc., for enemies are required to make report to the Alien Property Custodian; regulations are prescribed concerning applications for patents, etc., by enemies.

Act of July 15, 1918 (40 Stat. 901, sec. 4; 46 U. S. C. 835): It is declared unlawful, "when the United States is at war or during any national emergency, the existence of which is declared by proclamation o the President," without first obtaining the approval of the Shipping Board (now the U. S. Maritime Commission; see 49 stat. 2016, sec. 904; 46 U. S. C. Supp. 1243), to transfer any American ship to a foreign registry; to sell any American vessel to other than a citizen; to agree to construct vessels, etc., before the end of the war or emergency, for other than citizens; to vest in foreigners a controlling interest in shipyards, etc.; or to cause an undocumented American-built vessel to depart from a port of the United States.

Act of February 28, 1920 (41 Stat. 477 (15); 49 U. S. C. I (15): The Interstate Commerce Commission is to direct that preference be given to transportation of such traffic as the President deems essential to national defense and security "in time of war or threatened war."

Act of June 10, 1920 (41 Stat. 1072, sec. 16; 16 U. S. C. 809): The United States may take possession of any project licensed for the manufacture of nitrates, etc., when in the opinion of the President "the safety of the United States demands it."

Act of June 17, 1930 (46 Stat. 696, sec. 318; 19 U. S. C. 1318): "Whenever the President shall by proclamation declare an emergency to exist, by reason of a state of war or otherwise," he may authorize the Secretary of the Treasury to extend the time prescribed in the Tariff Act of 1930 for the performance of any act thereunder, and to permit the free importation of food, clothing, and medica supplies for use in emergency relief work.

Emergency powers relating to business granted by the Congress to the Executive from March 1933 to August 15, 1941

(The following references were compiled by the Legislative Reference Service of the Library of Congress, a bureau established by the Congress for legislative research.)

Act of March 9, 1933 (48 Stat. 1, sec. 2; 2, sec. 4; 12 U. S. C. 95a, 95): "During time of war or during any other period of national emergency declared by the President," he may regulate transactions in foreign exchange and the export, hoarding, melting, etc., of gold or silver coin, bullion, or currency, by any person subject to the jurisdiction of the United States; and "during such emergency period as the President of the United States by proclamation may prescribe," member banks of the Federal Reserve System are not to transact any banking business except in accordance with regulations of the Secretary of the Treasury approved by the President.

(Amended by joint resolution of May 7, 1940 (54 Stat. 179, ch. 185; Public Resolution No. 69, 76th Cong.), by extending the provision for regulation, etc., by the President to payments to banking institutions, and to transfers, withdrawals, or exports of or dealings in, evidences of indebtedness or ownership of property in which any foreign state, etc., has any interest.)

Act of May 12, 1933 (48 Stat. 51, sec. 43; 31 U. S. C. 821): Whenever the President finds that "the foreign commerce of the United States is adversely affected" by foreign-currency depreciation or action "is necessary in order to regulate and maintain the parity of currency issues of the United States," or "an economic emergency requires an expansion of credit," or an expansion of credit is necessary for the "stabilization at proper levels of the currencies of various governments," he is authorized (a) to conduct open-market operations in United States obligations through the Federal Reserve Board; (b) to direct the issuance of United States notes; or (c) to fix the weight of the dollar at not less than 50 percent of its present weight (amended by adding "nor * * * more than 60 percent" by act of Jan. 30, 1934, 48 Stat. 342, sec. 12).

(These powers of the President expire June 30, 1941, unless he "sooner declares the existing emergency ended"; act of July 6, 1939 (53 Stat. 998, ch. 260; 31 U. S. C. Supp. 821); but see H. R. 4646 (77th Cong.).)

Act of May 18, 1933 (48 Stat. 68, sec. 20; 16 U. S. C. 831s): The United States reserves the right, "in case of war or national emergency declared by Congress," to take possession of property described in the Tennessee Valley Authority Act, for the purpose of manufacturing explosives or for other war purposes.

Act of May 18, 1933 (48 Stat. 62 (m); 16 U. S. C. 831d (m)): Products of the Tennessee Valley Authority may be sold, for use outside the United States, to allies of the United States.

Act of June 19, 1934 (48 Stat. 1104, No. 606; 47 U. S. C. 606): The President may direct that "during the continuance of any war in which the United States is engaged" such communications as he deems essential to the national defense and security be given preference by any carrier subject to the Communications Act.

Act of June 19, 1934 (48 Stat. 1104, sec. 606; 47 U. S. C. 606): "Upon proclamation by the President that there exists war or a threat of war or a state of public peril or disaster or other national emergency, or in order to preserve the neutrality of the United States," he may suspend regulations of the Federal Communications Commission as to radio stations, or close or assume control of stations.

Act of June 27, 1934 (48 Stat. 1262 (f); 12 U. S. C. 1431): The Federal Home Loan Bank Board may require Federal home-loan banks to rediscount notes in certain cases "whenever in the judgment of at least four of its members an emergency exists."

Act of August 26, 1935 (49 Stat. 849 (c); 16 U. S. C. Supp. 824a): The Federal Power Commission may require certain temporary connections of facilities, etc., to prevent shortage of electric energy "during the continuance of any war in which the United States is engaged, or whenever the Commission determines that an emergency exists."

Act of August 30, 1935 (49 Stat. 1013, ch. 825, sec. 6; 40 U. S. C. Supp. 276a–5): The President may suspend certain provisions of law relating to wages of laborers, etc., under public building contracts, "in the event of a national emergency."

Act of April 16, 1936 (49 Stat. 1210 No. 4 (2) (e) (f); 46 U. S. C. Supp. 1305): Under contracts for the carriage of goods by sea, neither the carrier nor the ship is to be liable for loss or damage arising or resulting from an "act of war" or "act of public enemies."

Act of September 1, 1937 (50 Stat. 916, sec. 509; 7 U. S. C. Supp. 1179): "Whenever the President finds and proclaims that a national economic or other emergency exists with respect to sugar," he may suspend titles II (Quota provisions) and III (Conditional-payment provisions) of the Sugar Act of 1937.

Act of February 16, 1938 (52 Stat. 64, sec. 371 (b); 7 U. S. C. Supp. 1371): Whenever the Secretary of Agriculture has reason to believe that, because of "a national emergency," etc., the marketing quotas for corn, wheat, cotton, rice, or tobacco should be increased or terminated, he must cause an immediate investigation to determine whether such increase or termination is needed. (Amended by act of April 3, 1941 (55 Stat. —; Public Law 27, 77th Cong.), to include peanuts.)

Act of June 16, 1938 (52 Stat. 708, ch. 458, No. 3; 50 U. S. C. Supp. 93): A statutory limit r the educational orders (for the manufacture of special munitions, etc.) which may be awarded to any one actory is not applicable "during any war in which the United States is engaged."

Act of June 7, 1939 (53 Stat. 811, sec. 4; 50 U. S. C. Supp. 98c): Strategic and critical materials acquired to supply industrial, military, and naval needs of the country and to prevent the dependence of the United States upon foreign nations for such supplies are to be "used only upon the order of the President in time of war, or when he shall find that a national emergency exists with respect to national defense as a consequence of the threat of war."

Act of June 29, 1939 (53 Stat. 890): The President may make available certain funds

for the protection of American citizens in any foreign country, whenever he "shall find that a state of emergency exists endangering the lives" of such citizens.

Act of August 7, 1939 (53 Stat. 1254, sec. 1 (d); 1255, sec. 3 (a); 46 U. S. C. Supp. 1202, 1242): "Whenever the President shall proclaim that the security of the national defense makes it advisable, or during any national emergency declared by proclamation of the President," the United States Maritime Commission may terminate charters of vessels, and may requisition, etc., vessels of citizens for any period during such emergency.

Act of August 11, 1939 (53 Stat. 1418, ch. 701; 15 U. S. C. Supp. 713a–6): The Commodity Credit Corporation, in selling surplus agricultural commodities to foreign governments, must require the condition that these commodities are to be held in reserve for at least 5 years "unless a war or war emergency results in a serious interruption of normal supplies of such commodities."

Neutrality Act (joint resolution) of November 4, 1939 (54 Stat. 4–12; Public Res. No. 54, 76th Cong.; 22 U. S. C. Supp. 245j to 245j–19): The President or Congress may find that a state of war exists between foreign states; in such case arms, ammunition, and implements of war my be sold to the belligerents for cash, but American ships are prohibited from carrying arms, etc., to the ports of the belligerents, and from transporting supplies or passengers to the ports of the belligerents, except to certain ports which are not in the European war zone; exportation or transportation of any articles or materials to the belligerents prohibited, until all right, title, and interest therein shall have been transferred to some foreign government, agency, or national, except that private shipments to ports within the exempted areas, and inland transportation to Canada, can be made without transfer of title.

The President may define combat areas around belligerent or neutral ports into which American citizens or vessels must not go; the use of American ports by submarines or armed merchant vessels of the belligerents is restricted; vessels are required to give bond not to make deliveries to belligerent ships; restrictions are placed on travel by citizens of the United States on vessels of belligerents, on arming of American vessels, and on dealing in financial transactions with belligerents.

Provision is made for regulation of the munitions industry by the National Munitions Control Board. (For act of June 29, 1940, see No. 169 below.)

Navy Department Appropriation Act of June 11, 1940 (54 Stat. 293, 297; Public, No. 588): The Secretary of the Navy may exceed the statutory limit, under the Bureau of Engineering and Bureau of Construction and Repair (consolidated into Bureau of Ships by act of June 20, 1940, 54 Stat. 492–493; Public, No. 644, 76th Cong.), on repairs and alterations to vessels commissioned or converted "to meet the existing emergency."

Thirty-four million dollars is appropriated as an emergency fund to enable the President to "provide for emergencies affecting the national security and defense," including purposes specified under the Navy Department Appropriation Acts of 1940 and 1941, the furnishing of Government-owned facilities at privately owned plants, the training of civilian personnel necessary for the protection of essential equipment, etc., and the procurement of strategic and critical materials.

Act of June 14, 1940 (54 Stat. 395, sec. 10; Public, No. 629): Provisions of the act of April 25, 1939 (53 Stat. 591), authorizing contracts upon a cost-plus-a-fixed-fee basis in certain cases, are to be applicable to naval public works and utilities projects in the fourteenth naval district (at Pearl Harbor, Hawaii) "during the period of any national emergency declared by the President to exist."

Act of June 28, 1940 (54 Stat. 676–680; Public, No. 671): Whenever the President deems it to be in the best interests of national defense, "during the national emergency declared by the President on September 8, 1939, to exist": (a) The Secretary of the Navy (or the Secretary of the Treasury, in the case of Coast Guard contracts) may make advance payments to contractors up to 30 percent of the contract prices; (b) the Secretary of the Navy may negotiate contracts for the acquisition, alteration, etc., of naval vessels or aircraft, without competition; and deliveries of materials authorized under this act must be given priority over all deliveries for private account or for export.

(Amended by the act of May 31, 1941 (55 Stat. —; Public, No. 89, 77th Cong.), which extends the priority provision for deliveries of material to deliveries under (1) contracts for the government of any country whose defense the President deems vital to the defense of the United States under the Lease Lend Act; (2) contracts which the President deems necessary to promote the defense of the United States; and (3) subcontracts which the President deems necessary to the fulfillment of any contracts specified in the act.)

Certain restrictions on contracts for aircraft for the Navy are limited to contracts where the award exceeds $25,000 "during the period of the national emergency declared by the President on September 8, 1939, to exist."

The Secretary of War or the Secretary of the Navy may, under regulations prescribed by the President, certify to the Commissioner of Internal Revenue as to the cost, etc., of additional equipment needed under contracts for construction, etc., of vessels and aircraft "during the national emergency declared by the President on September 8, 1939, to exist."

The regular working hours of the Navy Department and the Coast Guard are to be 8 hours a day or 40 hours a week "during the period of national emergency declared by the President on September 8, 1939, to exist," notwithstanding any other provisions of law; but these hours may be exceeded where additional employees cannot be obtained to meet the exigencies of the situation.

The President may suspend, for the War and Navy Departments and for the Coast Guard, "during the period of the national emergency declared by him on September 8, 1939, to exist," provisions of the act of March 3, 1931, authorizing Saturday half holidays for Government employees.

Provisions of law prohibiting more than 8 hours' labor a day of persons employed under Army, Navy, and Coast Guard contracts are to be suspended "during the national emergency declared by the President on September 8, 1939, to exist."

The Secretary of War or the Secretary of the Navy may decide that the removal of civil-service employees is warranted by the demands of national security "during the national emergency declared by the President on September 8, 1939, to exist."

The Secretary of the Navy or the Secretary of the Treasury may decide which are the employees whose services "cannot be spared without detriment to the national defense" and who may, "during the period of the national emergency declared by the President on September 8, 1939, to exist," forego their vacations and receive double pay instead.

Monetary limitations on payment out of Navy Department appropriations for certain Navy employees are to be suspended "during the limited national emergency declared by the President on September 8, 1939, to exist."

(For act of June 29, 1940, see No. 169, below.)

Act of June 29, 1940 (54 Stat. 689–691; Public, No. 677, 76th Cong.): The United States Maritime Commission may insure water-borne commerce of the United States against war risks, etc., whenever the Commission feels that adequate insurance cannot be obtained on reasonable terms from companies authorized to do insurance business in a State.

The property which may be insured includes: (1) American vessels, their cargoes, disbursements, freight and passage moneys, and personal effects of masters, officers, and crews; (2) commercial vessels owned or controlled by the United States, Government cargoes, disbursements, freight and passage moneys, etc.

(This act is operative until March 10, 1942, unless the President by proclamation declares "that the extraordinary condition upon which it is predicated is passed.")

Act of July 2, 1940 (54 Stat. 714, secs. 4, 5; Public, No. 703): The regular working hours of laborers and mechanics employed by the War Department in the manufacture or production of military equipment, etc., are to be 8 hours a day or 40 hours a week "during the period of any national emergency declared by the President"; overtime is to be paid for as time and a half.

The President may expend up to $66,000,000 (authorized herein) in providing for "emergencies affecting the national security and defense," including purposes specified under the War Department Appropriation Acts for 1940 and 1941, the furnishing of Government-owned facilities at privately owned plants, the training of civilian personnel necessary for the protection of essential equipment, etc., and the procurement of strategic and critical materials. (This $66,000,000 was appropriated by the Military Appropriation Act of June 13, 1940 (54 Stat. 377; Public, No. 611).)

Title III of Revenue Act of October 8, 1940 (54 Stat. 998–1003; Public, No. 801): Taxpayers may be allowed to amortize in 60 months the cost of an "emergency facility" (certified by the Advisory Commission to the Council of National Defense and the Secretary of War or the Secretary of the Navy as "necessary in the interest of national defense during the emergency period") completed after June 10, 1940, during an emergency period beginning June 10, 1940, and ending on the date when the President proclaims the facility is no longer required in the interest of national defense. (Amended by joint resolution of January 31, 1941 (Public Law No. 3, 77th Cong.).)

Act of October 9, 1940 (54 Stat. 1029, ch. 777, sec. 9; Public, No. 809): The President may accelerate, "during any national emergency" proclaimed by him, the effective date of the law relating to the carriage of dangerous cargoes on vessels, etc.

Act of October 14, 1940 (54 Stat. 1125–1128; Public, No. 849): The President may determine in what areas a shortage of housing exists or impends which would impede national-defense activities, whereupon housing is to be provided by the Federal Works Administration. This authority is to terminate when the President declares "that the emergency declared by him on September 8, 1939, to exist has ceased to exist."

Act of October 21, 1940 (54 Stat. 1205, ch. 903; Public, No. 873): Work in excess of 40 hours a week is to be paid for at not less than one and one-half times the regular rate, for certain employees of the field services of the War Department and of the Panama Canal "during the national emergency declared by the President on September 8, 1939, to exist," and until June 30, 1942, "unless the Congress shall otherwise provide."

Lend Lease Act of March 11, 1941 (55 Stat. —; Public Law No. 11, 77th Cong.): The President may, for the benefit of any foreign nation whose defense he "deems vital to the defense of the United States," authorize Government departments or agencies to (1) manufacture; (2) sell, lend, or lease, up to the value of $1,300,000,000; (3) outfit, etc.; and (4) release for export, defense articles upon conditions satisfactory to him, when

he deems such action to be in the interest of national defense.

The Secretaries of War and Navy are authorized to acquire arms, ammunition, etc., produced abroad, if the President deems such acquisition "necessary in the interests of the defense of the United States."

(To enable the President to carry out this act, $7,000,000,000 was appropriated by the act of March 27, 1941 (55 Stat. —; Public Law No. 23, 77th Cong.).)

Act of March 28, 1941 (55 Stat. —; Public Law No. 24, sec. 603 (a), 77th Cong.): After July 1, 1942, "or after such earlier date as the emergency, declared by the President on September 8, 1939, to exist, has by his declaration ceased to exist," the Federal Housing Administrator is not to insure mortgages under section 603 of the National Housing Act, which provides for insurance of mortgages on property in an area in which the President finds that there is a shortage of housing detrimental to national defense.

Act of April 3, 1941 (55 Stat. 92, No. 5; Public Law No. 27): Secretary of Agriculture authorized to increase or terminate marketing quotas for peanuts.

Act of May 2, 1941 (55 Stat. —; Public Law 46, 77th Cong.): Whenever the President deems it to be in the best interests of national commerce and defense "during the national emergency declared by the President on September 8, 1939, to exist, but not after June 30, 1942," the United States Maritime Commission may:

(1) negotiate contracts (without advertising or competitive bidding) for the acquisition, reconstruction, etc., of vessels, including plans, spare parts and equipment, subject to the overtime-compensation provisions of the act of October 10, 1940 (54 Stat. 1092), and not on a cost-plus-a-percentage-of-cost system (priority is to be given in the furnishing of materials and performance of work under such contracts);

(2) charter vessels, for operation in foreign commerce, to private citizen operators; and

(3) prescribe rules and regulations for working hours and overtime compensation of naval architects, marine engineers, etc., engaged in its ship-construction program.

Act of May 31, 1941 (55 Stat. 236, ch. 157; Public Law 89). Establishment of priorities for defense contracts.

Act of June 6, 1941 (55 Stat. — No. 1, 3; Public Law 101): The President may take over foreign merchant vessels lying idle in waters within the jurisdiction of the United States, including the Philippine Islands and the Canal Zone, which are necessary to the national defense, "during the existence of the national emergency declared by the President on September 8, 1939, to exist, but not after June 30, 1942."

The United States Maritime Commission may, "during the national emergency declared by the President on September 8, 1939, to exist, but not after June 30, 1942," whenever it finds that additional vessels are needed for transportation of foreign commerce of the United States or of commodities essential to the national defense, (1) charter vessels of a foreign country on a time-charter or bare-boat basis and (2) charter vessels chartered by the Commission to a private operator, a citizen of the United States, or to any department or agency of the United States, on a time-charter or bare-boat basis, for use in foreign trade or service, etc.

Act of June 21, 1941 (55 Stat. —, ch. 210, No. 1; Public Law 114). Application of provisions restricting entry into and departure from the United States.

Act of June 28, 1941 (55 Stat. —; Public Law 135, p. 8). Expenditure of up to $500,000 for protection of American citizens abroad.

Act of June 28, 1941 (55 Stat. —, No. 3 (No. 201), Public Law 137). Approval of construction by Federal Works Administrator of public works needed in connection with national-defense activities.

Act of June 30, 1941 (55 Stat. —, No. 7; Public Law 139). Practically same as act of May 29, 1941, above.

Act of June 30, 1941 (55 Stat. —, ch. 265; Public Law 142). Powers relating to stabilization fund and change of weight of the dollar continued to June 30, 1943.

Act of July 1, 1941 (55 Stat. —; Public Law 146). Expenditure of up to $360,000 to meet emergencies caused by epidemics of disease.

Joint Resolution of July 1, 1941 (55 Stat. —; Public Law 143). Various powers are granted to the Federal Works Agency, etc., in relation to the expenditure of appropriations for emergency relief.

Act of July 1, 1941 (55 Stat. —; Public Law 144, p. 12). Secretary of Agriculture authorized to make expenditures (indefinite in amount) to meet emergencies arising out of epidemics of diseases of animals.

Act of July 1, 1941 (55 Stat. —, ch. 270 No. 4; Public Law 147). Secretary of Agriculture authorized to use funds of Commodity Credit Corporation to make loans on nonbasic agricultural commodities, up to 85 percent of "the parity or comparable price therefor."

Act of July 3, 1941 (55 Stat., ch. 276; Public 150, p. 6). Appropriation of $1,940,000 for "emergency health and sanitation activities (national defense)," under Public Health Service.

Act of July 3, 1941 (55 Stat. —, ch. 276; Public Law 153). Secretary of Commerce authorized to permit load lines for vessels, higher than those established under the International Treaty of 1930.

Act of July 11, 1941 (55 Stat. — No. 3; Public Law 163). Secretary of the Treasury authorized to negotiate contracts for construction, etc., of vessels for the Coast Guard with priority privileges.

Act of July 14, 1941 (55 Stat. —; Public Law 173). Authorization to Maritime Commission to issue warrants to vessels, giving priority in use of facilities for loading, discharging, etc.

Act of July 30, 1941 (55 Stat. —; Public Law 197). Authorization of construction of interstate petroleum pipe lines.

The above was prepared for ready reference in one document for my own convenience, with the additional thought it may prove of assistance to others.

Sincerely,

HARRY B. HAWES.

WASHINGTON, D. C., *August 15, 1941.*

St. Lawrence Power Development Needed for National Defense, Industrial, and Other Purposes

---

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

LETTER OF LELAND OLDS, CHAIRMAN OF THE FEDERAL POWER COMMISSION, ON POWER SHORTAGE IN THE UNITED STATES

Mr. CULKIN. Mr. Speaker, for the past several months this publication has been filled with statements pro and con on the merits of the St. Lawrence seaway development. These have included the unfounded and selfish fears of certain States and localities which continue to be vocal on the transportation phases of the project. It is natural that these protesting groups should wish to continue to be bottlenecks in our transportation system. They desire to continue taking unjustified toll of all the citizens of the United States, both rich and poor alike. Under these circumstances the navigation question will continue to be somewhat mooted, but I am confident that Congress will see the reason for this antiattitude and give all the people of the United States their place in the transportation sun.

POWER DEVELOPMENT

On this phase of the development no confusion exists. No authoritative voice has denied the crying need for this power development. It is noteworthy that such distinguished opponents of the seaway as Mr. BEITER, of New York, and Mr. Chauncey Hamlin, chairman of the Niagara Frontier Planning Board, are actually for the power development. Even the railroads and their colleagues, the brotherhoods, who are attempting to bottle up the Great Lakes area and take unlimited toll of the American people in the transportation field, have seen the light on the power phases of this development and do not oppose it. Much to the credit of the utilities, who are technically familiar with this proposition, is the fact that not one leader in that field has appeared before the Rivers and Harbors Committee and opposed the development of the power phases.

Now comes Leland Olds, the able chairman of the Federal Power Commission, who clarifies the situation and proves beyond peradventure, over his own signature, that there is a great and growing shortage in the supply of generating capacity in the United States. Mr. Olds, be it said, is not only realistic but is a technician in this field. His letter is a call to arms on this question. He calls for the development of the St. Lawrence and states: "Failure to provide for St. Lawrence power will leave a bad gap in the Nation's defense power supply."

During my service here I have contacted a good many men, in and out of the House, who have had vision and foresight and whose first interest was the welfare of America. Mr. Olds is a real career man and will always be outstanding in this field. He brings to his office a high sense of public duty, splendid technical intelligence, and his conclusions on the Nation's needs for electricity are complete and authoritative.

Pursuant to the permission of the House I append hereto a letter from Mr. Olds to Judge MANSFIELD, chairman of the Rivers and Harbors Committee, dated September 25, 1941. I recommend the careful reading of this letter by every Member of the House:

FEDERAL POWER COMMISSION,
Washington, September 25, 1941.

Hon. JOSEPH J. MANSFIELD,
Chairman, Rivers and Harbors Committee,
United States House of Representatives,
Washington, D. C.

DEAR MR. MANSFIELD: In my testimony before your committee and in our memorandum of July 18, entitled "Coal Consumption and the St. Lawrence Power Project", we

stressed the importance of St Lawrence power to the defense program. The Federal Power Commission's national defense power program for 1943–1946, released with the President's consent, further confirms the defense urgency of this project.

The Commission's program shows that the country will need all of the new electric generating capacity, both steam and hydro, that the equipment manufacturers can produce if it is to provide adequately for the defense program. It calls for the installation of 13,888,000 kilowatts in addition to the 7,799,315 kilowatts of new capacity on order for installation after July 1, 1941. The St. Lawrence power project is included in the list of essential hydroelectric projects to come in during 1944 and 1945.

Any failure to develop those projects which call for the production of new hydroelectric generating facilities will defeat that program. There can be no substitute but severe curtailment of the use of power.

Recent conferences indicate that the upState New York area is today definitely short of power for the expansion of essential defense production. Defense expenditures at the rate of $3,000,000,000 a month for the entire country will mean a 1945 demand in that area estimated at 3,505,000 kilowatts. Without the 820,000 kilowatts of St. Lawrence power only 2,291,000 kilowatts of capacity, after allowance for the minimum reserves, is at present scheduled to meet this demand. This would mean a shortage of 1,214,000 kilowatts with a resulting cramping of the defense program.

Even with St. Lawrence power the area will still be 394,000 kilowatts short of the needed capacity unless still further additions to generating capacity are planned. And if alternative steam capacity is substituted, it will have the effect of depriving other essential war-material areas of necessary capacity because the plan calls upon the equipment manufacturers for 100 percent of their capacity to produce.

In other words, failure to provide for St. Lawrence power will leave a bad gap in the Nation's defense power supply.

A glance at the program indicates that the hydroelectric energy to be obtained from the St. Lawrence will supplement, not compete with, coal-generated power. In the New York-New England region the program, including new generating units now on order, calls for an increase of 2,327,500 kilowatts in steam capacity, or nearly three times as much in steam as the additional power which the St. Lawrence will provide. For the country as a whole, 14,319,500 kilowatts, or fully two-thirds of the total new capacity, will be fuel burning. That represents the maximum amount of steam capacity which the equipment manufacturers can provide.

The new steam installations recommended in the defense power program, after allowing for use of oil and gas and for partial displacement of older and less efficient capacity, will create a demand for approximately 10,000,000 more tons of coal annually, representing an increase of about 20 percent over the exceptionally large use of coal in the country's central electric stations in 1940 and 33 percent over the corresponding use in 1939.

Under present chaotic world conditions, of course, it is impossible to forecast more than a few years ahead. The Commission's proposed program is based on the assumption that the all-out effort will continue through 1946, which from a military standpoint is the only safe assumption. Developments of the next few years may slow the program up or even force it to accelerate. It is important to bear in mind however, that even under normal peacetime trends the capacity now projected by the Commission's program would be needed in the reasonably near future. The defense plan entails only a quickening of this normally rapid uptrend.

The Commission concludes that it would be a grave error in military planning to delay immediate construction of the St. Lawrence River power project. It is fallacious, moreover, to consider this project and coal-burning plants as rivals. Both are needed. That is the simple but inescapable fact.

Sincerely,

LELAND OLDS, *Chairman.*

Mr. Phillip J. Gallagher, Postmaster of Woburn, Mass.

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

LETTER WRITTEN BY WILLIAM E. KANE, MAYOR OF WOBURN, MASS., AND AN ARTICLE BY GEORGE T. CONTALONIS

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present a letter written by the Honorable William E. Kane, mayor of the city of Woburn, Mass., to the president of the National Association of Postmasters, which met recently in annual convention at Boston.

Mayor Kane not only urged the selection of his city as the site of the next convention, but he called particular attention to the honors the association has bestowed upon Postmaster Phillip J. Gallagher, of Woburn. Mr. Gallagher has served as national vice president of the National Association of Postmasters, and at the recent convention he was elected unanimously as its president for the ensuing year. He richly deserves the honor, for he has made an especially fine postmaster for Woburn. His courtesy, his progressiveness, and his constant efforts to please and serve his public well have earned him the respect and acclaim of the citizens of that city. Postmaster Gallagher has been tireless in his efforts while vice president of the association in improving the whole postmaster service of the United States. The high regard in which he is held by the postmasters of the Nation is indicated by his election to the high position of president of the National Association of Postmasters. To show in what esteem he is held by the men who work under him, I submit an article written by Mr. George T. Contalonis, a letter carrier at the Woburn Post Office. Mayor Kane's letter and the article follow:

WOBURN, MASS., *September 17, 1941.*

MICHAEL J. O'ROURKE,
President, National Association of Postmasters,
Convention Headquarters, Statler Hotel, Boston, Mass.

DEAR MR. O'ROURKE: From earliest colonial days sons and daughters of Woburn have demonstrated ability for leadership and excelled in the sciences, law, medicine, athletic field, and the armed forces of the United States.

Many honors have come to Woburn in recent years by the rise of Woburn's sons and daughters to positions of city, State, and national importance.

Your organization has recognized the ability and quality of leadership of another son of Woburn when you elected him to a position of trust, namely, one of your vice presidents.

Next year the city of Woburn will celebrate the tercentenary of its founding as a unit of government. I am sure that every citizen of Woburn joins with me in the hope that your organization in convention assembled at Boston will promote our native son to the presidency of your great organization.

This would be most timely and appropriate and bring further honor to our city as another local son would join with many other citizens of our city who have received similar honor and will join in our local celebration of 1942.

Qualified by a hard-earned education and experienced as a city official and member of the bar, in behalf of the citizens of Woburn who join with me in the thought, your organization can make no better choice than to elect our postmaster, Phillip J. Gallagher, to the highest office in your organization, an honor which will be of great significance to our city and sincerely appreciated by our distinguished citizens.

Very truly yours,

WILLIAM E. KANE, *Mayor.*

(By George T. Contalonis, letter carrier, Woburn Post Office, Woburn, Mass.)

The election of Hon. Phillip J. Gallagher, of Woburn, Mass., as president of the National Association of Postmasters of America at the recent convention held at Boston, Mass., brought national honors again to the city of Woburn, Mass. A few years back Hon. Daniel J. Doherty served the American Legion as its national commander. Within a few years two illustrious sons have placed a city of a little more than 19,000 persons in the national limelight.

As a regular letter carrier at the Woburn post office I take this opportunity to express my sincere appreciation to the postmasters of this wonderful organization for electing to such a high office a man who worked his way up the ladder through many years of hard work and perseverance. Although a poor boy Mr. Gallagher went through Woburn High School and studied nights after work at the Suffolk Law School and was admitted to the Massachusetts bar. He practiced his profession honorably and successfully, and was later appointed postmaster by that great humanitarian, President Franklin D. Roosevelt.

His conscientious efforts in behalf of your organization were recognized in his various promotions to office. After 7 years of phenominal service in the postal department President Gallagher's ability was recognized by his promotion to the highest office within your power. Under him your organization will experience a material increase in membership and thereby a bigger and better organization.

The people of my city are proud of your new president as are the members of your association. He has demonstrated that under our form of Government a poor boy has an equal opportunity to succeed with the rich boy in this great land of ours. Unknown to the members of your organization 7 years ago he has since, through excellent organization work, become a national figure in postal circles.

We, who constitute the personnel at the Woburn post office, are elated that we are serving our Government as postal employees under a postmaster who is the new president of the National Association of Postmasters of America.

It is a signal honor to have the privilege of working under the supervision of a man

who has worked hard all his life for a living and knows the amount of work to expect from the personnel. I am glad to know that our postmaster will be the guiding influence of the organization during this year and will exert all his efforts to improve in any way possible our wonderful postal service. You have chosen a man who will merit the confidence you have reposed in him. It is your duty to join with him and cooperate to the fullest extent in all his undertakings which have a material bearing on the preservation of our great country. Let us all cooperate during this year whether we be postmasters or letter carriers or clerks, as members of that great family of postal workers under President Philip J. Gallagher, and thereby insure the success of the postal department, which is such an important Federal agency in our republican form of Government that guarantees us life, liberty, and the pursuit of happiness.

Should River and Harbor Legislation Be Subjected to the Time-Worn Pork-Barrel Charge?

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

Mr. MANSFIELD. Mr. Speaker, it is unfortunate that there is some misunderstanding with respect to pending river and harbor legislation, as indicated by premature remarks in the CONGRESSIONAL RECORD. I refer to the speech of the gentleman from Missouri [Mr. PLOESER] appearing in the CONGRESSIONAL RECORD of September 23, 1941. The gentleman apparently seeks to discredit river and harbor legislation generally by criticizing projects that have been proposed for the bill, which, as yet, is only in its nebulous stage.

The gentleman says the bill is a pork-barrel bill. There is nothing new in this contention. The approximate $600,000,000 expended upon the waterways adjacent to St. Louis since I have been associated with river and harbor legislation has been met with this same time-worn charge. The railroad propagandists coined that expression more than 40 years ago, expecting to use it in every instance where they were at a loss to find an intelligent reason for opposing expenditures on the Mississippi, the Missouri, and the Illinois.

The list of projects the gentleman referred to does not purport to be complete, neither have the proofs been read for correction. After the committee takes action on all the projects before it, and necessary corrections made, a final copy will be printed, and made available to all interested parties.

This tentative and incomplete list of projects has not been passed out by a committee clerk as stated in the gentleman's speech. I am advised that only a few members of the committee have as yet called for it, and only a small number of persons have been given copies. These persons were active in opposition to some of the projects embraced in the bill.

The gentleman, in his speech, says:

> In an apparent effort to counteract a prevailing belief in the public mind that this bill will be heavily loaded with "pork," one of the clerks in the Rivers and Harbors Committee has been passing out copies of a pamphlet entitled "Committee Print, September 17, 1941."
>
> The estimated cost to the United States of the projects heretofore adopted and those to be considered is as follows:

The quotation shows upon its face that it was a committee print. It was not public. It was for the information and guidance of the committee when they are to meet in executive session to compile the bill. Mr. McGann, clerk of the committee, prepared this tentative advisory list, following his usual custom of 42 years. This is the first time this prudent course has ever been publicly criticized.

During the 25 years that I have been in Congress it has been customary for the confidential nature of committee prints to be respected. I regret exceedingly that the gentleman has seen fit to violate the unwritten law on this subject and to place in the CONGRESSIONAL RECORD confidential matters of the Committee on Rivers and Harbors.

The gentleman in his speech says:

> I have quoted these figures with the word "plus," because there are a number of rivers and harbors projects which are scheduled to be included in the omnibus rivers and harbors bill which are not included in the committee print. The Trinity River project in Texas has been approved by the Army engineers at an estimated cost of $118,000,000. This project has support in the administration and is expected to be included in the omnibus bill, and yet by some oversight the Trinity River project was not included.

The gentleman seems to leave the impression that there is something sinister in the fact that the Trinity River is not listed in the tentative list of cost estimates approved by the committee. He facetiously says it is an oversight. I will say that the clerk of the Rivers and Harbors Committee does not transact business in the manner indicated by this inference. No report whatever has been referred to the committee on the Trinity River, and the CONGRESSIONAL RECORD fails to show that any such report has ever been received from the Secretary of War.

The gentleman from Missouri further says in his speech:

> The Rivers and Harbors Committee is still considering and approving projects for the omnibus bill which are not listed. On September 19, 1941, the committee heard testimony and approved a project for locks and dams on the Neches River in Texas at a cost of $23,000,000. This is not included in the committee print.

The gentleman's speech shows that the list of projects he copied from was dated September 17. The paragraph of his speech here copied shows that the hearing on the Neches River was held on September 19, and he calls attention to the fact that the action taken was not noted in the list printed 2 days before. Of course, one paragraph of his speech answers the other, and that should clear the clerk and chairman of the committee of any ulterior motive.

The gentleman was in error in saying the committee approved this project. Additional hearings have been held since the one he refers to, and no executive session has yet been held to take action. For his information I will say that no locks are embraced in the proposal, though two storage dams for impounding the flood waters are recommended as a necessary part of the development.

The tonnage on this waterway ranges from 39,000,000 to 41,000,000 tons per annum, which is not exceeded by any other port except New York and Duluth. The floods have been very destructive in the ship channel, causing many groundings and collisions of ships carrying highly inflammable cargoes, now urgent in defense operations.

Seven among the largest oil refineries in this country are located on this ship channel, including the Gulf and the Texas companies, whose filling stations are located in practically every city in the United States. They are also furnishing a large tonnage of necessary war materials to Britain.

The Navy and Maritime Commission are now carrying on extensive shipbuilding operations there, which are in great danger from the ravenous floods. Largely in the cause of national defense, 12,770 ocean-going ships passed in and out of this waterway the past year, a record exceeded only by the great port of New York. This being one of the few projects named by the gentleman from Missouri in his general charge of pork barrel, I will be glad if he will move to strike it out of the bill on that ground, and to hear the reply of the eloquent gentleman from Texas [Mr. DIES], in whose district the project is located.

During the summer months from time to time, under leave to extend my remarks, I placed in the RECORD remarks on waterway improvements by European countries for military preparedness which gave factual evidence of the high value placed on these improvements by the old countries in a war emergency. In fact, it was our experience with an overburdened and clogged transport system during the first World War that led us to hasten improvements and extend use of our own waterways. I mention these facts because any river and harbor bill that results from the present deliberations of the Rivers and Harbors Committee will include items that have important and immediate value to our military preparedness and defense program. For example, the most critical and troublesome section of the navigable channel of the Mississippi River between the ocean port of New Orleans and Minneapolis, as well as Chicago is the Chain of Rocks near St. Louis. It is expected that an item to remedy this advense situation will be included in any bill reported out by the committee. At a time when the movement of defense commodities on the Mississippi River has increased from 50 to 200 percent, improvement of the Chain of Rocks section should be made without delay in order that through commerce may not be hindered. The gentleman from Missouri

now intimates that he will vote against the bill containing this project for the reason that in his opinion it is a pork-barrel bill.

Forty years ago Congress passed a law prescribing the strictest possible provisions with reference to surveys and investigations of river and harbor projects. The Committee on Rivers and Harbors do not consider or report any project for enactment unless it has the approval of the Army engineers as required by that law. Every project that has been tentatively approved by the committee to be embraced in the bill now under consideration, has had the unqualified approval of the engineers. If Congress should take a view different from that of the engineers, it can very easily strike from the bill any project to which the majority objects. That being the case, how can anyone reasonably make the charge that a river and harbor bill is a pork-barrel bill?

The bill now in the process of the making contains a large number of projects which I assume will not be doubted by anyone as being urgently necessary for our national defense. I shall take no chance of imperiling the safety of our Nation.

In these times when unity is necessary for the safety of our country, we must not let our personal grievances lead us astray from our prime duties. One should be careful to avoid accepting and repeating incorrect information that may make him unwittingly the tool of the all-too-numerous malcontents, who are taking the chance of sabotaging our country's safety by inconsiderate criticism. Each and every one of us is either the man behind the gun or the man behind the man behind the gun.

My particular function is to be sure that nothing is left undone that should be done to keep our waterways capable of continuously transporting materials and supplies for the defense program. Let us not be diverted from the beaten path. The present Government of this great Nation is being led and directed with foresight, wisdom, and courage to the end that the ways of life and freedom which our forefathers fought for and saved for us may be preserved for our children's children for many generations to come.

Snake River Project

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EXCERPTS FROM HEARINGS BEFORE RIVERS AND HARBORS COMMITTEE

Mr. PITTENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts taken from the hearings before the Rivers and Harbors Committee of the House on September 22, when the committee had under consideration a project for river development and improvement. Your attention is called to this testimony in view of many misleading statements about the omnibus river and harbor bill:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RIVERS AND HARBORS,
Monday, September 22, 1941.

The committee met at 10:30 a. m., Hon. JOSEPH J. MANSFIELD (chairman) presiding.

The CHAIRMAN. The committee will please come to order.

We have before us this morning the project for the Snake River. General Robins, are you going to tell us about the Snake River project?

General ROBINS. Yes, sir.

Here follows testimony of General Robins:

Mr. PITTENGER. How many years have the people been agitating this project?

General ROBINS. For 40 years, to my knowledge.

Mr. PITTENGER. This is another of the internal improvements that will promote the welfare of this country that has been neglected year after year by the Congress of the United States.

While we have been fiddling away with no cooperation on the part of Congress with the War Department engineers, with no plan for developing our natural resources, the countries of Europe have been going ahead and developing their rivers and other projects in connection with navigable waters, lakes, and streams; is that right?

General ROBINS. That is right. This is one of the strategic water routes that has been neglected.

Mr. PITTENGER. Do you know of any opposition to it in particular?

General ROBINS. No, sir. Of course, it is one of these cases where you cannot show commerce at the present date in the usual way that commerce is shown to justify a project. But you do have a country there that is full of mineral resources, and nobody knows just how great they are. But to develop them you have to have this cheaper water transportation, and they will not be developed unless you have it.

Mr. PITTENGER. It is one of those things to be done to develop the country.

General ROBINS. Yes; and you have to justify it on the potential result in the development of these minerals. That country is so wild that nobody has settled there, but it is known that there are valuable deposits there.

Mr. PITTENGER. The experience of the War Department engineers has been that when such projects, such as the building of dams for the improvement of navigation, have been carried out in the past, commerce naturally adapts itself to them.

General ROBINS. Yes, sir.

* * * * *

Mr. PITTENGER. I want to clear up something else here. There has been a lot of publicity in the newspapers and the statement circulated by selfish interests to the effect that this particular omnibus bill which the committee will report out is a pork-barrel proposition.

I would like for the record to show, as far as you are able to give it to us, the facts as to what you know in reference to omnibus bills and the method of procedure concerning bills which come from the Committee on Rivers and Harbors. You have been appearing before this committee for many years.

General ROBINS. Yes, sir.

Mr. PITTENGER. Is it not a fact that an omnibus bill has been the regular type of bill which has been reported out by this committee, as the result largely, if not almost entirely, of the testimony of the War Department engineers, from one session of Congress to the next?

General ROBINS. That has been done for the last 25 or 30 years. Every 2 or 3 years Congress passes an authorization bill, or a so-called omnibus bill, which merely authorizes the projects. It does not appropriate any money.

After a project is authorized the Engineer Department has to go to the Bureau of the Budget and ask for money to do any work on any of the projects authorized in the so-called omnibus bill.

Mr. PITTENGER. The purpose of the bill is to give a legal status to the project, so that it is provided by the law of the land that the projects are to be constructed.

General ROBINS. Yes, sir. The omnibus bill merely legalizes the results of planning for these improvements which Congress has authorized to be done.

Congress authorizes us to make investigations, surveys, and reports on all of these proposed improvements. We do that and submit the reports to Congress. Then the adoption of these plans which have been made by the direction of Congress is legalized in an omnibus bill.

Mr. PITTENGER. The improvement of all of the rivers and little lakes and streams of the United States has been under the absolute and sole jurisdiction of the War Department engineers——

General ROBINS. For over 100 years.

Mr. PITTENGER. So when people talk about the pending omnibus bill being a pork barrel, what you have said is about all the pork there is in it; there is not any.

General ROBINS. There is absolutely no pork in the bill. Congress is acting on the best advice they can get and on reports that are put out with the entire facts before them.

Mr. ANGELL. Mr. Chairman, I think it would be well if the General would tell us, briefly, what the procedure is in approving these projects; how these projects receive the approval of the War Department engineers.

General ROBINS. The Army engineers are forbidden by law to originate or initiate any investigation, survey, or study unless authorized to do it by Congress. When Congress authorizes an investigation, the duty of making a preliminary examination is assigned to the division of district engineers in the field.

The district engineer starts out by holding public hearings and finding out what the people want, and the people come in and make all of the presentations they want as to what their desires are.

Then the district engineer makes a study of the situation, and if he finds from a preliminary study that the project appears to be economically sound, he recommends a survey and his report comes through the division engineer to the Board of Engineers for Rivers and Harbors, and if the Board agrees with the district engineer, the survey is ordered.

However, if the district engineer finds, on the face of it, that the project is no good, he recommends that no survey be made, and the report is sent to Congress with that recommendation.

When a survey is ordered it goes back to the field, and whatever engineering is necessary to be done is done by the United States Army engineers, and to establish definitely the economic status another public hearing is held.

Then the reports are sent back to the Chief of Engineers and referred to the Board of Engineers for Rivers and Harbors. Their report goes back to the Chief of Engineers and he sends the report, with whatever comments or recommendations he desires to make, to Congress.

Mr. ANGELL. How many are on that board?

General ROBINS. Seven.

Mr. ANGELL. And they are high-ranking engineer officers of the Army, graduates of West Point?

General ROBINS. They are all senior members of the Corps of Engineers.

Mr. ANGELL. And after a project receives the approval of the Board, then it goes to the Chief of Engineers?

General ROBINS. This Board submits its findings to the Chief, and the Chief submits the report to the Congress, with his recommendations, and then it comes before the Committee on Rivers and Harbors, and that committee holds hearings, just as you are doing today.

So every project in an omnibus rivers and harbors bill has certainly been through the mill from start to finish. There is nothing about it left to the imagination.

Mr. PITTENGER. What percentage of projects do you reject, if you recall? Is not the number about 40 percent?

General ROBINS. It is a little less than 50 percent.

Mr. PITTENGER. At any rate, you reject a large number of projects, do you not?

General ROBINS. Practically as many as we recommend.

Mr. PITTENGER. So all of these steps you have detailed have been taken in connection with every project that this committee has voted to put in the pending river and harbor omnibus bill.

General ROBINS. Yes, sir.

Advantages of Army Life

EXTENSION OF REMARKS

OF

HON. RICHARD M. DUNCAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ARTICLE FROM ST. JOSEPH (MO.) NEWS-PRESS

Mr. DUNCAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Joseph (Mo.) News-Press:

[From the St. Joseph (Mo.) News-Press]

PAY CHECK IS SHORT—BUT ARMY LIFE HAS ITS ADVANTAGES, SAYS SOLDIER ON FURLOUGH

Although it takes a lot of stretching to make $21 last a full month, there are phases of Army life that compensate for the short pay check, according to Private Sherman Forman, son of Mr. and Mrs. B. Forman, 2837 Penn Street. Private Forman is home on a 15-day furlough from Geiger Field, Wash., where he is attached to the Army air base.

If you adopt the proper point of view, Forman said, the Army isn't so bad.

"I was inducted into the Army at Fort Leavenworth June 21," he said, "and since then I have seen a lot of things I never saw before. Geiger Field is located in one of the beauty spots of the country and the Government is paying me to live there.

"I am associated with several hundred men from all walks of life and there is nothing to prevent me from becoming a well-informed student of human nature. I feel that I am being paid for this opportunity.

"I am given six uniforms, four service outfits and two for dress occasions. I have three good meals a day and the best medical care is offered me if I need it. There is a well-equipped service center in Spokane, equipped for games, music, reading, and other forms of recreation, and I am a welcome guest at any time. All of these things are done for me because I am a soldier in Uncle Sam's Army. At home I have to secure these things for myself. Of course, I have my work to do, but they tell me there are a lot of fellows at home who still don't have a job, so maybe I'm pretty well off, at that."

Inflation Menaces Everybody

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of September 28:

[From the Milwaukee Journal of September 28, 1941]

INFLATION MENACES EVERYBODY

The housewife who goes to market with $5 in her purse is coming home with a lot less in groceries and meat these days. Many food prices have gone up 10 percent; some have gone up as much as 40 percent. That means just one thing—inflation is under way in this country.

It is under way largely because Congress hasn't shown the courage to face honestly the problem of price fixing, and the reason that Congress is lacking in courage is that three large voting groups in the population, so far as they are vocal, are against an effective price control.

Businessmen, as represented by some chambers of commerce, are arguing for limited and selective control. Labor, as represented by the unions, is against control of wages—which means that it is also for limited control of another sort. The farmer, as represented by some of his leaders, is against control of farm prices, though he is willing that they be set at 110 percent of parity, if other prices are set.

The difficulty apparently is that these classes and some individuals in other groups do not really understand the menace of inflation once it gets beyond control. Somehow they think that ever higher prices and ever higher wages will mean prosperity. As a matter of fact, nobody in the long run gains from inflation. Every economist knows that.

There are temporary gains, of course. The owner of stocks benefits at first, while the owner of bonds loses. The employer gains and the employee loses. The farmer gains at the expense of the consumer. Debtors gain at the expense of creditors. But these gains are not long lived. As inflation speeds up, everybody is caught in the scramble. Money becomes well nigh worthless.

An extreme example of what inflation can do occurred in Germany in 1920 to 1923. The mark, normally worth 23.8 cents, descended in value in 3 short years so that finally 3,500,000,000,000 could be bought for one American dollar.

Even rather early in that German inflation, the Hamburg-American and North German Lloyd steamship companies were able to pay off mark loans totaling 130,000,000 marks ($32,500,000) with $10,000 in real money. If they had waited until the final crisis, they could have retired that debt with far less than one-hundredth of 1 cent in sound money. But these German steamship companies did not benefit in the long run. Their properties ran down because it was impossible to get together the sums of marks needed to make repairs.

Men who had saved a competence for old age found that their life accumulations were eventually not worth a single cup of coffee. Wages based on the buying power of one day were insufficient to buy even bread the next.

That sort of inflation might never come to us, and yet we might suffer nearly as much. There finally comes a limit to the effect of inflation, and Germany passed that limit long before the inflationary movement had run its course.

For it must be remembered that when inflation really gets going wages always lag behind prices. As prices go up 50 percent, wages go up 10 percent. Finally comes a point where money is so unimportant that those who have goods prefer to keep them or to barter them for other goods than to sell them for money. They don't want money, for nobody knows what that money will buy in the future.

Inflation ran away with things in Germany because nobody used effective means to check it at the beginning. There comes a moment when no means is at hand to check the ruinous descent in money values except repudiation of the existing currency and the establishment of a new money system.

We in the United States are far from that point now. We still have time to control inflation by general fixing of prices, wages, and rents. But the fixing must come soon, and it must apply to everything. It must be in the form of "freezing," with adjustments to be made individually at a later time where unfairness can be shown to exist.

The menace is serious, for it is by no means impossible that inflation such as Germany once knew could come to us—if we continue to put selfish and shortsighted obstacles in the way of effective measures to keep our price structure at normal levels.

Flag Raising at El Paso General Shops, Southern Pacific Co.

EXTENSION OF REMARKS

OF

HON. R. E. THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ADDRESS OF ADOLPH A. STOY, OF EL PASO, TEX.

Mr. THOMASON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a speech made by my friend and constituent, Mr. Adolph A. Stoy, of El Paso, Tex., at a recent flag raising at the Southern Pacific shops in that city. Mr. Stoy has been an employee in the shops there for many years and this is one of the finest tributes to the flag I have ever read:

Mr. Chairman, ladies and gentlemen, fellow workmen, this assembly today should have a deep signification for all of us. The exercises incident to the dedication of this new flagpole and raising of the colors at El Paso general shops will soon be forgotten but the principles symbolized by the flag which is to

fly from the masthead above us are everlasting.

In America, as free men, we voluntarily choose the paths of social and economic freedom which we tread. No limitation is placed on the heights to which we may ascend, for they are guided largely by the degree of our own individual efforts and application. We are citizens of a great republic which undoubtedly is the last bulwark of freedom's domain.

The heritage committed to our care by our forefathers is priceless. We must, and do, stand ready to meet the challenges of the day, whatever they may be. In the maelstrom which now envelops the Old World, man no longer is his own master; he is but a component part of a great machine which, to accomplish its goal of conquest and domination, spreads destruction and desolation wide before it. We are living in a crucial period, in a period which in the final analysis may determine the future of our civilization.

That flag, the Stars and Stripes, which today is to be raised to the lofty pinnacle prepared for it in this shop reservation, is a symbol which should be cherished by every one of the 1,400 workers who are now employed within the confines of this immediate local Southern Pacific Railroad industry.

What the Cross means to the Christian, what the Star of David means to the Hebrew, as symbols of their respective religious faiths, just so indelibly does our flag symbolize our political faith in this land of the free.

The thought here suggests that possibly it would be fitting to dwell for awhile on a short historical outline concerning it—of its antecedents and devolution therefrom.

In the early period of the American Colonies they used the Union Jack of Britain. In it were combined the crosses of St. George and St. Andrew, and sometimes a pine tree or a hemisphere was figured in the upper left-hand quarter. The controversies incident to the Revolutionary War, whereby the 13 English Colonies in America separated themselves from Britain and became the United States of America (1775–83), brought forth many patterns of flags and banners, the greater number of which bore mottoes of defiance to the then mother country.

The colonial flag of New Amsterdam, which was carried by armed vessels sailing out of New York, had as its central figure a beaver, to indicate both the industry of the Dutch people and the wealth of the fur trade in the New World.

On the 17th of June 1775 the battle of Bunker Hill was fought, and a month thereafter General Putnam (1718–90) used a red banner, on one side of which was the Connecticut motto, and on the other the motto of Massachusetts, the latter reading: "An Appeal to Heaven."

In January 1776, at Cambridge, Mass., General Washington displayed a flag containing 13 stripes of red and white, with the British Union Jack in a blue canton, the stripes being considered emblematic of the union of the Thirteen Colonies against British tyranny.

The rattlesnake flag was another pattern, in which the snake was coiled to strike, with the motto: "Don't Tread on Me," and, generally, the rattles of the snake numbered 13, indicative of the Thirteen Colonies.

On June 14, 1777, definite action was taken by the Continental Congress with reference to a national flag, when it passed a resolution reading:

"That the flag of the 13 United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a blue field, representing a new constellation."

After the Continental Congress had decided upon the design for the national flag a committee consisting of George Washington, Robert Morris, and George Ross called upon Mrs. Betsy Ross, a native of Philadelphia, and whose father (Samuel Griscom) assisted in the erection of Independence Hall, and requested her to undertake the sewing of the new flag. She offered the suggestion, which was accepted, that the stars have five points instead of six, and subsequently she received contract to make all Government flags. Her daughter, Mrs. Clarissa Wilson, continued the business until 1857.

It has been my privilege on many occasions to visit the shrine where our first flag was made, the Besty Ross house, located at 239 Arch Street, Philadelphia. To preserve this historic edifice to the Nation, the Betsy Ross Memorial Association was formed in 1898 and sufficient money was raised under its auspices to finally purchase it in 1905. As one of the school children of Philadelphia, I had the opportunity of subscribing to the fund—the modest school child's subscription of 10 cents, for which each of us received a certificate of membership. The American Flag House, where the Stars and Stripes were first brought into physical being, will be forever preserved to posterity, and a visit to it 5 years ago was just as interesting and appealing to me as the visits made during my childhood days.

In January 1794 Congress ordered a change made in the flag which had been adopted 17 years earlier; that it have 15 stripes, alternate red and white; that the union have 15 stars, white in a blue field, it apparently being the intention to add a stripe and a star for each new State admitted, as Vermont and Kentucky had been admitted in 1791 and 1792, respectively.

By 1818 the number of States had increased to 20 and Congress then enacted legislation of the tenor that the number of stripes in the flag be reduced to 13, to represent the Thirteen Original States, and increased the number of stars to 20, and further ordered that:

"On the admission of every new State into the Union one star be added to the union of the flag, and that such addition shall take effect on the 4th of July next succeeding such admission."

The stars were used in various arrangements until 1896, and, during that year, the Secretary of War, Hon. Daniel Lamont, ordered that they be placed in 6 rows; and, in 1912, by Executive order of President Howard Taft, the arrangement was fixed as 6 rows of 8 stars each, or, as we know the flag today. These 48 stars symbolize the States of the Union, in the order of their ratification of the Constitution and their admission to the Union, Delaware being the first, and Arizona, the forty-eighth and last. Texas, largest State of all is represented by No. 28.

Old Glory. An affectionate term for our beloved flag. That designation is attributed as having originated with Capt. William Driver, of Salem, Mass., these words being his salute to a beautiful new flag presented to his ship when starting on a voyage around the world in 1831.

Many are the interpretations offered by writers of prose and poetry as to the symbolism of the colors of the flag, but truly none can be more symbolic than that expressed by the United States Flag Association, headquarters at Washington, D. C., which has promulgated the following:

"Red for courage. The red in the flag proclaims the courage which the men and women of our race have always shown—the courage that inspires men and women to face danger and to do what is right.

"White for liberty. It is said that Washington once described the flag by saying: 'We take the stars from heaven, the red from the mother country, separating it by white stripes, thus showing that we have separated from her, and the white stripes shall go down to posterity representing liberty.'

"Blue for loyalty. The blue stands for loyalty. It is the blue of the heavens—the true blue. It tells the story of thousands of men and women who have been loyal to their country through thick and thin, hardship and suffering—of men and women who have hesitated at no sacrifice, even of their lives, when their country demanded it of them."

The flag should be an ever-present reminder of the many rights granted to an individual by the Constitution of the United States, and as it symbolizes the historic and cherished landmarks embodied therein there must be acknowledged that with the privileges come responsibilities. In this day of world tumult and strife which we are now witnessing the principles of American citizenship must emblazon themselves as brightly as described by Daniel Webster (1782–1852) in his oration at the cornerstone laying of Bunker Hill Monument, near Boston, in 1825, in commemoration of the Battle of Bunker Hill, which had been fought 50 years prior thereto, when he said, in part—again I quote:

"We have indulged in gratifying recollections of the past, in the prosperity and pleasures of the present, and in high hopes for the future. But let us remember that we have duties and obligations to perform corresponding to the blessings which we enjoy. Let us remember the trust, the sacred trust, attaching to the rich inheritance which we have received from our fathers. Let us feel our personal responsibility to the full extent of our power and influence, for the preservation of the principles of civil and religious liberty. And let us remember that it is only religion and morals and knowledge that can make men respectable and happy under any form of government. Let us hold fast the great truth that communities are responsible as well as individuals, that no government is respectable which is not just; that without unspotted purity of public faith, without sacred public principle, fidelity, and honor no mere forms of government, no machinery of laws, can give dignity to political society. In our day and generation let us seek to raise and improve the moral sentiment so that we may look, not for a degraded but for an elevated and improved future. And when both we and our children shall have been consigned to the house appointed for all living may love of country and pride of country glow with equal fervor among those to whom our names and our blood shall have descended.

"And then, when honored and decrepit age shall lean against the base of this monument, and troops of ingenuous youth shall be gathered around it, and when the one shall speak to the other of its objects, the purpose of its construction, and the great and glorious events with which it is connected, then shall rise from every youthful breast the ejaculation: 'Thank God, I, I also, am an American!'"

The flag which we are unfurling today is the gift of Hamilton Fish Camp No. 2, United Spanish War Veterans. We, as employees of the great Southern Pacific Co., are grateful to them for the courteous gesture they have extended through its contribution and acknowledgment of such is hereby made.

For perpetual maintenance purposes there is a flag fund at El Paso general shops, to which all employes engaged within this shop reservation, in all departments, may contribute. The flags we use will always be the gift, not of any specially designated department or group, but the gift of all the employes. E pluribus unum—all for one and one for all!

And now, before we proceed to raise the colors for the first time on this new flag pole, I would like to ask that all of you face in the direction of the flag. At the command of salute, if covered remove the headdress with the right hand and hold it at the left shoulder, the hand being over the heart. Those of you without covering will stand at attention. Women should salute by placing the right hand over the heart. Everyone will please remain standing at attention until the final note of the bugle.

Here is the flag of our country, safe within its fold is the freedom and fealty of our Nation. Friends you will join me in saluting it.

Congress Controls the Purse Strings

EXTENSION OF REMARKS
OF
HON. STEPHEN A. DAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

RADIO ADDRESS OF HON. STEPHEN A. DAY, OF ILLINOIS

Mr. DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made over the radio on September 26, 1941:

On September 11, 1941, the President informed the American people that he had given orders to shoot any German or Italian vessels entering the waters the protection of which he deemed necessary for American defense. He gave these orders as Commander in Chief of the United States Army and Navy. He claimed no authority from any legislation passed by the Congress. Many are laboring under a misapprehension that he acted under the Lend Lease Act. That act furnishes no authority for the order to shoot, and there are no laws on the statute books which authorize such an order. His sole power to issue the order rests in the fact that he is Commander in Chief.

On March 5, 1941, Senator CONNALLY, now chairman of the Senate Committee on Foreign Relations, in the debate on the Lend-Lease Act, in speaking of the power vested in the President as Commander in Chief, carried on the following discussion with Senator BONE:

"Mr. CONNALLY. Control of the Army and Navy refers to the organization, promotion, courts martial, and the internal government and control of the Army and Navy, and has nothing on earth to do with the Commander in Chief and his power.

"Mr. BONE. If that is true, then the President could immediately take this country into war by merely lifting his hand.

"Mr. CONNALLY. Any President who wanted to get the country into war could do it at any time he desired.

"Mr. BONE. Unhappily, that is true.

"Mr. CONNALLY. Any President who wanted to disregard the interests of his country could do that; and many Senators seem to think that the pending bill and all these amendments are merely intended to protect the country from the President, and assume that he is going to do wrong; assume he is going to violate his oath; assume he is going to do something contrary to the interests of the United States. I prefer to assume, on the other hand, that any sworn officer is going to do his duty. What I said was predicated upon the theory that some willful President would just plunge the country into war. Of course, any President could get the country into war at any time he desired by bringing about a situation from which we could not well retreat."

When pressed by Senator ELLENDER as to whether there were any limitations on the power of the President as Commander in Chief, Senator CONNALLY made this significant statement:

"If the President has the power under the Constitution, there is nothing we can do about it in this bill (Lend Lease Act) one way or another except to refuse appropriations. Congress can control the Army and the Navy by refusing appropriations."

It has been announced that the appropriation bill for approximately $6,000,000,000 of additional lend-lease funds will come up in the House of Representatives on October 6. If the American people want to keep out of war, the time has come for them to speak out and inform their Representatives that they do not approve of the President's order to shoot and that no further appropriation should be made for the Army and Navy to provide the very things the delivery of which will make war certain, in view of the President's order to shoot.

So that the average citizen will fully comprehend the exact situation, we must think of the President as holding two offices. He is President and at the same time Commander in Chief of the Army and Navy. As President, he will get the lend-lease materials, but no authority over the men who make up the rank and file of the Army and Navy. Let us suppose that he places these materials on our merchant ships. Up to this point, he is still at peace. He then decides to have these materials carried across the ocean to Britain and the merchant ships commence the voyage across the Atlantic. Up to this point he is still at peace. Now, he turns to his power as Commander in Chief, and deciding to use our battleships to convoy these merchant ships to Britain, he gives orders to the Army and Navy to shoot any German or Italian war vessels encountered on the way across. He obtained all of the authority up to the time of the shooting order from the Congress. He claims that his power to order shooting comes from the Constitution and that Congress has nothing to say about it. All those who have been urging the Members of Congress to do something to check the President, even to the point of impeaching him, are not aware of the fact that the President is acting under a power coming from the Constitution and not from the Congress.

To fortify his position the President stated on September 11, 1941:

"This situation is not new. The second President of the United States, John Adams, ordered the United States Navy to clean out European privateers and European ships of war which were infesting the Caribbean and South American waters, destroying American commerce. The third President of the United States, Thomas Jefferson, ordered the United States Navy to end the attacks being made upon American ships by the corsairs of the nations of North Africa."

As a constitutional lawyer, I take issue with the President. The fallacy in his position is that he is carrying materials to an active belligerent; he knows that his shooting order will mean war for he has said so himself. He knows that President Adams was attacking privateers which according to the dictionary means "armed private vessels commissioned to cruise against the commerce or war vessels of the enemy." He knows that President Jefferson was attacking corsairs. Turning again to the dictionary, we find that a corsair, in simple language, is a pirate. President Roosevelt has labeled Hitler and Mussolini as gangsters and pirates, and he can console himself with the reflection that he is protecting our commerce against gangsters and pirates. It is interesting to know from what source the President obtained this justification for his position.

In my book, We Must Save the Republic, published by the Shaw Publishing Co., Washington, D. C., on page 77, I state as follows:

"The lend-lease bill was passed by the Congress with a total misconception of international law as it is now interpreted by this administration. In fact, there has been such a radical departure from the tenets of international law, as it existed prior to this new interpretation, that practically no Members of either the Senate or the House of Representatives had any notion whatever of the present interpretation that authorizes the United States to engage in war against an aggressor, without a declaration of war by the Congress, as provided in the Constitution of the United States.

"Where did this interpretation come from? It was not born on American soil. It came from Budapest, in Hungary, and it had its origins in a conference of international lawyers, held at Budapest in September 1934."

After quoting from the testimony of Secretary Stimson before the Senate Foreign Relations Committee, in the hearings from January 27 to February 3, 1941, and the address of Attorney General Jackson, at Habana, Cuba, on March 27, 1941, both of whom gave their full approval to this new interpretation, on page 82 of my book the following is quoted from the address of Attorney General Jackson:

"President Roosevelt in his message to the Congress of January 6, 1941, said that 'such aid is not an act of war.'"

To what did Attorney General Jackson refer? President Roosevelt on January 6, 1941, appeared in person before the two Houses of Congress and said in part as follows:

"In fulfillment of this purpose we will not be intimidated by the threats of dictators that they will regard as a breach of international law and as an act of war our aid to the democracies which dare to resist their aggression. Such aid is not an act of war, even if a dictator should unilaterally proclaim it so to be. When the dictators are ready to make war upon us they will not wait for an act of war on our part."

Here is the understanding of the present situation. The dictators have not made war upon us. But the President is ready to start the shooting. The dictators did not claim that aid to Britain was an act of war. On January 6, 1941, the President spoke of Hitler and Mussolini as dictators, but he did not call them privateers and pirates. In other words, the dictators did not resort to open acts of aggression. They did not commit acts of war. War did not come from that source. Now the President, seeking to justify his order to shoot, cites the actions of two former Presidents who used our armed vessels to clear the seas of privateers and pirates. He no longer says, "Such aid is not an act of war." He states: "Convoys mean shooting and shooting means war."

When the Lend Lease Act was before the Senate for consideration it was clearly emphasized that it did not deal with men but only with war materials. Pressed by Senator ELLENDER in the debate on March 5, 1941, Senator BARKLEY stated:

"Mr. ELLENDER. Well, how can you convoy ships without men?

"Mr. BARKLEY. Oh, no; of course not, and the Senator from Louisiana knows that as well as I do; but in this bill we are dealing with equipment, all sorts of equipment. We are not dealing with an army. We are not dealing with a navy. We are dealing with the things that may be lent, leased, or otherwise disposed of by the President of the United States."

The complete answer to convoying can be found in these words of Senator BARKLEY. The things were to be carried by vessels manned by the British Government, and hence no American life could be taken if the vessel were attacked. This positively settles the claim that there is any authorization of convoying in the Lend Lease Act.

Furthermore, in this same debate Senator WHITE stated:

"It is charged that the passage of this legislation means that our warships will convoy our merchant vessels. The direct answer to this assertion is that the bill gives no such power. On the contrary, it says in

terms that nothing in the Act shall be construed to confer this right. There are those who insist that under his constitutional powers the President may do this thing. If they are right in this, if under his constitutional designation as Commander in Chief of our Army and Navy, or if in the powers which inhere under the Constitution in the office of President, Mr. Roosevelt can so use the naval vessels of the United States, certainly we cannot take from him any right conferred by the Constitution. If, on the other hand, such right is not constitutionally his, he does not have it., This bill does not confer it."

In the recent statement of the President, when he announced that he had given orders to shoot, he positively claimed that as Commander in Chief he has the right and intended to use it. We are, therefore, confronted with this situation. The President claims that he has the right to order shooting without any action by the Congress. This order to shoot may get us into war. The President can only provoke war but he cannot declare war. There may be any number of shootings, but, there will still be no war until action by Congress.

This presents a very unwholesome situation and if neglected may result in great humiliation and embarrassment. Over 80 percent of the American people do not support the President in making war. They do not want war and they do not want him to provoke war. What is the duty of Congress in this critical hour?

Fortunately, we are not without a remedy. The President is asking for additional billions of dollars under the Lend Lease Act, a law which does not authorize him to order shooting. He himself has said that convoys mean shooting and shooting means war. How, then, can the Congress vote him additional billions of dollars when the Congress knows that he intends to act under his powers as Commander in Chief and in direct violation of the plain provisions of the Lend Lease Act? This charges the conscience of every member of Congress to compel the President to rescind his order to shoot or be denied any further appropriation. There is no escape from this conclusion. Believing that the President will not rescind his order to shoot, I shall never vote to provide him with additional moneys which are clearly not authorized by the Lend Lease Act.

We must bear in mind that the additional $5,985,000,000 is to be used for the purposes of the Lend Lease Act. He has not asked for moneys to carry out his powers as Commander in Chief. All of us know what he intends to do with the money. All of us know that he intends to use our Navy to convoy merchant ships. All of us know that such use of our Navy will provoke war. All of us know that this will not be a constitutional war but the President's own war. What a travesty. How long can this sort of thing continue without breeding in the minds of the people a feeling of utter dismay and humiliation? But that is just where we stand today.

Knowing that he intends to carry on his own shooting war, the President merely uses the Congress to provide him with the sinews of war. He is not willing to comply with the Constitution of the United States and ask the Congress to declare war. All Congress is asked to do is to furnish the money so that he can make a success of his war which is in direct violation of the Constitution of the United States. Can any Member voting him these additional billions of dollars ever again claim that he has been true to his oath of office and to the Constitution of the United States?

We have presented to us a clear choice and it is this: Follow the Constitution or follow the President. If you follow the Constitution, we can stay out of war and keep faith with the American people. If you follow the President, you will be untrue to the people and to your oath of office. The time has come for Congress to assert its powers, preserve its dignity and prerogatives under the Constitution by refusing to vote any additional moneys. Congress controls the purse strings. Only in this way can we express our disapproval of the action of the President.

This decision is made easy for the Members of Congress because the President has asked for additional moneys under a law that does not authorize the action which he has taken as Commander in Chief. If the President feels himself wronged by the refusal of Congress to make these appropriations, he has only himself to thank for such injury. He has stubbornly refused to consult Congress and has stubbornly refused to take the American people into his confidence. Many claim that he has directly violated his sacred pledge to the American people. Many have asked that the President be impeached. There is no need at this time of going that far. Congress now is afforded the opportunity of rebuking the President by refusing to provide additional billions of dollars to enable him to pursue a course which Congress has not authorized.

I appeal to the President to recall his request for additional lend-lease moneys. I do this to prevent utter humiliation for all of us. I do this because of my loyalty to the Constitution of the United States and for my heartfelt desire to preserve ordered liberty in the land we all love so dearly. I believe the President should be big enough to realize that he cannot further pursue his own shooting war without cruelly destroying and eliminating the Congress as one of the three great coordinate branches of the Government. Much as we abhor aggression and desire peace, we have lost everything when we lose respect for ordered liberty under the Constitution of the United States. As a Member of Congress, I must be vigilant of the powers of Congress. We all took an oath to that same Constitution and we all stand or fall together. It is my prayer that there will always be a Constitution and that there will always be a Congress. May God bless you all.

National Newspaper Week

EXTENSION OF REMARKS

OF

HON. WILLIAM H. WHEAT

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

Mr. WHEAT. Mr. Speaker, October 1 to 8 has been designated as National Newspaper Week, and I want to take this opportunity to express my opinion as to the importance of the newspapers in this country, particularly those known as the weekly newspaper.

Coming as I do from an agricultural district in the central portion of Illinois, composed of 8 counties with a population of 300,000, in which are located the University of Illinois—which maintains an excellent school of journalism, the Millikin University, and the Eastern Illinois State Teachers College, I have had an opportunity to come in contact with and to observe the importance of the 60 newspapers located in my district.

It is my considered opinion, based upon many years of experience, that these newspapers wield a tremendous influence for good downright Americanism in their respective communities, and that they will continue to do so as long as they remain free and unhampered. Of late, we have heard considerable talk about the possibilities of at least a partial press censorship. In my opinion, this would be a very grave error.

For the benefit of America, I sincerely trust that these newspapers may be permitted to continue to operate as free and individual units, unrestrained by censorship from Washington or from any other source. Freedom of the press was one of the fundamentals laid down by the founders in that immortal document—the Constitution of the United States. If this one goes by the board, I warn you here and now, it will not be long until it is followed by restraints upon other freedoms—worship, speech, and assembly—and the seeds of tyranny will have sprung forth full grown.

The Neutrality Law

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 29, 1941

ARTICLE BY RAYMOND CLAPPER

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond Clapper, from a recent issue of the Washington Daily News:

[From the Washington Daily News of September 26, 1941]

THE NEUTRALITY LAW

(By Raymond Clapper)

Two main questions appear to be involved in the issue of revising or repealing the neutrality law.

One question is whether Congress shall permit the arming of American merchant ships. The other is whether American ships shall be permitted to go into belligerent ports. Some other points are involved, but they are incidental to these two.
